The universal abolishment of spring shooting in all the States is an object greatly to be desired, and which would prolong the existence of our wild waterfowl very materially, but there is another feature bearing on their preservation of equal, if not greater, importance than this, and which in my opinion has been the chief cause and king pin in the depletion of our wild game animals and birds. We know from sad experience that it has been the chief factor in the extinction of the buffalo, the wild pigeon and the great auk. I refer now to the baneful results of the traffic in these commodities, with an unlimited market demand at all times, both in and out of season. The markets of our large cities all over the land keep on crying for more venison, more grouse, more ducks and geese, more trout and bass; and the conscienceless dealer and market man in their efforts to supply the demand and make a few dollars, will offer inducements to market-hunters and market-fishermen that would tempt them to kill the last nursing doe on the earth, and take the last pair of spawning trout off their spawning bed. The market has no conscience, and the dealer and market-hunter have still less, if possible, and until the blighting effects of the traffic in these commodities that nature has given to all alike, can be abolished by uniform laws in all of the States, I fear that our wild animal and bird life will continue to dwindle until it disappears from off the earth. Can it be done? Can the abolishment of the sale and traffic of all kinds of game and game birds in all the States and at all times be accomplished? Some of the States have already taken this commendable action, and all the others should speedily follow the example; it is the only salvation for our game, and all of those States that have not taken action in the matter, cannot move too quickly in the enactment of laws to prevent the extermination of our wild animal and bird life from the baneful effects of barter and sale. The complete and uncompromising abolishment of the sale and commercial traffic in all kinds of wild game at all times, seems to be the only solution to the question of how to perpetuate the existence of the game animals and birds in this country; and the stubborn question of how to achieve this most desirable result, is a fitting one to engage the most earnest consideration of this convention of the fish and game wardens and commissioners of the Northwestern States assembled for the first time—but to be hoped not the last—for the purpose of exchanging views and devising plans for the better protection and advancement of the fish and game interests of our several States. It is said that "a rolling stone gathers no moss," but let us indulge the hope that from this little meeting held up among the majestic peaks of these grand old Rocky Mountains, a stone may be started rolling down the mountainside and across the great plains to the sea, gathering as it rolls all the fish and game wardens and commissioners in the Union into one grand fish and game league; and joining hands with the grat league of American sportsmen that has done much good work since its organization, in securing both State and National legislation for the better protection of the game, birds and fish of the entire country, and in helping to enforce existing State laws—a combined effort may be made for the abolishment of the two main causes of the destruction of the game and birds of the country, spring shooting, and the sale of game at any time.

A uniform law abolishing spring shooting, and the sale of wild game and birds at all times, should be upon the statute books of every State, but how to get it there is the rub. I fear that a measure of this kind will result in a great deal of legislative wrangling, and meet with bitter opposition from the dealers, the market-hunters and market-fishermen, as well as hotel and restaurant keepers; and many people who think that they should not be curtailed in the privilege of buying game or game fish when they can get it, either in or out of the market. This has at least always been the case in Utah whenever any game or fish protective measure has come up before the Legislature. It has been a continuous struggle between the sportsmen on the one hand, and the market-hunters and vendors, with the restaurant keepers, on the other; and I presume that this condition prevails in many of the other States. But the struggle will have to be continued until the desired object can be attained; and if this object can be more speedily consummated through the deliberations of this meeting, our coming together will not have been in vain. It is gratifying to note that the parent Government by extending the powers of the Department of Agriculture, is taking a hand in certain directions for the preservation and propagation of our birds and game, and I offer the suggestion that, if a national law for the abolishment of the sale and traffic in all kinds of wild animals and birds in any form could be enacted by the Congress of the United States, it would solve the vexed problem, and end all cavil that would naturally arise from climatic and other local conditions in the various States, in the consideration of such a measure by the State legislatures that have not as yet passed upon the question.

Furthermore, there is one particular feature connected with the preservation and perpetuation of our game animals and birds which in my opinion is worthy the serious consideration of our national lawmakers, and especially of the War Department; and that is in the opportunities offered for the making of good soldiers. I hear

some one say, How in the world do you make that out? It is now conceded, I believe, among the nations, since our recent war with Spain, and in the Philippine Islands, that our soldiers, sailors and generals are the best upon the globe, and that our common soldiers, both regular and volunteer, have the instincts of generalship so strongly in them, that, it is said, if all the superior officers of a command were to be killed in action their places would be competently filled from the ranks. How is this? there must be some reason for it. It is true that we have good military training schools, but perhaps no better than some other nations have; then there must be some other reason for it; and who may say that these qualities of bravery and independence in such high degree have not been inherited from the fathers of our country who had to guard continually against the savage native inhabitants of the land, and be prepared at all times with rifle in hand to defend themselves against savage wild animals while establishing their frontier homes in the wilderness? This frontier wilderness life, as we all know, necessitated a continued familiarity with the rifle as a means of defense, and for killing the wild game—which was found in such profusion everywhere—and used as part of their daily subsistence. The rifle was their constant companion while in the woods, and hung with the powder horn and bullet pouch on a convenient antler rack perhaps over the fireplace, where it could be instantly reached in case of a surprise, when at home, and the constant handling of the weapon brought the wonderful perfection in shooting that we read of as being done by Davey Crockett and other worthies at shooting matches. And we have shooting matches yet, at which Davey's shooting would have to take a back seat, but this is due perhaps to the superiority of rifles and ammunition now in use. May we not then safely presume that the superiority of our soldiers and generals is due largely to the opportunities for field sports that have existed in the past in the hunting of wild game, and which develops a natural aptitude in the use of the rifle and gun? And if this be so, should not every possible effort be made to preserve our wild game for the purpose of giving our young men practical field opportunities to perfect themselves in the use of the rifle and gun and the exercise of considerable generalship necessary in the successful still-hunt and capture of all of our wild game animals, insted of permitting them to be killed by market-hunters. Taking this view of the matter, it would seem that the general Government would be justified in making a national law prohibiting the further destruction of our large game animals, at least for market and sale.

WHAT FISH AND GAME MEAN TO A STATE.

BY F. W. SCOTT, STATE GAME AND FISH WARDEN OF MONTANA.

FEW people realize that the fish and game of a State are one of its most attractive natural resources; they seem to think, and especially in the West where they have been in the habit of killing whenever they so desired, and at all times of the year, that the fish and game are of no material consequence other than to be killed whenever found. They have been so accustomed to paying no attention to the game laws, that as soon as these laws are passed and enforced, these people rise up and exclaim that these laws are for a lot of sports and dudes that live in the cities, and are enacted for no other purpose than to preserve the game for these people to come from the towns and cities each year to hunt and fish. They claim that the fish and game belong to everybody, and that it ought to be killed whenever they see fit to do so; that the laws for the protection of fish and game are oppressive, and that the expense attached to their enforcement is a needless and useless tax upon the State and the people. These arguments of course come from people who are either unfriendly to the protection of game or who have not studied the question.

As an advertising medium for the West, the game and fish cannot be over-estimated. Most people would consider one a fit subject for the insane asylum if he put forth this argument; but let us stop and consider the proposition for a few minutes. There is hardly a capitalist or rich man in the East who does not enjoy the sport of fishing and hunting, and who does not look forward each year to the pleasures of his hunting trip. He is constantly inquiring about the best localities for hunting, and is looking over the sporting papers at all times and noting the sections of the country where the most game is to be found. If he is looking for large game, and he almost always is, he finds that the West or Northwest affords the best opportunities in this line; he finds that almost all species of bear can be found in the Rockies, that the lion and cougar are also there, that the noble elk are found by the thousands, that the black and white tailed and mule deer are plentiful, that on the crags and peaks can be found the almost now extinct Rocky Mountain sheep; that the Rocky Mountain goat is also found in larger numbers than in any other locality in the country; that the stately moose, too, frequents these haunts; that most of the animals native of North America are there, such as the wolf, both timber and prairie, the coyote, lynx, bobcat, fox, swift, martin, otter, beaver, mink, and all the others; that the feathered game are more than plentiful, the grouse in the high mountains, pheasants along the streams, quail and prairie chickens in the valleys; that on the lakes and rivers ducks, geese, brant and swan are found by the thousands; aside from its grand game resources, the finest trout fishing is to be had, almost every little rivulet and mountain stream is abundantly stocked with the little speckled mountain trout, while in the larger streams and rivers, the three and four pounder is to be found with not a few of those larger ones which make the angler's heart so glad. After finding out these things he naturally considers the West for his next hunting trip in the fall, and at last decides to come to Montana (using my own State for example).

When he got to the Crows' Reservation in Montana and looked out of the car window, he was more than surprised to find that the country was a vast expanse of tilled fields, well fenced, with stack after stack of hay and grain; he noticed that those working the fields were peculiar-looking, and after making inquiry found that they were the Crow Indians tilling the soil on their reservation, and that all these fields and ranches, grain and stock, belonged to these Indians and they had some of the finest land in the United States; he also found out that instead of these Indians being blood-thirsty and wild, they were civilized and industrious, and that on their reservation they had good schools and churches, comfortable frame and log houses instead of teepees, as he had supposed; that they raised their own crops and tilled their own soil under the direction of the "boss farmer," who is a white man and employed by the Government; that they owned thousands of fine horses and cattle, and were in a very prosperous condition, if not to say rich. He was surprised, if not awed, at the revelation; he could not believe his eyes, and what he had heard; could it be possible that all that he had heard of this country in the East was false? But he journeyed along all eagerness and excitement; he saw from the train a most beautiful country; on each side of the track were farms with comfortable houses and fine barns, and stock in countless numbers on every hand. In the course of a few hours they ran into Billings, and there he saw the hustle and bustle everywhere of business and city life, so unlike the towns of its size in the East; he saw the large flour mill puffing and humming and the line of teams hauling away its product; he saw the magnificent brewery which would be a credit to a city five or six times its size; he saw the great wool depot where hundreds of men and teams were working, and out of which last year was shipped and handled 14,000,000 pounds of wool; he also saw the large department stores and mammoth warehouses, the beautiful business blocks, and residences, streets lined with trees, lawns even and green. This was his introduction into the wild and uncivilized West; and as he continues his journey to Bozeman, a hundred miles distant, he sees the same continued line of fine farms and the thousands of stock. As he passes the little town of Big Timber he finds that they have a woolen mill located there, and that this town of only a few hundred inhabitants has an electric light plant and other modern improvements and two large department stores whose stocks will amount to half a million of dollars; this is the outfitting and supply point for the vast stock country surrounding it. His next stop is at Livingston, where the first thing that meets his gaze is the beautiful depot of the Northern Pacific Railroad; it is indeed an elegant structure, one of the finest in the country, far surpassing like structures in most Eastern cities. This, too, is a bustling town, and surrounded by an immense amount of productive farming country. From here on to his destination he passes through the Gallatin Valley, one of the most fertile and productive spots in the whole world. As far as his eye can see, even to the foot of the majestic mountains in the distance, is one vast area of grain stubble, where here and there a threshing machine and its crew are hard at work. His eyes and mind are still fixed on the scene when the brakeman's call of "The next stop will be Bozeman," arouses him. He jumps and hurriedly gathers together his effects, at the same time wondering what other revelations and surprises are in store for him. The train stops and he alights, and the first object that meets his eye is the fine large brewery across from the depot; to his right and left are immense grain elevators, in the distance the flour mills, and before him stretches "Bozeman the beautiful." At this juncture he is asked if his name is Smith, and turning sees a somewhat peculiar individual, who wore a slouch white hat, brown overalls, blue flannel shirt, canvas coat, and a handkerchief around his neck. He was a man about fifty, and his hair and full beard were streaked with gray. He assured the man that his name was Smith, whereupon that individual informed him that his name was Pete Jenkins, better known as Alkali Pete. Pete helped him on the car with his baggage and together they rode up to the hotel. Old Pete was anything but what he had expected to find him. When they arrived at the hotel he found that affair a most up-to-date institution. In the evening Pete came to the hotel and together they walked around the town and talked, and he was very much impressed with the old guide; he did not have much education, it is true, but he was bright and interesting. He found that almost everybody knew Pete and respected him; they said "that he was an old-timer and was as honest as the day was long, and as true as steel." During the few days in which they were assembling the necessary articles preparatory to starting on the trip, he grew to like the old man better each day, and they would sit in the hotel office in the evening and talk of the country, and the old man would introduce him to the prominent men of the place as they would happen in, and in this way he learned of the many resources of the country; he found that instead of being a barren waste, it was the most productive in the world. He hears of the barley so famous that most of it is exported, of soil that produces 50 bushels of wheat, 90 bushels of oats, 400 bushels of potatoes to the acre on non-irrigated land. He is told of the wonderful fields of alfalfa that are cut three and four times a year. He has heard of the mines, and interested in what he has already heard, he inquires about them, he learns that the output of the minerals of the State for the last two years has been $128,000,000. He hears of opportunities of investment and development. He meets men of highest education, bright, restless, energetic, the most progressive on earth, and he decides that as soon as he returns from his hunting trip he will look over the State before he returns home, which he does, and surprise follows surprise; everywhere the same gigantic enterprises; on all sides the same great natural resources ready to reward the investor a hundred fold; these things appeal strongly to his trained sense of sagacity; it is not a fever of speculation as in his own part of the country; it is legitimate business enterprise. Before he has started on his return journey, some piece of land, a particularly nice bunch of cattle or sheep, some mining or milling proposition, an opportunity for a mercantile establishment in some growing town has interested him to such an extent that he has concluded to make an investment. He returns home the best possible advertisement that our great commonwealth could have. He knows how to interest others, and he tells his friends of what he has seen and done, and about their false impressions of the West. The following year his hunting party consists of five or six of his friends; they too become interested—perhaps a company is formed and some business enterprise of great value is the result.

It should not be forgotten that the social attitude of these men, brought into the State solely with a view of recreation, is entirely different from what it usually is at home; there is a comradeship known only to sportsmen, the humblest hunter or fisherman is "a hale fellow well met," they are friendly and approachable. In the boat or camp they are as different from what they are in their Eastern offices as day and night. They are in a receptive mood and they will listen with interest to the story of a prospect, that in their business hours at home would not command a single thought. During the quiet hours of rest after a successful day's sport, in company of men who have located valuable prospects, but are without means to develop them, occurs the opportunity of a life time to secure the assistance of the capitalist; under no other circumstances would or could the two men get so close together. We need capital to develop our resources. The Eastern man is looking for favorable opportunities for investment. The certainty of being rewarded for his long journey in quest of game will surely attract him to this part of the country, and a knowledge of the actual conditions will in many cases secure him as a permanent investor. In this way the protection of game plays its part in the upbuilding of our great Northwest. Millions of dollars of Eastern capital have been invested here whose owners were first attracted by the hunting and fishing, and nothing should be overlooked that will induce others to come and do likewise.

THE BENEFITS OF CO-OPERATION BETWEEN THE STATES.

Gentlemen and Brother Game Protectors:

I have been asked by Mr. Scott, the efficient State Game Warden of Montana, to prepare something for this meeting along the lines of "The Benefits of Co-operation Between the States," also on the "Need of Legislation, If Any."

"In union there is strength" is an old saying, but it is true as gospel when applied to co-operation between States in the matter of game protection. We live in a favored age, in a time when men—thoughtful men—are paying close attention to game protection. Our prominent men are not afraid now to be classed as in hearty accord with every move that is for the enforcement of good game laws. I am glad to say that at the head stands our honored President, Theodore Roosevelt. His very example has strengthened and will help the cause we are here to promote. In my own State the men who hold prominent positions are with us. Our Attorney-General, W. B. Douglas, knows the difference between a rifle and a shotgun, and as a legislator in our State house and now as Attorney-General, has always been found enthusiastically advocating strict game laws and their enforcement. He is the author of several of the laws we have now on our statute books in regard to game legislation. So with our Governor, Van Sant; in fact, very few of our public men of to-day are not in hearty sympathy with our work.

But to accomplish the best results we must get together. Let me call attention to a few examples of the benefits of co-operation that this paper has to deal with. Take a shipment of game for example. Say it leaves Bismarck, N. D., its destination Chicago. There is complete harmony between the States it will pass through. It reaches St. Paul, where it has to be transferred; there the warden is on the look out. It may be shipped as butter, household goods, dressed poultry, or a score of other devices known to the game dealer may be used; but an alert warden notes at once that it looks suspicious, and upon investigation finds that it contains game from North Dakota, a State that prohibits shipment outside her own borders. It is immediately seized and the game warden of North Dakota notified, a complete report made, a copy of the way bill or express receipt, with the man's name or number who shipped it, secured; and all the information that he could gather that would be of use to the North Dakota authorities is furnished.

This is a sample, but thousands of cases have actually happened under our supervision in Minnesota of a similar nature. You all understand the tricks resorted to by the game and fish dealers. We have seized shipments in milk cans, in egg cases, in butter tubs with a thin layer of butter on top, shipped in barrels as potatoes, in cars as wood, and they have even shipped it in coffins and had a fake certificate purporting to have been issued by the Board of Health. I could give a great many instances of the workings of co-operation that have come under my observation in connection with our work in Minnesota. I will simply notice a few.

In 1897 we had a man named Davis, of Detroit, Minn. He was a persistent game law violator, and one of the worst ever known in Minnesota, and our warden had instructions to watch him closely; but with all our vigilance he managed to smuggle out a lot of game, for he was a past master in the business and had been engaged in it for years. He was very successful in getting his game to the Eastern markets, where large prices awaited him. We were aware of the fact that he was preparing to ship at one time sixteen hundred birds to Boston and New York markets, and with our warden watching him he managed to get them out of the State and into Fargo, N. D. Our warden found it out immediately and wired me at St. Paul. I took the first train to Fargo and called to my assistance the then State Game Warden, the Hon. Geo. E. Bowers. He and I were working in harmony and had rendered each other some assistance before. The game was in a Chicago, Milwaukee & St. Paul car, and sealed ready to be shipped; on my arrival I made a demand on the agent, telling him that it was Minnesota game; he simply gave me the laugh, saying that I might have some authority in Minnesota, but in North Dakota I was a dead one. Then the practical workings of co-operation were put in play. Bowers got a search warrant, broke open the car, got the game and handed it back to me as a representative of Minnesota. We indicted Davis on four different counts before the Clay County Grand Jury, but through the hostility of the presiding judge toward all game laws, Davis was fined $40 and costs—a mere farce—but I am satisfied that you gentlemen have had similar experiences, and we have got to put up with them. We did get the game, however. I am glad to say that in Minnesota, occurrences of this kind are very rare, as our courts have invariably upheld the game laws and punished offenders to the full extent.

Another case: A shipment started from Staples, Minn., and was going to New York by way of West Superior, Wis.; I was notified that the shipment would take place and tried to make the seizure before it left the State, but was prevented by the train crew. I boarded the same train and when I told the express agent at West Superior who I was, and made a demand on him for the game, he was very agreeable, but declined to recognize my authority in Wisconsin. I hunted up the game warden, Mr. Blackadder, and told him my troubles, and in less than one hour had the game back in Minnesota; another example of practical co-operation. I could cite at least a hundred cases where I have received assistance from the authorities of other States, but these two show the practical workings of reciprocity between the States. In every case we have brought the guilty parties to justice with the additional loss of their game.

In my estimation, co-operation is the best system that can be devised to bring the lawless element, the game dealer and the people who want to make merchandise out of our game and fish, to time. For years the lawless element on the boundary of our State and the Dominion of Canada has had full sway, and when our officers got after them they simply went over to Canada, and when the Canadian authorities tried to apprehend them, they came back to us. To show you that men are thinking along the lines of co-operation, I had a letter from the Hon. F. Gourdeau, Deputy Minister of Marine and Fisheries for the Dominion Government, suggesting an alliance between the two departments for the better protction of the fishing interests along the boundary, and in a very short time we hope to have such a system in good working order that it will be impossible for the law breaker to be harbored in either country, when he attempts to violate the laws respecting game.

A very interesting case is now pending in the Wisconsin courts, which will bear materially on this question. That is, the right of the wardens of one State to make arrests and destroy property when being used illegally on waters that form a common boundary between the several States. You know that the State of Wisconsin lies east of Minnesota, and that the Mississippi River and Lake Pepin form the boundary between these two States for 150 miles. Lake Pepin is the great breeding ground of the upper Mississippi. We have endeavored to keep the net fishermen from destroying the fish and in our raids have got over on the Wisconsin side of the lake and more or less trouble has resulted, guns being trump more than once. But I am glad to say that the matter is before the courts now and we are going to have a settlement that will last for all time to come. Our contention is that the wardens of one State have the right to arrest and bring to justice all law breakers on any waters between their own State and that of a State bordering thereon, and that the arrest can be made at any time before the violator reaches land; and our Attorney-General Douglass has given us an opinion, with which Attorney-General Hicks of Wisconsin has coincided, that according to the Enabling Acts, admitting the States of Minnesota and Wisconsin to the Union, both States have concurrent jurisdiction on all waters which form a common boundary between the States. Of course, to bring this about we must have the most thorough co-operation between the different State game wardens and their deputies, and assistance must be rendered to each other if necessary to bring the offenders to justice. We know that there are cases on record where requisition papers have been asked by the Governor of one State from the Governor of another to bring back men who have violated the game laws of that State, and under proper conditions this is to be commended.

One of the best agencies ever put in force to help carry out this reciprocity is the Lacey Law. None of us yet realize how far reaching this law is, because it is only in its infancy, but in my humble opinion it will be the strongest agency we can employ in stopping the illegal marketing of game, and will make it so unprofitable that in ten years the market-hunter and game dealer will be a thing of the past. Mr. Lacey, member of Congress from Iowa, is entitled to the respect and gratitude of every lover of game protection. Mr. T. S. Palmer, Assistant Chief of the Biological Survey, stationed at Washington, is one of the best men who could be found to carry out the provisions of this law. He and his assistants are doing a great work by seizing every shipment coming from any State where the laws of that State prohibit the shipment of game out. They are not only doing this, but each congressional game warden is provided with blanks like the one I hold in my hand. This is filled out with the shipper's name or number, the station shipped from and the date; then a copy of the way bill or express receipt is secured and the tag on the shipment. These are all pinned together and forwarded to the State authorities, where the shipment is made from, and conviction usually follows when such evidence is furnished. Another example, only on a larger scale, of the benefits of co-operation.

Now, to carry out this system of co-operation more successfully between the States, we want the hearty co-operation of all common carriers, the railroads and express companies. The railroad and express agents have to be appealed to because without their aid the fight is an uphill one. I am very glad to-day that the different carriers in our State of Minnesota render the Game and Fish Commission great service, and none of the higher officials, if they know of it, will allow any game to be carried contrary to law. We have more to do with the two great transcontinental lines, the Great Northern and Northern Pacific, than with any others. The management of both roads, from the highest to the lowest, are in hearty accord with game protection. Then we want the co-operation of the public, especially the farmers and pioneers. I need not tell you that a strong and vigorous public sentiment is the best help we can secure, and will often deter a law breaker where wardens fail.

I want to see this meeting, that has beeen called on a spot for which nature has done so much, accomplish much. I don't want the different States' representatives simply to meet here, have a pleasure trip and go home; but hope that each of us will go back to our several States with additional enthusiasm and added knowledge, as well as with a firm determination to not only protect the game of his own State, but to render every assistance in his power to his neighbors. If we do that, this meeting will be a success and will be a lasting benefit to the States here represented.

Some Needed Legislation.

Now Mr. Scott has asked me to point out some needed legislation. I should have preferred that this be delegated to abler hands than mine, but Montana and St. Paul are quite a ways apart, and for that reason I obey.

In the first place, I think every State in the Union ought to declare and have it incorporated in its game laws, that the game and fish of the State belong to the State—i. e., to the people in their sovereign capacity, and that no one can acquire any right in it except as the Legislature gives them permission. Then we will have something uniform and a basis for all the States to work on. Then every State should have a non-export law, strictly forbidding the shipment of any game bird, animal, or game fish outside the limits of the State. Then when a shipment is found by the authorities of any State in the Union that has come from a neighboring State, every warden will know that it has to be seized because it has been shipped contrary to law. Then every State ought to incorporate in her laws a limit to the killing, say twenty-five birds, two or three deer, and one moose. The law ought to be clear and specific in regard to the hides and heads of animals, making it just as much of an offense to have the hides and horns in possession as it is to have the carcass. This will put out of the business the hide and head hunter, because we all know that he does a great deal of damage, perhaps more than the meat hunter. Then, above everything else, every State ought to have a clause prohibiting the sale at any time of all game birds, animals and game fish.

When Forest and Stream first proposed this measure years ago, they were laughed at from one end of the country to the other. Strong editorials were written on the subject by the leading newspapers of the country, accusing Forest and Stream of working in the interests of the "dude" sportsmen and trying to deprive a large majority of our citizens of the privilege of buying their game in the open market. But sentiment has changed since then, and I bring you a message from Minnesota vouching for the benefits we have received from that excellent section in our game laws stopping the sale of all game.

We ought to incorporate in our laws a section (we have it in Minnesota) declaring contraband all devices used or maintained for the purpose of violating the law; that if a man went fishing contrary to law, with a net, to make that net liable to seizure and destruction. The same with a man's dog and gun; declare both contraband when being used illegally. It is a splendid law and ought to be put in practical operation. Such laws have been held valid by the Supreme Court of the United States; see Lawton vs. Steele, 152 U. S., 133.

Then we ought to have embodied in our laws, and every State ought to have it to make it effective, a section giving the wardens the right of search, when, in their judgment, a package contains game illegally shipped. It ought also to be made an offense for any one to ship game without having the contents plainly marked on the package; this would do away with a great many of the sneaking methods employed by the game dealer and market-hunter.

As for spring shooting, no true sportsman will kill ducks or geese in the spring of the year and the other fellows ought to be prevented by a rigid law, backed by strong public sentiment.

Then every State ought to have a license law, which should be uniform, or as nearly so as possible. Personally, I have never been in favor of a license law, but in self-defense every State must adopt it; for if one State allows free shooting, it will be made the dumping ground of all the shooters from the East, and its game will soon disappear. As I said before, personally I am not in favor of it, but when we come to study it we find that it is not so bad as it at first appears. In the first place, it helps to raise revenue to protect the game of that State, and it is a check on the hunter who may come to that particular State and not be particular whether he obeys the law or not.

Now no one realizes better than I do how imperfect this paper is. I want this convention to take it for what it is worth, and if there is any good in it, to adopt it; the bad is easily gotten rid of.

Wig-Wagging for Pigeons.

Pigeons are necessary for the squab market, but that does not seem to be the reason why there are so many flocks of pigeons in the city. Small boys have them for pets—it just answers the small boy's idea of having fun: the doing with great pains of something which can have no possible value. As soon as a pigeon-keeping boy is out of his own bed, he hurries down into the backyard to let his pigeons loose. Then he bolts his breakfast, and rushes out to tole his flock back to their coop. It's nip and tuck whether he can succeed before school time, and up to the last moment he keeps up his endeavors, yielding only when the birds have come home or his mother calls out of the window that if he doesn't leave at once he'll be late. To tole a flock of pigeons needs unlimited patience, and a fishing pole with a rag at the end. When the boy begins operations, the pigeons are usually perched in a row on the eaves of some house far down the block. He begins by whistling monotonously through his teeth. That seems to have the effect of causing the birds to snuggle up together. Then he begins to wave his rag at the end of the fish pole in circles over head. At once the pigeons leave their perch, and begin to fly compactly in wide circles, which may be a block or more in radius. Without resting, they fly this way for a long time about the place where the boy is waving the rag like an army signalman. All of a sudden, and it may be after an hour of such circular flight, they swoop down into the coop and begin to pick up the grain as though they had never left confinement.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in Forest and Stream.

Newfoundland Tuna.

Sydney, C. B., July 28.—*Editor Forest and Stream:* I read with a great deal of interest an article in Forest and Stream by Mr. J. L. L. Waddell on tuna fishing in Nova Scotia. This gentleman evidently possesses the soul of a sportsman and is to be commended for his exhaustive description of the habits and haunts of this noble fish. He says: "Several times in the last two years I have heard the statement that the reason nobody fishes for tuna on the coast of New Brunswick, Nova Scotia and Newfoundland is because of the stormy weather, great waves and consequent danger." I presume the gentleman's information is local, as in dealing with the comparative dangers to be met with in the two former places when engaged in tuna fishing, nothing is said about any dangers to be encountered while in pursuit of this ocean beauty in Newfoundland waters. I will be glad to fill in the gap about this latter place, and with your permission furnish your readers with some information about the opportunities for good and safe fishing there.

The waters all round the coast of Newfoundland is the resort of the horse mackerel, as it is locally called. It makes these waters its hunting ground and finds it can always appease its voracious appetite on the old, middle-aged and young silver herring, which are to be found at all seasons, and to be had for the catching; and as this is a case where the race is always to the swift, the tuna is invariably the winner. At all seasons some of the feeding grounds of the tuna are certainly too rough to make fishing for it anything but safety and pleasure. This would apply to the places unprotected from the rough waves of the Atlantic. But the great bay of Notre Dame and Bonavista, which may be said to be the choice habitats of the tuna, are certainly the places where, if anywhere, this aquatic sport can be indulged in with the least peril and the greatest immunity from rough or dangerous seas. Especially is this true of Bonavista Bay. Here within the great bay extending from Cape Bonavista to Cape Freels, are nine smaller bays and sounds whose waters are almost landlocked, and so completely fenced with islands as to form a natural barricade that marks the bounds of the angry Atlantic. Within these almost inclosed but extensive smaller bays, some of them running inland from twenty to forty miles, is to be found the tuna from May till October, sporting in their placid waters, feeding in spring and early summer on the herring which go into those bays and arms to spawn, and later in the season making its menu of choice young fry, which become its easy prey. In many of these places, which are the resort of the tuna, the fishermen who live there in the month of September and early part of October, catch them and salt them for food, and indeed, when fresh and properly cooked, it is a dish that would tickle the palate of an epicure.

I have never engaged in the pursuit and capture of one of those scaly beauties, but I have watched the fisherman from my boat when so engaged in what must be to them a most exhilarating sport and a grand contrast to their ordinary prosaic fishing for cod and herring. The mode of capture by our local fishermen is the harpoon, and this in many cases of a very primitive make. Great caution has to be exercised when a fish is struck not to allow too sudden a strain on the line, as there is the danger of both giving the fish its death blow and still losing it by jerking out the harpoon. But when a good "holt" is made then begins the real sport, and the shouting of the captors become as contagious as the enthusiasm of the race course, and sometimes bets are taken by the onlooking fishermen—small coin and tobacco plugs—on the size of the fish fastened, and some of the older gamblers make shrewd guesses as to the size of the fish from the rate of speed it can tow the boat. I have seen a skiff twelve feet keel with three men in it towed for thirty-five minutes by one of those fish before it became exhausted. This fish measured from tip of nose to tip of tail five feet nine inches (many have been taken much larger), and was the most beautiful denizen of the sea I ever beheld. The morning sun playing on its glittering scales, tinted the great fish in rainbow colors and displayed such a picture as could only be produced by the hands of nature's own artist.

For any of your readers wishing to engage in a few weeks' tuna fishing I can bespeak good sport and an ideal spot among the hundred islets, sounds and arms of Bonavista Bay, Newfoundland. There are good and safe sporting grounds to be found both in White Bay and Notre Dame, but at Bonavista I have seen the fish taken and know that nowhere can greater natural facilities be found to warrant the safety of the sport than here. Parties coming here to fish for this big game would require to bring along their tackle with them. I mean the rod, line and reel outfit. I would advise going prepared with camping equipment; this can be got at St. Johns. There are houses in nearly all the fishing villages where lodging could be had, but for a party taking an outing in August, I should think the camp preferable. Fresh meat, vegetables, milk, butter and eggs can be also had in these places. Men could be hired in the different places who are veterans in the chase, and boats also could be furnished by these men. I do not think a steam or naphtha launch can be obtained on the bay, but if notice were given with sufficient time, one could be got ready, and certainly to make the fishing a success, a pleasure without pain, a launch is indispensable.

It would be as well for any parties coming to bring along their shooting outfit. Sometimes there is rare sport in shooting seals. This is not the kind of seal, taking of which is one of our famous industries. This kind first referred to does not belong to the families of the harp and hood seal, which have its young on the ice floes in March, but this kind has its young on the shores in the month of June, and is not migratory. Being prepared with a shooting outfit would enable any who

wished to vary their sport to change off from tuna fishing to caribou hunting. The Reid Newfoundland Railway and Steamboat system can take intending visitors right to the waters where the fishing is to be had. In fact, at Port Blanford the railway taps the headwaters of the finest sound in Bonavista Bay for this big game fish. I will be glad to furnish information to any who propose coming, and will forward you later a colored chart showing the different fishing grounds and the absence there must be of any rough water on those grounds.

JON. NOSEWORTHY.

Eastern New York Trout Streams.

Fishing was unusually good in July, owing to the abundant rainfall.

It has been more like "old times" on the streams in Eastern New York and Pennsylvania, and some really good trout have been taken.

Many of these well-known rivers flow at considerable elevations, and years ago maintained a low temperature in July and August.

They do so always in the upper reaches, but the warm water line had crept upward just as the frost line has moved downward in Florida during the last decade.

This season we found the water cooler on July 6 than it was at one time during the month of May.

It is the best summer for fly-fishing we have had for many years and is full of promise for the future, if followed by a good spawning season.

If the earth is thoroughly saturated with moisture when Jack Frost appears, we may expect a long, cold winter. This should be favorable to fish life, in the absence of ice gorges and heavy floods.

The recuperative power of a good trout stream is really wonderful. Last year the Willowemoc suffered from a great disaster. One of those preventable mischances that are so exasperating. A tank at the Wood Alcohol Works, above Willowemoc, emptied its acid into the stream, killing great numbers of trout. Big and little suffered alike, and it was thought that several years would pass before the loss could be made good.

On the contrary, the fishing at De Bruce is now better than it has been for years at this season. With plenty of water the trout have run up from below, probably, and as the Willowemoc has been regularly stocked with fry and yearlings, there was, no doubt, a large surplus to draw upon.

In fact, the number of trout in many of our hard-fished streams is far and away beyond anything we can imagine. It is only when some great mortality among the fish reveals the secret that we can realize what the stock must be.

Summer fishing in our mountain streams is fascinating sport, and with the cool weather we are having, August should be a good month.

The fish are there, though you may not think so. Use fine tackle and have a good variety of flies, size and color may make all the difference between a fair creel and an almost empty one.

The white-winged coachman has always been a favorite, but his royal brother is preferred by many experts now. It may be taken for a glorified ant, or simply because it is so pretty that the trout must have it for a nose jewel, but that is of no importance if it takes the fish.

We usually prefer flies of more somber coloring. The Cahill is a good killer and all the tribe of duns. The Wickam's Fancy is an excellent fly at times, and the professor always of service. We usually tie the latter with a very pale yellow body.

It is an old saying that the best fly is the one that is always wet or in the water, but it pays to make changes occasionally.

Very large brown trout are now found in many of our streams, and they are dangerous antagonists. Just after a freshet, when there is till a shade of color in the water, is the best time for these big fish.

If you locate one of them, it may pay to devote some little time to his capture. While very timid in low water, they are sometimes extremely bold after a freshet. We have seen one of these large fish rise slowly in plain sight and take a fly within fifteen feet of the angler.

We think that they can fast for long periods, but when really on the feed are almost insatiable. They frequently take in the large case worms with their coverings.

Special's remarks on the use of small flies for salmon and large trout in Maine in F. & S. for July 26, were very interesting. Two years ago a friend wrote me that he had good sport at the Rangeleys when using the old Beaverkill fly on No. 8 hooks.

He also returned a plain little fly I had given him, saying that it had killed the largest salmon. Tail a few sprigs of ibis over gold tinsel, peacock herl body, with red-brown legs, red-brown over white under wings and jungle fowl sides.

The large fly has its place, however, and no hard and fast rules can be made. To take large fish with small flies and light tackle is most satisfactory to a sportsman. It is much less difficult we think in boat fishing than when wading a big rocky stream. A good man with the paddle or oars fights almost half the battle.

In 1885 the parmacheene-belle was queen of the Maine lakes and was sometimes dressed on very large hooks. We never offered the most costly salmon flies in exchange for our blonde belles, and they seemed fascinating in all states and conditions of weather and water.

A northwest wind is the breeze of breezes on a Maine lake, and we remember driving tandem with the parmacheene-belle and scarlet-ibis, when the fun was fast and furious. What a combination for the brook fisher who has been studying entomology.

The plain little flies had their day, however, when the lake was without a ripple and the trout rose under the long shadows cast by the late afternoon sun.

As one grows old, we care less for numbers and more for size and quality. We are satisfied with a few good fish, thinking more of the future of our sport and of those who will follow us.

THEODORE GORDON.

Fish and Fishing.

The Salmon Season of 1902.

THE salmon season now drawing to a close has been one of the most peculiar on record. The early March thaws seemed to presage an early and long fishing season, and undeterred by the later lengthy lingering of winter in the lap of spring, a number of American salmon fishermen left for their rivers very early in June, only to find that the water was too high to be fishable. The result was that those anglers who had not unlimited time at their disposal left the best fishing of the season behind them when they had packed up their rods and gone home. As soon as the rivers fell to their normal level, which, in consequence of the long-continued and heavy rains, was not till late in the season, the fish rose freely, and being very abundant in all the best rivers, afforded better sport than has been experienced for some years past. I hear that the fishing on the waters controlled by the Ristigouche Salmon Club, though late, was excellent, and that no fewer than eighteen hundred fish were killed during the season in the Ristigouche and its tributaries.

Among the earliest anglers on the Canadian salmon streams this year were Mr. Ivers W. Adams and party, who went down to the Moisie on June 1, and Prof. Johnson, of New York, who left for the Jupitagan about the same time. The latter river being much smaller than the Moisie, fell very much more quickly, and Dr. Johnson enjoyed excellent sport fairly early in the season. The Moisie party were twenty-eight days on the river before they took a fish. Then the sport was fast and furious. The same experience fell to the lot of the fishermen on nearly all of the north shore rivers. Mr. E. C. Fitch, of Waltham, and his two friends only killed thirty fish on the Romaine during the whole month of June, while in July it was quite easy to take as many in one day. One of Mr. Fitch's salmon turned the scales at forty-one pounds. Mr. Morton Paton, of New York, who fished the Trinity with a couple of friends, reports that his party took only eleven salmon during their first three weeks on the river, and in the following four days killed twenty-four. Mr. J. J. Hill, who has some of the best waters on the north shore, was obliged to return home before the fishing was at its best. Rev. Dr. Henry Van Dyke remained long enough on the Riviere-des-Truites to kill some thirty salmon, and Mr. F. S. Hodges, of Boston, was the last to leave the Natashquan. Mr. R. E. Plumb, of Detroit, was one of the fortunate anglers who enjoyed the sport of kings on this most sporty of Canadian salmon rivers.

It was generally supposed by fishermen that the heavy floods in the spring of the year, after the arrival of the salmon in the estuaries of the rivers, had so befouled the water that the fish had for the most part remained out of the streams just so much longer than usual. But from the enormous number of fish found in the upper waters of the rivers as soon as the floods subsided, and from the fact that many of them were far from wearing the bright livery of freshly run salmon, I im inclined to think that instead of being kept out of the streams, most of the early arrived fish took advantage of the high water to quickly overcome the usual difficulties encountered by them on their way to their spawning beds.

Even on the Grand Cascapedia there were some blank days in the early part of the season, though as a whole the summer of 1902 was one of the most successful ever experienced on the river. Such of the members of the Cascapedia Salmon Club as desired to do so had no difficulty whatever in reaching their limit of seventy-five fish. The present membership of the club includes Mr. Calwallader, Mr. Vanderbilt, Mr. Harry Hollins, Mr. H. De Forrest, Mr. John Kennedy, Dr. S. Weir Mitchell and Mr. E. W. Davis, of Providence, but not all of them fished the river this year. Mr. Davis controls personally some of the best portions of the Grand Cascapedia, and a number of other fine pools, including the water formerly fished by H. R. H. the Princess Louise, are the property of Mr. C. B. Barnes, of Boston. Both of these gentlemen fished the river this summer, and among others who had good sport there were Messrs. Mershon, of Saginaw, Mich.; Mowen, of Philadelphia, and John G. Heckscher, of New York. Mr. Heckscher fished with Mr. Davis, and killed a splendid lot of fish. Mrs. Davis, than whom probably no lady angler has so many big fish to her credit, killed a 43-pound salmon in the third week of July, and several of her forty-four fish of the present season weighed forty pounds and upward.

Killing Salmon at Night.

An interesting peculiarity of the fishing in the Grand Cascapedia, toward the end of the season, when the water is clear, and the weather bright and warm, is the large proportion of fish killed after sundown. The great bulk of the fish taken in July are killed between 7:30 and 9:30 at night. It is almost impossible to cast the fly in the daytime in some of the pools of this and other south shore streams, without being observed by the salmon. Such fish as are successfully raised in the hours of sunlight, usually take a small black-dose. After 7:30 or 7:45 at night a large fly is cast. It is often two inches and over in length, the most killing patterns being found to be the silver-gray and dusty-miller. Sometimes half a dozen fish are taken after sundown by a single rod, and when, as frequently happens, the opalescent hues of the leaping salmon at the end of the line are seen by the silvery light of the moon, the effect is weirdly picturesque.

The Gift of a Fish Hatchery.

Mr. C. H. Simpson, whose place of business is at Chatham Square, New York, but whose summer residence is among the Laurentian Hills in northern Quebec, has just made a very generous offer to the Fishery Department of that Province. Fishing, pisciculture, and the stocking of barren waters with rare forms of game fish life, are the chief amusements of Mr. Simpson upon his beautiful Canadian estate. For some years past he has operated there a fish hatchery, in which he has artificially reared immense quantities of young fish for stocking the waters of his preserve. These have included, not only the common brook trout, but rainbow trout, ouananiche, and the beautiful Canadian red trout (*Marstonii*). Having satisfactorily stocked the whole of his own waters, Mr. Simpson has generously offered the hatchery as a gift to the Provincial Government, providing it will undertake to operate it. The Department now has the matter under consideration, and as there is much need for the work of an inland hatchery for assisting in the maintenance of the purely fresh-water game fishes of the Province, it is to be hoped that the offer will meet with ready acceptance.

Midsummer Flies.

I have had several letters of inquiry within the last few days from anglers who intend to fish some of the inland waters of this Province during the month of August, and who ask for information relative to the best flies for midsummer fishing in Canada. For ouananiche fishing in the Grand Discharge during the remainder of the season, which ends on Sept. 15, I can confidently recommend the B. A. Scott, which is tied to represent an insect of which these fish seem to be particularly fond, and which abounds throughout the heated term on the waters of Lake St. John. This insect is one of those familiarly known as shad flies. The artificial fly is intended to represent male specimens of *Brachycentrus fuliginosus* (Walker), which belong to the family *Sericostomidæ* in the order *Neuroptera*. The General Hooker, which is an effective imitation of one of the *Phryganidæ* or stone flies, differs very little from the B. A. Scott, and is almost as good a killer. Both flies, and in fact all varieties used for ouananiche in the month of August, should be tied on Nos. 6, 7 or 8 hooks. Larger flies will certainly at times attract the fish, even in the hottest weather, but the smaller flies are the safer, and less likely to frighten the fish. A good deal of nonsense has been written about the difficulty of saving large ouananiche upon small hooks, but I have seldom found any trouble in killing them upon the smallest sizes of queen-of-the-water, professor, hare's-ear, Reuben-Wood or Jock-Scott. There is no reason whatever why the ouananiche of Lake St. John should not be killed on as small flies as those described by Special in FOREST AND STREAM of July 26 as having been successfully employed with the same fish in Grand Lake Stream. In the hottest and clearest weather of the short, hot Canadian summer, it requires, indeed, all one's skill to entice the ouananiche, and then, too, as Mr. Creighton so well puts it, "If you understand the fine art of dry fly-fishing, and can maneuver a tiny dun on a 12 or 13 hook so as to look like the real article, and can also handle large fish on the fine tackle required, you will get good sport and the satisfaction which comes of catching fish as Reynolds mixed his colors—with brains."

Almost all that has been said of ouananiche is equally applicable to trout, which even in northern Canada grow more or less shy of large flies in the midsummer months.

For both ouananiche and trout, some of the most attractive tours that can be made in the months of August and September, are those up any of the great feeders of Lake St. John by birch bark canoe.

E. T. D. CHAMBERS.

Delaware River Fishing.

THERE was another rise in the Delaware River the night of July 24, but it amounted to nothing and roiled the water not at all, so that it was still clearing next day. Our party was in camp midway of Crooked Rift, near Kellam, Pa., and in the little eddies alongshore we took some fine bass during our stay there. The farmers had told us there was nothing but eels in that part of the river, and it was with some surprise that within an hour we should land five nice bass, lose two and get three strikes that missed. A two-pound perch was also taken there. All of the bass were killed with No. 2 Skinner spoons while casting in the rift and along the willows.

There are two fine eddies near Hankins, in Sullivan County, both near the village, and good catches were reported from both of these. Then there is Hankins Creek nearby, where one can catch a creel of trout if he is lucky and the conditions are favorable.

Between Hankins and Callicoon Station there are some glorious places for bass and wall-eyed pike. Between these two towns the river is quite rapid, as it twists and turns a great deal in passing between narrow banks, and the rifts are strewn with large rocks on the Pennsylvania side, forming excellent hiding places for the game fish. One cannot safely wade these rifts, but casting from shore is possible, as a general thing. So far I have had the best luck with small spinners and a single hook, though a phantom minnow has proved a successful lure. Live minnows are successfully used, too, and these may be obtained in the numerous small streams that empty into the Delaware.

There is a bridge at Callicoon, and a walk of a mile from the town will bring one to an eddy on the Pennsylvania side, where I saw bass as I passed by. It is at the lower end of an island, and within a half mile one may choose between two rifts and a fine pool, all decidedly fishy in every aspect. At Callicoon this is known as good bass water. But there is a pool within ten minutes' walk of the station where good catches have recently been made. One was twenty-five bass to two rods in an afternoon. This pool may be reached by crossing the bridge and walking down the shore road a short distance. It is a short pool but a good one. It may be fished from shore or boat, and the rift below it during low water by wading.

Callicoon Creek enters the Delaware at this village, but trout will hardly be found short of three miles from there, and bait is generally used. This creek has been stocked at different times with rainbow, brown and brook trout. It is a pretty stream to visit.

One can go to Kenoza Lake from Callicoon by stage, the distance being nine miles. There is good fishing for pickerel and bass, they told me at Callicoon. Swago Lake is but five miles distant, in Pennsylvania, and the fish are bass, pike, pickerel, etc. So far I have heard no reports from there.

There were a few anglers on the river near Callicoon July 26 and 28, and the river was falling and growing clearer. On the 29th, however, heavy rains filled Callicoon Creek, which in turn, roiled the river for a long distance. Then the Delaware rose steadily, and is still

rising, as I write. The many boats at Callicoon are tied up and few anglers are to be seen.

Further down the river, say two miles below Callicoon, there are two fine eddies, and another one at Cochecton, N. Y., while at the latter town one can go to Laurel Lake, four miles distant, in Pennsylvania, for pickerel, perch and bass; to Huntington Lake, about six miles from the town, in New York State, for similar fish. Then, Tyler's brook is near, and the trout fishing, I was told, is good in low water.

One of the deepest eddies on the Delaware is reached from Narrowsburg, N. Y., distant about 125 miles from New York city. Like Callicoon, Narrowsburg has an abundance of boats and guides for hire, and in some places the pool is easily fished from shore, especially a short distance above the town and on the Pennsylvania side. Some big wall-eyed pike are taken, and all varieties of bass. Parties go from Narrowsburg to Mast Hope, about six miles, in large flat-bottomed scows, fishing the rift and eddies en route, and return by train. While passing down I saw numerous camps and talked with anglers, but while each one praised the fishing in low water, they were taking no game fish at the time, so high and muddy was the river. But there are good pools all the way.

There is an eddy a mile above Mast Hope, and Ten Mile River enters the Delaware at its head. Inquiries as to this pool should be sent to Tusten Postoffice, N. Y., which is alongside the eddy and immediately below Ten Mile River. This stream has a good reputation for trout and is easy to follow, as a road is adjacent.

There are several lakes near Mast Hope and two creeks. Campfield and Simms ponds and Westcolang Lake are all within five miles of the village, which is prettily located in the pines, and they contain the usual varieties of game fish.

It seems unlikely that the fishing in the Delaware will be good before August 8, even if the storms blow over and the river falls and clears in its usual time. To-day there is little encouragement in the skies, which are still overcast, and rains have fallen all about, as well as here at Mast Hope. Better luck next time.

PERRY D. FRAZER.

MAST HOPE FALLS.

New England Waters.

BOSTON, Aug. 2.—Still there is good fishing at most of the Maine resorts, although the season is usually practically closed to trolling by the middle of July, and fly-fishing is generally poor the rest of that month and all of August. It is likely that the cold and wet summer has had much to do with prolonging the fishing. The water in most of the Maine lakes is almost up to full banks, which is very unusual so far into the summer. C. G. Brown writes friends here that he has good sport at the Birches, Mooselucmaguntic Lake. There was one great day last week, when almost everybody got fish. Mr. C. A. Robinson, of South Windham, Me., formerly a devotee of Sebago fishing, but who has built a fine camp this season on the Decker Purchase, Mooselucmaguntic Lake, is having great fishing. He writes a Boston friend a glowing account of what he did in one day last week. Mr. B. D. Stevens, a Lake Auburn angler, keeps on fishing as opportunity offers. He landed a salmon of five pounds the other day.

Bass fishermen are having some very good sport. Mr. W. C. Harding and Mr. Howard Brandenburg, both Boston printers, went up the Sudbury to Wayland Monday. Luck seemed to turn against Mr. Harding. He hooked four apparently good fish, but succeeded in landing neither. Mr. Brandenburg caught seven bass, from one and a half up to five pounds, though he too lost four or five fish. The big bass was a surprise to both fishermen. Plump five pounds of fighting bass give an experience that does not often fall to the lot of an angler within a few miles of Boston.

Aug. 4.—For one I rejoice in the position the Granite State will take on the hunter's license question, through her Fish and Game Commissioners, and such sensible writers as Mr. Stark, provided Maine is foolish enough to adopt such a system. I can assure him that in that event a great many hunters will turn New Hampshireward. In speaking of the proposition to license hunters who go to Maine, a gentleman who has hunted several seasons in Maine recently said that New Hampshire would be left to hunt in without paying toll, and he should go there. He also remarked that he admired the good sense of the New Hampshire Commissioners in that they have gone straight forward, and have not been disposed to dabble in all sorts of schemes for getting money. "They have not invented spoon hooks and spinners, nor have they made September license laws, and have not taken the moose law into their own hands, if the illegal shooting happened to have been done by the sons of rich men."

Mr. E. C. Stevens is back from his summer fishing at Lake Dunmore, Salisbury, Vermont. Mr. Stevens speaks in the highest terms of this lake and its fishing, as well as the surroundings. He was out every morning, before the sun was warm, and fished again in the evening. He caught bass up to three pounds, and his biggest pickerel weighed 6½ pounds. One morning he was out with a guide and a minister—the minister to fish, of course. Trolling across a place noted for its big pickerel, he had a strike that satisfied him that he had struck the fish that he "had been laying for for ten years." The splash was a great one, and the fish turned. With a single dart the bamboo rod—"nearly as big as my wrist," Mr. Stevens says, was in two pieces. "Even then I thought I could hold him, for the line was a good one, and I had him by the top of the rod, with fifteen or twenty feet of line out. But after half a minute the line came to me, minus hooks and leader. The vicious old shark had cut the line off with his sharp teeth. I did not swear, because I never do, and beside there was the minister in the boat. He mildly remarked that 'it is very provoking. That fish weighs ten pounds if he does an ounce.'"

At Kineo, Moosehead, the fishing is reported to be good. Lenox Smith, of New York city, has lately taken some good strings, trout of three and a half and three and three-quarter pounds—large ones for Moosehead. At Upper Richardson Iake the camp owners are assembling, including Mr. Emerson McMillan, of New York; the Messrs. Bayard, John E. and E. V. R. Thayer, of Boston, and their families. Mr. E. V. R. Thayer has built a beautiful camp on the Camp Stewart lot that he purchased last fall. At the Upper Dam some trout and salmon are still being taken. At the Birches Mr. John S. Hall, of Southbridge, Mass., got a trout of six and a half pounds last week. Mr. Isaac R. Thomas, of Boston, caught a four-pound and a five-pound salmon, and Master Arthur Thomas got a trout of four and three-quarter pounds. Mr. Fred E. Jones, of Brookline, Mass., at the Mooselucmaguntic House, landed three salmon on Friday, one of three and a half, four and a quarter and six and a half pounds. John Alberger, of Philadelphia, also got some good fish, including a salmon of three and a half pounds. At the Bangor salmon pool a great many fish are being seen, some jumping on to the apron of the dam. But few are taking the hook. Fishing parties are now in order for Aroostook county, particularly the northern part. The Oxbow region is good, and also the region further north. Many fishing and camping parties are making the great carry trip through from Norcross to the Allaguash waters and down that stream to Van Buren. Great numbers of deer and moose are being seen, with now and then a caribou. Fine strings of brook trout are being taken in the vicinity of Plymouth, N. H. The waters of the Pemigewasset River are well spoken of. A string of thirty trout was taken from Hancock Brook last week by a conductor on the Boston & Maine system. Last week Mr. Hull and Mr. Thornton got 100 trout from the streams in that valley. Guests at the Profile House, and other summer resorts, improve the time in fishing. The very cold and wet season has been favorable thus far.

Mr. J. H. Jones, of Boston, has lately had some rare sport bass fishing at Crystal Lake, Canaan, N. H. He fished with his little son, and the youngster enjoyed the sport as much as his father, if such a thing is possible. They took sixteen bass at one trip of only about an hour and a half, and twenty-one at another trip. Even the boy was not satisfied, and wanted to "catch one more," although it was nearly dark. A curious feature of Mr. Jones' fishing was that the inhabitants around were not aware that there were any such fish in the lake, till presented with a mess of bass, all nicely skinned and dressed by Mr. Jones.

SPECIAL.

Rotten Pond in Bloom.

ROTTEN POND is purging at present and has been undergoing that process for some time. Some people imagine that purging prevents fish from biting, but the trouble is that those people do not know where to look for the fish, for the latter are just as hungry whether the water is clear or clouded. Fish do not like the state of the water when the purging is going on, no more than the people here like the black smoke of the soft coal. Fish will get away from it just as people get away from the smoke. Purging in a pond is due to the ripening of vegetation under water; the little seed bulbs arise to the surface and remain there until they ripen, when the live seed is precipitated to the bottom in order to produce more vegetation next year. The hulls which contained the seeds remain on the water until they decompose or until the wind blows them to shore. Some ponds, like Green Pond and Hanks' Pond, never purge, because they do not contain that peculiar vegetation which causes the purging process. As said above, fish try to get out of the clouded water and betake themselves to parts of the pond where the bottom is composed of rocks, gravel and sand and where are consequently no ascending bulbs or descending seeds. Consequently, in such places the fishing is better than usual. But to pursue the simile of the black smoke further, there are places like Pittsburg and Cincinnati where nothing but soft coal is burned and where, consequently, there is always moke. Rotten Pond is one of the Pittsburgs among ponds; it produces the vegetation which causes purging, all over its entire area. In such cases the fish do as the people do in Pittsburg, get used to it. In such ponds purging does not interfere with fishing, although it forms a convenient excuse for want of luck or skill.

Purging is not a very remarkable feature of Rotten Pond, but the character of the bass there is. Rotten Pond was stocked from Oldham brook and the Passaic River, and in neither of these waters are the big-mouthed bass particularly gamy. But it is a question whether there is a pond in the country where the bass possess more gamy qualities than they do in Rottten Pond. The big-mouthed, excepting in swiftly flowing streams, is a sluggish fish compared to the small-mouthed, but in Rotten Pond, for some unexplained cause, the big-mouthed is about as gamy as nature ever made fish. Instead of going to the bottom when hooked, as the big-mouthed does in Greenwood and most other lakes, the fish in Rotten Pond come straight to the surface and frequently jump out of the water five or six times before they are landed. Captain Simonton, of the local fire department, who fished Rotten Pond on Monday last, took up the better half of half an hour in landing a big-mouthed bass which did not weigh more than two and a half pounds. In Greenwood Lake, Wawayanda Lake and other waters, where there are plenty of big-mouthed bass, the captain could have easily landed half a dozen fish of that size in the time it took him to land that one in Rotten Pond. This peculiar characteristic of the bass in Rotten Pond has never been explained and probably never will be.

The question has frequently been asked what makes fishing so good in nearly every newly constructed pond, and this question is easily answered. There was, perhaps, never better fishing than was afforded by the reservoirs of the East Jersey Water Co. above Newfoundland three or four years after the water was first let into these ponds. The cause of this good fishing is the large volume of food to be found there. Vegetation which grows under water spreads very quickly, and when lands have been submerged the soil is very rich. The result of this abundance of vegetation is the production of a great deal of food for the small fish and the latter multiply in proportion, thus affording an abundance of food for the larger fish. There is one principle true of all fishing waters; the amount of fish produced is in direct proportion to the quantity of food to be found there. When there is plenty of food there will be plenty of fish. Rotten Pond was stocked some eight or nine years ago; it has passed its prime as a fishing place and its future will depend more upon the food placed in it for the big fish than on the number of big fish put in there. Mr. Frothingham is well versed in such matters, and it is safe to say that as long as he controls Rotten Pond there will be good fishing there. It is not as good now as it has been; in fact, frequently it is very poor, but a year or two of intelligent stocking will soon bring back the fish.—Chas. A. Shriner, in Paterson, N. J., Chronicle.

CHICAGO AND THE WEST.

Back from the Nepigon.

Mr. Oswald von Lengerke and Mr. Charles Lester are back from their trip to the Nepigon River. They were gone two and a half weeks. It takes four days to get to the fishing from Chicago, and four days to get back again. These gentlemen had excellent success on their trip, and are delighted with the country, which they describe as beautiful and interesting. They had fine success in fishing, taking about 75 pounds of trout daily. They brought back birch bark mountings of skins of several very handsome trout, their heaviest fish weighing 5¼ pounds. Mr. Von Lengerke took three which weighed 4¾, 4½ and 4½ pounds, these being his three first fish. They came near to tiring him out.

The record trout on the Nepigon is 8¼ pounds, there having been only three fish of that weight taken in twenty years. The numbers of trout seem unexhausted in this famous stream, and although the trip is one offering no special interest or news, the fishing itself is exciting and thoroughly satisfactory.

Mr. Von Lengerke says that the Canadian Government has this year set an Indian to destroying the great northern pike in the Nepigon River below the lake. This Indian is working with gill nets. In one night he caught 170 pike. Mr. Von Lengerke saw one pile of sixty pike which would average over twenty pounds each. These fish are all buried, no use being made of them at all.. The intention is to rid the stream of these fish and to keep the trout. The anglers complain that these great pike ruin their tackle and there is no stopping them.

These gentlemen report that there were seven parties beside their own on the Nepigon at the time they were in. Of these, one was from New York, two from Minneapolis, the rest unknown. Mr. Von Lengerke states that, so far from the supply of trout in the Nepigon being cut down, it is abundant to the limit of any angler's desire.

The Mississippi River Small-Mouths.

I used to think I was a good deal of a fisherman, and then I used to think I was at least something of a fisherman. I know better now. I have been mixed up with those Mississippi River small-mouth bass again, and they have convinced me that I don't know very much about bass fishing.

I wanted to go out to Lake Minnetonka to see the folks last week, and on the way out thought I would stop on the Mississippi river for a little bass fishing. Of course there was no one to go along. One's friends always fail at the last moment. Moreover, I knew that the Mississippi River was extraordinarily high, as it has been for a month. But such little matters as this ought not to discourage a man who really feels he ought to catch a mess of bass. Hence I did not change my intention of stopping for a try on the Father of Waters. I got off at Wabasha, Minn., below the mouth of Lake Pepin, and just below the mouth of the Chippewa River. I did not know any one here excepting Mr. H. B. Jewell, a sportsman of some thirty years' or more experience in Minnesota. On the way up from the depot I heard of Ira Weeks, a man who owned a good gasoline launch. I chased Ira all over town, and at last found him, big, quiet, good natured, and he in turn chased all over town until he caught Louis Longhway, a local boatman who says that is the way he spells his name, although I suspect him of being French and believe the way ought to be "Longuet." There was a circus in town that day at Wabasha, and Mr. Jewell and Ira Weeks and Louis and I all saw something of the circus, which made us feel young again. Hence it was after noon before Louis and I started down the river in his fishing skiff, with the understanding that Ira was to go down with his launch and take Louis up later in the evening ten miles below Wabasha.

Louis and I found the Father of Waters much excited, very high indeed, and getting higher. All the flat lands on both sides of the big river were filled with sloughs and cut-offs. The main stream itself looked so turbulent and uninviting that we determined to try the sloughs, thinking that the fish might have been driven in there by the freshets. We wandered off into one of these sloughs away from the main river, and traveled five or six miles in this way before we came back to the river again. Everything looked very bad for fly-fishing, and it was only fly-fishing which I cared for. And yet there were good signs of bass even under such unpromising conditions. I saw a big pool along the bank where the bass were feeding, and cast the fly over that place. As it sank, I felt a heavy tug and for a moment thought I had the fish fastened, but he ran deep and broke away. Accident No. 1. I made light of this and told Louis that it was not in the least important. Pretty soon something very similar happened again, and it happened five or six times in the same hour before we managed to get a bass into the boat. This was a fish weighing about a pound and a half.

We passed out into the old Beef River cut-off, where the Chippewa River logs used to be sent through, and where we now found plenty of good fishing country. A little stone pier looked likely to me, and I got Louis to row me over. I cast at the edge of the stones, and at once had a very heavy strike, raising this fish to the surface of the water. Once more I cast in, and again had a strike, the bass running very deep and feeling tremendously heavy. A third time I cast, and a third time had

a strike in this ittle place, not bigger than a table cloth. I lost him. This made half a dozen bass which I had lost in two or three hours. It was a little discouraging, but I told Louis that luck did run that way sometimes.

We now ran down the cut-off until we came to the mouth of the Beef River. This is not ordinarily a good bass ground; but Louis said he sometimes found one under the old bridge which runs across near the railroad track. As we stopped at the mouth of this river, meditating whether we should try to ascend it, we saw a big swirl close along the planked sides of the bridge pier. There was a mass of wreckage in the river which prevented the boat going up, so I told Louis to sit still, after putting me ashore, while I went on up to see if I could raise the bass. I made a dozen or twenty casts along the planking before I got a response. Then, all at once, there was a most terrifying tug at the line, and the rod tip went down sharply. This time the bass was hooked solidly, and then we had the biggest fight you ever did see. I was directly above the fish and the fighting room left me was only about thirty feet square. The old fellow evidently had a hole somewhere in the plank wall into which he wanted to go. Making a strong run for this hole, he bucked into the plank like a ton of brick. This stunned the fish a little bit, but presently he revived and began to run up and down the sheathing, very deep, and only once in a while jumping. The strain put upon him by the powerful rod, added to the injury which he had done himself, ended the fight in a few minutes, and we put him into the boat; a splendid red-eyed, small-mouth bass weighing 4¼ pounds.

This was something in the way of decisiveness, and I began to tell Louis what a devil of a fellow I was with black bass anyhow. We lost a couple more strikes and at last, just as the next town appeared in sight around the bend, we struck the last bass of the day, a little fellow of about two pounds. This bass when he struck came out from the logs, skipping along the water for about a dozen feet. Then he sounded and jumped alternatively, making as pretty a fight as any fish I ever felt on the rod. In this heavy current he felt as if he might weigh 5 or 6 pounds. It strained the rod to get him up to the landing net.

Total result for the day, more than a dozen strikes and only three bass landed, two of them small ones. When we went into shore and told Ira Weeks of our success, he looked a little bit incredulous and a little bit scornful at the same time. As for me, I did not say a word.

As to getting out to this bass fishing, I would suggest that one go in at Wabasha on the C., M. & St. P. R. R., or some point above Lake Pepin. If you go in at Wabasha, fish up toward the Chippewa River, and up into the Chippewa. La Crosse used to be a good point, but I don't believe the fishing there is as good as it used to be. At Wabasha get Ira Weeks and his steam launch, who will get for you Louis Longhway, or old Hiram Degneau, another local market-fisherman of considerable experience. I am sure Mr. H. B. Jewell, of Wabasha, Minn., would be glad to answer any questions as to the stage of the river and the like, and so I think would the gentlemen mentioned at any of the river points.

The fishing above Wabasha toward the mouth of the Chippewa River is grand at the proper stage of the water. In Lake Pepin the sport is not so good, but the bass are now beginning to work up above Lake Pepin. They tell me that even above St. Paul on the Mississippi River the fishing is good. Personally, I should prefer to go below Lake Pepin and above Winona. Mineaska, on the C., M. & St. P. R. R., or Winona, or La Crosse, are other points where one might go in. This trip is a very handy one from Chicago. One can take the evening train here, get on the river early in the morning, and after one or two days' fishing, take a night train on the river which will land him in Chicago in the morning. The scenery along the river is bold and picturesque. During the high waters one can get out into the sloughs and traverse what was once a magnificent duck and woodcock country, and which even now occasionally turns out good sport. Wabasha is a point very well worth remembering for quail or duck shooting, and I think, indeed, that one could get very fair woodcock shooting across the river from Wabasha even now, if he had a good dog. No one seems to hunt these birds very much, and the country looked to me ideal for them.

At Wabasha I met Henry Trudeau, a French half-breed, more than eighty years of age, who comes as near being a typical trapper as any one I have met in my life. Henry says that last fall he caught fourteen otter in the Mississippi bottoms across from Wabasha. He asked me to come up this winter and see how he trapped otter. The old man has a shack of his own hid over in the wilderness, and here he intends to spend his next winter, as he has for many winters before, trapping and living alone by himself. He does not leave the woods until the very cold weather of January comes, when the fur does not move very much.

Altogether, I find this upper Mississippi country very interesting and well worth investigation by the sportsman, either rod or gun. Especially as to these small-mouths, I most publicly register a vow to get even with them. I'll tell later what happened the next day.

How to Carry Fly Dope.

Dr. W. H. Snyder, of Toledo, O., offers the following tip on carrying fly dope:

"To repay my use for Fox fly dope formula, I will tell you an easy way to carry it. Have your chemist put the stuff in these collapsible tin tubes. One of the smaller ones just fits my whistle pocket and lasts nearly a week. No glass to break and it can be thrown away when empty. I have tried everything, and this is the best I have struck."

Bass.

Mr. Wm. Johnson, of this city, caught the small-mouth bass of Lake Geneva on the feed day before yesterday, and brought twenty-two beauties into camp with him. These bass were mostly taken by minnows in deep-water fishing.

Mr. Bert Waldo, of Fox Lake, Wis., caught twenty-one black bass weighing 40 pounds one day last week. The largest bass weighed 4½ pounds.

Mr. J. Bickford, of Excelsior, Minn., caught thirty-eight black bass deep fishing with frog in Lake Minnetonka one day this week.

There has been a much-touted fishing match on Crooked Lake, Wis., between two teams, two men each, of anglers who are not averse to fishing a side match. There was $100 up on the result, and the funny part of it is that the four anglers together caught less than a dozen fish in two days' fishing. The judges called the thing a tie and the gentlemen are to try it all over again to see if they can catch a mess of fish. I withhold names, because it is not nice to have one's name mentioned in connection with a side hunt or side fish in these enlightened days of the world.

Mr. F. G. Browning, at Eagle Lake, Wis., last week killed nine handsome bass, and at the same place Mr. A. Ahrend caught six bass, nice ones. Mr. F. Sandahl, at Cedar Lake, near Lake Villa, on the Wisconsin Central Road, caught thirty-two bass one day this week, his best fish weighing eight pounds.

Bass Biting.

Chicago, Ill., Aug. 1.—The big-mouths are biting again in the upper Illinois waters, and most of the parties who went out last week had good luck. About the best reported was at the old and much over-fished water, Lake Beulah, in Waukesha County, Wis., where Messrs. Chas. Lawrence and H. Miner took 21 bass and 11 pickerel in one day's fishing, the bass running from 1½ to 4½ pounds each. Similar good fortune is reported from the Fox Lake and Lake Villa region along the Wisconsin Central line. Among others to start this afternoon for the latter locality were Messrs. Lawrence and Miner, F. Doremus, Lester Williams, Chas. Hanson, George Harrison, Carl Hurtle, Geo. Warren, Chas. Olk, H. Greenwood, Jas. Maloney, Dr. Beeler and others. The weather is warm but not glaring to-day, and granted a similar day to-morrow, these gentlemen should hit it about right on the big-mouth proposition. Few of our anglers are going to Indiana now, it being supposed that the best of the angling season there is over. The bass fishing in upper Wisconsin is better than in the lower part of the State, of course, and we hear more of the catches from that region than we formerly did, for the simple reason that the muscallunge are getting so scarce there that the anglers turn to bass fishing, which formerly was so common and so easy that no one cared for it. The season has not turned out very many good 'lunge thus far, though we have still the fall to hear from, during which season some of the largest fish are usually taken.

Chicago Fly-Casting Club.

The following are the records of the last three events of the Chicago Fly Casting Club. The records as originally reported for June 21 were incorrect, owing to error figuring percentages, wherefore the score is rescinded by the secretary, who offers the corrected sheets as follows:

	Long Distance Fly, Feet.	Obstacle Fly, Per Cent.	Accuracy & Delicacy, Per Cent.	Bait-Casting Per Cent.	Delicacy Bait Per Cent.
C. F. Brown		70	91 1-3	..	..
H. G. Hascall		95 2-3	92	..	..
F. N. Peet		95	92 1-3	..	..
H. W. Perce		95	91 2-3	..	..
A. C. Smith		92 1-3	93 2-3	..	..

The scores in distance and accuracy fly hereon are to correct record sheet dated June 21. All distance and accuracy scores on that sheet are wrong, owing to an error in figuring percentages, and are hereby rescinded.

Winner—Distance and accuracy, fly: H. G. Hascall.

I. H. Bellows		93 1-3	94 1-3	92 2-3	91 1-2
C. F. Brown		88 2-3	85 1-2	..	..
W. T. Church		..	..	93 5-6	94 1-6
*H. G. Hascall		89 1-3	91 1-3	98 1-2	97 1-2
N. C. Heston		87 1-6	91	97	97 5-6
J Hohmann		..	..	94 1-3	89 1-6
*F. N. Peet		94 1-2	94 5-6	97 5-6	97 1-2
*H. W. Perce		80 1-6	81 5-6	..	84 2-3
C. B. Robinson		..	..	95 1-6	95
*A. C. Smith		93 1-3	92 5-6	98 2-3	97 5-6
*F. S. Smith		..	..	92 2-3	97 2-3
Re-entries:					
Hascall		..	..	97 1-2	98 1-6
Peet		..	..	94 1-6	97 2-3
Perce		..	..	94 2-3	96 2-3
F. S. Smith		..	..	96 2-3	97 1-6
A. C. Smith		..	..	89	98

Winners—Accuracy and delicacy, fly: F. N. Peet; delicacy, bait: A. C. Smith.

I. H. Bellows	91	97	87 1-12	..	96 2-3
C. F. Brown		94 5-6	..	..	94 5-6
*W. T. Church		..	..	96 5-10	..
*H. G. Hascall	87 1-6	..	86 7-12	98	..
N. C. Heston		98 2-3	..	97 7-10	99 1-6
G. A. Hinterleitner		91 1-3	..	89 8-10	96 5-6
E. L. Mason		89 1-2	..	..	91 2-3
*F. N. Peet		..	86 7-12	95	..
C. B. Robinson		96 1-3	..	94 1-10	90 1-3
Re-entries:					
Peet		..	..	97 2-10	..
Hascall		..	..	97 4-10	..
Church		..	..	97 2-10	..

Winners—Bait casting: H. G. Hascall; delicacy, bait: N. C. Heston.

Back from Minnesota.

Mr. W. P. Mussey returned to-day from a six weeks' trip in the forest country of Minnesota, where he has been fishing for bass and having a good time, much to his physical benefit. The heavy rains which have prevailed over the West have not extended to the headwaters of the Mississippi River.

Back from the Mississippi.

Mr. Byron D. Veatch, of this city, returned this week from a two days' trip among the small-mouth bass on the upper Mississippi River. Mr. Veatch went in at Prescott and floated down the river as far as Diamond Bluff. He met some rain, but had good fishing in spite of the high water. He took some bass on the fly, but also used some bait, which is "agin the statoots" of this Mississippi River small-mouth fishing. On one wing dam near Diamond Bluff he caught eleven grand bass at one station, and he was entirely satisfied with the sport he had. He found the most killing bait to be a California wabbling copper spoon, arranged with two hooks which carried two minnows side by side. With this contrivance he caught only the largest bass, and had better luck than his friends had with any other arrangement whatever. Mr. Veatch is infatuated with this Mississippi River fishing, as well he might be. His guide was Charles Stapf, of Prescott, who charges $2.50 a day. Mr. Veatch says the best fishing was above Red Wing, near Diamond Bluff. There is nothing in Lake Pepin of any consequence.

Where to Fish.

Mr. O. D. Wheeler, of the passenger department of the Northern Pacific Railway, has brought his yearly railway books to so great a point of excellence that they have come to be awaited with considerable interest by sportsmen. His latest hand book of the Northern Pacific Co. is called "Where to Hunt and Fish." It is about as thorough-going and as beautifully illustrated a railroad publication as one has ever seen. The horns of some of the mountain sheep are curled a little bit extensively, but we will let that pass. The best resources of the grand sporting country crossed by this railroad are placed before the reader in pleasant and effective form.

Called.

Mr. Calvin S. McChesney, of Troy, N. Y., my old Rocky Mountain hunting companion, passed through town yesterday, and I grieve very much that he passed so quickly that I was unable to see him during his brief sojourn here. Mr. McChesney, by card, reports himself well and happy.

Chickens and Ducks.

Mr. James K. Boyd, of Hempstead, N. Y., wants to know where he can find duck and chicken shooting Sept. 15. That date is a little late for the best of the chicken shooting in the lower latitudes, but not too late for a certain amount of sport. I would suggest that he try the country in the neighborhood of Detroit, Mich., where he could get a few ducks and possibly a few chickens. By the way, I believe that if any gentleman wanted to find out about the shooting points in Minnesota, he might do much worse than write Executive Agent S. F. Fullerton, St. Paul, Minn. Mr. Fullerton is, of course, in close touch with the game supply all over the State, and his advices would be more direct and authentic than anything I would be apt to have. Mr. Sherwood is busy but good natured, and I would like to make him a little trouble if I could.

For North Dakota, nearly all the little stations as far north as Larimore on the Great Northern, will be found good. Dawson has lost something of its earlier glories, but can undoubtedly furnish duck shooting and some small amount of chicken shooting in season. The Turtle Mountain country will be found good for ducks, and for geese later in the season.

As to prairie chickens, I dislike very much to give definite advice, because this bird is very uncertain. In general it is well to be on hand on opening day if possible. The State of Wisconsin will have about as good prairie chicken shooting as any State in the Northwest this fall. Sept. 1 in these latitudes is usually pretty hot and the sport is pleasanter later on, but the difference of a week or two may mean the difference between birds and no birds.

Sells Frogs.

The train butcher on the Wisconsin Central fishing trains which run out of Chicago to the Lake Villa district, has worked up a fine trade in live frogs, which he sells in bags or baskets on the trains to the anglers who are going out for bass fishing. In the better part of the season this man has sold as much as 1,000 dozen bait frogs in the course of one week.

Mr. E. E. Bliss, formerly of Saginaw, Mich. (but later of Denver, Colo.), writes regarding the sporting resources of his newly adopted home: "The dove season opened on the 15th in Colorado. I went out on my wheel on the morning of opening day and got 19 nice birds. Fishing is, of course, the popular theme now. Early in the season it was good near here, but for two or three weeks now has been poor on most of our trout streams."

E. Hough.

Hartford Building, Chicago, Ill.

Guileless Lo!

A friend just down from a fishing trip in northern Minnesota, within the boundaries of the new Minnesota National Park and Forest Reserve, tells the following story:

"We had thirty miles to make by the team before we reached the lake we intended to fish. My friend and self occupied the rear seat, the half-breed driver sitting in front. A short distance down the forest road we espied a Chippewa buck, rifle in hand, and a gunny sack over his shoulder.

"Ride? Yes, he could ride, and he jumped into the front seat, carefully resting the gunny sack upon the bottom of the rig and between his feet. When he turned our way and replied to our queries regarding moose and deer, we became fully aware of the fact that he had run across John Barleycorn when in town.

"Presently he reached down into the depths of the gunny sack and brought out a full pint flask of whisky and at once proffered it to us. Having scruples against indulging in Lumber Jack's whisky, we declined. The half-breed driver threw back his head and allowed the amber liquid to guggle-guggle-guggle down his throat, and our Indian brave did the same thing, and when the two drinks had been scored and the cork replaced, but half the original contents remained in the bottle. The flask was carefully replaced in the gunny sack.

"Realizing that the Indian was inclined to talk, we plied him with questions and learned more or less regarding the Indian customs of his tribe. How much was truth and how much plain, unadulterated lie was left for us to determine. It was a long, rough drive and a correspondingly long time between drinks, for Lo reached into his sack and produced a second fresh bottle filled to the neck. Again was the cork drawn and a tender made to and refused by us, but due justice was done to the situation by the driver and the Indian, the half-emptied bottle being corked and again returned to its resting place.

"The Indian now began to talk on his own account, and was given to bragging as to his marksmanship, and volunteered to give us a demonstration. We let him, and, as we imagined would be the case, he did not come within a rod of his target, at which he was somewhat crestfallen.

"We continued to pound along in and out and around stumps. It was a long, tiresome ride, and appreciating

that fact, the Indian reached again into his gunny sack and pulled forth a third pint bottle full and untouched, and again was this bottle returned to its resting place minus half its contents.

"A turn in the road brought us to the trail where the Indian's way and ours parted, for only a little distance back in the woods was the Indian village. Before leaving the rig the Indian again reached into his storage warehouse and pulled out a fourth pint bottle of whisky unopened. Holding it out to our gaze that we could be assured that it was a full bottle, he slipped it into the recesses of his blouse. Then gathering up his gunny sack he left the wagon and walked straight to a small brook by the roadside. As the horses moved on we kept our gaze upon the Indian and saw him take the three half-emptied bottles and carefully replace the missing *aqua fortis* with *aqua pura* from the brook, and then jam the corks in good and hard, replacing the mixed drinks in his sack and moving along the trail to his village.

"And this is the way it appeared to us—viz., that three other bucks thirsty, but too lazy to go after it, placed in the hands of our late companion funds sufficient to secure four pints of whisky, one pint to be allowed the runner as commission for his trouble.

"So having helped himself liberally to the whisky of his principals, he covered up his shortage as above described, and if any criticism was made on the weakness of the fire water, he no doubt blamed it upon the rascally liquor seller.

"The Indian may be a child of nature and wholly unsophisticated, but when it comes to a question of manipulating whisky he certainly is an adept."

CHARLES CRISTADORO.

Fish Choke the Paddle Wheels of a Steamer.

YEARLY, as the ducks and geese hurry south, leaving freshly frozen rivers and lakes in their wake, we read of the farmer who goes early to the slough on his farm to break the ice that the cattle may drink. How that farmer notices the lake dotted with clumps of feathers, which on closer investigation turn out to be mallards and canvasbacks, frozen solid in the ice. And when he has chopped them all free his two-horse wagon load is all the team can haul.

But down near New Orleans emanates the following, with all the ear marks of truth:

The high tides filled the sloughs with salt water and drove the buffalo fish into the fresh-water canal. Had there been a few of them only things would have gone well, but as it was, the canal was literally choked with them and the breathing room in the water giving out myriads of them turned belly up.

The pilot of the steamboat traversing the canal plowed his way through the dead and living fish alike, choking his paddle wheels and finally running aground upon a solid mass of dead and alive fish.

The suffocating fish died and then the odor appealed to heaven. Darkies were hired to pitchfork them out upon the bank as they would throw hay, and lime was sprinkled on them. But this was slow and unsatisfactory, because there were six solid miles of fish in that canal. Something had to be done, and it was proposed to cut 100 feet of levee and let in sufficient water to sweep the fish into the Gulf. Another proposition was to station a number of large tuge in the river near the locks and flush the canal by pumping. I understand this latter plan was followed.

The fact that these fish were buffaloes gives credence to the story; one might readily believe it of carp. In fact, if the carp of the country could be driven into the Erie Canal, suffocated and flushed into the Atlantic Ocean, the country would be the gainer. The German carp, like the little German band, has become considerable of a nuisance, and we can easily dispense with them.

CHARLES CRISTADORO.

The Connecticut Worm Law.

Editor Forest and Stream:

Having read the editorial in last issue of FOREST AND STREAM, in regard to digging sandworms in Greenwich, Conn., I thought perhaps I might be able to throw a little light on the subject. As I understand it, the law prohibiting the digging of sandworms was passed in order to protect the long clams. My informants are oystermen, and they claim that in digging the worms great havoc is wrought by disturbing the young clams—that all small clams thus disturbed die. Whether the law applies only to non-residents I have been unable to definitely ascertain, though I have carefully looked over the "Public Acts of the State of Connecticut" for the last four years.

There are some who claim that this law is simply a retaliatory measure. That New York discriminates against non-residents through a like law. Whether this is true or not, I cannot venture to say.

WILLIAM H. AVIS.

HIGHWOOD, Conn., July 21.

The Big Fish Eat the Little Ones.

JAMAICA PLAIN, Mass., July 26.—While fishing for pickerel in Charles River yesterday, I found a dead pickerel. Its death had been caused by a smaller pickerel which the larger one had attempted to swallow. The larger pickerel would weigh about a pound, and the smaller one fully half a pound.

Quail must have wintered well in this section, for we can hear them calling from any part of the woods near the river.

July 19 in going around a sharp bend we flushed four wild ducks, and yesterday about half a mile from this point we saw a wild duck with her brood of three little ones.

The weather was just right for pickerel yesterday, and we captured thirteen. The bass have not been biting very good for the past two weeks, and a little sunshine will make fishing better in that line. I caught one small-mouth black bass there last year that weighed four pounds two ounces. E. C. D.

Fish-Scale Flowers.

DOMESTIC industries travel in a manner that often astonishes the careful student. The Indians of Venezuela and Northern Brazil have from time immemorial been skillful makers of fish-scale flowers and leaves. The denizens of the ocean in the tropics are notable for the color and brilliancy of their scales and fins, the range of chromatic tints, including pink, rose, scarlet, sky-blue, ultramarine, apple-green, emerald, and olive-gold, orange, gray, lilac, and purple. The scales are easily fastened together or to wires with strong fish glue, which is singularly durable and permanent. The industry passed to the West Indies, where it was adopted by the Spaniards, and during the Cuban War came over to the mainland and found a home in Florida. In the present year it has come northward, and now finds a habitation in New York city.

One of the shops is not far from the Waldorf-Astoria, and is presided over by a clever nimble-fingered woman whose work table looks almost as delicate as a jeweler's. Her tools are a pair of scissors, a needle and thread, cloth or thread-wrapped wire, wire cutters, glue pot and brush, and some compressors for changing the curvature of the scales. The scales themselves are usually flat when they reach the operator, and must be concaved or curled in order to simulate petals, sepals, and many forms of leaves. A finished flower possesses a fantastic beauty which is unique. The shape and color of the vegetable world are present, but there is a certain transparency to all the tissues, a firmness to the lines, and a resilience to the leaves and blossoms which are never found in the floral kingdom. The play of color is often startling, and sometimes so brilliant, and yet so subdued, as to seem a new variety of the best and richest mother-of-pearl.—Evening Post.

The Luck of a Pearl Hunter.

CHICAGO, Ill., July 24.—It might come under the classification of "Lucky Finds of Sportsmen," or then it might come under the general classification of hard luck stories. The facts are these: Tamis Haines is a clam fisher of the upper Mississippi River, and has been for some years. A week ago he took his net results of pearls, which he had been some months abstracting from clam shells, and went to Minneapolis to have a look at the city. He sold his pearls to a local dealer for $100, the latter not discovering in the lot anything of special value to his notion. Then along came the agent of Tiffany's, of New York, who examined the sweet water pearls which had been collected by this same local dealer in Minneapolis. Without much ado the Tiffany man sorted out a single pearl from the bunch which Tamis Haines had sold for $100, and paid the Minneapolis man $1,500 for the same, without batting an eye. Tamis, according to last accounts, is still fishing for clams on the upper Mississippi.

Good Fishing in Buffalo.

BUFFALO, July 30.—Although practically no perch have been caught in Niagara River this season owing to the numerous rains that roiled the water, residents on the east side of Buffalo are able to get the toothsome fish without any effort. They arrange with the water department to turn on a hydrant almost anywhere in the Broadway district and the fish will be thrown wriggling into the gutters by the stream. Nearly all the service pipes leading from the mains to the houses are clogged with perch, so much that it is impossible in some places to get any water. The fish average about six inches in length. The water department has not yet discovered how the fish got into the pipes.—N. Y. Sun.

Kawartha Lakes.

CLEVELAND, O., Aug. 3.—I am contemplating a trip to Canada about Sept. 1 in quest of good bass and maskanonge fishing, and at present have two places in view, viz., Bobcageon and Burleigh Falls, in the Kawartha Lakes district, but having no knowledge of which is the best point, except from railroad folders, I would be pleased indeed if some of the FOREST AND STREAM readers would enlighten me as to the merits of either or both places, stating whether good bass fishing may be had, also if guides are necessary.

A. N. WIRLS,
50 Bank street, Cleveland, O.

Staten Island Fishing

GREAT KILLS, S. I., N. Y., Aug. 1.—Weakfish are running very good at Great Kills, S. I. All boats got large catches to-day. M. FITZGERALD.

The Lobster Hatchery.

From the London Chronicle.

NATURE grim, in remorseless mood,
Undoes the work that she has done,
And out of every lobster brood
Slays ninety-nine and keeps but one.

Art stretches o'er the horrid scene
Her skillful and remedial sway—
And when I speak of "Art" I mean
The Fish Commission, U. S. A.

It takes the tender lobsterlet,
And gives him food and kind advice,
Changes his boots if they are wet,
Brushes his hair and makes him nice.

And lo, this baby of the sea
In gratitude begins to thrive;
Where one per cent. it used to be,
Fifty, all fat, remain alive.

O noble work, heroic, grand,
That saves in scientific ways
Those little lisping lobsters, and
Keeps them for me and mayonnaise.

The Kennel.

Fixtures.

BENCH SHOWS.

Sept. 8-11.—Toronto, Can.—Twelfth annual show of the Toronto Industrial Exposition. Fred Jacobi, Sec'y.
Oct. 7-9.—Danbury, Conn.—Danbury Agricultural Society's show. John W. Bacon, Treas.
Oct. 8-11.—Dallas, Tex.—Fifth annual show of the Texas Kennel Club. Geo. W. Clayton, Supt.
Oct. 21-24.—Frederick, Md.—Frederick County Agricultural Society's annual bench show. J. Roger McSherry, Supt.
Oct. 21-24.—New York.—Ladies' Kennel Association of America's show. Miss M. K. Bird, Westbury, L. I., Hon. Sec'y.
Nov. 26-29.—Philadelphia.—Philadelphia Dog Show Association's show. M. A. Viti, Sec'y.

FIELD TRIALS.

Aug. 19.—Emmetsburg, Ia.—Iowa Field Trial Association's (member of the American Championship Club) fifth annual trials. Louis Stuehmer, Sec'y, Emmetsburg, Ia.
Aug. 26.—Salem, S. D.—South Dakota Field Trial Association's (member of the American Championship Club) third annual trials. E. H. Gregory, Sioux Falls, S. D.
Sept. 2.—Inaugural trials of the Minnesota-North Dakota Field Trial Association. Dr. W. A. Moore, Sec'y, St. Paul, Minn.
Sept. 4.—Carman, Man.—Sixteenth annual trials of the Manitoba Field Trials Club. Eric Hamber, Sec'y, Winnipeg.
Sept. 11.———, Man.—Fifth annual trials of the Brandon Kennel Club. Dr. H. James Elliott, Sec'y, Brandon, Man.
Sept. 11.—O'Neill, Neb.—Nebraska Field Trial Association's inaugural chicken trials. M. H. McCarthy, Sec'y.
Oct. 20.———, ———.—Western Field Trial Association's second annual trials. C. W. Buttles, Sec'y, Kansas City.
Oct. 27.—Paris, Mo.—Missouri Field Trial Association's (member of the American Championship Club), sixth annual trials. L. S. Eddins, Sec'y, Sedalia, Mo.
Oct. 27.—Washington C. O., Ohio.—Monongahela Field Trial Club's field trials. A. C. Peterson, Sec'y.
Oct. 28.—Whitby Island, Wash.—Pacific Northwest Field Trials F. R. Atkins, Sec'y, Seattle, Wash.
Nov. 3.—Robinson, Ill.—Illinois Field Trial Association's (member of the American Championship Club) fourth annual trials. W. R. Green, Sec'y, Marshall, Ill.
Nov. 3.—Lake View, Mich.—Michigan Field Trial Association's (member of the American Championship Club) fifth annual trials. C. D. Stuart, Sec'y, Benton Harbor, Mich.
Nov. 10.—Bicknell, Ind.—Independent Field Trial Club's (member of the American Championship Club) fourth annual trials. H. S. Humphrey, Sec'y, Indianapolis, Ind.
Nov. 11.—Hampton, Conn.—Connecticut Field Trial Club's trials. F. W. Smith, Sec'y, New Haven.
Nov. 10.—Ruthven, Ont.—North American Field Trial Association's (member of the American Championship Club) fourth annual trials. Richard Bangham, Sec'y, Windsor, Ont.
Nov. 11.—St. Joachim, Ont.—International Field Trial Club's fourteenth annual trials. W. B. Wells, Hon. Sec'y.
Nov. 17.—Glascow, Ky.—Kentucky Field Trial Club's (member of the American Championship Club) third annual trials. F. W. Samuel, Sec'y, Louisville, Ky.
Nov. 18.—Ruthven, Ont.—Fourth annual trials of the North American Field Trial Club. Alfred Wigle, Sec'y, Windsor, Ont.
Nov. 20.—Manor, L. I.—Pointer Club of America's (member of the American Championship Club) second annual trials. R. E. Westlake, Sec'y, Scranton, Pa.
Nov. 24.—Washington C. H., Ohio.—Ohio Field Trial Association's (member of the American Championship Club) fifth annual trials. C. E. Baughn, Sec'y.
Dec. 1.—Washington C. H., Ohio.—American Championship Field Trial Club's second annual trials. Chas. B. Cooke, Sec'y, Richmond, Va.
Dec. 1.———, —. —.—Interstate Championship Field Trial Association's second annual trials. C. D. Cooke, Sec'y.
Dec. 15.—Huntsville, Ala.—Alabama Field Trial Club's (member of the American Championship Club) third annual trials. John F. Fletcher, Sec'y, Birmingham, Ala.

Virginia Field Trials Association.

RICHMOND, Va., July 31.—I inclose clipping from to-day's Dispatch, showing the organization of the Virginia Field Trials Association, which starts off with very bright prospects.

The gentleman elected president, Mr. Wm. H. Colquitt, is an old-time sportsman, although a young man. He was the original owner of Count Gladstone IV., and is still posted in dog matters generally.

CHAS. B. COOKE.

The Virginia Field Trials Association was organized recently at an enthusiastic meeting of sportsmen. The Association starts out with encouraging prospects and the list of possible members includes all of the well-known sportsmen of the State.

Letters were read from gentlemen in various sections of the State, offering their co-operation and support, and it is quite likely that by the time the bird season opens the Association will be one of the largest in the country.

The meeting last night was called together by Mr. Cooke, and Mr. J. C. Tignor was elected temporary chairman and Mr. Todd temporary secretary. Upon motion of Mr. Vaughan, the Association was formed, and Mr. W. H. Colquitt was elected President, and Messrs. W. W. Collins, of Houston, and Clarence W. Robinson, of Newport News, Vice-Presidents. Mr. Charles B. Cooke was elected Secretary and Treasurer, and the Executive Committee, as elected, embraces the above, and Messrs. J. T. Tignor and John Jackson, of Richmond, and George C. Herring, of Harrisonburg.

The Richmond members of the Executive Committee and the Richmond officers were named as a Committee on By-Laws and Membership. They will meet in the next few days and formulate a report to be presented to a meeting of the Association at Tignor's on Friday night of next week.

Mr. Cooke read a letter from Mr. Edward Herbert Manle, manager for Mr. William C. Whitney, inviting the Association to hold its first trial at the Bellesville preserves.

Ohio Field Trials Association.

CIRCLEVILLE, O., July 31.—*Editor Forest and Stream:* On account of my being absent in the Northwest for some weeks, please announce through your columns that Mr. T. D. Krinn, of Circleville, O., will act as secretary of the Ohio Field Trials Association during my absence. All inquiries for entry blanks and general information should be addressed to him. C. E. BAUGHN,
Secretary Ohio Field Trials Association.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., New York, and not to any individual connected with the paper.

Yachting.

Yachting Fixtures, 1902.

Secretaries and members of race committees will confer a favor by sending notice of errors or omissions in the following list and also changes which may be made in the future.

AUGUST.

15. Penataquit-Corinthian, annual cruise, Bay Shore.
16. Royal Canadian, 30ft. class, Toronto.
16. Shelter Island, open regatta, Shelter Island Heights.
16. Horseshoe Harbor, Y. R. A. of L. I. S., open, Larchmont, Long Island Sound.
16. Huntington, Y.R.A. of L. I. S., open, Huntington, L. I. Sound.
16. Hartford, Y. R. A. of L. I. S., open, Saybrook, L. I. Sound.
16. Hull-Massachusetts, club, Hull, Boston Harbor.
16. Seawanhaka Corinthian, club, race for Centre Island cup, Oyster Bay, Long Island Sound.
16. Duxbury, club, Duxbury, Massachusetts Bay.
16. Winthrop, club, Winthrop, Boston Harbor.
16. Beverly, fourth Corinthian, Monument Beach, Buzzard's Bay.
16. Corinthian, club championship, Marblehead, Mass. Bay.
21. Plymouth, M. Y. R. A., open, Plymouth, Massachusetts Bay.
22. Kingston, M. Y. R. A., open, Kingston, Mass. Bay.
23. Bridgeport, Y. R. A. of L. I. S., open, Bridgeport, L. I. Sound.
23. Hull-Massachusetts, club, Hull, Boston Harbor.
23. Winthrop, club, Winthrop, Boston Harbor.
23. Huguenot, Y. R. A. of L. I. S., open, New Rochelle, Long Island Sound.
23. Royal Canadian, 16ft. class, Toronto.
23. Penataquit-Corinthian, Lighthouse cup, Bay Shore.
23. Shelter Island, ladies' race, Shelter Island Heights.
23. Corinthian, club championship, Marblehead, Mass. Bay.
23. Beverly, fifth Corinthian, Monument Beach, Buzzard's Bay.
23. Wollaston, club, Quincy Bay, Boston Harbor.
23. Seawanhaka Corinthian, club, Oyster Bay, Long Island Sound.
23. South Boston, club handicap, City Point, Boston Harbor.
23. Duxbury, M. Y. R. A., open, Duxbury, Mass. Bay.
23. Marine and Field, Y. R. A. of Gravesend Bay, Sea Gate, New York Bay.
24. Mosquito Fleet, club, City Point, Boston Harbor.
25-26. Wellfleet, M. Y. R. A., open, Wellfleet, Massachusetts Bay.
28-30. Cape Cod, M. Y. R. A., open, Provincetown, Mass. Bay.
30. Winthrop, club, Winthrop, Boston Harbor.
30. Beverly, sixth Corinthian, Monument Beach, Buzzard's Bay.
30. Columbia, race to Waukegan, Lake Michigan.
30. Manhasset Bay, club, Port Washington, Long Island Sound
30. Larchmont, club, Larchmont, Long Island Sound.
30. Atlantic, club, Fire Island and return, New York Bay.
30. Hull-Massachusetts, club, Hull, Boston Harbor
30. Indian Harbor, Y. R. A. of L. I. S., open, Greenwich, Long Island Sound.
30. Royal Canadian, dinghy and 25ft. classes, Toronto.
30. Kennebec, club, Bath, Maine.
30. Hartford, Y. R. A. of L. I. S., open, Saybrook, L. I. Sound.
30-31. Corinthian, annual cruise, Marblehead, Massachusetts Bay.

SEPTEMBER.

1. Indian Harbor, club, Greenwich, L. I. Sound.
1. Quincy, club, Quincy Bay, Boston Harbor.
1. Corinthian, club, Essington, Delaware River.
1. Corinthian, annual cruise, Marblehead, Massachusetts Bay.
1. Larchmont, fall regatta, Larchmont, Long Island Sound.
1. Sachem's Head, Y. R. A. of L. I. S., open, Guilford, L. I. Sound.
1. Norwalk, Y. R. A. of L. I. S., open, So. Norwalk, L. I. Sound.
1. Lynn, M. Y. R. A., open, Nahant, Massachusetts Bay.
1. Beverly, open, Monument Beach, Buzzard's Bay.
1. Royal Canadian, first class, Lorne cup cruising race, Toronto.
1 Shelter Island, club race, Loehrke cup, Shelter Island Heights.
2. Penataquit-Corinthian, fall regatta, Bay Shore.
4-6. Seawanhaka Corinthian, Y. R. A. of L. I. S., open, Oyster Bay, Long Island Sound.
5-6. Eastern, open, Marblehead, Massachusetts Bay.
6. Corinthian, club championship, Marblehead, Massachusetts Bay.
6. Boston, club, City Point, Boston Harbor.
6. Hull-Massachusetts, club, Hull, Boston Harbor.
6. Beverly, open, Mattapoisett, Buzzard's Bay.
6. Wollaston, club, Quincy Bay, Boston Harbor.
6. Quincy, M. Y. R. A., open, Quincy, Boston Harbor.
6. South Boston, sailing tender race, City Point, Boston Harbor.
6. New York C. C., Y. R. A. of Gravesend Bay, Sea Gate, New York Bay.
6. Penataquit-Corinthian. Lighthouse cup. Bay shore.
8. Eastern, open, Marblehead, Massachusetts Bay.
11. New York, autumn regatta, New York, Lower Bay.
13. Knickerbocker, ladies' day race, College Point, L. I. Sound.
13. Kennebec, club, Bath, Maine.
13. Beverly, seventh Corinthian, Monument Beach, Buzzard's Bay.
13 Atlantic, fall regatta, Sea Gate, New York Bay.
13. Larchmont, club, Larchmont, Long Island Sound.
20. Manhasset, Y. R. A. of L. I. S., open, Port Washington, Long Island Sound.
20. Y. R. A. of Gravesend Bay, Sea Gate, New York Bay.
—. Seawanhaka Corinthian, club, Oyster Bay, Long Island Sound.
27. Riverside, Y. R. A. of L. I. S., open, Riverside, L. I. Sound.
—. Manhasset Bay, club raceabouts, Port Washington, L. I. Sound.

For Cruising Yachtsmen.

With the purpose of stimulating the interest in cruising, and the keeping of a detailed log by cruising yachtsmen during the season of 1902, the publishers of Forest and Stream offer prizes for the best stories of cruises submitted to be published in Forest and Stream. It is believed that these will form not only entertaining records of pleasant summer days spent afloat along our coasts and waterways, but will furnish information of practical value to other yachtsmen making subsequent cruises on the same waters.

Prizes will be awarded to the three best stories as follows:

First prize, $50.00.
Second prize, $30.00.
Third prize, $20.00.

Contributions are invited under the following conditions:

1. The cruise must be made in waters of the United States or Canada in the season of 1902.

2. The cruise must be made in a sailing yacht, power to be used only as an auxiliary, if at all.

3. The story must be prefaced by a description of the boat. Cruises should be treated in as interesting and readable a way as possible, but should be practical and contain all possible information and data that would be of value to men going over the same route. A description of the handling of the ship in all weathers will be regarded very favorably in making awards, and it is suggested to writers that an accurate account be kept of all incidents happening while under way.

4. An outline chart suitable for reproduction, showing the course taken, must accompany each article. When possible, articles should be accompanied by amateur photographs taken on the cruise, including one of the boat. Good photographs will be considered in making the awards.

5. The story should contain about seven thousand words, written on one side of the paper only, and must be received at the office of the Forest and Stream Publishing Company, 346 Broadway, New York city, on or before Nov. 15, 1902.

Mr. T. C. Zerega has very kindly consented to act as judge and to make the awards,

Quincy Y. C. Challenge Cup.

Trial Races to Select the Defender.

In 1898 the Quincy Y. C. offered a $500 silver trophy for yachts of 21ft. waterline. Wishing to develop boats in which speed was the primary requisite, the only restriction in the original deed of trust was the restriction of competitors to the 21ft. waterline, but later, after Dominion, designed by Mr. G. H. Duggan, had been built, the following clause was added in order to bar out double-hull boats.

"No point of any cross section of a yacht shall be lower than its center."

The intent of this clause is plain enough, and yet it has not accomplished its object, for this year a boat has been built which, although complying to this rule, is yet clearly not of the type intended to be allowed. But of this more later.

In 1898 the Lynn Y. C. challenged for the cup, and sent to Quincy as its representative Duchess, designed, owned and sailed by C. D. Mower. Ricnist, designed by S. R. Purdon, owned by Com. Fred B. Rice, and sailed by Henry M. Faxon, successfully defended the cup, although she lost two races of this series.

In 1899 four yacht clubs challenged, and as the conditions of the deed of trust allows a simultaneous acceptance of any number of challengers, four competitors came to the line to compete against the new defender Hostess, which was designed by Arthur Keith for his friend, H. M. Faxon, to uphold the honor of Quincy. Hostess was sailed in her races by Mr. Faxon, who has had the honor of sailing the representative of the Quincy Y. C. in the cup races since the beginning. The four challengers were Pompano, from the Beverly Y. C., owned and designed by W. E. C. Eustis; Thelma, from the East Gloucester Y. C., designed by Crowninshield, for W. B. Pigeon; Oogrook, designed by Purdon for Walter Abbott, of the Hull Y. C., and Heiress, designed, owned and sailed by C. D. Mower, of the Lynn Y. C. Suffice it to say that although some close races ensued, Hostess successfully defended the cup.

In 1900 three clubs sent in challenges, and the Beverly, Manchester and Harvard yacht clubs all had representatives at the starting line. Pompano, extensively altered, represented the Beverly Club; Tashmoo, owned, designed and sailed by John S. Lawrence, the Harvard, and Lookout, designed and built by David Fenton, for a syndicate headed by Reginald Boardman, and A. H. Higginson, the Manchester Y. C. The Quincy people pinned their faith again to Hostess, and they were badly disappointed, as except for the first day, when an accident to Lookout's canvas-covered hull compelled her withdrawal, she won three straight races, thus bringing the cup to the custody of the Manchester Y. C.

In 1901 no challenge was forthcoming, but early in April of this year the Quincy Y. C. sent in one, which was, of course, promptly accepted. At a meeting of the representatives of the two clubs, Mr. L. M. Clark was chosen to pass upon the eligibility of the boats, and the designs were submitted to him.

Two boats were built by members of the Manchester Y. C. to compete for the honor of defending the cup. The first of these, Hades, is designed by B. B. Crowninshield, and built by Timothy White, of Manchester, for a syndicate of Manchester men, headed by Richard D. Boardman. This boat is the one spoken of earlier, which, although complying with rules, is still really an evasion. Hades is 55ft. over all, 17ft. beam, and 18in. draft. She is built on two distinct hulls, each 5ft. wide, and connected by a deck, to which a great truss gives the required strength. These two hulls show a sharp reverse curve at the waterline in order to give the required displacement. They have very little flare to their bilges, which are round in section; they are built of ¼in. stock covered with canvas. Inside they are well trussed and braced, and the wire trusses set up with turnbuckles, and coming 3ft. above the deck, aid in keeping up the ends. In order to comply with rule that no point of any cross section should be lower than the center, a so-called middle hull of some 400lbs. displacement, has been constructed. It amounts practically to nothing more than a centerboard case having for its longitudinal section the section of the two side hulls. Through this hull is hung a dagger board of moderate dimensions, and the structure—she can hardly be called a boat—is steered by a wooden rudder of the balance type. The whole is surmounted by a jib and mainsail rig of stupendous proportions, amounting in all to 2,000 sq. ft.

This boat is sailed in her races by either E. A. or R. D. Boardman, with Geo. Lee, Mathew Bartlett and J. A. Burnham as crew.

The other boat which will compete with Hades for the honor of defending the cup, is a scow of the most extreme type. She was designed by W. Starling Burgess, and built by David Fenton, of Manchester, for a syndicate of some forty members of the Manchester Y. C., and she is managed by A. H. Higginson, and sailed in her races by Reginald Boardman, with James Jackson, Frank Burgess and Aleck Jansen, as additional crew. Outlook, as this boat is called, is 52ft. 7in. over all, and 16ft. beam. Her section shows one hull with a very flat floor, no dead rise, and a great deal of flare to her bilges, 18in. on each side. Her deck plane shows her ends a little drawn in, but only enough to give a fair sweep to the rail. Her longitudinal section shows a certain amount of reverse curve, but her shoal draft, 9in., reduces this to a minimum. In construction her designer has hit upon a very clever plan for strengthening her. A steel truss goes through her, fore and aft like a back bone, and from this truss are six cross trusses running into the bilges, two at the mast step, one forward of it, and three aft of it. This truss weighs only 1,400lbs., and it adds enormously to the strength of the boat. The mast is stepped in the truss, the shrouds, runners, backstays, deck blocks, cleats, rudder, bowsprit, centerboard, in fact everything on the boat that requires strength, leads to the truss. The ¼in. planking, covered with canvas, keeps the water out, that's all.

Outlook has an ordinary wooden centerboard, and is steered by a deep rudder of ordinary type, with no balance. She has 1,800ft. in her jib and mainsail.

Both boats have hollow spars, those of Hades coming from Geo. F. Lawley's, while Outlook's are from the works of the Spalding St. Lawrence Boat Co. at Ogdensburg, N. Y. Neither boat has any ballast.

First Trial Race, Monday, July 28.

Monday morning dawned hazy, and with little wind. At 8 A. M. Outlook came down the river from Fenton's yard in tow of her steam launch, and took a mooring near the starting line off West Manchester. At 8:40 Hades came out of the harbor in tow of her launch, So Long, and took a mooring near Outlook. The wind came in from the west and gave signs of increasing, and the judges, Messrs. H. B. Pearson, H. M. Mason, W. A. Tucker and E. S. Green, delayed the start fifteen minutes. Both Hades and Outlook had their mainsails up at 9:15, and at 9:30 both hoisted No. 1 jibs and stood out a bit to try the wind, which was freshening fast. Outlook was pot-leaded to her rail, while Hades had black lead on her bottom only, and her yellow hull glistened in the sunlight.

At 9:35 the course, No. 0, was hoisted on the steam yacht Velthra, which was acting as judges' boat, designating a dead beat to buoy No. 11 off Little Haste, a run back, and repeat; distance, twelve miles. At 9:40 the preparatory gun was fired, and at 9:45 the starting gun, the boats having two minutes in which to cross the line. Outlook crossed first with Hades on her weather quarter. Both boats stood half a mile on the starboard tack until over under Misery Island. Outlook tacked to port at 9:52, with Hades fifteen seconds later astern, and to leeward. Outlook had gone fast, both outfooting and outpointing her rival. The breeze had now freshened, and both boats had a good heel on. At times the weather hull on Hades was well out of water, but even when this was the case she could not seem to foot with the scow, which was footing fast and standing up well, although she is not so stiff as Hades. At 10:05 Outlook tacked again to starboard, followed a little later by Hades, which seemed to be falling slowly back. Both stood on this hitch some ten minutes, and then tacked inshore again. At 10:23 Outlook was sent out again on the starboard tack, her crew far out on the weather rail, as it was now blowing a good whole-sail breeze. At about 10:09 Hades tacked half a mile astern of Outlook, and had stood but two minutes on this tack when the turnbuckle on her bobstay parted, her bowsprit broke short off, and her mast buckled badly aft, leaving her a hopeless wreck and out of the race. She was towed in by her launch.

Outlook was kept at it, turned the windward mark and ran down under her mainsail, not needing to set her spinnaker. As she was about to start on her second round, the judges expressed themselves satisfied, and so she came up into the wind, lowered her sails and was taken in tow by her tender. All hands were much disappointed at the accident to Hades, although Outlook demonstrated clearly her ability to beat her to windward in a whole-sail breeze.

Second Race, Tuesday, July 29.

At 9 A. M., when the judges came on board the Velthra lying off West Manchester, there was a very faint northeast wind blowing, which later in the day came southeast and remained there. At 9:30 both Outlook and Hades came down the river in tow of their tenders. The wind outside was very light, but it seemed quite steady, and at 9:40 the signal for course 10 was displayed. This meant a beat out to red can buoy No. 2 on the outer breaker to the southeast of Baker's Island, a spinnaker run to Archer's Rock buoy, off Marblehead, and a reach home. As a matter of fact, the wind on the last leg hauled so much to the eastward that both boats had to make a short hitch on the way home, making practically a windward and leeward course.

The wind was so light, that the start was delayed some time in the hope of a better breeze, and it was 9:45 before the preparatory gun was fired. Both boats hung near the line, but they had such little way on, that the handicap gun at 9:52 was fired before either boat crossed. At 9:53 Hades crossed the line, followed 21s. later by Outlook, which was just to windward. At the time the wind was just strong enough to give the boats steerage way, and both crews were sitting to leeward to give the boats a list. Both boats crossed on the port tack, and before they had gone two hundred yards Outlook had passed Hades to windward. She footed much faster, pointed as high, and seemed to hold on to windward better. Hades slipped to leeward, owing, I think, to her small centerboard. When about a mile out, both boats tacked to starboard and stood to the eastward. The wind had increased, but was still very light. When half a mile had been covered on this tack, Hades tacked to port again, while Outlook stood on to the eastward. At first Hades seemed to gain by this, as the wind favored her a good deal. However, when the boats came together again it was seen that Outlook had just about held her own. Out to the eastward a little blue streak on the water showed that at last a little breeze was at hand. Both boats tacked to catch the first puff. Outlook, a little to windward, caught it first, and heeling to the fresh puff began to move very fast. Hades, when she felt it, heeled down too, but although her weather hull was well up, she did not seem to move fast. The wind hauled a bit to the eastward, and both boats were now reaching for the outer mark, with their sheets a little started, Outlook gaining fast. At 11:55:30 Outlook gybed around the red can buoy and quickly set her spinnaker to starboard. Hades followed at 11:38:02, and also set her spinnaker on the same side. The wind had dropped again until it was very light, and the two boats ran down toward the Marblehead shore slowly. When near Satan Ledge Outlook gybed to starboard and set her spinnaker to port. Three minutes later Hades followed suit, but did not set her spinnaker again. Up to this time Hades had gained a bit, but now Outlook, with her spinnaker drawing better, drew away again and at 11:51:41 gybed around Archer's Rock buoy and with flattened sheets and her crew all lying to leeward, the big scow started on the beat for the finish line. Hades followed at 11:53:31. She had gained 40s. on the run, and this was the only gain she made throughout the race.

Once on the wind again Outlook took on a surprising gait and dropped Hades very fast. Both boats tacked to port off Eagle Island, and after standing out about quarter

of a mile, were able to fetch across the finish line. The work of Outlook on this last leg was very fast, and she crossed the line at 12:32:00, with a lead of eight minutes over Hades, which crossed at 12:40:00. It was a very decisive victory for Outlook, and clearly demonstrated her ability to travel very fast in light airs. The crew of Hades were quite satisfied with the race, but said that they thought that Hades would go far better in a steady whole-sail breeze. The summary:

	Start.	1st Mark.	2d Mark.	Finish.
Outlook	9 52 00	10 55 00	11 51 41	12 32 00
Hades	9 52 00	11 58 02	11 53 31	12 40 00

This shows a gain of 2m. 32s. for Outlook on the first leg, a gain of 38s. for Hades on the second leg, and a gain of 6m. 10s. for Outlook on the last leg.

Third Race, Wednesday, July 30.

The third, and what proved to be the final race of the series, was sailed in a strong whole-sail breeze from the northeast. Both boats had full sail, and both had all they could stagger to from start to finish. At 8 o'clock there was a strong puffy north wind blowing, and when Outlook came down the river in tow of her tender, she had two reefs tucked in her mainsail and a No. 2 jib on her bowsprit. About 9 o'clock the breeze moderated and steadied down to a good whole-sail breeze, and when the crew on Hades hoisted whole mainsail and No. 1 jib at 9:05, Outlook followed suit, and at 9:10 both boats were sailing around under whole sail. At 9:15 the judges on the Velthra sent up the signal for course No. 5, a reach to starboard off Hospital Point, another broader reach to Gooseberry Ledge, and a dead beat back to the finish line, a distance of nine and one-half knots.

Promptly at 9:30 the preparatory gun was fired, and when the starting gun went at 9:35 both boats came for the line with booms to port and a good move on. Outlook was to leeward, but a little in the lead, and crossed the line at 9:35:14, with Hades on her weather quarter at 9:35:25. At once Outlook began to draw away, and although Hades had her weather hull well out, she could not seem to hold the scow, which was footing very fast and standing up well. Off Prides Rock the wind freshened a bit and the boats took on a little more heel, and moved very fast. Down for the Hospital Point mark they went, the breeze freshening and coming in stiff puffs off the shore, and the boats going at such a rate that the steam tenders following them were unable to keep up the pace. At 10:00:05, Outlook gybed around the mark, and with boom to starboard started for the windward mark. The way to Gooseberry Ledge had knockabouts, launches and sailboats all along, but none of them were able to keep pace with the racers. Outlook continued to gain steadily, and when she tacked around the windward mark for the beat home at 10:23:52, she had a lead of over seven minutes on Hades, which followed suit at 10:31:15. The beat home was made in the best breeze of the day, and Outlook not only beat Hades badly, but made a very fast performance. She stood up well, pointed high, and footed very fast, easily dropping raceabouts and 25-footers, which were watching the race. She continued to gain all the way to the mark, and crossed the finish line more than a mile ahead of her rival. Outlook crossed at 11:05:44, with Hades at 11:25:06. The victory was so decisive that the judges decided that there was no need of more trial races, and selected Outlook as defender. The summary:

	Start.	1st Mark.	2d Mark.	Finish.	Elapsed.
Outlook	9 35 14	10 00 05	10 23 52	11 05 44	1 30 30
Hades	9 35 25	10 03 32	10 31 15	11 25 06	1 49 41

Outlook's victory was a very popular one, as the oddity of the triple hull boat had caused much worriment and a little feeling on the part of many. The owners of Hades frankly admitted that the boat had been merely an experiment, and that she was a failure. The trouble with Hades, in the writer's opinion, is that in the first place her construction is such that even had her lines been good, the boat was unable to keep her shape. In the second place, the disturbance made between the three hulls by the water passing rapidly through, was so great that it must have retarded the boat greatly. Both boats had very good sails, those of Hades being made by Wilson & Silsby, while Outlook carried a mainsail made by the same firm and a jib made by Cousens & Pratt, of Boston. Outlook's steel truss has proved a great success—in fact, her construction is in every way good and fitted to stand the great strains put on a boat of this kind. On Thursday morning after the final race a new mainsail made by Cousens & Pratt was tried on Outlook. It is made of lighter material than the Wilson sail, and seems to be far better in light airs, and just as rigid in the stronger breezes. A new silk jib has been ordered from Cousens & Pratt to use in extremely light weather. Outlook will be tuned up the rest of the week and hauled out to pot lead for the cup races on Saturday.

A. Henry Higginson.

Seawanhaka-Corinthian Y. C.

OYSTER BAY, LONG ISLAND SOUND.

Saturday, Aug. 2.

Five boats started in the race for the Robert Center Memorial cup, held on Saturday, Aug. 2. The boats sailed over one of the inside courses in a fair south breeze. Lucille won by over a minute. The summary, start 3:20:

	Finish.	Elapsed.
Lucille, W. H. Landon	5 33 49	2 13 49
Bobs, W. A. W. Stewart	5 34 50	2 14 50
Wyntje, Colgate Hoyt	5 37 48	2 17 48
Gowan, F. G. Stewart	5 40 04	2 20 04
Heron, J. R. Coudert, Jr	Disabled.	

Newport Y. R. A.

The Regatta Committee of the Newport Yacht Racing Association announces they will hold a series of races off Newport on Monday and Tuesday, Sept. 1 and 2. Prizes will be given in each class where two or more boats start. Entries are to be made to George E. Plumer, secretary of the Regatta Committee, at the office of the Association, No. 152 Bellevue avenue, on or before Saturday, Aug. 30, at 6 o'clock in the evening.

Manhasset Bay Y. C.

PORT WASHINGTON, LONG ISLAND SOUND.

Friday, Aug. 1.

The first of the two days' racing given by the Manhasset Bay Y. C. was devoted entirely to one-design boats. Twenty-six boats started in the seven different classes. Com. Stephen W. Roach's flagship Emeline was turned over to the newspaper men, and the Regatta Committee, which is made up of Edward MacLellan, Charles D. Mower, Robert Jacob and George Bowles.

There was a good sailing breeze from the south. The American Y. C. one-design boats and the Larchmont one-design boats sailed over a triangular course of eleven miles. All the other boats, with the exception of the dories, sailed over a triangular course of nine and one-half miles.

The preparatory signal was given at 2 o'clock, and the American and Larchmont one-design boats were sent away five minutes later at 2:05. The American Y. C. boats got away in a bunch, and at the first mark were still close together. On the windward work, however, The Kid took the lead and was never headed. In the Larchmont Y. C. class, Dorothy, well handled by her owner, Mr. H. T. Spence, made an excellent showing, and defeated Houri by nearly six minutes.

Three of the New Rochelle Y. C. boats turned up, Ace beating Knave out and Caper coming in last.

Some good racing was seen in the Manhasset Bay one-design class. Pup, the new boat in the class, owned by Mr. T. W. Ratsey, created quite a sensation with her red sails. She did not show up very well, but this was her first race. Lambkin, Com. Roach's boat, won by over four minutes.

Only one of the Ardsley one-design boats turned up, but she sailed over the course.

In the Huguenot Y. C. dory class, Prize won, beating Ketch II. by nearly half an hour.

After a close race in the Pelham Country Club class Echo won from Gloria by thirty-two seconds. The summary:

American Y. C. 21ft. Class—Start, 2:05.

	Finish.	Elapsed.
Howdy, S. Wainwright	5 19 38	3 14 38
Jolly Tar, S. Howland	5 10 58	3 05 58
Rascal, S. C. Hopkins	5 12 32	3 07 32
Hobo, T. L. Park	5 11 29	3 06 29
Ping Pong, W. H. Browning	5 10 17	3 05 17
The Kid, O. Harriman, Jr.	5 07 24	3 02 24

Larchmont 21ft. Class—Start, 2:05.

Adelaide, J. J. Dwyer	5 39 06	3 34 06
Houri, J. H. Esser	5 36 25	3 31 25
Dorothy, H. T. Spence	5 30 27	3 25 27

New Rochelle 18ft. Class—Start 2:10.

Caper, P. L. Howard	5 18 25	3 08 25
Knave, R. N. Bavier	4 56 12	2 46 12
Ace, W. N. Bavier, Jr.	4 55 09	2 45 09

Manhasset Bay Raceabouts—Start, 2:10.

Lambkin, S. W. Roach	5 05 50	2 55 10
Arizona, G. A. Corry	5 12 04	3 02 04
Mist, J. W. Alker	5 12 28	3 02 28
Firefly, Guy Standing	5 09 58	2 59 58
Pup, T. W. Ratsey	Not timed.	

Ardsley Club Class—Start, 2:10.

Mary Baker, No. 3, F. M. Hoyt	5 18 30	3 08 30

Huguenot Y. C. Dories—Start, 2:15.

Ketch, S. C. Ketchum	4 58 40	2 43 40
Prize, H. H. Van Rensselaer	4 30 10	2 15 10
Marguerite, W. F. Johnson	5 24 00	3 09 00

Pelham Country Club Lark Class—Start, 2:15.

Gloria, G. B. Mott	3 56 22	1 41 22
Echo, T. A. Weatherly	3 55 50	1 40 50
Skidoo, M. S. G. Davies	3 56 26	1 41 26
Yellow Jacket, G. B. Robinson, Jr.	3 57 55	1 42 35
Go To, G. G. Smith	4 07 20	1 52 20

The winners were The Kid, Dorothy, Ace, Lambkin, Mary Baker No. 3, Prize and Echo.

Saturday, Aug. 2.

Saturday was the day set aside for the annual regatta of the Manhasset Bay Y. C. Nearly eighty boats were entered for the race, but owing to the very light breeze in the morning many of them found it impossible to get to the line in time to start. The boats in the 36 and 30ft. classes sailed over a course nineteen miles long. All the rest of the boats, with the exception of the larks, dories and naval reserve cutters, sailed over a nine and a half mile course, while these latter boats covered a four-mile course. At the time of the start the wind was light from the southwest. Shortly after the start a squall broke out of the northwest, many of the boats carrying sail through it, however, although some of the smaller craft lowered away. After the squall the wind backed around to the southwest again, and during the last part of the race freshened up to a good sailing breeze.

Com. Roach's steam yacht Emeline was again used as the committee boat.

The two 43-footers Effort and Dorwina arrived late, but the Regatta Committee were ready to give them a race. Dorwina's owner was not satisfied with the arrangements made and would not start. This left Effort without a competitor, and this boat not wishing to take a sailover, did not cross the starting line. Mira was at Greenport preparing for the New York Y. C. cruise, and consequently could not get to Manhasset. Challenge, the other 43-footer, has been taken back to the lakes by her owner.

Leda was the only starter in the 36ft. class, and she sailed over the course alone.

In the 30ft. class Alerion, Marguerite and Mimosa started. Mimosa soon worked into first place and beat Marguerite by over two minutes.

Five boats started in the raceabout class. Rogue, well sailed by Mr. A. B. Alley, led Hobo, the second boat, over the finish line by over five minutes.

In the Larchmont 21ft. class only two boats started, Adelaide and Houri. The former won by over three minutes.

Montauk in class Q had matters pretty much her own way, and won with ease.

In the New Rochelle one-design class Ace again won. In the light air the New Rochelle boats made better time over the course than did the Manhasset boats. In the Manhasset one-design class Firefly won, although Lambkin pushed her hard for first place. Mary Baker No. 3 won in the Ardsley one-design class by over two minutes.

Mr. Robert Jacob's new sloop Eleanor, which is fitted with red sails like Mr. Ratsey's Pup, did not do very well in class R. Mr. Thomas Clapham's Jag won in this class.

A special class was made up for Scoot and Plover, the former winning by a small margin.

Gloria won in the Pelham Country Club lark class. Only one boat finished in the Huguenot dory class.

In the Naval Reserve cutter class five boats started, but only one finished. The summary:

Sloops—Class M—30 to 36ft. Racing Length—Start, 12:40—Course, 19 Miles.

	Finish.	Elapsed.
Leda, H. L. Maxwell	4 28 24	3 48 24

Sloops—Class N—25 to 30ft. Racing Length—Start, 12:45—Course, 19 Miles.

Naval Reserve Cutters—Start, 3:05—Course, 4 Miles.

Second Division, First Battalion	5 10 45	2 05 45

The winners were Leda, Mimosa, Rogue, Adelaide, Montauk, Ace, Firefly, Mary Baker No. 3, Flirt, Scoot, Jag, Wif Waf and Prize.

Indian Harbor Y. C.

GREENWICH, LONG ISLAND SOUND.

Saturday, Aug. 2.

The second handicap race held by the Indian Harbor Y. C. this year was sailed on Saturday, Aug. 2. Twelve boats started in the handicap class. Four prizes were offered for boats in this class. The first was won by the scratch boat, Empronzi, the second by Mignon, the third by Robin Hood and the fourth by Neola.

Noggin won in the class for Indian Harbor sailabouts, with Queenie second.

The race for launches was won by Vivienne.

The boats in the handicap class sailed over a ten-mile triangle, and the sailabouts sailed over a six-mile triangle. The wind was light from the S.W., freshening a little toward the finish. The summary:

Handicap Race.

	Start.	Finish.
Eos, E. D. Mead	3 10 00	5 47 17
Osseo, H. C. Nash	2 40 00	5 54 34
Neola, J. R. Johnston, Jr.	3 05 00	5 44 52
Penguin, G. H. Bartlett	3 00 00	5 58 22
Malillian, R. B. Thompson	3 10 00	5 48 30
Mignon, Joseph Fournier	3 20 00	5 40 05
Louie Bell, J. M. Williams	2 50 00	5 54 38
Viper, Newcombe & Elson	3 25 00	5 45 34
Robin Hood, G. E. Gartland	3 05 00	5 43 53
Empronzi, Alfred Peats	3 30 00	5 38 58
Crab, T. R. Pell	2 35 00	Not timed.
Bantam, H. H. Page	2 45 00	Not timed.

Indian Harbor Sailboats—Start, 2:55.

	Finish.	Elapsed.
Stingy, E. E. Zittel	4 52 00	1 57 00
Cero, Charles Mallory	4 56 17	2 01 17
Queenie, Frank Tilford	4 51 07	1 56 07
Noggin, C. S. Somerville	4 42 47	1 47 47
Betty, Swords & Hyde	5 29 32	2 34 12

Launches.

	Racing Length.	Start.	Finish.
Vivienne, E. S. Wheeler	18.00	5 02 00	6 02 06
Thistle, R. E. Tod	45.00	5 20 42	Withdrew.
Kit, F. B. Jones	16.67	5 00 00	6 10 30
Kentucky, L. Crawford	19.81	5 04 24	6 06 52

Centre Island Cup for Knockabouts.

The fifth series race for the Centre Island cup for Seawanhaka knockabouts was sailed on July 26, over the knockabout No. 2 course, shortened. The weather was fair and a southeast wind was blowing. Bobs was disqualified for fouling boat. The summary:

	Finish.	Elapsed.
Vagrant, T. M. Brown & W. G. Low, Jr.	5 11 09	1 31 09
Marcia, Johnston de Forest	5 12 20	1 32 20
Gowan, Francis G. Stewart	5 14 56	1 34 56
Wyntje, C. S. Hoyt	5 20 49	1 40 49
Lucille, H. H. Landon	5 21 01	1 41 01
Heron, F. R. Coudert, Jr.	5 25 37	1 45 37
Bobs, W. A. W. Stewart	5 13 16	1 33 16

In a special race for the Leland Corinthian Challenge cup on same date, over same course, the result was:

	Start.	Finish.	Elapsed.
Gowan, Francis G Stewart	10 45 00	1 05 30	2 20 30
Wyntje, C. S. Hoyt	Withdrew.		

Lake Yacht Racing Association.

Following the practice of earlier years, a racing circuit was arranged for this summer, beginning at Hamilton with races for all classes, on Monday, July 21. The fleet assembled on Sunday, the weather being very miserable, a cold east wind prevailing, with continuous rain, which began on Saturday afternoon, lasting with only occasional breaks until Monday morning. The fleet was on the whole better than for several years, the various classes being well filled with material for lively racing, although as usual there were many boats entered that failed to start. The first, 45 and 40ft. classes, consist entirely of boats from two to ten years old, but as they are fairly well matched, there is always enough uncertainty about results to make interesting racing. The 35ft. class includes the Canada cup boats, particularly Genessee, winner in 1899, and Invader, winner in 1901. These two had never come together before, and, in fact, until Invader squarely outsailed her at Toronto on July 23 Genessee was an unbeaten boat, and is still very fast. The 30ft. class contained some old boats and a new Crowninshield craft, Naomi, built to fit the new restrictions which are to be in force next year. She is a comfortable, roomy boat, and quite as fast as her older unlimited competitors. In the 25ft. class are two new yachts, Whirl and Helen, designed by Geo. Owen, of Hamilton, to conform to the new rules, and although under some disadvantage this year, they easily outsailed all comers.

Monday, July 21.

The morning promised a fine day, the rain having ceased and given place to fog, a very unusual thing on Lake Ontario. At the time of starting it was thick about the piers and the vicinity of the line, but as the sun was shining, everybody expected it would rapidly dry up; and as the steamer was starting to lay the marks just ahead of the yachts, no difficulty was looked for. Heavy fog is so unusual on the lake that it scarcely enters into the calculations of racing men, but on this occasion it simply spoiled the race, swallowing up the fleet for an hour after the start, and sending them all mark hunting with varying success. It was said that the compass bearings of the triangle in the printed instructions were not closely followed, but anyway most of the boats found their way around eventually, while Aggie, Chinook, Invader and some smaller craft lost their way and withdrew. The weather cleared about noon, and then followed more heavy rain, which made everybody afloat and ashore uncomfortable. This was fortunately followed by a fine breeze, but owing to the fog there were no close finishes except in the 25ft. class.

The owner of Chinook addressed a letter to the Regatta Committee, complaining that the course was not well laid, and asking for a resail. At an informal meeting of the yacht owners, however, it was decided on a vote that there were no good reasons for asking a resail. The Regatta Committee met and considered the whole matter carefully, and decided to allow the results to stand and award the prizes. The times were:

First Class—Start, 10:30.

	Finish.	Corrected.
Vreda	4 01 00	5 30 04
Merry Thought	4 07 10	5 37 10

Aggie did not finish.

45ft. Class—Start, 10:40.

Canada	4 56 35	. . . .

Zelma did not finish.

40ft. Class—Start, 10:50.

Clytie	4 26 10	. . . .
Vivia	4 26 50	. . . .

Chinook did not finish.

35ft. Class—Start, 11 o'clock.

Genesee	4 17 50	. . . .
Beaver	4 52 40	. . . .

Invader did not finish.

30-foot Class—Start, 11:10.

Nox	2 08 15	2 57 11
Chitta	2 08 50	2 58 04
Naomi	2 09 00	2 58 14
Hiawatha	2 16 00	3 06 00

Knockabout Class—Start, 11:30.

Petral	2 18 50	. . . .
Enid	2 19 40	. . . .

25ft. Class—Start, 11:20.

Whirl	2 09 40	2 49 28
Helen	2 10 15	. . . .
Vesta	2 12 30	2 52 07
Pedro	2 14 08	2 53 42
Illaway	2 17 55	2 57 32
Ko Ko	2 18 15	2 58 15

On Tuesday the fleet sailed to Toronto, making a comfortable passage in light winds. Here two days' racing was offered by the Royal Canadian Y. C., the course being a triangle in the open lake, starting off the south shore of the island.

Wednesday, July 23.

The races for the 35, 30, 25ft. and knockabout classes were fixed for the first day in order to give the smaller craft two days in which to sail to Cobourg. The wind was light in the morning, particularly about half an hour before the start, and as a result several yachts were becalmed in the channel and failed to get to the starting line. As most of the boats were there and ready at the time appointed, it was impossible to wait indefinitely for others, and the races were started on time. This may seem rather drastic to yachtsmen accustomed to starting when everybody is ready, but it is really the only satisfactory way to do things on a racing circuit. The yacht owners know and understand the custom and usually object very vigorously to any postponement whatever. The interest of the day centered in the race between Genessee and Invader, and while the result was not unexpected, they made a thoroughly good match well worth watching. In the evening a concert was held at the town club house and prizes distributed. The times were:

35ft. Class—Start, 11:00.

	Finish.
Invader	3 47 00
Genesee	3 55 15

Beaver did not finish.

30ft. Class—Start, 11:10.

Naomi	2 23 30
Carlotta	2 23 42

25ft. Class—Start, 11:20.

Whirl	2 26 00
Ko Ko	2 52 20

Helen did not finish.

Knockabouts.

Petrel	3 40 00
Enid	3 41 40

Thursday, July 24.

The first and 45ft. classes were bunched, making a nice fleet of six starters, the forties sailed by themselves and the second and third prizes unearned on Wednesday were again offered for the small classes, but only one boat, Helen, turned up at the line. The wind all day was light and fluky, but otherwise the weather was delightful, and the uncertainties and streaks of good and bad luck kept up the interest until after 7 o'clock in the evening. Aggie and Merrythought had a great fight for first place, the former leading on the first round, but dropping into second place with a freshening breeze, and eventually winning on time allowance. The 40-footers failed to finish by 7 o'clock, and their prizes were awarded on the first completed round. Chinook was still leading, however, when taken in tow for home. The following are the results:

First and 45ft. Classes—Start, 11:00.

	Finish.	Elapsed.	Corrected.
Aggie	6 23 42	7 23 42	7 18 57
Merry Thought	6 21 46	7 21 46	7 21 46
Canada	6 53 20	7 53 20	7 46 55
Vreda	7 07 45	8 07 45	8 06 19
Zelma	7 13 25	8 13 25	8 06 22

Clorita did not finish.

40ft. Class—Start, 11:10.

	Finish.
Chinook	3 49 50
Clytie	3 51 53
Vivia	4 14 15

Mr. John Wright very kindly placed his handsome steam yacht Electra at the disposal of the club, and she made an excellent judges' boat.

From Toronto to Cobourg is a passage of over seventy miles, and most of the small craft took advantage of a fair wind on Thursday to get as far as possible; while the boats which had to race on that day kept canvas up and crews together to get under way as soon after dinner as stores could be shipped. The next day, Friday, brought a light to moderate head wind, making a tedious but not unpleasant passage, and nearly all the boats got into port early in the evening. There is no yacht club at Cobourg, and the regatta was arranged entirely by the citizens and summer residents. The course was five miles to windward and return, the wind being light from the southeast. Most of the boats worked out into the lake on a long tack, but Zelma, of the first class, and Chinook, of the 40-footers, worked the shore on short tacks and gained a great advantage, Chinook, although starting five minutes after the big fellows, showing the way around the weather mark. The wind held true for the run back, and spinnakers were showing on either side. Merrythought tried hard to blanket Zelma, but the latter, very smartly handled, managed to keep clear and hold a lead on her longer competitor to the end of the first round. As for the rest, Invader had Genessee well astern, while the new Owen boat Whirl was leading in her class, with her sister boat Helen a close second. On the second round the wind shifted a bit to the eastward, making a long and short leg out. It also freshened and the final run home with balloon jib topsails was the finest sight of the day, and, in fact, of the whole circuit, the leaders being closely bunched, ten of them finishing in as many minutes. The times were as follows:

First and 45ft. Classes—Start, 11:00.

	Finish.	Elapsed.	Corrected.
Zelma	3 52 25	4 52 25	4 46 32
Vreda	3 51 44	4 51 44	4 50 32
Merry Thought	3 50 40	4 50 40	4 50 40
Aggie	3 54 58	4 54 58	4 51 01
Canada	3 59 14	4 59 14	4 53 54

40ft. Class—Start, 11:05.

	Finish.
Chinook	3 59 20
Clytie	4 07 13
Neola	Withdrew

35ft. Class—Start, 11:10.

Invader	3 57 48
Genessee	4 05 36

30ft. Class—Start, 11:15.

Nox	2 41 45
Naomi	2 57 10
Chitta	2 59 15

25ft. Class—Start, 11:20.

Whirl	2 32 45
Helen	2 34 13
Pedro	2 56 08

Knockabouts—Start, 11:25.

Petrel	2 52 20
Enid	Withdrew.

The distribution of prizes took place early in the evening, several of the yachtsmen taking occasion to heartily thank the local committee who had so well managed the regatta, and the citizens and summer residents who generously subscribed the prize money. A dance at the Arlington followed, breaking up at midnight, of course, so that the yachtsmen were astir early on Sunday morning, and finding a fair wind, all hands made sail for Charlotte. A thunderstorm and sharp squall were encountered in the afternoon, no harm being done to the racing fleet, but a small yacht from Hamilton capsized off the north shore, one young man being drowned and the others rescued with difficulty. Many of the boats made Charlotte early Sunday evening, others arriving during the night, so that all hands had a day up town in Rochester on the Monday following.

Rochester Y. C., July 29.

The course was triangular, ten miles around, and the wind light throughout the day. Merrythought maintained first place in her class, with Vreda second, although Zelma crowded her closely. The celebrated cutter Yama came into port, but not in time to race. She has been purchased by W. H. Pearson, Jr., of the R. C. Y. C., Toronto, and will add much interest to the first class. All the boats, though old, have been famous in their day, and still give fine racing. The new restrictions will prevent their being rapidly outbuilt, and at the same time there will be more encouragement to build new craft. Nobody wants a freak or a racing machine in this class on Lake Ontario, and none have been built even when there was a chance to do so.

Some disappointment was caused by Invader not turning up at Charlotte, but the freak boat Canadian was in port, and made a race for Genessee, dropping out, however, before the finish. Some local craft added to the interest in the smaller classes. The times were:

First and 45ft. Classes.—Start, 11:00.

	Finish.	Elapsed.	Corrected.
Merry Thought	5 30 10	6 30 10	6 30 10
Vreda	5 40 25	6 40 25	6 39 13
Zelma	5 55 03	6 55 03	6 49 10
Canada	6 03 00	7 03 00	6 57 40
Aggie	6 10 05	7 10 05	7 06 08

40ft. Class—Start, 11:10.

	Finish.
Chinook	6 28 45
Clytie	6 45 00
Neola	Withdrew

35ft. Class—Start, 11:20.

Genessee	6 33 15
Canadian	Withdrew

30ft. Class—Start, 11:30.

Nox	3 00 35

Whirl	4 07 20
Anatok	4 18 45
Pedro	4 24 15
Naomi II.	4 24 20

Knockabouts—Start, 11:50.

Petrel	4 09 30
Veritas	4 38 50

The Rochester Y. C. has just opened a fine new house on the lake shore, the old house up the river being retained for boats and storage. This club has evidently taken on a new lease of life, and under Com. Van Voorhis and other able officers is maintaining its reputation for hospitality and racing. Next year it sends a challenge for the Canada cup, while an Association meet will likely be arranged at Kingston, the best port on the lake in many ways for such an event.

This year's circuit was a great success, the attendance being good and the racing much more lively than usual.

Wm. Q. Phillips.

Boston Y. C.

MARBLEHEAD, MASS.

Monday, July 28.

The Boston Y. C. held a Y. R. A. open race off its station at Marblehead on Monday, July 28. The breeze was from the west, light at the start, but strong and puffy at the finish. In the 25-footers it was Chewink's race from the start. Chloris led the 21-footers over the course, and Question led the 18ft. knockabouts. Tunipoo won a good race from Opitsah II. in the raceabouts. Sally IV. won in the first handicap class, and Apache in the second. The summary:

Class D—25-footers.

	Elapsed.
Chewink II., F. G. Macomber, Jr.	1 28 44
Sally VI., L. F. Percival	1 30 19
Calypso, A. W. Chesterton	1 31 12
Seboomook, B. A. Smith	1 32 30
L'Aiglon, E. W. Hodgson	1 41 05

Class S—21-footers.

Chloris, Cheney & Lanning	1 32 33

Riverton Y. C.

RIVERTON, DELAWARE RIVER.

Saturday, July 26.

A special race was sailed on Saturday, July 26, between boats of the Riverton and Beverly yacht clubs. A good sailing breeze from the east held throughout the race. Peerless, one of the Beverly boats, won in her class with Sea Gull second. In the sloop class Isit again won, making her third victory in three weeks. T. Bonfield won in the Lark class by seven minutes. In the Mosquito class, A. Cook won by nearly two minutes. The catboats and the jib and mainsail class sailed twice over the course, No. 3, making a distance of twelve miles. The larks and mosquito boats covered course No. 2, twice around, a distance of ten miles. The summary:

Catboats—Start, 3:10.

	Finish.	Elapsed.	Corrected.
Peerless	4 55 35	1 45 35	1 39 16
Sea Gull	4 56 25	1 46 25	1 42 01
Leila	4 57 43	1 47 43	1 42 35
Priscilla	5 01 58	1 51 58	1 45 39
Titania	4 56 15	1 46 05	1 46 05
Gertrude	Withdrew.		
Vampire	Withdrew.		

Jib and Mainsail—Start, 3:15.

Isit	4 57 30	1 42 30	1 32 56
Tadpole	5 12 53	1 57 53	1 43 19
Pumpkin	5 09 15	1 54 15	1 48 37
Fiona	5 03 00	1 48 00	1 45 11
Kaloola	5 02 00	1 47 00	1 47 00

Larks—Start, 3:17.

No. 3	5 14 32	1 57 32	. . . .

Corinthian Y. C.

MARBLEHEAD, MASS.

Midsummer Series.

THE Corinthian Y. C., of Marblehead, has held a most successful race week. First came the postponed Fourth of July race, which was sailed on Tuesday, July 29. The Boston Y. C. gave up one of its Marblehead open races so that this race might be sailed. Then came the annual midsummer series on Wednesday, Thursday and Friday, and on Saturday was sailed the special invitation race. The weather was good every day, and there was not one on which there was not enough breeze to furnish good racing. This is certainly a rarity for Marblehead race week, and the committee has been congratulating itself. There was a good attendance every day, and there was, throughout the series, everything from light to strong breezes, and everybody was satisfied.

Tuesday, July 29.

On this day the Fourth of July special race, which was twice postponed previously on account of light air, was resailed. Before the start it looked like a Marblehead fluke day, but it breezed on from the southeast and a good race was sailed. In the 25-footers Chewink II. had things all her own way. She got the start and led at every mark. There was the usual hot finish between Sally VI. and Seboomook for second place. In the 21-footers Little Haste got the start and led all over the course, while Chloris and Porcupine had a tussle for second place. In the raceabouts, Tunipoo got the start and held Sintram under her lee to the first mark, but after this it was all Sintram. A close race was sailed between Rattler, Savage and Question in the 18ft. knockabouts, Rattler winning. In class A handicap, Yarico won on corrected time, and in the handicap knockabout class Opitsah II. won. The summary:

Class D—25-footers.

	Elapsed.
Chewink II., F. G. Macomber, Jr.	1 13 40
Sally VII., L. F. Percival	1 16 46
Seboomook, B. A. Smith	1 16 56
L'Aiglon, E. W. Hodgson	1 21 11

Class S—21-footers.

Little Haste, T. K. Lothrop, Jr.	1 15 14
Chloris, Cheney & Lanning	1 17 47
Porcupine, C. H. W. Foster	1 17 56
Pilot, Reginald Boardman	1 18 20
Rooster II., Adams Bros.	1 18 46
Micmac, Richard Hutchinson	1 19 28
Opitsah IV., S. H. Foster	1 21 28
Tabasco III., H. H. Wiggin	1 21 32
Thelma, C. W. Chapin	1 21 43

Class K—Raceabouts.

Sintram, W. P. Fowle	1 18 20
Tunipoo, Cooley & Humphrey	1 20 09

Class I—18ft. Knockabouts.

Rattler, A. D. Irving	1 19 04
Savage, J. A. Lawrence	1 19 29
Question, J. H. Hunt	1 19 39
Malillian, B. S. Permar	1 20 49
Miladi II., F. R. Adams	1 21 05
Scrapper, W. C. Loring, Jr.	1 24 26
Comforter, J. M. Whittemore	1 29 00
Aspinquid, C. M. Foster	Withdrew.

Class A—Handicap.

	Elapsed.	Corrected.
Yarico, W. H. Rothwell	1 17 49	1 15 32
Chasca, D. H. Follett	1 16 14	1 16 14
Sally IV., H. W. Mason	1 17 38	1 17 38
Babs, E. B. Alvord	1 19 30	1 17 39

Class B—Handicap.

Scapegoat, C. H. W. Foster	1 22 38	1 20 17
Ruth, H. S. Wheelock	1 22 40	1 20 19
Dabster, G. W. Keith	1 21 17	1 21 17

The judges were George W. Mansfield, W. W. Keith and H. S. Goodwin.

Wednesday, July 30.

On this day the first of the midsummer series of invitation races was sailed in a light breeze, east northeast. In the 25-footers Chewink II. again carried away the honors. In the 21-footers Chloris led to the first mark, but on the second round Little Haste pulled out a lead just before the mark was reached, and she led to the finish. It was all Sintram in the raceabouts, and in the 18ft. knockabouts Savage won after a hot scrap with Question. In the handicap class Sally IV. was an easy first. In the handicap knockabouts Opitsah II. led the class. The summary:

Class A—Restricted 25-footers.

	Elapsed.
Chewink II., F. G. Macomber, Jr.	2 25 09
Sally VI., L. F. Percival	2 32 24
Seboomook, B. A. Smith	2 33 32
L'Aiglon, E. W. Hodgson	2 52 57
Calypso, A. W. Chesterton	2 54 05

Class B—Restricted 21-footers.

Little Haste, T. K. Lothrop, Jr.	2 35 24
Chloris, Cheney & Lanning	2 41 08

Spinster III., L. M. Clark	Not timed.	
Suzanne, Frank Brewster	Not timed.	

Thursday, July 31.

The second of the midsummer races was sailed in a whole-sail breeze, south southeast. Seboomook won in the 25-footers. She and Sally VI. got in a mix up, in which Sally's boom was broken. In the 21-footers Opitsah IV. sailed a great race, leading for the greater part of the course and losing at the last through the greater size of Little Haste. In the raceabouts it was again Sintram. In the 18ft. knockabouts Miladi II., Question and Savage headed the class, Miladi winning. In the handicap class Babs won, and in the handicap knockabouts Suzanne won, both on corrected time. The summary:

Class A—Restricted 25-footers.

	Elapsed.
Seboomook, B. A. Smith	1 31 38
Chewink II., F. G. Macomber, Jr.	1 33 08
Sally VI., L. F. Percival	Disabled.

Class B—Restricted 21-footers.

Little Haste, T. K. Lothrop, Jr.	1 37 58
Opitsah IV., S. H. Foster	1 39 04
Pilot, Reginald Boardman	1 10 09
Porcupine, C. H. W. Foster	1 43 38
Tabasco III., H. H. Wiggin	1 44 23
Katherine, H. C. Sears	1 45 50
Rooster II., Adams Bros.	Disabled.
Thelma, C. W. Chapin	Disabled.
Perhaps II., J. E. Robinson	Disabled.
Chloris, Cheney & Lanning	Withdrew.

Class C—Raceabouts.

Sintram, W. P. Fowle	1 45 57
Tunipoo, Cooley & Humphrey	1 48 18

Class E—18ft. Knockabouts.

Miladi II., J. H. Hunt	1 24 18
Question, F. R. Adams	1 24 48
Savage, J. A. Lawrence	1 25 35
Scrapper, W. C. Loring, Jr.	1 27 00

Aspenet, E. W. Remick	1 31 02	1 27 42
Scapegoat, C. H. W. Foster	1 35 12	1 31 02

Pilot protested Little Haste on two counts, and on one of these Little Haste entered a counter protest against Pilot.

Friday, Aug. 1.

The last of the midsummer series of invitation races was sailed in a whole-sail breeze, south by east. Calypso got the start and led over the course, while there was the usual hot scrap for second place between Sally VI. and Seboomook. It was all Little Haste again in the 21-footers, and in the 18ft. knockabouts Miladi II. won a good race. Chasca won all around in the handicap class, and in the handicap knockabouts Scapegoat won on corrected time. The summary:

Class A—Restricted 25-footers.

	Elapsed.
Calypso, A. W. Chesterton	1 29 08
Sally VI., L. F. Percival	1 31 19
Seboomook, B. A. Smith	1 31 27
Chewink II., F. G. Macomber, Jr.	1 33 36

Class B—Restricted 21-footers.

Little Haste, T. K. Lothrop, Jr.	1 34 05
Pilot, Reginald Boardman	1 38 20
Rooster, Adams Bros.	1 39 15
Opitsah IV., S. H. Foster	1 40 12
Chloris, Cheney & Lanning	1 40 16
Tabasco III., H. H. Wiggin	1 40 35
Porcupine, C. H. W. Foster	1 41 04
Micmac, Richard Hutchinson	1 41 18

Class E—18ft. Knockabouts.

Miladi II., J. H. Hunt	1 12 58
Question, F. R. Adams	1 13 12
Rattler, A. D. Irving	1 13 55
Malillian, B. S. Permar	1 15 26
Savage, J. A. Lawrence	1 15 56

Class D—Handicap.

	Elapsed.	Corrected.
Chasca, D. H. Follett	1 35 20	1 35 20
Louise, E. McWilliams	1 41 35	1 35 52

Jacobin, T. W. King	Disabled.	
Suzanne, Frank Brewster	Disabled.	

Saturday, Aug. 2.

In each of the classes a cup was offered to the winner of the series, and on Saturday morning the tied classes sailed off, in a southeast breeze, light at the start and constantly strengthening to the finish. In the 25-footers Seboomook finished first, but was disqualified on protest and Chewink II. won. In the handicap class Sally IV. won, and in the handicap knockabouts Opitsah II. won. Both of these wins were without question. With the ties settled, the winners of the cups were Chewink II., Little Haste, Sintram, Miladi II., Sally IV. and Opitsah II.

The special race was sailed in the afternoon in a whole-sail breeze, south southeast. Calypso led the 25-footers all over the course. In the 21-footers Tabasco and Porcupine led to the first mark, Thelma led on the beat and then Little Haste won. Miladi II. won in the 18ft. knockabouts after a hot finish. Louise won in the handicap class, and Suzanne in the handicap knockabouts, both on corrected time. The summary:

Class A—Restricted 25-footers.

	Elapsed.
Calypso, A. W. Chesterton	1 22 02
Sally VI., L. F. Percival	1 23 52
Seboomook, B. A. Smith	1 24 46
Chewink II., F. S. Macomber, Jr.	1 25 57
L'Aiglon, E. W. Hodgson	1 30 17

Class B—Restricted 21-footers.

Little Haste, T. K. Lothrop, Jr.	1 30 35
Chloris, Cheney & Lanning	1 32 48
Micmac, Richard Hutchison	1 32 56
Thelma, Livingstone Davis	1 33 18
Tabasco III., H. H. Wiggin	1 33 26
Pilot, Reginald Boardman	1 33 42
Opitsah IV., S. N. Foster	1 35 25
Rooster II., Adams Bros.	Disabled.
Porcupine, C. H. W. Foster	Withdrew.

Class E—18ft. Knockabouts.

Miladi II., J. H. Hunt	1 11 45
Rattler, A. D. Irving	1 11 54
Question, F. R. Adams	1 12 35
Savage, J. A. Lawrence	1 12 56
Malillian, B. S. Permar	1 13 32
Tokalon, R. J. Randolph, Jr.	1 14 58
Scrapper, W. C. Loring, Jr.	1 16 32
Comforter, J. M. Whittemore	1 17 26

Class D—Handicap.

	Elapsed.	Corrected.
Louise, E. McWilliams	1 33 54	1 30 14
Chasca, D. K. Follett	1 31 41	1 31 41
Yarico, W. H. Rothwell	1 37 24	1 32 49
Sally IV., H. W. Mason	1 34 53	1 34 53

Class F—Handicap Knockabouts.

Suzanne, Frank Brewster	1 38 25	1 35 00
Jacobin, T. W. King	1 42 23	1 36 01
Spinster, L. M. Clark	1 42 35	1 36 13
Ruth, H. S. Wheelock	1 44 20	1 37 29

Opitsah II., S. H. Foster	1 37 50	1 37 50

Seboomook protested Calypso, but the judges decided in favor of Calypso.

Newport Special Thirties.

NEWPORT, R. I.

Monday, July 28.

THE 30-footers sailed a race on Monday, July 28, for a cup offered by Mrs. Herman B. Duryea. The breeze was fresh from the southwest. The boats sailed from Brenton's Cove up to Dyer's Island and return. Wawa was first away, but she did not retain her lead very long, for Carolina soon worked into first place. Carolina was first around the leeward mark, and on the beat home she did still better. The summary, start 3:23:

	Finish.	Elapsed.
Carolina, Pembroke Jones	5 53 14	2 30 14
Wawa, Reginald Brooks	5 54 16	2 31 16
Asahai, Lloyd Warren & W. S. Miller	5 55 49	2 32 49
Breeze, William G. Roelker, Jr.	5 57 32	2 34 32
Veda, William L. Stow	6 00 08	2 37 08
Esperanza, H. O. Havemeyer, Jr.	6 02 04	2 39 04
Barbara, Winthrop Rutherfurd	6 05 57	2 42 57

Tuesday, July 29.

On Tuesday the thirties sailed a sweepstake race over a triangular course. The wind was light from the south. Asahi got the best start and held her lead on the first leg, which was a reach, and on the second leg, which was to windward, Esperanza got by Asahi and finished a winner. The summary, start 3:30:

	Finish.	Elapsed.
Esperanza, H. O. Havemeyer, Jr.	5 09 21	1 39 21
Wawa, Reginald Brooks	5 11 06	1 41 06
Barbara, Winthrop Rutherfurd	5 11 10	1 41 10
Carolina, Pembroke Jones	5 17 24	1 47 24
Breeze, William G. Roelker, Jr.	5 19 06	1 49 06
Veda, William M. Stow	5 32 04	2 02 04
Asahi, W. S. Miller & Lloyd Warren	Withdrew.	

Wednesday, July 30.

All of the 30-footers now at Newport started on Wednesday in one of the closest and most interesting races sailed this season. The wind was fresh from the north, and the course was six miles to windward and return. Breeze and Barbara were just on the line at gun fire, but before half the windward leg was covered Esperanza had taken the lead and from that time on it was a most exciting race between Esperanza and Barbara, the former winning by eleven seconds. Three seconds only separated Asahi and Wawa, the third and fourth boats, and Veda came in last, only eight seconds behind Breeze. The summary follows, start 3:22:

	Finish.	Elapsed.
Esperanza, H. O. Havemeyer, Jr.	5 02 47	1 40 47
Barbara, Winthrop Rutherfurd	5 02 58	1 40 58
Asahi, W. S. Miller & Lloyd Warren	5 04 27	1 42 27
Wawa, Reginald Brooks	5 04 30	1 42 30
Carolina, Pembroke Jones	5 05 26	1 43 26
Breeze, William G. Roelker, Jr.	5 05 58	1 43 58
Veda, William L. Stow	5 06 06	1 44 06

Thursday, July 31.

Esperanza again won in the sweepstake race for the thirties sailed on Thursday, July 31. At the start there was a moderate southwest breeze, which died out considerably when the boats turned the leeward mark, and it was slow work beating back to the finish. The course was from Brenton's Cove to Dyer's Island and return. Esperanza took the lead early on the run to the first mark, and was two minutes ahead in rounding. On the beat home she increased her lead and won by three minutes and thirty-five seconds. The summary, start 3:20:

	Finish.	Elapsed.
Esperanza, H. O. Havemeyer, Jr.	6 17 01	2 57 01
Breeze, William G. Roelker, Jr.	6 20 36	3 00 36
Barbara, Winthrop Rutherfurd	6 22 00	3 02 00
Veda, William L. Stow	6 23 42	3 03 42
Carolina, Pembroke Jones	6 24 09	3 04 09
Wawa, Reginald Brooks	6 27 26	3 07 26
Asahi, Lloyd Warren & W. S. Miller	6 32 00	3 12 00

Friday, Aug. 1.

Owing to the light wind the race sailed by the 30-footers on Friday was a most unsatisfactory one. The wind was from the south and the boats sailed over a five-mile to leeward and return course. Barbara led to the leeward mark, but after the boats hauled on the wind Carolina took first place and won by over four minutes. The summary, start 3:24:

	Finish.	Elapsed.
Carolina, Pembroke Jones	6 43 39	3 19 39
Wawa, Reginald Brooks	6 46 37	3 23 37
Barbara, Winthrop Rutherfurd	6 48 07	3 25 07
Breeze, William G. Roelker, Jr.	6 48 29	3 25 49
Asahi, L. Warren & W. S. Miller	Withdrew.	
Esperanza, H. O. Havemeyer, Jr.	Withdrew.	
Veda, William L. Stow	Withdrew.	

Saturday, Aug. 2.

The cup offered by Mr. George D. Widener, of Philadelphia, was raced for by the 30-footers on Saturday, Aug. 2. The course was to Dyer's Island and return. The wind was fresh from the S.W. Veda was first around the outer mark, but on the beat home Carolina and Esperanza both passed her. The race lay between Esperanza and Carolina, and the latter won by eleven seconds. The summary, start 3:35:

	Finish.	Elapsed.
Carolina, Pembroke Jones	5 55 28	2 20 28
Esperanza, H. O. Havemeyer, Jr.	5 55 39	2 20 39
Wawa, Reginald Brooks	5 55 58	2 20 59
Veda, W. L. Stow	5 57 57	2 21 57
Barbara, Winthrop Rutherfurd	5 58 09	2 23 09
Asahi, Warren H. Miller	Withdrew.	

Yacht Racing Association of Gravesend Bay.

Saturday, Aug. 2.

THE sixth regatta of the Yacht Racing Association of Gravesend Bay was sailed on the afternoon of Saturday, Aug. 2, under the auspices of the Brooklyn Y. C. Twenty-seven craft started in the contest, and all but five finished. The winners in the different classes were Bonito, Caribou, Cockatoo, Bronco, Quinque and Martha M.

The day was one of surprises and minor accidents, which upset calculations. What promised to be the keenest struggle of the regatta, that between the class P boats, Cockatoo and Song and Dance, was marred early in the contest by an accident to the last-named craft, in which she lost her bobstay.

This deprived Song and Dance of her jib, until a temporary stay could be arranged, on which was bent a smaller head sail. At the time of the accident the boats were having it nip and tuck, with Cockatoo slightly in the lead. The mishap to her rival greatly increased the advantage.

The best Song and Dance could do under the circumstances was to finish fourth in the class. Before the race the two were tied on points for the Association series, with 42 each. The standing is now 52 to 46, in favor of Cockatoo.

The star feature of the regatta was the excellent work of the class Q boats, Bronco and Wraith, hailing from the New York C. C. These 21-footers have been working nobly all the season, and in this contest led the whole fleet of smaller boats at the finish. Bronco was first over the line, only thirteen seconds ahead af Wraith.

During the middle of the contest Cockatoo carried away one of her backstays. This accident necessitated reefing for the time being, until the southerly breeze had lightened somewhat. She did not finish until one minute and fifty-three seconds after the class Q boats, which led the fleet, and her elapsed time was four minutes and fifty-three seconds more than that of Bronco.

The Regatta Committee of the Brooklyn Y. C. placed the little Herreshoff boat, Opossum, in special class Q for open boats. She had no competitor, and did not finish. The result of the race evened matters quite a bit in the way of points in class Q on the Association series. Trouble now leads, with 36; Bronco has 34, and Wraith 30.

The whole of the Marine and Field Club one-design class was out, and made most interesting racing. The struggle was characterized by two of the tail-enders coming to the fore and winning first and second positions, while the craft which have been monopolizing the honors had to be content with less glorious results.

Quinque won the race, heading Flying Fox at the finish by one minute and forty-five seconds. Kelpie and Stinger, leaders in the series, finished fourth and fifth respectively.

These little Wyckoff creations were also sailing the fifth race for points on the Snedeker trophy. There is but one more struggle for this prize, which occurs on Aug. 16 in a special race held by the club. The winner of a contest in this series scores four points. The second boat gets three, while the others secure one each. Kelpie now leads the series with 16 points, while Stinger is second boat with 10. Barring accident, Kelpie should win the trophy.

Martha M. made a show of the other starters in class V for catboats. She carried full sail throughout, while the other boats were reefed.

The entry in classes M and N which journey twice out to West Bank Light and return, was not gratifying. In special class M the old rivals Sunol and Bonito contested, and victory this time went to the latter. Kangaroo started in the race, but when half way home on the first round broke her main sheet, and eventually withdrew.

Neither Vivian nor Gwendolen, the regular class N boats, started. This was disappointing, as the two are evenly matched and always sail a fine race.

In special class N Squaw did not come to the line. This left but Caribou and Indian as starters. The former did well on time, and won easily. Indian did not finish the race.

Class R boat, Pickaninny, went over the line at the starting signal, but as she had no opponent withdrew.

The southerly wind blowing gave the smaller boats which sail the inside courses a run to the Marine and Field Club buoy, a reach to the mark off Fort Hamilton, windward work to the Atlantic Y. C. stage boat, and a run home. Classes M and N, which journeyed out to West Bank Light, had a beat out and a run home.

For the next two weeks there will be a lull in Association regattas. The next does not occur until Aug. 23, under the auspices of the Marine and Field Club. The summaries of the race and the points to date follow:

Class M—Special—Start, 3:33.

Bonito, Haviland Bros.	7 01 00	3 28 00
Sunol, John Abbey	7 26 45	3 53 45
Kangaroo, C. H. Humphreys	Withdrew.	

Class N—Special—Start, 3:36.

Caribou, J. E. Nicholson	7 19 40	3 43 40
Indian, Menton Brothers	Withdrew.	

Sloops—Class P—Start, 3:39.

Cockatoo, Hendon Chubb	5 09 50	1 30 50
Corona, J. E. Beggs	5 12 15	1 33 15
Streak, Speidel Brothers	5 15 25	1 36 25
Song and Dance, E. F. Luckenbach	5 17 52	1 38 52

Class Q—Cabin—Start, 3:42.

Bronco, F. C. Moore	5 07 57	1 25 57
Wraith, Calvin Tomkins	5 08 10	1 26 10
Flying Fish, I. M. Dean	5 12 50	1 30 50
Trouble, W. H. Childs	5 14 00	1 32 00
Wink, W. A. Barstow	5 15 38	1 33 58
Elsie, C. P. Rosemon	5 22 26	1 40 26

Class Q—Open—Start, 3:42.

Opossum, R. P. Doremus	Withdrew.

Sloops—Class R—Start, 3:45.

Pickaninny, L. R. Connett	Withdrew.

Marine and Field Class—Start, 3:48.

Quinque, L. H. Smith	5 24 30	1 36 30
Flying Fox, Cone & Buckman	5 26 15	1 38 15
Vixen, Mahoney & Chandler	5 27 50	1 39 50
Kelpie, W. K. Brown	5 27 54	1 39 54
Stinger, A. P. Clapp	5 30 50	1 42 50
Jig-a-Jig, W. A. Hutcheson	5 31 30	1 43 30

Catboats—Class V—Start, 3:48.

Martha M., Richard Moore	5 21 45	1 27 45
Boozie, C. D. Durkee	5 29 50	1 35 50
Rascal, D. G. Whitlock	5 35 20	1 41 20
Jean, F. Nickerson	Withdrew.	

Points to date on Y. R. A. G. B. series—Mariquita, 5; Sunol, 44; Bonito, 38; Kangaroo, 12; Vivian, 30; Gwendolen, 16; Caribou, 50; Squaw, 24; Indian, 6; Cockatoo, 52; Song and Dance, 46; Streak, 22; Karma, 20; Carona, 14; Trouble, 36 Bronco, 34; Wraith, 30; Opossum, 24; Wink, 13; Flying Fish, 10; Spots, 2; Elsie, 1; Pickaninny, 5; Kelpie, 52; Stinger, 42; Quinque, 24; Flying Fox, 18; Vixen, 10; Jig-a-Jig, 7; Martha M., 40; Rascal, 38; Boozie, 24.

Points to date on Snedeker trophy—Kelpie, 16; Stinger, 10; Quinque, 7; Vixen, 5; Jig-a-Jig, 4; Flying Fox, 4.

English Letter.

THE International races for the French 1-ton cup have been won by Scotia II. She was designed by Linton Hope for Mr. Lorne C. Currie, and is a very fine example of good construction and building. L'August was the French challenger—not nearly so taking a craft—and she is fast in light winds. The first race was sailed in a fresh breeze, and while it served both equally, Scotia romped away, particularly on the wind. She led the other by eleven minutes on the first round. The other two races were close, but Scotia had the wininng cards all the time. The course was off Seaview in the Isle of Wight.

The Clyde regattas had rather dismal weather, though on the south coast we were favored with brilliant summer at the time. They produced nothing very startling, the chief items of interest being the improved sailing of Camellia in the 52ft. class and the marked success of Barabel against the Fife 36-footers. She is the crack boat of the class now. This will, in all probability, lead to a strong class next season, and it seems possible that the Clyde will produce more boats of this size than the Solent. If so, we shall soon see whether a long lean type will be of use. It would be possible to build a 36-footer of good sail area, with a loadline of 38ft. and 8ft. beam with fair draught, too. I cannot see how such a boat could fail to pick up many prizes against the present boats of about 9ft. beam and 34ft. L. W. L. Certainly it would be worth the trial.

Kariad has been deserted again by Sybarita, which made a brief appearance on the Clyde, with no success, however. Sybarita may not be going as well as she ought to, but I have never seen any reason to consider her even a moderately good boat. She was able to beat Meteor II. (as a yawl) in very light airs, but the older boat was by far the faster in anything like a breeze. Kariad, on the other hand, is obviously a very speedy craft and should shape well for many years to come. These big boats are not easily outbuilt, and a good sailing master means a long lease of life to them—Charlie Barr and Columbia supply an excellent instance of this. Camellia has also deserted Lucida, leaving her to sail over the Irish courses alone. It is possible that she is having some trifles attended to before the Cowes week, where last year's crack Magdalen will meet the two new boats for the first time. I am not sure that I was right in guessing that Camellia had a slight alteration before the Clyde races, though her form seems to indicate it, and her garboards were certainly removed. Harley Mead has just launched a 30ft. L. R. boat designed and built by him last winter at his yard in Cowes. She is an extremely pretty boat, and he deserves all success for his pluck. He built the boat on the chance of getting a purchaser, and, unfortunately, such persons have been peculiarly scarce for the last year or two. I believe he means to race the boat himself now. He has done this once or twice before and his boats have been very successful, but it seems rather hard lines that in the profession of yacht designing one should have to supply one's own patronage. It would be different in the case of a duffer, of course, but Mead has show real talent.

We are all now trembling with excitement over the anticipated delights of the Cowes week. Many of your readers who have never been to Cowes must think it is quite a magnificent place. These may be surprised to hear that in the High Street (the only important thoroughfare) there is not room enough for two vehicles to pass! When two have the bad luck to meet, one must back down to some distant widening before the other gets a fair wind. And the anchorage is awful. The tides run very hard through it, so that getting under way when it is crowded is extremely difficult. But it is a pretty little place, and having been pitched upon as the original yachting center of England, it can very well hold its own. The open classes will have a fair share of races in the Weehi, but the chief racing will be handicaps, including those of the Squadron's, King's Cup and German Emperor's Cup. The conditions of the latter, by the way, exclude Navahoe, for it is open only to yachts built in Europe.

The King has been at Cowes on board his new yacht, Victoria and Albert, during the last ten days. The sea air has hastened his recovery in a remarkable way. This may be said to be the first appearance of the yacht in public, and after all has been said, she is a grand vessel. I was told by one of the men who was in her when she was sent purposely to look for bad weather in the Bay of Biscay that a finer seaboat never floated. Her speed is over 22 knots, and she is a handsome ship. She cannot be compared to private yachts in appearance, for she is quite unlike any, and that is as it ought to be. The only fault I can fancy to exist is that her masts are just a little short, and the mainmast is a little too far aft.

Navahoe appears to be little injured by her change to yawl rig. Her skipper managed a very complete smash-up of the old Irex at the start of the channel match from Dover to Ostend last week, by trying to force a passage in complete defiance of rules. The old cutter had her bulwarks smashed and her mainsail split, and Creole was within an ace of being rammed. There was a fresh breeze during the day, giving a reach to Ostend (70 miles), and Cicely scored a remarkable win. She finished ten minutes ahead of Navahoe, over 23 minutes ahead of Clara, over 45 minutes ahead of Brynhild, covering the course at an average of over twelve knots.

Cicely continues to do well, but in light winds, with a fair amount of beating, she cannot quite hold Navahoe and does not show up so well with Bona and Brynhild. This is only natural, and in a schooner class it would take a very slippery vessel to beat her in any weather.

One would expect that at this season of the year the motor makers would be dull, but over here the reverse is the case. There is a decided boom in motors, and evidently the yachts and launches fitted last winter have proved satisfactory object lessons. Next winter will see many auxiliary yachts on the stocks—of that there is no doubt. Our makers stick to the 4-cycle engine, and for what photographers call "serious work." I am strongly inclined to think them right. I have seen some pathetic efforts being made to coax 2-cycle engines out of the sulks. These incidents only seem to endear them to the owners, however. Our deep type of small cruising yachts permit the motors to be installed in a very compact way, interfering little or not at all with the accommodation.

E. H. HAMILTON.

Shelter Island Y. C.

SHELTER ISLAND HEIGHTS, L. I.

Saturday, Aug. 2.

ONE of the best regattas seen off Shelter Island in many a day was sailed on the afternoon of Saturday, Aug. 2. There was a stiff breeze blowing from the southwest at about a twelve-knot velocity.

The best racing of the day was in the competition for class R sloops. After a close race, Harp, belonging to J. W. Lunning, crossed the line about 100ft. ahead of M. Edson's San Toy. Psi, Andrew Bancker, was third, while John Webster's Snook and Howard Keim's Arrow brought up the rear in the order named.

Four of the star boats competed in class N. Flosshilde, belonging to Oscar Webber, won the contest. George Trowbridge Hollister's new Gardner & Cox boat, Kalmia, was second, and Helen, belonging to Mortimer Fuller, was third.

Senta, another Gardner & Cox creation, belonging to Otto E. Lorke, met with an accident, which put her out of the running. One of her spreaders gave way, which allowed the mast to go by the board about 15ft. from the deck. Quick work saved the yacht from further damage and she was towed into anchorage by the steam yacht Magnet, belonging to Hamilton Fish.

Eelskin, Guy Hutchison, owner, carried off the honors in the class for small sloops. Second place was taken by Winnewish, belonging to H. N. Shickel, which beat out Kard Pickard's Duchess by a slight margin.

It was the first victory of the season for Flosshilde and for Harp.

Penataquit-Corinthian Y. C.

BAY SHORE, L. I.

Saturday, Aug. 2.

THE annual regatta of the Penataquit-Corinthian Y. C. was sailed on Aug. 2. Ten classes filled, and the races were the equal of any in South Bay yachting history.

Honors of the day went to Com. Regis H. Post's sloop Constance, which won the Queen of the Bay cup from Charles De Hart Brower's Winnabust. This trophy goes to the yacht making the best elapsed time over the longer courses. The Post boat covered the distance in 1:19:58, while Winnabust did it in 1:30:21.

The class N sloops which are competing this season for the Lighthouse cup presented by J. Campbell Smith, had a lively contest, although the race did not count on the series.

John R. Suydam's new Crane boat, Arrow, won, finishing nearly two minutes ahead of H. O. Havemeyer's Herreshoff production, Electra. T. R. Macy's Don was third. Gayety, Richard Hyde, owner; Pinkie, belonging to Allan Pinkerton, and Amy Foster, the property of J. Campbell Smith, winner of the Lighthouse cup series of 1901, also started. Amy Foster did not finish.

The winners in the other classes were: Class H, 25ft. sloops, Frontenac; Westhampton Country Club one-design class, Charon; Moriches Bay catboats, Merry Jest; class W W, Scud; catboats, class W, Grace; catboats, class 4, Toddie; class M, special, Wildojna; catboats, class P, Jupiter, sailover.

American Y. C.

MILTON POINT, LONG ISLAND SOUND.

Saturday, Aug. 2.

THE American Y. C.'s 21 and 18ft. one-design classes sailed a race off Milton Point on Saturday, Aug. 2. The boats sailed over a small triangular course in a very light southwest breeze. In the 21ft. class Jolly Tar and Rascal tied for second place. Cricket won in the 21ft. class, while Rattler won in the 18ft. class. The summary:

21ft. Class—Start, 3:10.

	Finish.	Elapsed.
Cricket, H. Willetts	4 17 14	1 07 14
Jolly Tar, S. Howland	4 17 26	1 07 26
Rascal, S. C. Hopkins	4 17 26	1 07 26
Howdy, S. Wainwright	4 18 30	1 08 30
Ping Pong, W. H. Browning	4 19 14	1 09 14
The Kid, O. Harriman, Jr.	4 20 09	1 10 09

Seawanhaka Cup Defender.

AT a meeting of the Regatta Committee of the Royal St. Lawrence Y. C., held on Saturday, Aug. 2, it was decided that Trident was the boat best suited to defend the Seawanhaka cup against Tecumseh, the Bridgeport Y. C.'s challenger.

Challenger for Fisher Cup.

THE Regatta Committee of the Royal St. Lawrence Y. C. has been authorized by ex-Com. George H. Gooderham to send a challenge to the Rochester Y. C. for the Fisher cup. Invader is named as the challenging boat.

Western Canoes.

CHICAGO, Ill., Aug. 2.—Mr. A. W. Friese, of Milwaukee, just back from Ballast Island, reports that he believes there is at least some chance for a general A. C. A. meet at Ballast Island in the near future. E. H.

Seawanhaka-Corinthian Y. C. One-Design Class.

A SHORT time ago the Seawanhaka Corinthian Y. C. opened a designing competition through the columns of FOREST AND STREAM with the idea that some of the designs sent in might prove good enough for general adoption. One of the conditions governing the competition was that the boats should be designed under the new measurement rule. It was found afterward that the rule could not be applied with any satisfactory results to such small boats, and although the prizes were awarded, none of the designs were actually used. Some of the club members who wished to build in this class got Mr. Clinton H. Crane to make a design for them, and the one submitted by him proved satisfactory. The boats which are to be built will be known as the Seawanhaka 15-footers, will measure as follows; 15ft. waterline, 24ft. 6in. over all, 6ft. breadth and 3ft. 9in. draft. The boats will have a regular knockabout rig, and will carry 325 sq. ft. of sail. They will be keel boats with outside lead ballast, and will have bronze watertight bulkheads. The boats will be double planked with mahogany, and will cost not over $650.

Those who are certain to build are ex-Com. Henry C. Rouse, Frank J. Gould, Com. Alexander Van Rensselaer of the Philadelphia Corinthian Club, James A. Burnet, Frank D. Pavey, Daniel Bacon, Emlen Roosevelt, C. W. Wetmore, T. S. Young, Walter James, Franklin A. Plummer, Johnston de Forest, William J. Mattheson, Colgate Hoyt and Percy K. Hudson. The four who will probably build are L. L. Lorillard, Jr., E. S. Willard, H. M. Crane and C. A. Sherman.

YACHTING NEWS NOTES.

We are indebted to Mr. A. F. Bancroft, Secretary of the Corinthian Y. C. of Philadelphia for a copy of its club book.

Mr. Stanley M. Seaman has made the following sales through his agency: Auxiliary ketch Cero, 52ft. l.w.l., for Messrs. W. K. Mathews and A. B. Claflin, of New York City. Yawl Yram, for Mr. J. P. Bartram, Jr., of New York city. The 51ft. sloop Whitby for Mr. N. L Tuck, of Brooklyn, N. Y., to Mr. W. E. Haskell, of New York city. The 30ft. sloop Kathleen to Mr. Daniel Bacon, Seawanhaka Y. C., for Mr. E. L. Hopkins, of the same club. The launch Spray for Mr. Henry Bullard, of Middletown, Conn., to Mr. L. B. Huntington, of New Rochelle, N. Y.; she is a cruising launch 40ft. over all, designed and built by Henry Burdeau this spring; Mr. Huntington contemplates an extended trip to Florida this coming winter. The 25ft. sloop Quivette for Mr. Walter Burgess, of Boston, Mass., to Mr. Henry A. Robinson, of New York city.

Mr. Frank N. Tandy has sold for Mr. Guy Norman his steam yacht Hope to Mr. E. Pierson Beebe.

The Geo. Lawley & Son. Corp., South Boston, Mass., is building for Mr. Charles Fletcher, of Providence R. I., a steel steam yacht. Mr. Fletcher recently sold his steam yacht Alvina to Mr. Chester Griscom. The new boat was designed by Mr. A. S. Cheseborough, who also designed Alvina. The new vessel is 171ft. over all, 139ft. waterline, 21ft. 6in. breadth and 10ft. draft. She will be completed May 1, 1903.

The 40-footer Nymph, recently purchased by Mr. John Reilly, of New York, was beached at New Rochelle on Tuesday, July 30, to have her bottom painted. To keep her on an even keel guy ropes were run out from the masthead. One of these parted and let the yacht fall over on some rocks, making a bad hole in her port side. The captain of the yacht, who was working on the keel, had a narrow escape from being crushed.

The Northport Y. C., of Northport Harbor, will hold their fourth annual regatta on Saturday, Aug. 9. It is open to all yachts of the 75ft., 55ft. schooners, the 80ft., 70ft., 60ft., 51ft., 43ft., 36ft., 30ft., 25ft., 21ft., 18ft. sloops and cutter classes; 43ft. and 36ft. yawls; raceabouts regular class, 30ft., 25ft., 21ft. and 18ft. classes; Manhasset Bay Y. C. one-design class, Northport Y. C. one-design dory class (Greenwich type). The races will be started at 12 o'clock. It will be high water at Northport Harbor at 3:21 P. M. on the day of the race.

Mr. Hollis Burgess, who attends to the brokerage department of the business of Mr. W. Starling Burgess, has recently made the following sales: 21ft. knockabout Geisha, owned by W. T. Whitman, of Paris, Texas, to A. B. Shepley, of St. Louis; Herreshoff, one-design, Buzzard's Bay 15-footer Twinkle, owned by Augustus Hemenway, of Boston, to C. E. Hodges; 30ft. yawl Katharine, owned by Walter Burgess, of Boston, to the Hon. F. W. Rollins, ex-Governor of New Hampshire; 31ft. steam launch Freebooter, owned by Walter Parsons, of Boston, to E. B. Phillips, of Pepperell, Mass; 28ft. sloop Norseman (in conjunction with McConnell Bros.), owned by F. W. Bridge, of Boston, to Rev. G. A. Strong, of Quincy; 41ft. steam launch Hermes, owned by C. W. Downer, of Boston to W. H. Elliot, Commissioner of the Interior at Porto Rico, to be used as a Government launch; 30ft. sloop Elmer, owned by Thomas Harrington, of Boston, to Capt. Johnson, of Melrose; 21ft. raceabout Margaret, owned by James E. Graves, of Marblehead, to William Cothroll, of Chicago; 18ft. knockabout Tern, owned by Mrs. L. B. Gibson, of Roxbury, to William Cothroll, of Chicago; 18ft. sloop Osprey, owned by W. H. Child, of Hingham, Mass., to R. L. Scaife, of Boston; 21ft. knockabout Meander, owned by E. B. Merriman, of Boston, to Henry W. Peabody, of Boston; 25ft. sloop Querita, owned by C. C. Williams, of Boston, to B. D. Amsden, of Boston; 21ft. knockabout Polly, owned by Ray Taft, of Boston, to Frank Damrosch, of New York; 21ft. Massachusetts Y. R. A. cabin sloop Quakeress, owned by Quincy Bent, son of Major Bent, Commodore of the Annisquam Y. C., to Mr. Joyce, of Philadelphia; 21ft. keel sloop Frolic, owned by Albert F. Bigelow, of Boston, son of Albert S. Bigelow, Commodore of the Eastern Y. C., and owner of the fine new steam yacht Pantooset, to Dr. W. H. Litchfield, of Hull, representative of Boston; 16ft. keel sloop Pollly II., owned by Eliot Wadsworth, of Boston (sold in connection with F. S. Nock, of West Mystic, Conn.), to Mr. Dodge, of New York; 25ft. Bar Harbor knockabout Oeewah, owned by Alfred Douglas, of New York, to Walter T. Wallace, of New York.

This firm has chartered the 100ft. steamer Genevieve, owned by Capt. Burgess, of Onset, to C. N. Shaw, of Dedham, with option of purchase; 105ft. steam yacht Josephine, owned by William H. Gwynne, of Cambridge, to the Quincy Y. C., for the Quincy cup races held off Manchester Aug. 4, 5 and 6, with option of more.

Rifle Range and Gallery.

Columbia Pistol and Rifle Club.

SAN FRANCISCO, July 20.—H. Kroeckel, secretary of the Stockton Pistol and Rifle Club, joined our club, the Columbia Pistol and Rifle Club, and was high man in the .22 rifle contest. His shooting will stimulate our boys. Capt. Fred Kuhnle, who comes all the way from Petoluma, found his .38 black powder cartridges would not work, so Young prevailed upon him to shoot his loaded with smokeless. Fred proceeded to roll up 44 in 10 straight shots with it, beating Young on the 3-shot match with his own gun. "Well," said Fred, "you can't keep them out of the center, can't you load mine that way?" Ed Hovey led in the pistol match and Pape in the Creedmoor.

By the way, why has New York or the National Rifle Association found Creedmoor unsuitable for team-match shooting? We notice the team match is to be on the Standard with military guns. There has been some good military shooting done in the West on Creedmoor, and the vandalism in this instance remains with New York.

Scores on Columbia target, off-hand shooting:

Rifle, 200 yards; three-shot match: Capt. Fred Kuhnle, 11, 12, 15, 17, 18, 19, 19, 20, 20, 22. F. O. Young, 11, 13, 14, 16, 18, 18, 18, 20. H. Kroeckel, 19, 26. Ten-shot match: F. O. Young, 53; A. H. Cady, 67. Military and repeating rifle match, Creedmoor count: A. H. Pape, 47; P. Becker, 46, 45, 43; F. Knostman, 42, 39, 38, 37.

Fifty-yard range, pistol: Ed Hovey, 39, 43; F. O. Young, 53, 53; R. Schneider, 55, 61, 65, 67, 79; G. Barley, 57; P. Becker, 59; Dr. H. W. Hunsaker, 64, 66, 69, 78; J. R. Trego (revolver), 67, 68, 70, 74, 76; Miss Magnin, 129; Mr. Magnin, 133. Revolver, L. Hinkel, 57; F. O. Young, 62, 67; .22 and .25 rifle, H. Kroeckel, 18, 21, 21, 22, 22, 22, 24, 25, 26; Dr. Twist, 21, 22, 23, 23, 24, 25, 28, 28; Dr. Hunsaker 35, 35.

FRED O. YOUNG, Sec'y.

Trapshooting.

Fixtures.

Aug. 13-14.—Brunswick, Me.—The Interstate Association's tournament, under the auspices of the Brunswick Gun Club. L. C. Whitmore, Sec'y.

Aug. 14-15.—Greenville, Pa.—Alexander's second annual trapshooting tournament; $50 average money. John A. McNary, Mgr.

Aug. 14-15.—Greenville, Pa.—Alexander's annual target tournament.

Aug. 14-16.—Hamilton, Can.—Dominion Trapshooting and Game Protective Association's tournament.

Aug. 14-15.—Vicksburg, Miss.—Mississippi and Louisiana Trapshooters' League target tournament. C. W. Walton, Sec'y, Natchez, Miss.

CONTESTS AT INTERSTATE PARK.

Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have published. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York. FOREST AND STREAM *goes to press on* TUESDAY OF EACH WEEK.

The programme of the Interstate Association tournament, given for the Haverhill (Mass.) Gun Club, August 27 and 28, has ten events each day, alternately 15 and 20 targets, known and unknown angles, $1.50 and $2.00 entrance. Lunch will be served on the grounds each day. Rose system ratios 5, 3, 2 and 1 will govern the division of the moneys; targets 2 cents; sweepstakes optional. First class shells for sale on the grounds. The Haverhill Gun Club will give $50 in gold to the four high guns of entire programme, as follows: First, $20; second, $15; third, $10; fourth, $5. To reach the shooting grounds, take Main-Rosemont electric cars to Dustin Square, from which it is a short walk to the grounds. On August 29, the third day, the Haverhill Gun Club will give an extra programme of ten events, 25 targets each, $2.50 entrance, 250 targets in all, with a total of $25 entrance. These are alternately regular and Sergeant systems. The first four are grouped into a 100 target event.

The Interstate (five men) team match, entrance $15 per team, the total amount of this entrance, with $10 added by the club, goes to the winning team; should less than three teams enter for this event, the committee reserves the privilege of transferring added money to either the interclub or individual matches. Nos. 5 and 6 and the interclub (five men) team match, open to all regularly organized gun clubs, any of which may enter one or more teams. To the winning team of this event the club presents $15. Nos. 7 to 10, inclusive, are the individual handicap, 16 to 23yds. Handicapping will be done by three competent men. The club adds $30 to this event, $15 to first, $10 to second, $5 to third, high guns.

For further information address the Secretary, Mr. S. G. Miller, 25 Washington Square. Mr. Elmer E. Shaner, the Association manager, will manage the tournament.

The programme of the Olean, N. Y., Gun Club's tournament, the dates of which are Aug. 12 and 13, provides twelve events each day, 10, 15, 20 and 25 targets, $1, $1.50, $2 and $2.50 entrance. The programme contains further information as follows: "$20 in gold will be given for first; $10 to second; $5 to third, and $5 to lowest average. Moneys will be divided Rose system, 8, 5, 3, 2. Shoot will commence promptly at 9 A. M. Loaded shells for sale on the grounds. Shoot rain or shine. Shells shipped to Mr. B. D. Nobles, 111 North street, will be delivered on the grounds free of charge. Mr. H. D. Kirkover, Jr., of Fredonia, has donated an elegant trophy to be given to any shooter residing in Cattaraugus county who makes the highest average during the two days' tournament. There will be a 100-target race between B. D. Nobles, of Olean, and H. D. Kirkover, of Fredonia, for the Olean challenge trophy, which Mr. Kirkover now holds, having won it at the last Olean tournament. Handicapping Committee: F. D. Kelsey, of East Aurora; L. V. Byer, of Rochester; Otto Miller, of Olean; E. H. Vaughan, of Olean, and one other selected by the committee." B. D. Nobles is the secretary.

The programme of the Parker Gun Club tournament, to be held at Meriden, Conn., on September 1 and 2, provides like events each day, ten at 15 and 20 targets alternately, $1.30 and $2.40 entrance, or a total of 175 targets, $18.50 entrance. The tournament is open to all. Grounds open at 8:30. Programme begins at 9:30. Rose system, 5, 4, 3, and 2. Targets 2 cents, sweepstakes optional. Shells for sale on grounds. Take electric cars to Hanover Park. Guns and shells prepaid and shipped to Mr. C. S. Howard, will be delivered on grounds free.

A Bristol Sheep Bake—Dinner will be served on the grounds, consisting of baked lamb, sweet potatoes, Irish potatoes, fried sweet corn, etc. Tickets, 50 cents. Served first day only. Second day a substantial lunch will be supplied.

Mr. Elmer E. Shaner has been enjoying a much-needed outing at Rainmakers' Camp, indulging betimes in the gentle art of fishing, in which art he was gratifyingly successful. The Marietta and Brunswick tournaments are next to engage his attention.

The Middletown (N. Y.) Gun Club has issued the programme of its tournament, to be held on August 12. There are eight events, with extra events to be arranged later. The events are at 10, 15 and 20 targets, except No. 8, which is the Wallkill Challenge Trophy. This trophy was first offered by the Wallkill Gun Club, and they were the first winners, by a score of 101, on their own grounds. It was then won on the Deckertown Gun Club grounds by the Middletown Gun Club by a score of 80 tie —30 tie and 30. The Wallkill Gun Club won the next contest on the grounds of the Warwick Gun Club by a score of 89. The fourth contest for this trophy will take place on the grounds of the Middletown Gun Club, on Tuesday, August 12, 1902, at 2:30 o'clock P. M. Contestants: Wallkill Gun Club, Deckertown Gun Club, Warwick Gun Club and Middletown Gun Club. Shooting will commence at one o'clock. Purses divided, Rose system, one money for each three entries. Events open to all shooters. Lunch served on grounds. Take State Hospital car.

The Vicksburg, Miss., Gun Club has issued the programme of its eighth annual tournament, which is to be held Aug. 13 to 15. Cash to the amount of $400 will be added, and $100 will go to the six high averages. The first day is for practice. The regular programme begins on the second day. On the second and third days there will be ten events each day, with a total of 200 targets each day. Entrance each day, $20. Targets 2 cents. Rose system will govern. Railroads will give reduced rates from all points on certificate plan. All visitors should secure certificate when buying ticket, as fifty certificates are required. Shooters attending the Birmingham, Ala., shoot, Aug. 12 and 13, can leave Birmingham at 10:10 P. M. over Queen & Crescent route, Aug. 13, and arrive in Vicksburg 6:50 A. M. next morning, Aug. 14, in time for regular programme of the Vicksburg Gun Club shoot.

The programme of Alexander's second annual tournament, to be held at Greenville, Pa., Aug. 14 and 15, provides eleven similar events each day, five at 15, five at 20 and one at 25 targets, entrance $1.50, $2 and $2.50. The shoot will be held at Packard Park, which is only a few minutes' walk from the hotels. Average money $50, divided in four moneys, 40, 30, 20 and 10 per cent. Prizes for two low guns. On Thursday evening, Aug. 14, the participants in the tournament will have a Sea Food Dinner, given by Mr. Chas. G. Grubb, of Pittsburg, and Alexander, at the Elks Club. A magautrap will be used for target throwing. The Rose system will govern. Lunch served on the grounds. Manufacturers' agents and for-targets-only go together. Guns and ammunition sent to the manager, Mr. John A. McNary, will be delivered on the grounds free of charge.

The programme of Messrs. Budd and Henshaw's amateur tournament, to be held at Arnold's Park, Iowa, Aug. 26 to 29, announces that $300 will be added, and that the programme for each day is alike; that is, twelve events, eight at 15 and four at 20 targets, $1.50 and $2 entrance. Further information is presented as follows: "Shooting will commence at 9 A. M. sharp. Interstate Association rules to govern. Price of targets, 2 cents. All ties divided. Purses will be divided as follows: 40, 30, 20 and 10 per cent. in 15-target events, and 30, 25, 20, 15 and 10 per cent. in 20-target events. For information or programmes write E. C. Henshaw, Okoboji, Ia. Ship shells and guns care C. W. Budd, Arnold's Park, Iowa. A handsome trophy will be given to manufacturer's agent making high average in all programme events."

Mr. Chas. H. Philbrook, acting secretary, writes us as follows: "At the request of Mr. C. F. Lambert, in behalf of the Haverhill Gun Club, who wish to extend the Interstate Association shoot through Aug. 29, the Watertown, Mass., Gun Club have changed the date of their all-day open tournament to Saturday, Aug. 30. Otherwise our plans are unchanged, and we will endeavor to make the day an enjoyable one for all in attendance."

In the shoot of the Baltimore Shooting Association last Saturday, Mr. E. H. Storr made a score of 97 out of 100 targets, a performance of the first class.

President G. Dal Fox writes us that "The Milton (Pa.) Rod and Gun Club will hold a two days' shooting tournament, August 21 and 22, at Ranyler's Park, one mile east of this borough limits. The club already has the assurance that some of the best shots in the county will be present."

There are some rumors floating about, the purport of which is that the Grand American Handicap at Live Birds completed its end with the recent tournament at Kansas City. It is to be regretted that one, a final one if need be, is not positively arranged to be held at San Antonio.

The succotash party and tournament given to the Wanderers by Dr. W. L. Gardiner, at his charming home in East Orange, N. J., on Saturday of last week, was well attended, twenty-five shooters participating in the competition. Every one seemed to have enjoyment unalloyed.

The Haverhill, Mass., Gun Club is most energetically endeavoring to make a success of the forthcoming tournament given for it by the Interstate Association. The Haverhill tournaments are noted for good competition, good fellowship and skillful management in all particulars.

The Wanderers will visit the Jackson Park Gun Club, of Paterson, N. J., on Saturday of this week, and the Saturday following they will visit the North River Gun Club, at Edgewater, N. J. Aug. 23, they will visit the Westwood, N. J., Gun Club's clam bake. They will shoot actively at each place, in a modest way.

At the tournament of the Southeastern Iowa Amateur Association, Newton, Ia., July 29 and 30, Mr. Fred Gilbert was high average with the extraordinarily high percentage of .989. Eight others shot 90 per cent. or better.

The Wanderers are rapidly fattening their treasury, though why they need a treasury at all, there being no expenses of any importance, is not at all apparent. The question then is: Why is it?

On Sunday last, Mr. Theodore R. Hostetter, of Pittsburg, Pa., died. He was a member of the Herron Hill Gun Club, and quite famous locally as a trap shot of skill.

The secretary, Mr. R. W. Sample, informs us that the East Liverpool (Ohio) Gun Club will hold a tournament on September 10.

There is open target shooting at Watson's Park, Burnside Crossing, Ill., every Saturday.

BERNARD WATERS.

Southeastern Iowa Amateur Association.

NEWTON, Ia., July 30.—The second tournament of the Southeastern Iowa Amateur Association, held in this city, closed to-night on account of small attendance. The programme was not completed, some Association events being left out on account of small entries. The shooting was from one set of traps, Sergeant system. One hundred dollars was to have been paid for averages, but owing to light attendance but $50 was paid. Hughes won first; Burnside, second; Selbhers, third; Klein, fourth; Cool, fifth; McKelvey and Ellett, sixth.

Budd and Gilbert shot for targets and birds. Gilbert was high with .989, while Budd made .948. On the first day Gilbert made a run of 112 straight. No meeting of the Association was held, and no location decided on for next meeting. Geo. Selbhers won the Schmelzer Arms Company's cup; Russel Klein won the championship medal given by the St. Louis sportsmen; Hoon won a diamond model pistol; Ellett a shell box, given by Von Lengerke & Antoine; Klein a metal cigar case, donated by Parker Bros., and Dove a gun.

Quite a number of the boys will go from here to Spirit Lake, Ia., to attend Burmeister and Klein's tournament, Aug. 6 and 7.

First Day, July 29.

HAWKEYE.

A certain wealthy English gentlemen, being in doubt as to whether he would become the tenant of a sporting property advertised in County Clare, entered into conversation with the gamekeeper. "And you say that there are plenty of birds about?" "Birds, yer honour, it's bewildered ye'd be wid them." Finding the shooting report so satisfactory, the "foreigner" turned to the lake. "Are there fish here?" said he. "Fish, yer honour, why, it's jostling each other they are, and if they wants to turn round they has to lep out of the water to do it."—Shooting Times.

IN NEW JERSEY.

North River Gun Club.

Edgewater, N. J., Aug. 2.—The handicap prize shoot was won by Mr. Allison. The day was exceedingly hot.

JAS. R. MERRILL, Sec'y.

The Westwood Gun Club.

Westwood, N. J., Aug. 3.—The regular annual clam bake to be given by the Westwood Gun Club will occur on Saturday, Aug. 23, at Westwood, N. J. Shooting will begin promptly at 9 o'clock A. M., on the grounds, which are light and appropriately situated, thus affording a grand opportunity for making some excellent scores.

Some of the most noted shots of the country have volunteered to be present to enliven the occasion, including the Wanderers' Gun Club, those jolly fellows of the North River Gun Club, and representatives of many other clubs will participate in the numerous events of the day.

The bake will be under the immediate direction of Mr. Geo. C. Bennett, whose long experience as a caterer on occasions of this kind, makes him master of his profession.

Westwood is situated along the line of the New Jersew & New York Railroad, about twenty-one miles from New York, among the hills of northern New Jersey, making it a most delightful spot for all out-door sports. Trains leave the foot of Chambers street (Erie depot) every hour. Excursion tickets for round trip, 90 cents. Ammunition can be obtained on the grounds at New York prices. Parties wishing to forward their guns, ammunition, etc., can do so by expressing, prepaid, consigning same to themselves, in care of B. L. Gruman, Captain, Westwood Gun Club. Goods forwarded in this way will be delivered on the grounds free of charge.

The management will spare no means to make this a most delightful day's outing for all those who wish to enjoy themselves. Good music will lead the march from the shooting grounds to the bake, which will open at about 5 P. M., and will be present to enliven the occasion while the diners are participating in all the good things pertaining to a genuine clam bake.

E. L. GREENIN, Sec'y.

Rahway Gun Club.

Haverhill Gun Club Tournament.

HAVERHILL, Mass., July 31.—The committee of the Haverhill Gun Club are busy these days arranging matters that should prove both interesting and profitable to those who will participate, and who are capable of such co-ordination of brain and trigger fingers that shot and target will meet at a given point during the Interstate Association tournament, Aug. 27-28.

The club is the fortunate possessor on its membership roll of those who, while they rarely take an active part in shooting, are ready at all times to further any project that will cause visiting shooters to retain pleasant recollections of Haverhill.

These members, together with the merchants and business men, have made it possible for the club to offer, in addition to the regular Interstate Association programme, a special event, which carries with it both cash and merchandise prizes.

The committee are not at this writing in a position to state accurately what these prizes will be, although they are willing to go on record as saying that a few halves and quarters of our "glorious bird of freedom," as represented by what the "gold bugs" term sound currency, will head the list of these special prizes. This event will be run on an extra trap throughout the two days, under conditions that should be unique and interesting, as well as sportsmanlike and fair.

The programmes for the extra day's tournament are out, and the committee are of one mind that all who figure in the ten events will realize they have recently attended a shooting match.

Would again advise those who will attend this tournament to either bring or send an extra supply of ammunition.

The committee have arranged to have an abundance of the standard loads on sale. Those who anticipate attending, and who prefer a different load than those standard loads before mentioned, should notify the secretary at once, and they will be ready.

C. F. LAMBERT.

Baltimore Shooting Association.

BALTIMORE, Aug. 2.—The new average handicap system introduced by J. C. Hicks was used to-day for the first time on the Baltimore Shooting Association grounds and gave perfect satisfaction. This is the only system ever used whereby every shooter handicaps himself, and every shooter is placed on equal footing.

In the club event J. R. Malone, J. W. Chew, W. R. Biddle and C. C. Peters made clean scores of 50 each with their bird allowance.

Capt. E. H. Storr, who was using a new gun which he had never shot before, made the remarkable score of 97 out of 100. He was high gun in the open events, giving a beautiful exhibition of trapshooting.

The handicaps used yesterday will be continued during the month. Every one will be allowed to shoot up one back score, giving those who did not attend a chance to shoot up next week.

Capt. J. R. Malone and Dr. H. E. Lupus will leave to attend a four days' shoot at Asheville, N. C. The scores:

Events:	1	2	3	4	5	6	7	Events:	1	2	3	4	5	6	7
Targets:	10	15	15	10	10	..	50	Targets:	10	15	15	10	10	..	50

No. 6 is handicap allowance.

Leach—Richardson.

SWANTON, Vt., Aug. 2.—There was an interesting 100 bird race on the Robin Hood Powder Company's grounds, Swanton, Vt., this afternoon, between the veteran trap shot, who is sixty-three years of age, Mr. N. P. Leach, and E. H. Richardson, secretary of the Robin Hood Powder Company.

A strong wind made the shooting difficult. The shooting was from five different positions and over the magautrap. The scores:

N P Leach	23	23	25	24—95
E H Richardson	21	24	22	24—91

NOAH.

Clearview—West Chester.

WEST CHESTER, Pa., July 26.—The scores of the shoot between the Clearview Gun Club of Philadelphia and the West Chester Club was at 25 targets per man, from Magautrap:

RAVELRIGG.

Sistersville Gun Club.

SISTERSVILLE, W. Va., Aug. 3.—Because of a red hot baseball game that the local team had on for Saturday afternoon, Aug. 2, the attendance at our regular weekly club shoot was very light, several of our shooters taking in the game. McNaught and Bower, two of the regulars were on hand as usual, and had as visitors F. C. Percival, Esq. (Cole), president of the West Virginia State Sportsmen's Association, of St. Marys, and A. Bruce Hunt, Esq., a prominent local attorney. While Mr. Hunt is one of the finest field shots in West Virginia, he has, until just recently, done no shooting at the trap, but with a little practice he will no doubt rank among the best. The following are the scores made:

Events:	1	2	3	4	5	Events:	1	2	3	4	5
Targets:	25	25	25	25	25	Targets:	25	25	25	25	25
Ed O. Bower	19	21	22	24	23	J Y McNaught	17	22	21	20	..
Cole	21	23	25	20	17	A B Hunt	21	19	21	18	22

LERANZO.

Ossining Gun Club.

OSSINING, N. Y.—Herewith please find scores made at the regular Saturday afternoon shoot of the Ossining Gun Club July 26. Many favorable answers have been received from manufacturers' agents and other shooters regarding the two days' shoot of this club, Aug. 20-21. This promises to be a record shoot for the Ossining:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	10	10	10	10	10	10	5p	10	15	15
Hans	8	6	8	7	10	5	6	7	12	10
W Clark	5	8	8	9	6	9	9	5	11	13
C Blandford	10	10	9	10	10	..	9	..	..	..
J C Barlow	..	..	8	9	7	9	7	7	8	9
W Coleman	7	8	7	9	10	6	4	6	11	12
W Fisher	9	..	..	..	..	..	..	..	..	..

C. G. B.

Raleigh Gun Club.

RALEIGH, N. C., July 24.—Rain, just at the hour of the time for the Raleigh Gun Club shoot, prevented several from attending. But the ones participating enjoyed it and tried but failed to reach the percentage of our president, Jas. I. Johnson. They must content themselves to do better next time. Mr. Johnson holds his record, 90 per cent. and above, and the conditions must be very bad to lower it. We expect to have a four-days' shoot the last week in October with about $400 added money.

	Shot at.	Broke.		Shot at.	Broke.
Johnson	75	67	Parker	50	38
Whitaker	75	48	Gowan	50	35
Pearce	50	35			

R. T. GOWAN, Sec'y.

Dover Sportsmen's Association.

DOVER, N. H., July 30.—The weekly shoot of the Dover Sportsmen's Association was brought off to-day in order to attend the Exeter tournament to-morrow and day following. J. Edmond Doremus and Jack Fanning contributed largely to the interest of the day. The former is an old-time acquaintance, and the latter will never be a stranger again in Dover. The scores were as follows:

	Shot at.	Broke.		Shot at.	Broke.
Fanning	100	92	Smart	40	20
Doremus	100	70	Hodsdon	40	17
St. Evenes	90	59	Meserve	20	11
Nosroc	60	39	N C Wentworth	50	25
F F Wentworth	60	32	Hallam	20	7

Cincinnati Gun Club.

CINCINNATI, July 26.—The first contest for the Troisdorf medals took place to-day, and as there are two medals, it was decided to have two classes. The "A" class is composed of those who are placed at from 18 to 22 yards. The "B" class from 14 to 17 yards. Scores:

"A" Class: Coleman (19) 43, Peters (19) 42, J. B. (18) 41, Ahlers (21) 41, Heyl (20) 39, Van Ness (20) 38, Verges (20) 37, Gambell (20) 36, Roll (19) 31.

"B" Class: Harris (17) 41, Ward (15) 41, Falk (17) 32, Anderson (16) 29, Colonel (14) 26, Herman (17) w.

Harris won shoot off.

Team Race—50 targets; 2 high teams out: Gambell 43, Verges 45; total 88. Coleman 43, Peters 45; total 88. Ahlers 41, Van Ness 44; total 85. J. B. 39, Heyl 37; total 76. Roll 34, Herman 34; total 68.

Birch Brook Gun Club.

LYNN, Mass.—Mr. Jack Fanning and Mr. Doremus were present on Saturday, Aug. 2, and Mr. Fanning had a little fun with the shooters, throwing targets from a hand trap. The scores:

Events:	1	2	3	4	5	6	7	Events:	1	2	3	4	5	6	7

No. 1 was the merchandise, No. 2 the medal event.

HENRY ROOD, Sec'y.

Trap Around Reading.

READING, Pa., July 21.—The Independent Gun Club of this city to-day defeated the Keystone Gun Club of Lebanon in the third of a series of team shoots on the Independent's grounds in Spring township.

The visitors scored 475 out of a possible 700, while the Independents scored 489 out of the same number. The contest throughout was very exciting, and was enjoyed by a large crowd of sportsmen, many of whom were from Lebanon. The scores follow:

Team shoot—Teams of 14 men, 50 targets per man:

Independent.	Broke.	Keystone.	Broke.
Weidner	34	Brubaker	47
Larkin	38	Haddon	37
Trout	40	Zellers	42
Hoffert	36	Kleinfelter	28
George Lutz	42	Bollman	28
D Lutz	36	Beamsderfer	35
Doerrman	31	Blucher	35
Charles Henry	41	Duffenbaugh	36
H. Ball	33	White	31
George Weber	38	Ehrhorn	24
Harner	29	Shanaman	34
Kunkelman	26	Dissinger	39
Bucks	38	Trafford	40
Smith	27—489	Reinoehl	19—475

July 26.—The Midsummer tournament of the Reading Shooting Association will be held at Carsonia Park, Aug. 27 and 28. The committee is composed of John Shaaber, Charles H. Dietrich and George W. Ritter. Following is the programme for each day:

Targets.	Entrance.	Added Money.	Targets.	Entrance.	Added Money.
1. 10	$1.00	$2.00	5. 15	1.50	2.00
2. 15	1.50	2.00	6. 25	2.50	2.50
3. 20	2.00	2.50	7. 15	1.50	2.00
4. 15	1.50	2.00	8. 20	2.00	2.00

Purses will be divided as follows: Of 20 shooters, 30, 25, 20, 15 and 10 per cent.; if less, 40, 30, 20 and 10 per cent.; if less than ten shooters, 50, 30 and 20 per cent. All ties divided.

There will be extra events to suit shooters. Loaded shells will be for sale on the grounds.

Carsonia Park is easily reached from Reading, Penn street, by trolley car every 5 minutes, and the new grounds are considered by sportsmen to be the finest in the State.

Lee Wertz, the champion target shot of Berks County, to-day defeated Geo. H. Ritter, the champion of Reading, in a 100-target match, $25 a side and county championship, by the score of 81 to 74. The scores made were low, owing to the cloudy weather, which made the targets hard to see. Several hundred dollars changed hands on the result. Another match will likely be made. Fred Wertz and Luther Showalter officiated as judges, while Albert Fink, of Reading, was scorer. The match was witnessed by over two hundred sportsmen. The contest took place on the new Friedensberg shooting grounds, Friedensberg, Pa., about seven miles from this city, on the Oley Valley trolley line. Sweepstake events followed, the scores being as follows:

Events:	1	2	3	4	5	6	7	8	9
Targets:	15	10	10	15	10	15	10	15	15
Ritter	10	9	9	12	9	15	9	12	13

Dr. Gardiner's Succotash Tournament.

ON Aug. 2 the Wanderers had a day of superlative enjoyment. For it they were indebted to their worthy and alert treasurer, Dr. W. L. Gardiner, who on that day extended to them the hospitality of his home at East Orange, N. J., a section famed for its natural beauties, and domiciles of modern art.

Dr. Gardiner some time since conceived the idea of a succotash party and target tournament, all arranged and liquidated by himself, with the Wanderers as his guests. In accordance with this hospitable purpose, he issued an invitation to each member of the Wanderers, and to some of his friends, as follows:

"Elliott Place, East Orange, N. J., July 23.—You are invited to attend a succotash party, Saturday, Aug. 2. Lunch at 1 o'clock. Take 12:10 D., L. & W. train for Brick Church. Conveyance at depot. The afternoon will be devoted to trapshooting."

This invitation came neither to the blind nor the halt, neither to the heedless nor the dormant. The members responded affirmatively, and attended in full force, with the exception of a few who could not participate owing to other cares, and who accordingly sent excuses and regrets to the host.

Never was invitation sent to a body of men more capable of living up to its possibilities, more promptly cheerful in so living or more gratefully appreciative of the honor. The members are eminently qualified to enjoy life's highest form of enjoyment in a wholesome way, when time, place and opportunity properly combine for it. In this respect, they probably are excelled by none, or, if it be conceded that they are excelled, slightly, at all, then only by the Ancient and Honorable Artillery of Boston, the Putnam Phalanx of Hartford, and a limited few other bodies of tried and true trenchermen, who have been much longer in existence as organizations, and who have been favored by far greater numbers of opportunities. Nevertheless, though the older organizations may be surpassingly clever, touchin' on an' appertainin' to the art of dinner knife and fork, they yet are lacking in the all-round proficiency of dining well and shooting better. The Wanderers shoot exceedingly well at a maximum of expense—that is, some of them do—and if any of them are deficient as epicures and shootists, time and opportunity will cure it, so that it is not an unwarranted prediction that the Ancient and Honorable Artillery, et al., may be forced to a subordinate position as functionists by this new, merry, peripatetic organization of trapshooters.

The invitation in itself contained nothing of information as to the full length and breadth of the good Doctor's generous purposes. Nevertheless there were rumors, vague, yet of fair reliability as coming from knowing sources, that the succotash party and tournament, bountiful and pleasing, would add a new red-letter day to the annals of trapshooting. The rumors treated of valuable merchandise prizes gratis, handicaps of invincible potency, fragrant waters from the springs of old Kentucky, and amber aqua vitæ of a kind to tickle the palate of jolly old King Gambrinus; succotash galore, and all crowned by the gracious hospitality of the amiable host.

Aug. 2 was swelteringly hot and humid, nevertheless guests arrived promptly on time and were received at the station by Dr. Gardiner, who had provided for their carriage an omnibus in size something less than that of a ferry boat. It had a capacity for about twenty-four first cabin passengers, with a few stowaways, and it was packed to its full limit. In numbers they appeared something like an army without banners—all healthy, able-bodied men, some of ample girth, all sharp of eye—whom to fill with succotash was a feat not lightly to be considered. The Doctor with warm cordiality welcomed his guests to his home, assuring them that they were at Liberty Hall, where each was at liberty to do as he pleased to promote his best comfort and happiness, and every one thereupon was instantly at his ease. Tables were ready, set on the broad veranda, the guests fell to and forthwith displayed a speed and execution of admirable degree. Succotash and many other dishes were in abundance, and a popular dark ruby liquid in which sliced lemon floated, was passed around, the name of which I did not learn. After lunch the Doctor showed the prizes for which the shooters were to compete. They were much admired. He explained that a contestant could win but one prize; that ties of one event would be shot off in the following event or events; that there was a prize for high average and one for low average; that all the prizes were donated by himself; that there was no entrance fee other than the price of targets at 2 cents; that, after deducting the expenses of targets, trappers, etc., any surplus would be turned into the Wanderers' treasury, and that he, while participating in the competition would shoot for targets only, all of which was received with much commendation by word and look. The grounds are beautiful and spacious. Although the shooting was toward the house, which was large, modern, and in an admirable setting of smoothly shaven green lawn and thrifty trees, the distance was too great for the shot to reach it. A tent afforded shelter, camp chairs afforded seats, and large noble trees furnished shade.

The traps were obtained from the South Side Gun Club, of Newark, and were famous for their perfect work. They were set Sergeant system. The screen was high, and therefore the targets flew high. The shooters faced the sun, so that the conditions were not favorable to the making of good scores, and yet some of the shooting was excellent. Mr. Neaf Apgar made the excellent percentage of .956, missing but seven targets out of 160. He won high average. Mr. L. Colquitt won the prize in event 1, a silver watch charm and fob, which disqualified him from further winning. Mr. E. A. W. Everett, of Pompton Lake, N. J., won the prize, a silk umbrella, in event 2. Mr. B. Waters won the prize in event 3. Mr. O. L. Yeamans won the rocking chair, the prize of event 4. Event 5 had a carving set for a prize, which was won by Mr. T. Dukes. Event 6 was a two-man team event, in which there were several ties which were reduced to four, and it being too late to shoot them off, they were decided by lot; Messrs. Dukes and Colquitt won the prizes, a scarf pin for each. Mr. F. V. Carlough won the prize, a fishing rod in event 7, and Mr. F. E. Butler won a box of cigars, the prize in event 8. The programme was not finished. A number withdrew from event 8 to give opportunity to shoot off the ties, and No. 9 was not shot at all. About 4,000 targets, more or less, were thrown in the afternoon. Mr. M. Herrington acted as referee; Mr. D. F. Pride as scorer; Mr. W. R. Hobart as cashier.

After the shoot ended all repaired to the Doctor's home, where the prizes were distributed. Mr. Colin S. Wise, the president of the Wanderers, and Capt. A. W. Money addressed the host, felicitously expressing thanks and appreciation of the entertainment so bountifully bestowed on the Wanderers by their host, who modestly replied in a few well-chosen words. The party then took seats in the elongated bus, and as the ponderous craft started for the depot the melodious voices of the Wanderers burst forth in the time-honored song, "For he's a jolly good fellow," which punctuated a day of which every moment was enjoyable. The list of shooters, handicaps and scores, with allowances added to events, follow:

Events:	1	2	3	4	5	6	7	8	Shot at.	Total Broke.	Av.

Dudley, 1	18	20	20	20	19	20	18	..	140	129	.922
Sinnock, 2	20	20	20	18	20	20	20	..	140	130	.929
Colquitt, 3	20	20	20	20	20	20	20	20	160	145	.906
Seeley, 5	20	19	19	20	18	20	20	20	160	131	.819
Guenther, 4	20	19	19	19	20	18	20	16	160	121	.756
Waters, 5	19	20	20	20	20	19	20	..	140	112	.800
Schoftel, 5	12	17	14	..	..	..	..	..	60	28	.622
Gardiner, 0	14	16	16	13	17	16	17	..	140	109	.778

The averages are based on what the contestants actually broke.

No. 6 was the two-man team race, the same handicap allowances of the other events holding good. Following are the scores:

Welles 20, Seeley 20; total 40.
Sinnock 20, Von Lengerke 20; total 40.
Guenther 18, Butler 19; total 37.
Yeomans, 20, Keystone (F. V. Carlough) 20; total 40.
Dudley 20, Waters 19; total 39.
Dukes 20, Colquitt 20; total 40.
Terrill 20, Morfey 17; total 37.
Gardiner 16, Goetter 18; total 34.
Apgar 20, Brigham 17; total 37.
Schneider 19, Skelly 20; total 39.
Jacks (C. S. Wise) 13, Banks 20; total 33.
Everett 20, Money 19; total 39.

Mississippi—Louisiana Trapshooters' Association.

THE Mississippi-Louisiana Trapshooters' Association have just completed in three days' shoot, one of the most successful held in the annals of the Association. The shoot was attended by a great number of distinguished trapshooters from all over the country.

High average was won by Ward Erwin, of Greenville, 364 out of 400, a gold medal. He also won the individual championship of the Association, after shooting off the tie with Percy Benedict, of New Orleans, breaking 24 out of 25. Walter Blake, of Greenville, and Harold Money, of St. Louis, tied for second place with 354 out of 400. As Mr. Money was a professional, Mr. Blake was awarded the medal for second high average. The cup donated by the Peters Cartridge Company, emblematic of championship for three-man teams of the Association, was won by Greenville team, composed of Erwin, Blake and Sharkey, scoring 65 out of 75.

After the programme was finished on the second day a 100-bird race was shot by Ward Erwin and Harold Money. Money won by 2 birds. Both were strongly backed by friends, and the race was a pretty one throughout.

They shot four strings of 25 birds as follows: Money 25, 24, 23, 22; Erwin 21, 24, 22, 25.

Gallatin Gun Club.

GALLATIN, Tenn., July 26.—Our club is very proud of a beautiful gold medal presented by the Peters Cartridge Co. This medal was put in competition for the first time to-day. It will be contested for weekly the balance of this season and all of next, and will then belong to the member who has won it most often. The medal was this time won by Bright.

Each event was at 25 targets.

Seay	15	9—24	Brown	14	19—33
Murphroo	20	17—37	Bright	20	23—43
Green	21	20—41	Hickman	16	17—33
W Anderson	21	16—37			

W. C. HARRIS, Sec'y.

WESTERN TRAPS.

Richmond Shoot.

CHICAGO, Ill., July 24.—The combination handicap at targets, Sept. 3-5, at Richmond, Ind., seems to be about as attractive a little card as looms up on the Western horizon at this moment. There will be $200 average money divided between 10 high guns and 10 low programme guns. In the last event there will be a guaranteed prize of $100, with $15 extra to high gun. The Richmond Gun Club openly announces that it proposes to give the biggest shoot ever held in Indiana. O. V. Porter, secretary, Richmond, Ind.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Garfield Gun Club.

CHICAGO, Ill., July 26.—The appended scores were made on our grounds to-day on the occasion of the sixth trophy shoot of second series. Hellman won class A trophy on 25 straight, A. McGowan won B on 20, and C. H. Kehl won C on 15.

The day was a fine one for target shooting in all respects, except being a little too hot for comfort, about 99 in the shade and a rather stiff breeze across the traps made the left quartering targets very fast and low. The attendance was fairly good, seventeen shooters showing up for trophy event.

Thirteenth trophy shoot: Dr. J. W. Meek 20, C. H. Kehl 15, R. S. Leete 17, G. W. Drinkwater 14, J. Monaghan 12, W. R. Johnson 18, J. D. Pollard 23, L. Thomas 21, A. McGowan 20, G. Barnard 17, C. P. Richards 23, J. E. Dofter 20, M. G. Eldred 10, Bowers 21, A. Hellman 25, S. E. Young 21, Dr. J. H. Huff 22.

Targets:	10	10	10	10	10	10	10
Meek	10	8	8	9	10	7	9
Kehl	5	3	..	6	7	2	5
Leete	7	..	..	8	9	3	7

Hellman	10	8	..	10	10	..	..
Young	8	7	10	5	7	..	..
Huff	..	..	..	..	..	..	..

Chicago, Ill., Aug. 2.—The appended scores were made on our grounds to-day on the occasion of the seventh and last trophy shoot of the second series. A. Hellman and C. P. Richards tied for Class A trophy on 23, and Richards won on shoot-off. Leete won Class B trophy, on 22, and Eldred won Class C on 18.

The day was a good one for target shooting, and sixteen shooters lined up for the sport.

The next shoot begins a new series under a reclassification. The scores for the present series have not been figured up yet, but I will report winnings and standings of this series next week:

DR. J. W. MEEK.

Haverhill Gun Club.

LYNN, Mass., July 25.—The shooting committee of the Haverhill Gun Club have for some time been discussing the advisability of giving an extra day's shoot following the dates of the Interstate Association tournament, and having heard favorably from many prominent shooters, will arrange a programme that should cause the fraternity to polish up their specs. The club will add fifty cold "plunks" and on the following terms:

The programme will call for ten 25-target events, numbers 1 to 4, inclusive, will constitute an Interstate five-man team match, which calls for $15 entrance fee from each team, one money, and to which the club adds a medal and $10 in gold to first high team and $5 to second. Events 5 and 6 is the interclub team race; any regularly organized gun club may enter one or more five-man teams. Entrance $10 per team, one money. Those wishing to do so may enter for price of targets only. The club presents team scoring highest $10 in gold.

The remaining events—four in number—should cause the fur to fly, as the articles of agreement call for a distance handicap, 16 to 23 yards, known, Sergeant, reversed and unknown angles respectively for each of the four quarters of this 100-target event. The club will "sweeten" this particular argument to the extent of $25; $15 to first and $10 to second high guns.

They are also arranging to open a bank through which temporary loans may be negotiated by those shooters who would otherwise be obliged to "hit the gravel" to get home.

C. F. LAMBERT.

Baltimore Shooting Association.

BALTIMORE, Md., July 26.—The shoot on the Baltimore Shooting Association's grounds to-day resulted in good scores. Dr. H. E. Lupus led with 46 out of 50; W. R. Biddle was next with 43, and J. W. Chew third with 42. The prizes for July were awarded as follows: Lupus first, with 181 out of 200; Malone second, with 167; Peters third, with 151; Edwards and Biddle fourth, with 150 each. Capt. A. W. Du Bray, Capt. Ben Eick and Dr. Funk were visitors. For the month of August the new average system of handicapping will be used. There will be three prizes offered.

Targets:	10	10	15	10	10	Club Score.
Lupus, 18	9	..	13	..	..	46
Chew, 16	10	10	13	10	8	42

Evans	..	5	..	5	..	

Hopedale Gun Club.

HOPEDALE, Mass., July 28.—The Hopedale Gun Club hold a shoot at their grounds at Hopedale every Saturday afternoon. The best scores made this season so far are out of a possible 25, Sergeant system: F. Day 23, C. W. Arrand 22, A. Smith 21, D. Smith 21, L. Wright 20, William Hadley 20.

C. W. ARRAND, Pres.

Providence Gun Club.

PROVIDENCE, R. I.—The tournament of the Providence Gun Club, July 25 and 26, was well attended. Secretary Robert C. Root, famous as an expert in trapshooting and tournament management, was active as a worker in everything tending to the success of the tournament.

Sim Glover, of New York, was high man, with 162 out of 175. For second place, "Jack" Fanning, of New York, "Gene" Griffith, of Pascoag, and Herbert, of Boston, were tied with a score of 159.

July 25, First Day.

July 26, Second Day.

The team race was of dominant interest. The teams as made up were: Maine—Capt. Hunnewell, Preble, Green, Randall, Dalton; New Hampshire—Capt. Stark, Langley, Morris, Nardini; Massachusetts—Capt. Herbert, Dickey, LeRoy, Climax, Wheeler; Rhode Island—Capt. Griffith, Getchell, Inman, Bain, Francotte.

The individual scores of the team members were as follows:

Massachusetts—Herbert (captain), 88; LeRoy, 88; Climax, 87; Wheeler, 86; Dickey, 92. Total, 441.

Maine—Hunnewell (captain), 86; Preble, 92; Randall, 85; Dalton, 85; Green, 90. Total, 438.

Rhode Island—Griffith (captain), 94; Inman, 91; Getchell, 90; Bain, 80; Francotte, 75. Total, 430.

New Hampshire—Stark (captain), 76; Langley, 76; Nardini, 79; Morris, 70.

The next shoot in the team contest for the New England championship will take place at Exeter, N. H., July 31 and Aug. 1.

Griffith was high for the day with 187 out of 200 targets. The full scores for yesterday were as a follows:

Targets:	15	20	25	25	25	25	15	20	15	15	Broke.
Apgar	12	16	21	21	24	22	14	19	15	15	179

Wabash Gun Club.

WABASH, Ind., July 21.—On July 16 and 17 the Wabash Gun Club gave its fourth annual tournament under their new organization. It proved to be the very best ever held here, and one of the most successful ever held in the state, both in respect to numbers and staying qualities.

The morning of the first day gave promise of a beautiful day, but about 10.30 it clouded up and began raining, and it looked to the management like indigo, but after a good scare the rain ceased. Old Sol showed his face, and from that time to the close of the tournament the weather was all that could be desired.

The arrangements were as near perfect as possible. A large tent had been generously provided by Col. Allen Powell, and with the club house, the cashier's tent and the large native trees that lined the banks of the Wabash river, the shooters were as comfortable as they could have been anywhere.

Our club member, Mr. Beck, had furnished a lunch that appealed to the most fastidious appetite. Sirloin steak, fried chicken, black bass rapidly disappeared. Here is where every one made a satisfactory score.

We had but two protests respecting our open programme, and from an entry list of nearly forty there were but six professional shooters, and a significant fact is that the second average and second winner of purse was a Simon pure amateur, the third winner was also an amateur. We think the amateurs need not be frightened by the shadows of professionals. We append score of the various contestants:

July 16, First Day.

Radebaugh	..	..	..	..	..	..	6	4	12	..	..	..

Not a word of complaint speaks volumes for the tournament. C. O. Ferry made a very acceptable referee.

The trade was represented by J. L. Head, R. S. Trimble, C. W. Phellis, W. R. Crosby, Hood Waters, L. H. Reed, P. C. Smith and Chas. North, every one a gentleman and thorough sportsman.

The largest winner was Billy Crosby, who was certainly right, a total of 17 misses out of 420 hard targets is a record that should show well in the purses.

Thomas Lang, of Findley, Ohio, won the second average. He tied the only "Bill" the first day, but was somewhat stale the second, but landed next to "William" just the same. Tommy is every inch a gentleman, and will always receive the glad hand when attending a local tourney.

One of the interesting features was the shooting of Miss Edith Renner, a lass of sixteen summers, who shot in several of the different events, and considering the strangeness of the grounds, people and natural diffidence of a young lady of that age, she shot well. With proper coaching, Miss Edith will make a second Annie Oakley.

The Lobster Quartette. Did you ever hear it? We have, and once heard is never to be forgotten. This amphibious named aggregation of music killing singers are composed principally of J. L. Head, H. M. Clark, C. W. Phellis and L. H. Reed, and collaterally, of anybody on the side who think they are singers, but no one else does. These gentlemanly "singers" rendered a number of "choice" selections. They were not particularly diversified either as to tune or subjects, and the meter must have been long for they did hang on so. Yet, seriously, the gentlemen above named were the life of the tourney, and things had to move wherever they were. We admire the quartette very much, and cordially invite you to come again, and will be only too glad to listen to the familiar strains of that old "fashioned pump gun" rearranged by our only J. L. Head.

SPENCER.

Springfield Shooting Club.

SPRINGFIELD, Mass., July 25.—You will notice we had three professional shooters with us. The exhibition shooting of Fanning, Le Roy and Doremus resulted as follows: Le Roy shot at 100 birds and broke 96. Fanning shot at 100 birds and broke 94. Doremus shot at 100 birds and broke 84. The following scores were made by members and out-of-town shooters from Worcester and Palmer:

Events:	1	2	3	4	5	6	7	8	9	10	11	12

C. L. KITES.

Highland Gun Club.

GORGAS STATION, Pa., July 26.—At the regular monthly shoot of the Highland Gun Club, the Meehan cup was the main event, a sweepstake contest at 25 targets. The scores were: W. Dalton 22, McMichael 22, Dedier 21, M. Wentz 20, Wayne 19, E. Wentz 19, Aiman 19, Dunlevy 15, Pinkerton 14, Green 13, Hammil 12.

Second event, for the Laurent trophy, 25 targets, 16 yards rise, unknown angles—M. Wentz 23, Aiman 22, Dedier 21, Laurent 21, Dunlevy 21, Pinkerton 20, Green 18, Hammil 18.

Third event, open sweepstake, 20 targets, 16 yards rise, unknown angles—M. Wentz 18, McMichael 18, Laurent 18, Aiman 18, Pinkerton 18.

Match event, 25 targets, 16 yards rise, unknown angles—M. Wentz 23, P. Laurent 20.

Rockland Military Club—Spring Valley Club.

NYACK-ON-HUDSON, N. Y., July 26.—The tie match in the series of three was shot at Spring Valley Saturday and was won by Rockland by score of 111 to 107. With the exception of French and Lauder, the best shots of both teams did not come up to their usual high standard. The day was cloudy, but there was no wind. The Spring Valley Club have a very excellent place for trapshooting and are splendid entertainers. The scores:

Rockland Military Academy Gun Club—Casse 17, French 21, Potter 17, Gilson 17, Lauder 20, Moeller 16, Casse, Jr., 6. Total 111.

Spring Valley Gun Club—Smith 19, Singer 15, Addis 18, Cruikshank 14, Fessenden 16, Fisher 16, Mapes 8. Total 107.

The contest fixed to take place between Mr. Neaf Apgar, holder, and Dr. W. L. Gardiner, challenger, at East Orange, N. J., on Aug. 2, for the championship of New Jersey was postponed indefinitely.

Bonesteel Gun Club.

BONESTEEL, S. Dak.—The first annual tournament of the Bonesteel Gun Club was run off on schedule time on the afternoon of July 22. The attendance was good and the local boys staid with the game as long as it lasted.

Peters cartridges were very much in evidence, winning first, second and third high averages, and the longest consecutive run and the championship of Gregory County.

The championship trophy, given by the Peters Cartridge Co., was won by Mr. Carl Porter after shooting off a tie with his brother and Spatz and a second tie with his brother.

There were in attendance Messrs. Carl and Orion Porter of Fairfax, and among the locals were W. W. Law, Cliff Law, J. A. Kenaston, E. E. Jones, A. G. Blanchard, E. L. Cantrell, J. F. Spatz, T. J. Thompson, S. F. Lucas, Earl McHenry, H. O. Noble, Avery Graham and W. A. Leach.

Judge J. A. Kenaston, who is named among the locals, is the father of Dr. H. R. Kenaston of our city, and is visiting the Dr. and incidentally waiting for the young chickens to get ripe. He is 76 years and shoots without glasses, and is as enthusiastic over the sport as a boy. Verily, the average trapshooter is long lived and always young.

The thanks of the Bonesteel Gun Club are due and are hereby tendered to all those gentlemen who assisted the management in making the shoot a success, and to the merchants who so generously donated the substantial merchandise prizes. Bonesteel has demonstrated on more than one occasion that she does nothing by halves.

The race for high average as well as the championship event were keenly contested, and at the end of the day five birds covered the extreme difference between the four high men, C. Porter, Leach, Spatz and Thompson.

Carl Porter won the championship of Gregory County, and the Peters Cartridge Co.'s trophy representing same and also high average for the day.

Leach won second high average and made the longest consecutive run, 172, while third and fourth high average went to Spatz and Thompson, in the order named.

There were three uncontested events on account of darkness, and the merchandise left over will be contested for at some date in the near future.

Following are the scores in the regular events:

Events:	1	2	3	4	5	6	7
Birds:	15	15	15	15	15	50	15
C Porter	14	10	12	13	14	39	11
Leach	12	11	10	14	10	38	15
Spatz	10	14	13	14	10	39	9
Thompson	10	12	12	10	11	34	14
O Porter	7	11	10	10	12	39	12
Jones	5	7	6	11	9	34	13
Lucas	5	10	8	7	10	23	6
C Law	4	10	6	9	8	30	6
Blanchard	6	5	5	7	5	..	..
Cantrell	10	9	8	9	..	..	6
W W Law	3	7	8	9	9	21	..
McHenry	5	6	12	7	..	..	..
Kenaston	..	4	4	..	..	..	..
Noble	..	..	..	9	8	..	8
Graham	..	..	..	4	4	..	9

The winners of merchandise prizes were as follows:

Event 1: First, Blanchard; second, O'Connor and Stanton; third, Jones, Lucas, McHenry.

Event 2: First, Jones; second, W. W. Law.

Event 3: First, Cantrell, Lucas, W. W. Law; second, G. Jones and C. Law.

Event 4: First, Cantrell, W. W. Law, C. Law and Noble; second, Blanchard, Lucas, McHenry.

Event 5: First, C. Law and Noble; second, Blanchard.

Event 6: First Orion Porter; second, Spatz.

Event 7: First, Carl Porter; second, Spatz and Graham.

Winners of special prizes were as follows: First high average, Carl Porter; second high average, W. A. Leach; third high average, J. F. Spatz; fourth high average, T. J. Thompson; first low average, Cliff Law; second low average, S. F. Lucas; third low average, E. E. Jones; longest consecutive run, W. A. Leach.

Answers to Correspondents.

No notice taken of anonymous communications.

MERCY, Pittsburgh, Pa., July 31, 1902.—(1)—Will silk worm gut deteri... for a year, and if so, is there any preparation tha... to prevent it from so doing? (2)—Will you kindly give r...pe for making same mist color? (3)—Is 5½ ounces heavy enough for 9-foot fly rod for brook fishing for trout? Kindly reply through FOREST AND STREAM. Ans.—(1)—Good silk worm gut will not deteriorate by keeping. A recent writer in the London Field tells of gut nearly fifty years old that was as strong as ever. Of course, the gut should be soaked before using. (2)—A simple dye may be made of Arnold's fluid ink and water in equal parts. Soak the gut in mixture for some hours. (3)—Yes.

PUBLISHERS' DEPARTMENT.

Proctor's Theaters.

THREE of Manager Proctor's Metropolitan play houses have remained open all summer, playing to enormous crowds and delighting all who have been in attendance. On Aug. 25 his fourth New York theater—Fifty-eighth street—will open for the regular season. Meanwhile the Fifth Avenue and One Hundred and Twenty-fifth Street are open and prosperous. The Proctor Stock Co. is presenting a series of clever comedies, and excellent vaudeville is shown as an additional feature of the entertainments. The Twenty-third Street is wholly given over to the best vaudeville, and the performances are continuous from noon until midnight. Proctor's Newark is enjoying a very prosperous summer season of vaudeville at special prices for the heated term. Artificial aids are employed to keep the Proctor theaters cool and comfortable, and a more agreeable place to spend an afternoon or evening is not to be found anywhere. Proctor's theaters in Montreal and Albany are presenting the Proctor Stock Co. in comedy revivals, and the summer is and has been altogether a period of gratifying prosperity for this enterprising theatrical manager.

W. R. Crosby, writing from Atlanta, Ga., to the company which he represents, the American E. C. & Schultze Gunpowder Co., says: "I did quite well here, winning the general average by a good big lead, and two daily averages out of the three, tieing for the third. I made 96 per cent. from 20yds. on the first day out of 175 targets shot at—not so bum for an old 'has been'." Mr. Crosby's favorite load is 44grs. of E. C. No. 1, with 1¼oz. of No. 7½ chilled.

At the Mississippi-Louisiana Trapshooters' Association tournament the trade was represented by the following shooters: Maurice Kauffman, of the Peters Cartridge Co.; Herbert Taylor, of the Dupont Powder Co.; L. C. Lawrence and Louis Williams, of the Laflin & Rand Powder Co.; Luther Wade, of the Peters Cartridge Co.; John E. Avery, of the U. M. C. Co.; Harold Money, T. A. Divine and G. H. Hillman, of the Winchester Repeating Arms Co.

"The Handy Book for Trapshooters and Sportsmen" is the title of a work replete with information to sportsmen, the 1902 edition of which has recently been issued by the Peters Cartridge Company, of Cincinnati, O. It can be obtained of dealers in Peters ammunition, or of the company.

Mr. V. C. Dargan, of Dallas, Tex., scored 159 out of 160 at Ardmore, I. T., shoot. He used the Ideal factory-loaded shells on this occasion. A. W. Kirby, of Greenville, O., shooting Ideal factory loads, won the amateur average at the Troy shoot.

The Marlin Fire Arms Co., New Haven, Conn., has issued a new catalogue for 1902 which is excellent in artistic design and complete in the information presented. It will be sent to all applicants. Three stamps are required to pay for postage.

At a recent shoot of the Sioux Falls, S. D., Gun Club, Mr. F. C. Riehl, who represents the U. M. C. in that region, broke 49 out of 50 targets.

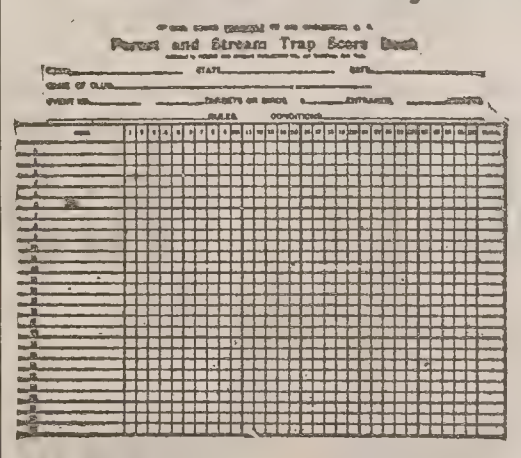
FOREST AND STREAM

Trap Score Book.

The only one containing the new (1902 revision) Shooting Rules of the Interstate Association, for targets and live birds; The American Shooting Association Rules; and the revised Hurlingham Rules. And a detailed description of all the shooting systems in practice for the divisions of money.



FOREST AND STREAM'S new Trap Score Book will admirably fill the needs of clubs and contestants in affording a means of keeping a faithful record of contests. Each book contains a generous number of sheets, so ruled as to make all the chief divisions of the shoot plain at a glance. For instance, the horizontal spaces are numbered from 1 to 27, every sixth line being distinctly heavier than its fellows; hence the squads are distinguishable at a glance. The perpendicular spaces are numbered from 1 to 30, ample space first being left for the contestants' names and their handicap allowance. Heavy dark lines are between each five spaces, and the numerals 5, 10, 15, 20, 25 and 30 are in heavy-faced type, so that the number of targets or birds to be shot at are apparent at a glance. The heavy ruling also is an advantage in bad lights. However dark a nook the scorer may be in, no straining of the eyes or incorrect entering of scores is possible on account of inability to distinguish the lines of the score sheet. At the head are the usual spaces for current data. Each sheet is perforated, so that it can be readily torn out when manifold copies are made, and yet each sheet is strong enough to hold firmly in place if the book is desired for permanent club records. A neat pocket on the inside of the back cover holds carbon sheets for manifolding. The book is neatly and substantially bound in cloth, and contains 150 score sheets. The price is $1.

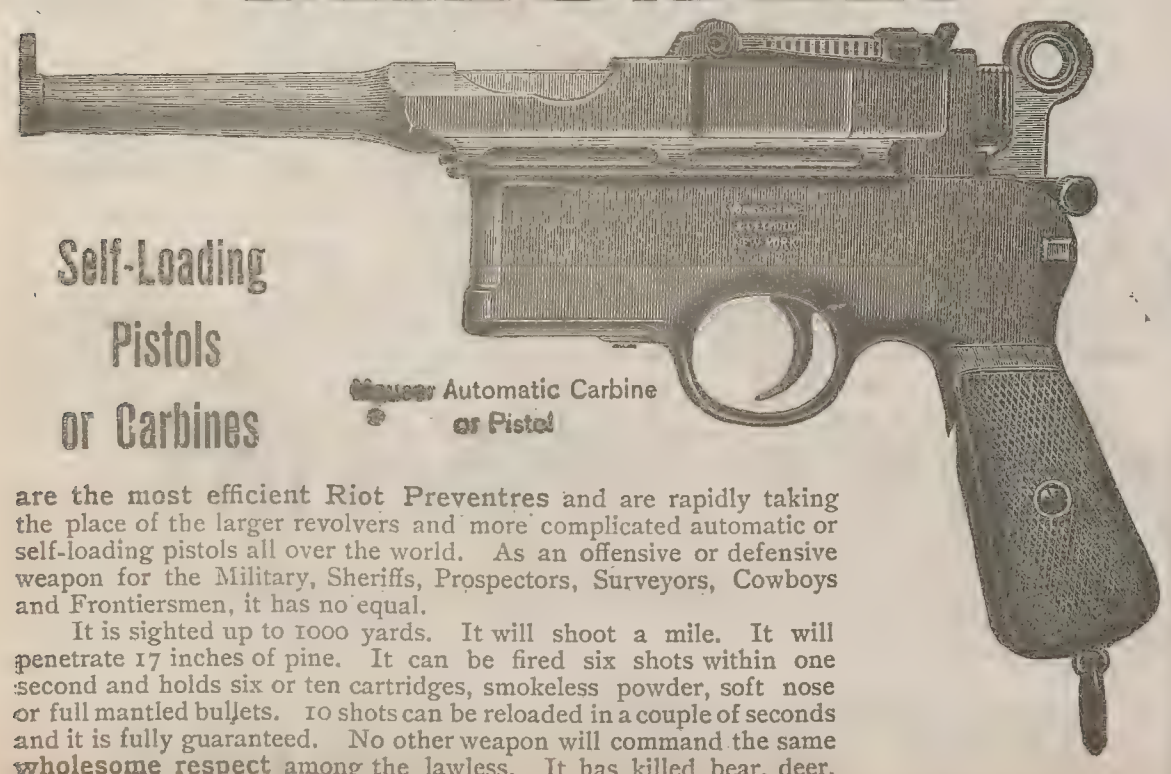
"MAUSER"



Mauser Automatic Carbine or Pistol

Self-Loading Pistols or Carbines

are the most efficient Riot Preventres and are rapidly taking the place of the larger revolvers and more complicated automatic or self-loading pistols all over the world. As an offensive or defensive weapon for the Military, Sheriffs, Prospectors, Surveyors, Cowboys and Frontiersmen, it has no equal.

It is sighted up to 1000 yards. It will shoot a mile. It will penetrate 17 inches of pine. It can be fired six shots within one second and holds six or ten cartridges, smokeless powder, soft nose or full mantled bullets. 10 shots can be reloaded in a couple of seconds and it is fully guaranteed. No other weapon will command the same **wholesome respect** among the lawless. It has killed bear, deer, and nearly all big game and little game to be found on this continent, and its small size and light weight make it a most desirable auxiliary.

A New English Gun.

"Great Value for Little Money."

THE REGENT. PRICE $65 NET

We have just received the first few cases of a new English gun which we have named "The Regent". They are made for us by the best gunmaker in England and bored on the same principle that has won world wide honors for English guns. The barrels are best Siemens Martin steel, and the shooting is unexcelled. The stocks are selected English walnut, half pistol grip, latest model Anson & Deeley action, nicely engraved, and the finish and workmanship throughout are up to the English standard. [illegible] been the standard of the [illegible] a new era in price as well as quality. We have never before been able to offer so fine and good a gun for so little money. They can be supplied in weights from 6¼ lbs. to 8 lbs., in 12 bores, and from full choke to true cylinder.

We carry a large line of guns and rifles from $6.00 to $600.00, and are sole U. S. Agents for the celebrated guns of W. W. GREENER.

WINCHESTER .33 CALIBER

A NEW LARGE CALIBER HIGH POWER RIFLE.

BIG game hunters who have advocated a large caliber high-power rifle will find in the new Winchester .33 Caliber a gun that will meet their requirements. The popular and reliable Winchester Model 1886 Rifle has been adapted to handle this new cartridge, which is large enough and powerful enough to kill any big game known. The Winchester .33 Caliber Rifle is made in solid-frame or take-down style, with a 24-inch round nickel steel barrel and weighs about 7 3-4 pounds. The "Take Down" *lists* at $30.00 and the Solid Frame gun at $25.00. The Winchester .33 Caliber belongs to the high-power Smokeless-powder class of cartridges, having high velocity and flat trajectory, and which develop great striking energy and penetrating power. The .33 Caliber bullet weighs 200 grains, and with the load of Special Smokeless powder used in the cartridge develops a muzzle velocity of 2,050 foot seconds and a muzzle energy of 1,868 foot pounds. The penetration of this cartridge with a soft-pointed metal patched bullet at a distance of 15 feet from the muzzle is 12, 7-8-inch pine boards. Soft pointed bullets used in this cartridge have special upsetting, or mushrooming, qualities, owing to their high velocity. This makes the Winchester .33 Caliber a particularly desirable cartridge for big-game shooting, as mushrooming bullets of this size, have terrific killing power. For all practical purposes this cartridge is as powerful as the .30 U. S. Army or .303 British, and the fact that it is of considerably larger caliber is considered by some an advantage in its favor. Send for full description of it.

CANOE CRUISING AND CAMPING.

By Perry D. Frazer. Illustrated. 95 pages, cloth. Price $1.

This interesting little volume is a practical guide for the cruising canoeist, the man who wishes to start away from the city and for a short time to make his canoe his home. With this in view, Mr. Frazer, who regards canoeing as a healthful and economical method of passing away leisure hours, has written briefly but attractively of canoes, camping outfits, clothing, firearms and ammunition; fishing tackle, photography, and in general of cruising, camping and all that pertains to this phase of outdoor life. While the volume has been written chiefly for the younger men, it is yet full of practical information and suggestion that appeals to those who have had a wider experience.
Such a book as this should be in the library of every man who is interested in outdoor life or the things which pertain to it. It is one of the manuals which should stand on the shelf alongside of "Woodcraft," of which, in fact, it is a part.

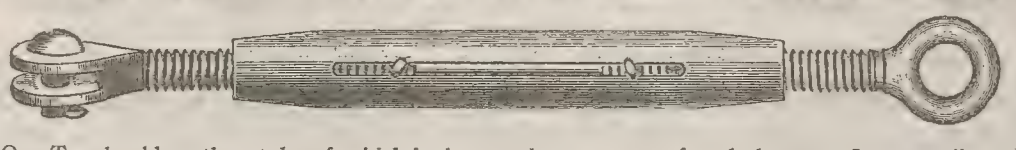
FORGED TOBIN BRONZE TURNBUCKLES.



With Cast Manganese Bronze Sleeve.

Our Turnbuckles, the style of which is shown above, are made of the very finest quality of manganese bronze centers and forged tobin bronze ends. They have been subjected to most severe tests by several of the largest and most practical Yacht Builders for the past two years. Made with great care and beautifully polished, they are a delight to the eye, as well as being the strongest Turnbuckle made. These Turnbuckles are nearer perfection than any yet placed on the market, and being non-corrosive, they really do the work expected of a Turnbuckle. Notice device used to prevent center from unscrewing and being lost as had always been the case with old style goods.

YACHT ARCHITECTURE.

By DIXON KEMP, Associate of the Institute of Naval Architects, and Member of Council. Second edition. Super-royal 8vo. Price, $16.80.

This work enters into the whole subject of the laws which govern the resistance of bodies moving in water, and the influence a wave form of body and wave lines have upon such resistance. It also deals comprehensively with the subject of steam propulsion as applied to yachts. An easy system for designing is provided, and every necessary calculation is explained in detail. The latter part of the work is devoted to yacht building, and engravings are given of every detail of construction and fitting, including laying-off, taking bevels, etc. The list of plates (exclusive of over thirty devoted to the elucidation of the text, and nearly 200 wood cuts) exceeds fifty, and comprises the lines of some of the most celebrated yachts afloat by the most successful builders and designers.
FOREST AND STREAM PUBLISHING COMPANY, NEW YORK.

STEAM YACHTS AND LAUNCHES.

Their Machinery and Management. By C. P. Kunhardt. With plates and many illustrations. 267 pages. Price, $3.00.

A complete veview of the development and present status of the marine engine and boiler as applied to steam yachting. The theory of the engine is set forth and its parts fully described. The functions of the boiler and its mountings are explained. Simple and compound engines are compared, and the latest results in high expansion and high steam are detailed. Numerous examples of modern practice are introduced, including all the patent forms of pipe boilers and special machinery. Also kerosene and naphtha motors for launches, with many tables and rules, specifying their construction. The U. S. Government laws of inspection and Rules of the Road are given, and also rules for racing steam yachts, and complete directions for the care and running of machinery. CONTENTS: Theory of the Steam Engine. Boiler Efficiency. Boiler Mountings. The Engine and Its Parts. The Screw. Laws Applicable to Steam Yachts. Lloyds Rules. Racing and Steam Yachts. Management and Care of Machinery. Principal Types of Yacht Machinery. The Design of Hulls. Practical Construction. Small Cruising Steam Yachts. Lights on Steam Yachts and Useful Tables.

SHEEPMEN AND CATTLEMEN.

THE battles in the West between the sheepmen and the cattlemen, of which we frequently read in the newspapers, are not without their interest. Yet it may well enough be that few except those who have spent more or less time in the West have any very clear understanding as to what these battles are about.

From the time of the early Spanish settlements there have always been sheep in the extreme Southwest, but for many, many years they were confined to Mexico, New Mexico and California. So long as hostile Indians were found in the West and Southwest, there was little spread of the sheep, and, as of course is well known, there were practically no cattle in the West and Northwest until about forty years ago. Between 1860 and 1880 the cattle business in the Northwest grew and flourished enormously, following closely the extermination of the buffalo and the driving out of the Indian.

As the flocks of sheep in the Southwest gradually increased and proved more and more profitable, the industry naturally expanded. The sheepmen needed more range, and drove their flocks further and further from home; while along the lines of travel which were gradually being extended out into the Western country, new sheep ranches were started in regions that had never before known sheep.

Now, it is well known that sheep, in large bunches, eat off the grass from the ranges over which they are driven down to the very roots, and sometimes eat off the roots themselves. The soil, cut up by a multitude of hoofs into fine dust, is often blown away, leaving bare the subjacent gravel or sand, from which nothing will grow. Also the odor left by the sheep is disagreeable to horses and cattle, which will not pasture on a range which has been run over by sheep.

From these facts it results that sheep are very unpopular with men who have horses and cattle on the range, for they believe that if sheep are introduced to the country which they have been occupying they will be obliged to move, partly because the grass will soon all be destroyed, or if not that because their cattle will not remain on the range polluted by the sheep, but will desert it for some other place. Now the cattlemen and horsemen have no more right to the range than the sheepmen have, but because they have occupied it for a long time, and perhaps have made improvements on certain small areas to which they possess title, they feel that they do have rights there, and that they are injured when sheep are driven in. On the other hand, the sheepmen say that they have as much right there as the cattlemen, which is true. Since, however, there seems to be no lawful method of getting rid of the sheepmen, force has frequently been resorted to, and for years we have heard of large bunches of sheep being destroyed and their herders being frightened out of the country or sometimes even killed. It is but a year or two since we were told that the residents of Jackson's Hole, in Wyoming, and the neighboring country, had determined to resist the advance of the sheepmen by force of arms, and such conflicts are now taking place in Wyoming.

To some extent one's sympathies are enlisted in behalf of the cattlemen, because they are permanent dwellers in the country. They have taken up land, built houses, taken out irrigation ditches and made hay meadows, built fences and corrals, and generally acted as if they had come to stay and to help build up the country. The sheepherder on the other hand is a real nomad. He has his sheep, his dogs, his tent, and his wagon. He moves from place to place, eats up the grass here, and to-morrow goes on somewhere else, and where he has passed too often it is as if a blight had fallen on the country.

The interest of the sportsman in advance of the sheep must be a keen one, and is two fold. Sheep destroy the food in a country as other domestic animals do not, and game will not graze where large bodies of sheep have been, any more than will horses and cattle. Beside this, in many sections of the West the sheep are driven into or through the forests, and destroy the young and growing vegetation. We are told of a section of Oregon where a tribe of Indians, who from time immemorial had subsisted largely on the huckleberries that grew there, were recently in a starving condition, because the sheep driven in there had exterminated over a territory about forty miles square the huckleberry bushes, the fruit of which these Indians used to gather.

It is unnecessary to write of the harm the sheep have done in California, not only by their browsing, but by the forest fires set by the herders. We may all watch with interest the progress of this conflict between the sheepmen and the cattlemen. It is a quarter of a century old in this country, and is still going on, and it may last much longer. The damage done to forests and range by the sheep is quite comparable to that done in France three-quarters of a century ago, and which France endured until about the year 1860, when it began its fight for reforesting the country of the Rhone.

INDIAN TERRITORY QUAIL.

WE print elsewhere two communications in comment upon our remarks last week on the exportation of live quail from the Indian Territory for stocking purposes. One correspondent avers that the intercepted quail had been exported in violation of law, and he says, "If it is unlawful, under the State law, to net or trap quail in Illinois, it is consequently unlawful under the Lacey Act to ship them from one State to another." We will all endorse the proposition that quail should not be exported in violation of a State law; but the "consequently" in our correspondent's quoted assertion does not follow. The Lacey Act has nothing to do with the transportation of live birds; it has to do only with "the dead bodies or parts thereof of any wild birds or animals, where such animals or birds have been killed in violation of the laws of the State, Territory or District in which the same were killed." The "consequently" that does follow is that the seizure of live birds in transit under an assumption of authority conferred by the Lacey Act is arbitrary and outside of the law. This is all that was suggested in the comment alluded to; but it is not to say that the unlawful exportation of game should not be suppressed and punished. It should be—by the proper authorities and in the proper way.

The statement is made by our other correspondent that the Federal courts of the Indian Territory hold that the export of quail is forbidden under Sec. 2137 of the Revised Statutes of the United States.

If this interpretation of the court is correct the authorities of the Territory should take all proper measures to prevent the exportation of live birds for stocking purposes.

This Sec. 2137 is an interesting bit of game legislation. The law of 1873 is a re-enactment of a law adopted in the thirties just after the setting apart of the Indian Territory as a district for exclusive occupancy by certain Indian tribes. It reads:

> Revised Statutes of the United States, 1878.—Sec. 2137. Every person, other than an Indian, who, within the limits of any tribe with whom the United States has existing treaties, hunts or traps, or takes and destroys any peltries or game, except for subsistence in the Indian country, shall forfeit all the traps, guns and ammunition in his possession, used or procured to be used for that purpose, and all peltries so taken, and shall be liable in addition to a penalty of $500.

The intent of this provision was to prevent hunting by white men in the Indian country, for the two-fold purpose of protecting the Indians in their sole hunting rights and of preventing friction between red man and white caused by hunters in Indian territory. A few years ago when the question came up in the courts whether quail were included in the prohibition of Sec. 2137, the claim was advanced that the birds had not been present in the Territory, as a recognized factor of the game supply at the time when, seventy years ago, the statute was framed. There were two aspects in which the question might be considered—one of the letter of the law, the other of its spirit. By the letter there could be no question that the quail were game within the statute. Considered in the spirit of the law, there was room for debate. If applied to quail the statute would mean that white residents in the Territory might not take any quail. Would such a prohibition assure to the Indian any existing right he sought to maintain, and would it prevent friction between Indians and white killers of quail? These questions probably would have been answered negatively; and the statute being construed in the light of its intent, the quail would not have been included as coming under the designation of game. The point was, however, construed according to the letter of the law, and as a consequence it follows that no white man in the Indian Territory, whether resident or visitor, has any right to take any quail either by shooting or trapping, except "for subsistence." This exception was made in favor of those white men who were obliged to depend on the game of the country through which they were traveling or in which they were stationed; it was a provision which was essential at the time, but could hardly be considered as pertinent now, except in very rare instances, for in a settled country men do not kill game for subsistence. The defense of an Indian Territory quail shooter that he killed the game for subsistence would be specious in the extreme.

In considering the question of the exportation of quail from the Indian Territory, then, it must be remembered that the white people of the Territory, since they are absolutely forbidden to take quail in any way, have no shadow of right or privilege which requires protection. The only interest to be considered is that of the Indians; and those who are familiar with the attitude of the Indian toward quail, know of course that the only use the Indian has for quail is to market them dead or alive.

Under these conditions, the white people being denied them by law, and the Indians not desiring them by reason of Indian nature, the best possible disposition to make of the birds would be to send them to States where citizens have both the right and disposition to work their dogs on them.

The exportation of quail from the Indian Territory is perfectly lawful, if the birds are captured by Indians in districts which are outside of the Chickasaw Nation; for having lawfully been reduced to possession by the Indians, the birds become lawful subjects of commerce, and may be sent out of the Territory by and to the agents of game clubs, State commissioners and others. In the cases of seizure alluded to by us in our issue of last week, the information given respecting them was that the birds had been taken under lawful conditions—that is to say, by Indians; and that they were therefore legitimate subjects of commerce. If this was the case, the seizure of them by United States marshals under the assumption of authority conferred by the Lacey Act was not erroneously characterized as arbitrary.

If it was arbitrary it was indefensible. The protection of game is an important interest, but it is not an interest of such moment as to justify resort to measures not clearly within the sanction of law. There is to be noted in certain quarters—and to note it is to deplore it—a tendency on the part of zealous game protectors to accomplish their purpose at all costs; and the rulings of the courts in game cases are not always conclusive as to their wisdom and justice. In Illinois, for example, where a bungling Legislature failed to prescribe any close time for quail, shooters have been arrested for killing quail at times which the Commissioner considered improper; and have been mulcted in fines by justices, who in taking their money were as truly robbing them as if they had robbed them on the highway. Indeed, it was worse than highway robbery, because done under guise of law by those whose high duty it is to uphold the law and to do justice.

Our correspondent's suggestion that State laws should be modified to permit the interchange of game birds for stocking is an excellent one. There are a few States in which, under supervision of proper authorities, certain birds might be taken for export in restricted number. Until we have such a system, the Indian Territory appears to afford the best available supply of game for stocking purposes. It is a region fertile in quail. The white people there have no right to take any quail; the Indians use them only for market purposes, and the best market use to put them to is to sell them alive for stocking purposes. If the Department of Agriculture can do nothing in the work of game stocking because of lack of appropriations, it can at least promote the work of replenishing Eastern game fields by encouraging the Indian Territory red men to export their birds.

The Sportsman Tourist.

Just Fishing.

THERE were three of us, to say nothing of the boy. Three of a kind, all disciples of Blackstone. We determined to have a good old-fashioned day's fishing, if the wheels of justice ceased revolving. The Blind Goddess laid aside her blinders and took up her knitting for a day's solid enjoyment on that fair July morning after seeing so many of her wards safely disposed of.

We were in the mountains of southwestern Virginia, on the summit of the divide, in the quaint and interesting little village of Wytheville. A delightful summer resort combining the essentials to health and pleasure, good climate, good water and good society.

Situated on the crest of the water shed, 2,500 feet above sea level, on a calm clear day (as the guide books say), from the top of the loftiest building in the town, you can gaze upon the yellow waters of the Mississippi, on the one side, and the billowing Atlantic upon the other—provided your eyes are focused for the necessary distance—they are both there.

Way back in the mountains there were said to be trout streams filled with the dappled darlings (speckled beauties revised); and fifteen miles away was New River, reported to be teeming with bass, but these distant possibilities quickly lost their charm, and were relegated to the "some other times," when the boy assured us without reservation or qualification that: "The creek was full of bass, red-eye perch, chub and sunfish, beside slashin' big old hog suckers."

We went to the creek with some misgivings and a promise to the boy of a swim in his clothes if the conditions as set forth did not materialize—but he made good, and the day was a success every way.

The boy promised to provide the bait-worms, but as the ground was dry, he failed in his quest, so the start was delayed half an hour while all hands dug bait.

The four-mile drive through the beautiful blue grass country in the early morning was a bit of unalloyed pleasure. The homes, meadows and stock were strikingly like what one sees in the blue grass region of Kentucky, save that the land is more rolling.

My two companions were natives and Virginian gentlemen.

As dignity never goes beyond the city limits with a fishing party, ours was no exception, and so our town names had to be relegated for the time being.

The most dignified member was christened Talk Easy, the other native Walk Easy and the writer Take it Easy; the latter being irony of a pronounced type.

We all had things; Talk Easy a throat, Walk Easy and I stomachs, but all convalescent. Arrived at our destination, an old mill site with the dam partly broken away, we put the horse in a shady place and prepared to enjoy ourselves.

It was but a few moments thereafter until we had another illustration of how unreasonable a boy is.

"Get the net and bucket and come back with me up the road to the branch and let's try to catch some minnows," said I.

As he laid down his pole and started to obey, traveling with that broken back snake gait that a boy always affects when he has plans of his own that are interfered with, he was accosted by Talk Easy, who requested him to search among the rain coats, lunch baskets and other duffle in the conveyance for his fish line.

As the boy swelled up with injured indignation, but before he could voice it, the third member of the party called to him, and in a most polite tone of voice requested that he "look up the bait and carry all the cushions over to the place selected to fish."

Speechless for a moment, the unreasonable little heathen then howled: "How in thunder-m I goin' to do half a dozen things at once? I ain't no triplets. Somebody else ought to do something, too."

Then somebody promptly offered to do something, and as the somebody was the boy's avuncular relation, the small boy did a sprint across a bit of clover and hurdled over a high rail fence, and then retired to a thicket to meditate until time, the great healer, worked out a condition favorable to his return to our society.

My minnow fishing was not a success, and I soon concluded to return and take chances with the others, using the plebian angle worm. They were hard at it, and Talk Easy had hooked, played and safely landed a fine fish of the genus chub that weighed all of 2½ ounces and was nearly as long as the longest finger on his hand.

After modestly acknowledging our hearty congratulations and recovering from the fatigue incident to such exertion, the gentleman calmly resumed his fishing.

Determined that there should be a show of scientific fishing, I rigged up a fly outfit and proceeded to industriously whip the water that looked favorable, hoping to take a bass.

The conversation that immediately ensued between my companions was not calculated to encourage me. "What is he doing?" said the fisherman who had scored.

"Practicing to drive a dog tram on the Klondyke," was the reply.

"Does he think it possible that fish eat feathers?"

"No; his idea is to scare them to death with a near view of the fearful and wonderful insects."

I cut short this brilliant show of pleasantry by dropping a large stone in the water's edge between them, splashing some muddy water on each.

My further efforts to educate creek fish up to a feather diet proceeded without criticism or comment.

When thoroughly discouraged, I put away my fly outfit and got down to business with a worm. Talk Easy, who seemed to be the real fisherman of the crowd, had caught another fine chub, almost as large as the first, and several red-eye perch that were clearly visible to the naked eye, and was in a fair way to become very unpopular with the less successful members of the party.

He and Walk Easy had fished on down the stream together, and when I followed them and came near enough to hear their conversation, I saw again that oft recurring, but ever deplorable sight, "man's inhumanity to man," in confidence betrayed. Talk Easy would find a likely hole, cast in and take a fish or two; then, if no further success rewarded his efforts, he would call to Walk Easy to come there where he had found a good place, and with the arrogance born of success and a belief in his superior skill, direct him as to the proper bait to use and spot to cast in, and then leaving his grateful, but deluded friend to fish exhausted waters, hurry on to the next good hole.

It was a case calling aloud for foreign intervention, but added to the fact that I had no gun, was the further fact that it behooved me to get ahead of the trouble in question and find some unfished water so as to save my own reputation.

Returning about noon to where the unequal partners were operating, I found the head of the firm laden with conceit and fish, while the junior was struggling with physical exhaustion and the problem of why it was that he had found the only worms in the can that the fish would not eat.

We now proceeded to enjoy one of the most pleasant events of even the most eventful outing, the lunch hour. The boy was called, and came in with two fish, and voluminous explanations of how it was that his string was not full, and after making proper apologies for the shortcomings of early morn, was restored to limited fellowship on probation. The lunch basket assayed well and proved entirely satisfactory, until Walk Easy produced from its profoundest depths a small brown bottle about half full of fluid and other things, which he said had been placed there by order of the supreme dictation of his household, with express instructions that he proceed to take a little as antidote for lunch in excess.

Merely out of curiosity, we agreed to join him in partaking of the contents of the bottle, as it had some queer objects that we had never seen used as ingredients in any beverage.

Cork cocktail we found it to be, and give the formula, as it will probably become more popular than the famous drink of the commonwealth—mint julep.

Fill up a bottle with corks and stuff the interstices with spirits fermenti. Let stand until all the flavor of the cork is extracted. Two teaspoonfuls of this—which was our share after Walk Easy had worried down his prescribed dose—made us think we were two bits of thistledown; and our poor friend, with a full dose to contend with, had to sit holding a large stone in his lap for some time.

It is a great discovery, this cork cocktail, but the man who fully exploits it had best provide himself with the footwear of a deep sea diver if he wants to retain his grip on terra firma.

We resumed operations after dinner and the luck held. The man who knew the game continued to catch fish, while his partner industriously fished exhausted waters.

The boy joined them for a season, but when Talk Easy, under the impression that he had a large fish, tore a minnow out of the water with such force as to jerk its head half off, his frankly expressed opinions and hilarious shouts of laughter revived his unpopularity of the morning, and he concluded to join me for a while. There is always something original about a boy's fishing outfit, and our boy was no exception.

His pole was so long that he either had to fish across to the opposite side of the stream all the time, or else sit well back from the water's edge.

His line was long and strong and carried two hooks of generous size.

But the artistic finishing touch of the outfit was the float. This consisted of a cork disk about as large as a batter cake of generous thickness, and of such buoyancy that no ordinary fish could have pulled it under the water.

The effect produced by the casting of the boy's line was to be compared only with the explosion of a subterranean mine.

We got on fairly well together—the boy and I—but his method of fishing was too strenuous for results. Every few moments he would pull in and cast out, the first half of the process sounding like pulling a stump, and the return being a s-wish-s-sh, ker-plunk, su-wash! The climax being the settling of the float.

At my earnest insistance, he finally removed the float, and shortly thereafter fished for several minutes with his hook hanging from a bush on the opposite bank, where it had lodged when cast, without his noticing that fact. His disgust was great, and no amount of argument could convince him to the contrary of a great opportunity lost in the few moments that he had fished up a tree.

This was much more amusing than the next incident, as any one but a boy would know, but he thought the contrary. I had caught a minnow and was fishing a long stretch of water for a bass. A fine strike showed, and when I pulled I was fast to something big and strong. The boy observed it, and greatly excited, abandoned his own business to rush over to offer me advice and assistance.

"Pull him in! Snake him out! Don't let him get away," he shouted; "What you reckon it is?"

"A bass," I coolly replied, "and a good one. Stand back and I will show you how to properly land a large fish."

Having no clear water to play it in, I was steadily reeling and pulling in my catch, which was fighting in a jerky, stubborn way rather unusual in a game fish, but I believed it to be such, and a good heavy one, too.

Setting well back, pulling hard and reeling fast, with the boy jumping and shouting with excitement, I brought my catch to the surface, and with a lunge and splash, it came into full view, proving to be a long, slender, green switch that my line had become fast to in the center, so that in pulling it through the water it offered the jerky resistance described.

I was both disappointed and chagrined, and for one brief instant thought that even my companion was going to be considerate and sympathetic, as he seemed to share my disappointment, but this was a violent presumption—he was only a boy.

After one look at my prize, the boy proceeded to roll over and over on the ground with whoops and yells, occasionally choking and smothering with his efforts to be sarcastic: "Oh! what a bass." "Ain't he a big one, though," and other remarks of like nature, until I was minded to wonder how a boy could be such a brute, naturally.

I do not believe in punishing other people's children—having small troubles of my own—but after the insufferable row kicked up by that young hopeful had continued to a point beyond human endurance, we separated.

He never knew that the vicious slashes made at him with that stick, as he sought safety in flight, were only intended to frighten him; nor the further fact that they might have done so to the extent of shortening his earthly career without causing regret. The cool of the evening found us all back at the starting point at the dam, and a canvass of the returns showed Talk Easy high hook, with his deluded and confiding companion, yet like the small boy who said: "When I catch the one I am after, and two more, I will have three."

But the law of compensation now intervened, and the weary, unsuccessful fisherman came to his reward. With all of us fishing as near him as we could crowd, he caught the four largest fish of the day, and was once more happy.

The ride home was uneventful with one exception. In fording the creek we drove in the deepest water and succeeded in entirely submerging the floor of the buckboard, where sat the boy.

We have heard Nilsson, Patti and Campanini—none of whom discoursed music as sweet as the sound of the yells of rage and anguish that proceeded from the throat of the boy as he slashed around in the cold water of that spring-fed stream.

The glory of a mountain sunset was full in our faces as we drove home. A grand sea of molten gold dotted with crimson islands.

The miracle that we call the sun going down, that was old when these lofty mountains were the levels of the great deep, that is as old as the first day of the creation and yet is ever new.

But this is not fishing, and the inevitable must be met. "How many feeshes, Daddie?" is the question in sweet chorus that meets us at the gate.

Then to the house we go with deep longing for the welcoming caress that each has looked forward to all through the long ride home; and the hearty words of praise that sound so sweet from loved ones to the weary, yet successful fisherman, only to be met with that query—replete with subtle wit, and old, oh! how old—not dating back, perhaps, to the first sunset, but antedating many, many sunsets: "Why, how nice. What did you say they cost you?"

LEWIS HOPKINS.

On a South American River.

THE revolutionary movement now going on in the United States of Colombia began in November, 1899. In February of that year, with a companion, Col. Dunstan, I visited Colombia and spent more than two months in the interior, returning in May. It is a ten days' voyage from New York to Savanilla. Just after starting, we were caught by the great blizzard of that year, as we ran southward along the coast, and had to lie to for many hours; after that we had fine weather for the rest of the trip. We stopped at Fortune Island for perhaps half an hour, to take on some cargo handlers, who would be dropped off again on the return voyage, and then made for Kingston, Jamaica, where we lay twenty-four hours. After rounding the east end of Jamaica, the run along the southern coast to Kingston is famous for its magnificent mountain views.

From Kingston we ran a straight course for Savanilla, which, being right across the Caribbean Sea, was out of the track of ordinary travel, and we saw no sail on the way, but as the weather was fine, contented ourselves with the sight of flying fish and dolphins and grand sunsets. The Magdalena River is to Colombia what the Mississippi is to this country, a great commercial highway. Unfortunately, its mouth is too shallow for steamers or any large craft to enter, so that, while the custom house is at Barranquilla, not far above the mouth, vessels discharge and take on cargo at Savanilla on the coast, eighteen miles west of the town and connected with it by railroad. Savanilla is merely a railroad station and a collection of a dozen or so thatch-roofed houses, but there is a fine steel pier 4,000 feet long at the outer end of which vessels tie up and discharge their cargo into cars, which are then sealed and run to the custom house at Barranquilla. Travelers get their baggage after it is inspected at the latter place. We reached Barranquilla at 11:15 A. M., when of course everyone had gone to breakfast and its following siesta, so we had to wait a couple of hours for the officials to return, which time we utilized by driving to the English hotel ahead of our fellow travelers and engaging the only vacant room, a corner one looking out on the plaza and flanked by a church. It being against the law to take rifles into the country, I was doubtful as to what would be done with my little .44-40 Winchester, but after I had been introduced by a friend, Don Luis Pochet—an American citizen, by the way, who served in our Navy in the Spanish war—and had shown how a one-armed man handled the gun, and had, in pantomime, disposed of a half dozen imaginary assailants, leaving them dead upon the custom house floor, a proceeding which brought a chorus of "Bueno!" from the crowd of officials and spectators, I had no trouble, and carried my gun off in peace. Late in the afternoon we found that a boat for our river was to leave next morning at 7 o'clock, and decided at once to go by it, as another might not leave for weeks. This left little time in which to see the town, but Dunstan had been there often and knew where to go, so I saw enough then and on my return to give me an idea of it. It is a town of say 20,000 people, built on sandy soil, sloping gently to the Magdalena, on the west bank of which it lies. As a rule, the streets are narrow and the buildings low, one or two stories high, but with high ceilings and all brick, stuccoed and whatnot, either brilliant white or pale yellow. There are the usual courts, balconies and barred windows. A well planted, well-kept plaza is faced on opposite sides by a church and club house, business houses occupying the rest of the space. There are electric lights, street cars drawn by mules and an ice plant. There is a garrison with the cuartel near enough to the hotel for the guests to hear the calls

the buglers seem to be fond of blowing. There are sawmills, boat yards, printing offices—one run by ex-U. S. Consul Pellet—and other industries, but the place is essentially a shipping point. Perhaps the principal port of entry in the country, it distributes its imports by the Magdalena River and its tributaries over an extensive territory, and receives by the same streams large amounts of articles for export—hides and coffee the principal ones. The Magdalena is navigable for steamboats from Barranquilla to Honda, where one leaves the river for Bogota, the capital.

Its principal affluent, the Cauca, is perhaps longer than it is, but with more current and shallower. It joins the main stream 200 miles above Barranquilla, and is navigable to Caceres when the water is high; otherwise to Boca del Nechi, 70 miles from the mouth. When there is good water, boats run up the Nechi 60 miles to Zaragoza, a town of some 2,000 people.

Our destination being a landing called Matanzas, 24 miles below this place, we had to take passage when we did, as boats left Barranquilla for the Cauca and Nechi only when the water was right and cargo offered. Barranquilla is a healthy place; the sandy soil it is built on allows no stagnant water, and there is always a fine, strong breeze. We rose at 5:30 A. M., with the air as bright and clear as on a northern October morning, so that I could see the huge peaks of the Sierra Nevada of Santa Marta away to the east.

Several of the large shipping and importing houses in Barranquilla run lines of steamboats on the Magdalena. These are metal-hulled, shallow draft boats, with stern wheel, an upper deck with four to six staterooms on either side amidship, the space between used as a dining room; the forward part covered and fitted with side curtains for use against sun and rain. Some were built in Pittsburg, and put together and finished in Barranquilla.

We set forth on the Antioquia, an hour or two after the appointed hour, of course, time being little thought of where we were. The hold was filled with cargo. The after part of the main deck showed the boiler and horizontal engine, while its sides and available space amidships were piled high with firewood. Forward there were some deck load for nearby points and a few cattle.

We secured adjoining staterooms next the captain's, put all our belongings inside, and opening our steamer chairs, had time to sit and look about us. There is a long island opposite the whole front of Barranquilla, so that the town faces a rather narrow back channel, with the main stream beyond. The upper end of this channel is closed; why, I could not understand, unless because the large firms located at the lower end of town did not wish trade to draw away to the other end, so all the boats have to go down stream, round the lower end of the island, then turn back up the main river. As we went down this channel we passed a washing and watering place, where a crowd of washerwomen occupied the bank and the water, too, among whom the water carriers drove their barrel carts into the stream to be filled. As we swung out into the main stream we saw a caiman, and soon after, another on the bank. The law forbids shooting at these from the steamers under a penalty of $200. This is not to protect the caimanes, but persons on shore and their property, for the ordinary people are such poor shots that they are more likely to hit a horse, cow or fellow citizen on top of the bank than the caiman at the water's edge. We had quite a number of passengers, among them two young girls, who had been at school near Barranquilla, and were going home in care of a priest. There was also an American, then in charge of the Magdalena end of the Carthagena and Magdalena Railway at Calamar. He was a Grand Army man who had been in the Second Massachusetts Cavalry. We enjoyed his company until he went ashore at his station, and he seemed as much or more pleased to have a couple of fellow countrymen to talk to.

A band of twelve pieces was on board, going home after having been to Barranquilla for the carnival. Some of its members were mere boys, swarthy-faced Indian-looking fellows, with long, black hair. All had excellent ears for harmony, and their time was capital. Whenever we approached a village or came to a town the band played, and we found the inhabitants, already warned of our coming by the steamer's whistle, lining the top of the bank from one end of the place to the other, sometimes a half or three-quarters of a mile—men and women variously clothed or partially so; little children unclothed, Caballeros on prancing horses, fishermen with brown and white hats, all sorts of odd-looking people came to hear the music and followed up stream as far as the water street or roadway permitted. Not far from Barranquilla we passed a field of huge cacti, of which I was sorry not to get a photograph. Soon after, we stopped at a house on the bank to let a newly married couple get on board. At 11:30 we breakfasted, the captain of the boat at the head of the table. It seemed to be etiquette for no one to leave the table until the captain rose, and for him to keep his seat as long as any guest was still eating. This was annoying to us, for the other passengers bolted their food so fast that we were away behind, and had to let part of the meal go untouched or keep the rest of the guests in their seats watching us. In the evening there was dancing on the passenger deck—waltzes, Spanish and Colombian dances. Our part was confined to helping the fun for the band and applauding the dancers from our coign of vantage next the forward rail, where we smoked our cigars, fashioned of the fragrant Ambalema tobacco. About 8 o'clock we reached Calamar, a busy-looking place, with a crowd at the landing, white and yellow stuccoed buildings glaring in the moonlight, lights streaming from their windows, in one a party of young people in gay attire. A couple of leagues beyond this the band left us. The boat simply sidled up to the bank, which, although in shadow, the moonlight showed to be covered with thick brush; a gangplank was pushed out a few feet, some one held a lantern aloft, possibly to disconcert those who could see a little by the unmeddled-with moonlight, and the musicians, one by one, sprang into the darkness of the brush and disappeared like the point of a pen stuck into an ink blot. As we steamed away after a chorus of "Adios," we could hear their calls to each other as they scrambled their various ways to the upper ground. We ran all night. About an hour and a half after midnight, we stopped at a wood yard for fuel. The little settlement in the mystery of the moonlight, the flaring lights and moving figures made a delightfully picturesque combination. We did not like to go to sleep, but rest was necessary; however, we rose at 6 o'clock. Presently the boat stopped at Savannah, a small, neat-looking village, where the captain bought fowls and other supplies for the table fare. The air continued to be most delightful; like one of our spring mornings, so that as I sat clothed in a linen duck coat and waistcoat, with corduroy trousers, I wondered when and where the "tropical heat" was to come in. The river teemed with fish, as did all the streams I saw, big and little; lots of them were leaping near shore, and large white cranes were numerous. We saw many canoes, some of them large cargo canoes, as they are called. At Savannah was a very large one, brilliantly painted, loaded with crockeryware made in the interior, and on its way, probably, to Barranquilla. Later in the day we saw some caimanes, fifteen or twenty. On one point lay a large one, 15 or 16 feet long. On another lay eight or nine, one of them larger than the solitary one. They seemed to know we were not allowed to molest them. At intervals, flocks of parrots flew chattering across the stream, and I saw one small bunch of ducks.

HOUSE OF THE NEWLY WEDDED COUPLE.
Photo by Cecil Clay.

Early in the afternoon we stopped for wood, and an hour later reached Magongue, 160 miles from Barranquilla. It is quite a place, the business street, as usual, running along the river front, with a long string of white and yellow stuccoed buildings. Part of the front was disfigured by Syrian or Turkish peddler booths, placed on the edge of the bank, some hanging over it and all with their backs turned to the river. Along the bank were remains of the old Spanish brick work to protect it. Queer cargo canoes with thick thatched tops lay along the shore and a pack train for the interior was loaded just before we started away.

After some delay we got off again and crossed the river to a brickyard, where the crew went ashore with their machetes to cut grass for the cattle we carried. At midnight we tied up at a woodyard at the mouth of the Cauca, forty miles from Magongue, the law allowing steamers to run that river by daylight only, because of its swift current, changing channel and many snags. We went on again at half past 5. As we went up the Cauca, mountains began to appear in the distance, and later in the day hills came to the stream. One peak, the Cerro Corcovado (Hunchback) loomed up splendidly at a distance of thirty miles. We saw a number of caimanes, big and little. One village, La Raya, at the mouth of a small river of that name, on a litle flat at the foot of a fine wooded hill, was pointed out as a bad town, where one should not stop over night. The people go up the Rio La Raya after ivory nuts. We tied up for the night at a woodyard two leagues below Boca del Nechi, which place we reached about 7 o'clock next morning. This is seventy miles up the Cauca, or 270 from Barranquilla. Our steamer was to go from here up the Cauca to Caceres, return and then go up the Nechi. We preferred to go on by canoe rather than to wait for it, so engaged two men to take us to Matanzas in a dugout and started up the Nechi the next morning, the captain with a huge broad-bladed paddle in the stern, we with our effects amidships, and the crew with the forward third to himself and his push pole. When we set out the crew was clothed, but when we left the village out of sight behind a point he kicked off his sandals and removed his attire piece by piece, as his work warmed him; blouse, shirt, trousers, everything, came off until there was left only a short skirt reaching from the waist to near the knees. When uncomfortably warm, he jumped into the river for a minute, then climbed to his place again. At 10 o'clock the crew ate a few bites of fish and bread, and at noon we lunched. There are no villages on the Nechi from the mouth to Zaragoza. We passed a few houses during this day, and occasionally cattle or a canoe, to remind us that the country was inhabited. The usual flocks of parrots flew back and forth across stream, and gangs of monkeys made racket enough for a menagerie in uproar, but we did not see them. We found mosquitoes plentiful where we spent the night, but put up our toldos (nets) and defied them. A traveler leaving Barranquilla supplies himself with a bright-colored matting rug, pillow, sheet, striped cotton blanket or other coverlet, and a mosquito net, made up in oblong box shape with a stick across each end at the top, and cords to hang it up. On the steamboats cots are placed all over the passenger deck, and each traveler puts his sleeping outfit on one of them to secure it. If not sleepy, he lies under his net and smokes.

The people in this region are descendants of the Indians and negroes. When the Spaniards occupied the district of Guomoco, they found a population of 90,000 Indians. These, after some years of toil and working in the mines, were reduced to 15,000, mostly women. Then slaves were brought from Africa and a mixed race replaced the original. The people are strong, well built

and good workers. On the Nechi and around Zaragoza and Remedios they are nearly all miners.

The next day we traveled better, as the water had fallen some 2 feet. We saw but two or three caimanes and not more people except the family at a house near which we stopped for lunch at noon. At 7 o'clock in the evening we reached Matanzas, where a trail leaves the river for a mine forty-five miles back through the forest. There is a house for shelter of men or goods, and a pasture field for pack animals. In Colombia every locality is given a name, whether there be anything there or not, a method which has the merit of avoiding long descriptions when arranging a meeting point or stating a destination. When I left Matanzas six weeks later, I had a larger canoe, with a crew of three and two other passengers, Harry Dunstan and a storekeeper from Llana, a hamlet four miles from the river by the trail. After two hours' travel, one of the men broke a prong off his push pole, so we stopped while he went ashore to cut a hardwood crotch with which to mend it. A gang of red monkeys was making a great row not far off, and from where I sat I caught an occasional glimpse of one moving in the treetops a hundred yards back. Presently I saw one clearly squatting on a limb away up in an enormous tree, so far off that it looked like a little chipmunk. I put up my Winchester, but found when I sighted that a slender horizontal branch of a sapling on the bank completely shut out the monkey. I explained this to my companion by word and pantomime, then sighted again, when just as I said, "Now, as I sight, that little branch completely covers," my finger touched the trigger and the branch fell. I threw in another cartridge, fired again, and down came the monkey. The crotch and the monkey both in the boat, everybody had to smoke while we awaited the mending of the push pole. Gathering from chance words and gestures of the crew that the death of the monkey was being discussed, I asked what they were talking about. "Oh," said Dunstan, "they are saying, 'Wonderful! wonderful! The general says there is a limb, I cannot see the monkey. He fires and cuts away the limb. He fires again, the monkey is dead. Santa Maria, what shooting!' Your having but one arm makes it more extraordinary to them. I doubt whether one of them could hit it at 20 yards." The monkey measured, body, 21 inches; tail, 23 inches, standing, 30 inches. We saw no caimanes until afternoon. Just after lunch I killed one 16 feet long, a difficult shot at 150 yards, and toward the sun. I missed another huge one by underestimating the distance and the motion of the canoe. An American trader in caiman skins who buys them from the natives and ships them to the States said recently, in answer to a question, that the largest skin he had shipped was 21 feet long by 5½ feet wide. This of course was the belly skin only; that of the back would be one-fifth wider, so that the creature was 22 feet long and 12 feet around the body.

Several miles below Zaragoza the river cuts through a range of hills, where for several miles the stream is narrow, deep and swift. The densely wooded hills come to the water's edge, sometimes with cliffs and everywhere rocky. We went through these narrows by moonlight, a delightful experience. Just above, the river is spread out over constantly shifting sandbars and is very shallow. We made a number of attempts before we succeeded in rounding a rocky point, where we emerged from the narrows and struck the converging currents. About 9 o'clock we reached Zaragoza, our journey's end.

When the insurrection began in Colombia the Government seized all the steamboats on the river, so that for two years there has been no internal commerce. Only a few dozen people are left in Zaragoza, and a good part of the place was burned as being a nest of the Liberals. The country round about and up and down the Nechi is denuded of men who are in one army or the other or hiding in the woods to avoid service. Supplies are exhausted, no crops are being raised, and that section of country is in bad condition. All the mines, English, French and American, are idle. Officials of some of them have been in Barranquilla more than a year, unable to get permission to go to them, either by Government boat or canoe. In whatever way the civil war may end, it will take the country a good while to recover from its effects.

CECIL CLAY.

Wild Animals of the North.

From Richardson's "Fauna Boreali-Americana; or the Zoology of the Northern Parts of British America."

The Beaver.

No animal has been the subject of more essays and of more imaginative writing than the beaver; and Richardson, who, of course, passed through the region of the beaver's greatest abundance in North America, has much to say about it, and quotes plentifully from Hearne, for reasons given in his own words:

"The beaver attains its full size in about three years; but breeds before that time. According to Indian report, it pairs in February, and after carrying its young about ten weeks brings forth from four to eight or nine cubs, toward the middle or end of May. Hearne states the usual number of young produced by the beaver at a time to be from two to five, and that he saw six only in two instances, although he had witnessed the capture of some hundreds in a gravid state. The female has eight teats. In the pairing season the call of the beaver is a kind of groan; but the voice of the cubs, which are very playful, resembles the cry of an infant. When the beaver cuts down a tree it gnaws it all round, cutting it, however, somewhat higher on the one side than the other, by which the direction of its fall is determined. The stump is conical, and of such a height as a beaver, sitting on his hind quarters, could make. The largest tree I observed cut down by them was about the thickness of a man's thigh (that is, six or seven inches in diameter); but Mr. Graham says that he has seen them cut a tree which was ten inches in diameter.

"Pennant fixes the southern range of the American beaver in latitude 30 degrees, in Louisiana, not far from the Gulf of Mexico; while Say mentions the confluence of the Ohio and Mississippi as their limit, which is about seven degrees further to the northward. In high latitudes they are confined to the wooded districts, there not being even willows enough for their subsistence on the banks of the small lakes and rivulets of the Barren Grounds. Their most northern range is, perhaps, on the banks of the Mackenzie, which is the largest American river that discharges itself into the Polar Sea, and is also the best wooded, owing to the quantity of alluvial soil deposited on its banks. Beavers occur in that quarter as high as 67½ degrees or 68 degrees of latitude, and their range from east to west extends from one side of the continent to the other, with the exception of the Barren districts. They are pretty numerous in the country lying immediately to the northward of Fort Franklin; and from the swampy and impracticable nature of the country, they are not likely to be soon eradicated from thence. The Iroquois are the greatest beaver takers in Canada, and their hunters now allot the beaver districts among themselves and endeavor to preserve these animals from extinction by trenching the beaver dams of any one quarter only once in four or five years, and taking care to leave always a pair at least in a dam to breed. Further north the Indians, when they break up a beaver lodge, destroy, as far as they are able, both young and old, and the numbers of beaver are consequently now very much reduced. Gangs of Iroquois were also introduced into the fur countries to the north some years ago; and by setting traps, which destroyed indiscriminately beaver of all sizes, they almost extirpated the species from their hunting grounds. The Hudson's Bay Co. are, however, endeavoring to remedy this evil, by laying plans to insure an adequate supply of the very useful beaver fur, although it is not likely that it can ever be so plentiful as it was formerly. In the year 1743 the imports of beaver skins into the ports of London and Rochelle amounted to upward of 150,000; and there is reason to suppose that a considerable additional quantity was at that period introduced, illicitly, into Great Britain. In 1827 the importation of beaver skins into London, from more than four times the extent of fur country than that which was occupied in 1743, did not much exceed 50,000.

"In some seasons a great mortality occurs among the beavers from some unknown cause, many being found dead in their lodges. Toward the north the fur of the beaver is better, and continues in prime order through a greater portion of the year. At Great Slave Lake, in latitude 61, July, August and September are the only months in which the beaver fur of inferior quality is procured. In commerce, beaver skins cut open, stretched to a hoop and dried in the ordinary manner, are named beaver parchment, and form by far the greatest part of the importation. When the beaver skins have been made into dresses and worn by the Indians, it is termed beaver coat; and, though it may have been in use a whole season, it still brings a good price. Inferior-sized skins are named beaver-cub. An incisor tooth of a beaver is fixed in a wooden handle by the northern Indians and used with great dexterity to cut bone. This was the instrument with which the people fashioned the horns of the reindeer into spear-heads and fish-gigs; but these bone weapons are now generally replaced by iron, and the beaver tooth has been supplanted by an English file.

"The best account of the manners of the beaver, and the most free of extravagancies, is that given by Hearne; and it agrees so exactly with the information I received from the Indian hunters that were I to record the latter it would appear to be borrowed almost entirely from that traveler. I therefore prefer giving it in Hearne's own words:

"'The beaver being so plentiful, the attention of my companions was chiefly engaged on them, as they not only furnished delicious food, but their skins proved a valuable acquisition, being a principal article of trade, as well as a serviceable one for clothing. The situation of the beaver-houses is various. Where the beavers are numerous they are found to inhabit lakes, ponds and rivers, as well as those narrow creeks which connect the numerous lakes with which this country abounds; but the two latter are generally chosen by them when the depth of water and other circumstances are suitable, as they have then the advantage of a current to convey wood and other necessaries to their habitations, and because in general they are more difficult to be taken than those that are built in standing water. They always choose those parts that have such a depth of water as will resist the frost in winter and prevent it from freezing at the bottom. The beavers that build their houses in small rivers or creeks in which water is liable to be drained off when the back supplies are dried up by the frost, are wonderfully taught by instinct to provide against that evil, by making a dam quite across the river at a convenient distance from their houses. The beaver dams differ in shape according to the nature of the place in which they are built. If the water in the river or creek have but little motion, the dam is almost straight; but when the current is more rapid, it is always made with a considerable curve, convex toward the stream. The materials made use of are drift-wood, green willows, birch and poplars, if they can be got; also mud and stones intermixed in such a manner as must evidently contribute to the strength of the dam; but there is no other order or method observed in the dams except that of the work being carried on with a regular sweep, and all the parts being made of equal strength. In places which have been long frequented by beavers undisturbed, their dams, by frequent repairing, become a solid bank, capable of resisting a great force, both of water and ice; and as the willow, poplar and birch generally take root and shoot up, they by degrees form a kind of regular planted hedge, which I have seen in some places so tall that birds have built their nests among the branches.

"'The beaver houses are built of the same materials as their dams, and are always proportioned in size to the number of inhabitants, which seldom exceeds four old and six or eight young ones; though, by chance, I have seen above double that number. Instead of order or regulation being observed in rearing their houses, they are of much ruder structure than their dams; for, notwithstanding the sagacity of these animals, it has never been observed that they aim at any other convenience in their houses than to have a dry place to lie on; and there they usually eat their victuals, which th occasionally take out of the water. It frequently ha pens that some of the large houses are found to ha one or more partitions, if they deserve that appellatio but it is no more than a part of the main building, le by the sagacity of the beaver to support the roof. C such occasions it is common for those different apar ments, as some are pleased to call them, to have n communication with each other but by water; so tha in fact, they may be called double or treble house rather than different apartments of the same house. have seen a large beaver house built in a small islan that had near a dozen apartments under one roof, al two or three of these only excepted, none of them ha any communication with each other but by water. A there were beavers enough to inhabit each apartmen it is more than probable that each family knew the own and always entered at their own doors, witho any further connection with their neighbors than friendly intercourse, and to join their united labors erecting their separate habitations and building the dams where required. Travelers who assert that th beavers have two doors to their houses, one on the lan side and the other next the water, seem to be less a quainted with these animals than others who assig them an elegant suite of apartments. Such a constru tion would render their houses of no use, either to pr tect them from their enemies or guard them again the extreme cold of winter.

"'So far are the beavers from driving stakes into th ground when building their houses, that they lay most the wood crosswise, and nearly horizontal, and witho any other order than that of leaving a hollow or cavi in the middle; when any unnecessary branches proje inward they cut them off with their teeth and thro them in among the rest to prevent the mud from falli through the roof. It is a mistaken notion that t woodwork is first completed then plastered for th whole of their houses as well as their dams are, fro the foundation, one mass of mud and wood, mixed wi stones, if they can be procured. The mud is alwa taken from the edge of the bank or the bottom of t creek or pond, near the door of the house, and thou their forepaws are so small, yet it is held close up b tween them under their throat, that they carry both m and stones, while they always drag the wood with the teeth. All their work is executed in the night, and th are so expeditious that in the course of one night I ha known them to have collected as much mud as amount to some thousands of their little handfuls. It is a gre piece of policy in those animals to cover the outsi of their houses every fall with fresh mud, and as late possible in the autumn, even when the frost becom pretty severe, as by this means it soon freezes as ha as a stone, and prevents their common enemy, th wolverine, from disturbing them during the winter. An as they are frequently seen to walk over their work, an sometimes to give a flap with their tail, particularly wh plunging into the water, this has, without doubt, giv rise to the vulgar opinion that they used their tails as trowel with which they plaster their houses, whereas that flapping of the tail is no more than a custom whi they always preserve, even when they become tame an domestic, and more particularly so when they a startled.

"'Their food consists of a large root, something r sembling a cabbage-stalk, which grows at the bottom the lakes and rivers. They also eat the bark of tre particularly those of the poplar, birch and willow; b the ice preventing them from getting to the land the winter, they have not any barks to feed on in th season except that of such sticks as they cut down summer and throw into the water opposite the doo of their houses; and as they generally eat a great de the roots above mentioned constitute a principal pa of their food during the winter. In summer they va their diet by eating various kinds of herbage and su berries as grow near their haunts during that seaso When the ice breaks up in the spring the beavers alwa leave their houses and rove about until a little befo the fall of the leaf, when they return again to their o habitations and lay in their winter stock of wood. Th seldom begin to repair their houses till the frost com mences and never finish the outer coat till the cold pretty severe, as hath been already mentioned. Whe they erect a new habitation they begin felling the woo early in summer, but seldom begin to build until th middle or latter end of August, and never complete till the cold weather be set in.

[TO BE CONTINUED.]

Eugene Blackford, the ex-Fish Commissioner, wa standing in the door of his office in Fulton Market on day last week, when a literary woman came up to hi and said: "Mr. Blackford, I am gathering material fo an article on crabs. Do you think those little crusta ceans have the faculty of reasoning?"

"Well, madam," replied Mr. Blackford, "I have neve given the subject a thought, but I have known crabs t do some remarkable things. Last summer I was fish ing for flounders in Jamaica Bay. The water was sha low, and I could easily see the bottom. A crab sidle up to my bait, picked up the hook with one claw, too off the bait with the other, ate it, and then climbed u the line hand over hand, tumbled into the boat, and wen nosing around looking for the bait box. If that isn reason, it certainly is a very high degree of instinct." New York Times.

A negro named Floyd Conyer and his men of Ceda Key, Fla., met with a peculiar adventure with a tarpo a few nights ago. While sailing along there was a sud den splash in the water and a heavy object fell on th deck, which proved to be a tarpon, between five an six feet long. After striking the deck it gave ano he leap and struck the sail, which knocked it back upo the deck, and into the hatchway, where they succeede in capturing it. The negroes were frightened nearly ou of their wits. They thought it was a mermaid or som horrible sea serpent, and were almost ready to desert th ship.—Jacksonville (Fla.) Times-Union.

Items from the Pacific Coast.

Because of the long drought last winter, and lack of rain during the late spring, nearly all precipitattion occuring during the month of March, many of the mountain brooks are nearly dry and the mountains are bare of pasturage. Though plentiful at the begininng of the season, trout have been difficult to take on account of shallow water. Mountaineers report deer sign scarce throughout the best country. A reduction in the reservation force and the unusual number of campers this year make it necessary for the rangers to be exceedingly watchful. Fires have been burning for a fortnight among the Big Trees near Yosemite and are now reported as having entered the park. Under a recent order from the Interior Department, allowing guns to be taken into the forest reserve only by those who have a permit from the supervisor, attention is directed especially to shotguns, as the ammunition used for these is deemed more likely to result in conflagration.

The recent tour through the south of President H. T. Payne, of the State Game and Fish Protective Association, appears to have awakened some enthusiasm in interests of this character, as nearly every week one hears of cases in which the law has been enforced or other beneficial work has been accomplished. A notable instance occurred in one of the parks in Los Angeles. The nearest residents found during the spring that the waters of Echo Lake were full of black bass and carp, and though it was out of season, everybody had a good time fishing. All would have gone well perhaps had not W. M. Meece, who had boating privileges for the lake, discovered he could catch bass by rocking a skiff near shore, and thereupon supplied the anglers with these fish. Deputy Pritchard heard of this performance, arrested the offender, and later in the Police Court had Meece fined for catching bass out of season.

Those of your readers who visit this State for the excellent salt-water fishing may be pleased to learn that a compromise has at last been effected with the canning companies in regard to Avalon Bay, near the island of Santa Catalina, where the purse netters have been so destructive to sport the past winter, though supposed to be prohibited by a county ordinance from entering such waters. Secretary Ryder and President Holder, assisted by other members of the Tuna Club, had obtained sufficient evidence to convict the crew aboard one of the most persistent launches, but consented not to prosecute if the sardine company withdrew from the island all of the offending boats. Undisturbed by nets the fish have come into the bay as never previously and sport is excellent.

Hunting and fishing are well looked after in Santa Barbara County, where a strong club upholds the efforts of Game Warden Abels to enforce the law, and during the close season beast, bird or fish may consider itself comparatively safe, or the pot-shot who would kill illegally may know that his act immediately puts him in jeopardy. The manner in which the Game Warden appears where least expected has aroused no end of consternation; though a very large county, rough, too, he may pervade all of its extremities upon the same day, almost as if doubles or worse had assumed the protective office. Zeal of this order seems worthy of imitation elsewhere. The above official is now employed in stocking the streams with rainbow trout. Untiring service of this kind is rendered only in communities that give wardens assurance of moral support from the residents.

A decision rendered lately by the Supreme Court of this State, though seemingly in direct opposition to the opinion delivered several years ago, really conforms with the latter in every point, indeed throws further light upon the view then assumed. To state the case in the former action briefly, James Knapp, of Stanilaus County, California, in December of 1899, upon being convicted of shipping ducks out of the county in direct violation of an ordinance passed by the supervisors, brought his cause before the Supreme Court, which ordered his release and wrote the following opinion: "The State regulations upon this particular subject seem complete, and restrict the rights of citizens so far as is necessary to prevent the unlawful killing of game. Serious question has been made as to the power of any board of supervisors to add either restraints or regulations to the right to take and kill game to those made by the legislature. We do not find it necessary for the purposes of this case to decide that question. If such further restrictions upon the right to kill game may be made by the county boards, such regulations must be reasonable, not oppressive to any class, and must not contravene any established policy of the State. Having taken the game lawfully and at a time when it is lawful for anyone to shoot ducks, the ordinance prohibiting its shipment is an unreasonable interference with the right of private property, and an unnecessary restraint of trade. It was stated in the argument, substantially, that the ordinance was aimed at pot-hunters. Relatively, a small part of the community only are sportsmen. A law or ordinance which would discriminate in their favor would not be a proper exercise of the so-called police power. If that be the manifest or admitted purpose of the ordinance, it is void for that reason also."

The test case recently decided was brought at the instance of the commission merchants of San Francisco, who wished to ascertain the validity of the State law in regard to the sale of game. One of their clerks sold a quail, was arrested, pleaded guilty, was fined $25, and at once appealed the case. He asked for a writ of habeas corpus, on the ground that the law was class legislation and that when a man killed any game it became his property, with which he could do as he pleased. But the Supreme Court held that all game is really the property of the State, that sportsmen kill animals only through sufferance, and that the Legislature in granting favors can make whatever qualifications may seem proper, nor does the prohibition in reference to the sale of game destroy a property right. Two of the seven justices, however, dissented on the ground that the law discriminates in favor of sportsmen and hence is class legislation. The opinion upholding the State measure, following as it does that overthrowing the county ordinance, defines clearly the right of legislature and board of supervisors to enact game regulations.

A young bird, said to be a California condor, was caught the other day by a ranchman in the mountains near Santa Maria. Your correspondent, however, is somewhat incredulous as to the variety. He heard in the spring that a condor's egg had been found by two boys in the mountain near Santa Barbara; but investigation proved that the egg was only one of "another kind" of condor. The great California variety still exists, though, for specimens infrequently cross this valley, one large individual only several months since, and are easily identified by the observer. The egg of these creatures sells readily for $1,500, or about at the market price of great auk eggs, nor has one been forthcoming at even these figures for years.

Golden eagles, the eggs of which are now deemed so rare that oologists will give $35 for a good specimen, may still be seen frequently about the Ojai Valley, especially during winter or spring, and up to a few seasons ago one pair built annually upon a hillside scarcely a mile from our postoffice. The collector, who secured their egg, informed me that the old birds did not conduct themselves at all with the conventional ferocity reputed to these creatures by the writers for certain juvenile papers, but when the nest was approached, sailed away never to return. The spot chosen for building was easily accessible and did not have to be attained by him through the aid of a rope secured to one foot. Conduct so unheard of in the parent birds, with such commonplace choice for their home, if persisted in generally, would make the writer of adventuresome stories weary, even as he often makes his readers weary.

An eagles' nest on a high peak thirty miles from town, from its being near the point at which Supervisor Slosson has located one of his reservation guard, has acquired no little fame among the forest rangers, even a degree of veneration, as the lonely individual whose misfortune has isolated him up there has no other comrades than the restive occupants, and nearly every member of the force has had his opportunity to become intimately acquainted with the pair. Though all the world lies within view, to the ranger in distress it appears quite remote. For this Jove there can exist for immediate entertainment no Venus, no freaky Juno, no ambrosia, but only wide prospect for his delectation. His lightning defies and scares him. Assuredly ownership in the royal birds must be a solace. Should they steal young lambs, the herds are a pest to the range.

Camping for Women.

It is well to make up one's mind in the beginning of a camping season to abandon starched garments, both outer and inner. The woven gauze union suits are the simplest and in every way the best things that may be had in underwear. These require no ironing, and are warmer in cold, damp weather, and safer, because absorbent, in hot weather than are muslin. An extra pair of tights for unusual cold should also be taken. A divided underskirt of pongee for hot weather should serve instead of petticoats. Corset covers should be of the gauze sort.

In a hot camp a short denim skirt of dark color is admirable; in cooler places, corduroy is better. But in either place the woman who really expects to accompany the men of her party on expeditions will have to be provided with a divided skirt. In mountain regions, where the horse is the favorite means of locomotion, any other sort of a riding skirt is an absurdity, and in any unbeaten forest hunting knickerbockers are a necessity. For these, again, either denim or corduroy, according to the climate, should be selected.

Thin flannel shirt waists should be substituted for any starchable varieties; and a sweater to slip on over them when sunset or showers chill the atmosphere is also desirable. Soft, starchless stocks may be worn if the camper insists upon being conventionally dressed through everything, but a more comfortable and picturesque fashion is to knot a soft silk handkerchief about the throat above a collar cut sailor-wise, or even turned back.

A waterproof bag for one's extra clothes is a prudent purchase, and a set of waterproof pockets, to be attached to a short pole set in two crotched sticks in the tent, is a necessity. In it, if it is of at all generous proportions, everything, from hairpins—of which no supply can be extravagant—handkerchiefs, cosmetics, medicines, to needles and literature, may be kept.

If you are going into a region of mosquitoes or flies, take a head net. It is a sort of bag of bobbinette, which is fastened around the rim of the hat and in yoke fashion about the shoulders. It is unlovely, but not so unlovely as the face which has needed its protection and failed to find it.

High canvas leggings, double-bottomed shoes, a rubber or waterproof coat—these should complete the outfit of the amateur camper, so far as mere material appendages are concerned. The immaterial necessities will be at once perceived by every woman of common sense. Having invaded the masculine realm of pastimes, she must adopt the masculine virtues. She must learn to regard discomforts with gayety, to reserve all her tears until she is home again, and in the seclusion of her own room, to divorce her "moods"—a woman of moods is a scourge and an abomination in a camp—to subdue all whims of appetite and to be indifferent to all vagaries of weather. Unless she can make up her mind to all these things, let her at the beginning of the summer seek her well-piazzaed hotel, and decide to busy herself with her Renaissance lace-work or five-hole golf, as in years gone by.—Anne O'Hagan, in Collier's Weekly.

While Amos Cartright was fishing in the Big Bushkill Creek, Sullivan County, he hooked a large trout, and while playing it in the pool a large fishhawk pounced upon the trout and rose with it from the water. Cartright was so excited he did not stop his reel, and the hook holding fast in the fish's jaw the line parted at the tip of the rod. The hawk disappeared from view with not only the trout, but the fly, leader and 50 feet of the fisherman's line.—Oswego Times.

Natural History.

A Theory of Animal Instinct.

Paper read before the Fairhaven Men's Club by Joseph K. Nye, Fairhaven, Mass.

For ages men have been observing some apparent method of communication which one animal holds with another. To be sure, the order of intelligence in such communications is very low, nevertheless we have all of us noticed the ability with which some familiar animal, family cat, house dog, horses and other animals share with each other the sentiment of joy or fright. How often have we seen a dog sensible to the approach of danger of which a human being is totally unconscious? How often have we seen a flock of half a hundred birds, so bunched up that it is impossible to observe the leader, turn instantly in their whirling flight, as one bird? No known method of human thought could be devised by which a command and its execution could be compassed within the space of a hundredth part of a second; and yet the phenomenon is familiar to us all; and the scientific question comes to us, what method of intelligence is employed by the leader of that whirling flock by which he maneuvers his little army?

I have questioned closely a large number of whalemen, and it seems to be an established fact that, when one whale of a school is struck, all others in the immediate vicinity are aware of danger. Certainly some means of communication exists among these animals beyond that which can be attributed to sight and hearing.

Ernest Seton Thompson, in a recent articles, describes very vividly the actions of two herds of antelope, who, although two or three miles apart, were made aware of danger one to the other; and although his explanation goes so far as to say that certain physical changes in the patch of white hair would make it possible for these animals to communicate by sight, I want, later on, to suggest another means which may be possible, and which it remains for science to develop. Go further than this, what is it that guides the wildfowl high in the air, through days of fog and nights of darkness, unerringly in its flight north or south? Surely some power other than the sight of familiar landmarks, and as an indication of my train of thought, I will say, why not the same power that points the delicate little magnetic needle in the same direction.

Now, I cannot state facts, that is, so far as asserting that this is so, but let us hold up to the light of this suggestion some of the recent discoveries in science, which, I think, can be truly claimed to have some bearing on this phenomenon.

In 1888 Prof. Hertz, by a series of experiments, which have been widely discussed and studied, discovered that throughout all nature in all matter, solid, liquid or gaseous, there exists an attenuated, intangible substance, which, for want of a better name, he called ether. He found that by means of certain electrical instruments which would produce what we call an elctric spark, this ether would be set in motion, and start out in all directions a series of waves or vibrations, which certain other electrical contrivances would be sensible to; and out of this sprung the present method of what is known as wireless telegraphy.

No human eye is delicate enough to feel or in any way receive an impression from these ethereal waves, that is, stating it specifically, but in a general way there is no doubt in the scientific mind that all human sensations of heat and light are truly produced by these vibrations of ether; and does it follow that because our eye is not sensible to certain ether vibrations, that the eye of some animals may not be?

The theory of light is nothing new. We know that a beam of light can be decomposed into its seven primary colors; ranging from the highest, violet, down through the blue, green, yellow, orange, to red, the lowest color in the spectrum, or, at least, the lowest which any human eye can see; and we know that these color effects upon the human eye are produced by vibrations of the aforesaid ether, and even the rapidity and length of these vibrations has been proved, until to-day science says the highest color, violet, is produced by a vibration of ether equaling 700 billions per second. And now comes Prof. Hertz to prove that his little electric spark, in itself scarcely visible to the naked eye, can start out a series of these vibrations so much longer and so much lower down in the scale of color that no human eye can detect it. But the scientific mind has not been content with the mere theory that these low vibrations do exist, and after months and years of research, the discovery has been made by young Marconi, that a small pinch of nickel filings become violently sensitive when placed within a radius of these lower frequency waves.

It is wonderful to think of, that this little pinch of nickel filings should so far surpass the human eye in delicacy, and see colors which we know nothing of, but such is the case. To be sure, our filings have no nerves or gray matter to translate their sensation into human intelligence; but for an instant suppose they had. Away off yonder on a distant coast, through houses, trees and hills, a minute spark flashed between two electrical points would be gathered in by the filings, the sensation transmitted to the brain, and we could count them one, two, three and so on with a prearranged sequence, which would carry intelligence around the world. In fact, the sensation would be —sight.

Is it not possible that our dumb animals, deprived as they are of the power of speech and reason, should have within them some physical organ through which they may be sensible to this ethereal vibration which is known to exist far below the range of human sight? Does not some power within the leader of that whirling flock of birds understandingly transmit its order to turn? Does not the wonderful phenomenon of life admit of some power by which the frightened antelope sends forth its ethereal warning to its fellows, miles away? Why not the same thing, far more comprehensive than what we call instinct, transmit the agony of the wounded whale to its kind within the danger radius?

What are the electric currents which surround the earth but a stream of ethereal vibrations, which for the

sake of distinguishing we call electricity. Electricity surrounding a bar of iron will produce a magnet, with all the phenomena of north and south poles. The earth itself has long since been regarded as a great magnet, with the same phenomena of polarity. Currents of ethereal vibrations moving either from its rotation, or some other means of transmission, produce this great magnet; and if our little pinch of filings are sensitive to it, and they are, is it beyond the bounds of science, or rather nature, that the lonely wildfowl far up in the depths of darkness should be possessed of the same sensitiveness, and perhaps a far keener one? Is it not possible that they may be sensible to this north and south producing vibration which guides him forward unerringly to the pole?

Why is not this an explanation of the powers of a carrier pigeon? The little receiver within his brain sensible to the ethereal waves which are producing the polarity of the earth instantly teaches him in what direction he is crossing, and upon being liberated from a distant point, his mind teaches him to follow the reverse.

There is nothing supernatural or beyond the bounds of reason in believing that the brains of some animals should contain elements as delicate as the common glass tube filled with filings, and when is added to this nerve sensitiveness to feel the changed conditions of this little brain receiver, and the mental intelligence to translate it into actual knowledge, it seems almost simple that these birds who actually do from practice know north from south, should be possessed of the same function which can be as readily acted upon by the Hertzian wave, as the little tube of filings which is visible to our eye.

The little metal particles which in the trembling magnetic needle feel the force of these Hertzian waves, and as a result point unerringly north and south, has no brain to translate its sensitiveness or feeling into intelligence, and is made up of an arrangement of chemical elements far less wonderful than animal brain matter; but it proves that there is a mechanical power which a certain arrangement of chemical atoms is sensible to, and why not this same mechanical power acting upon the brain of a bird.

Take the case of the turkey buzzard. The sky may be clear and cloudless, giving a range of human vision for many miles around, with none of these animals showing above the horizon, but throw upon the ground, even in a remote spot, a piece of decaying fish or other animal matter, and the quickness with which these birds will arrive upon it from all directions is startling; a common explanation for which is that they smell the food from afar, but I do not think this explanation was ever made without an unspoken feeling of doubt; it serves for a popular explanation, but not a scientific one.

It is well known that putrifying animal matter will give off a phosphorescent glow. If all light is the result of ethereal vibrations, why not this phosphorescent glow? And simply because it produces no effect upon the retina of our eye, except feebly in the night time, is hardly a reason that some physical formation of the eye or other function of the buzzard, should not receive a definite impression from the ether vibrations given off by the mass of decaying material.

We all know the wonderful provisions nature has made in plant life, carrying the pollen from flower to flower, sometimes by the passing breeze, sometimes on the leg of a bee or other insect, and doubtless in other ways which we know nothing of; and given the fact which is now established beyond a doubt, that various phenomena, which do truly occur in nature, are constantly throwing off copiously these imperceptible ether waves, why is it impossible, that in the great design of nature some animal life should be sensible to them? Human beings were given a mind to investigate and make use of these phenomena of nature, but the dumb animal must do it through his inherent instinct, and I believe he does.

Mosquitos and Music.

Letter to the Editor of The London Times.

Sir: I find the folowing in a recent scientific publication:

"Mr. Brennan, of the Public Works Department, Jamaica, is responsible for the following interesting communication: 'You will pardon me for drawing your attention to the fact, if you have not already noticed it, that the mosquitoes (I do not know if every variety) will respond to such sounds as a continuous whoop or hum. I have tried the experience lately and find swarms gather around my head when I make a continuous whoop. There may be, however, some particular note or pitch that would be more attractive to them.' This observation would afford an interesting subject for experiment."

In 1878 I made and erected an apparatus for lighting the grounds of the Grand Union Hotel at Saratoga Springs, N. Y., by electricity. The lamps employed were rather large and each was provided with its own dynamo machine. One of the lamps worked something like a telephone and gave out a note, the pitch of which corresponded exactly with the strips on the commutator passing under the brushes of the dynamo machine. Some of the other lamps would occasionally give off a musical note, but only for a few minutes at a time. With this one, however, the note was practically constant, and no adjustment of the carbons had the least effect upon it. One evening, while examining this lamp, I found that everything in the immediate vicinity was covered with small insects. They did not appear to be attempting to get into the globe, but rather into the box that was giving off the musical note. Upon a close examination of these insects I found that they were all the same kind—viz., mosquitoes, and, what is more, all male mosquitoes. Although there were certainly 200 times as many female mosquitoes on the grounds as males, I was unable to find a single female mosquito that was attracted in the least by the sound.

When the lamps were started in the beginning of the evening, every male mosquito would at once turn in the direction of the lamp, and as it were face the music, and then fly off in the direction from which the sound proceeded. It then occurred to me that the two little feathers on the head of the male mosquito acted as ears, that they vibrated in unison with the music of the lamp, and as the pitch of the note was almost identical with the buzzing of the female mosquito, the male took the music to be the buzzing of the female. I am neither a naturalist nor an entomologist, still I was much interested in this peculiar and interesting phenomenon. I wrote down a full account of it at the time and sent it to a scientific paper, but it appeared to be too stupid to find a place in that particular publication. However, it now appears that others have stumbled across the same thing. I would advise Mr. Brennan to continue his experiments, especially as regards the sex of the mosquitoes which are attracted by a musical note. The male mosquito is much smaller than the female of the same species, never bites, but feeds upon vegetation, and is easily distinguished on account of two little feathers on the head, which resemble to some extent the antlers of a stag.

A very interesting experiment may be easily made in the following manner: Obtain a tuning fork which gives a musical note as much like the hum of the female mosquito as possible. If you strike this fork within twenty feet of a male mosquito he will at once turn about, face the music, and erect the two little feathers on his head, something after the manner of a cockatoo.

Yours faithfully,

HIRAM S. MAXIM.

Potholes and Glacial Action.

Editor Forest and Stream:

I am at a loss to understand how your correspondent, Von W. (FOREST AND STREAM Aug. 2) got the impression that I had connected pot holes and glacial action together. As I think I referred to both in the same communication, it may be that I confused the two so as to cause this mistake. But my impression is that I mentioned the pot holes as occurring in North Carolina, and the glacial action as being shown in northern Wisconsin and Michigan. There has never been any glacial action below the old Mason and Dixon line, and we have none of the grooved rocky surfaces, such as I mentioned as occurring in northern Michigan, nor have I ever seen any pot holes elsewhere so well developed as I have found them in the rapid mountain streams. Pot holes cannot be a result of glacial action, only of water rapidly flowing and whirling. Since my communication I have discovered an immense number of these holes, in embryo, as may be said, on the surface of the bare granite rocks, down the slight slopes of which on the rounded surfaces the rain has flowed, following the slight depressions, and making miniature cascades as the stream runs from one to another of these, has hollowed out small bowls two, three, or more inches in diameter, and half an inch or more deep, all along the course of the little streams. In some places these bowls are two or more inches in diameter, and an inch or less in depth; but some are six or eight inches in diameter and three deep, showing what a long time has passed since the beginning of them. Necessarily in the course of swift mountain streams, the wear of the rock in this same way must have been much more rapid, and thus in the beds of the streams, but mostly in the swift rapids and the courses of the waterfalls, these holes are much larger and deeper. But it seems very clear that the grinding out of these holes has been done by the action of the water whirling in eddies, for the power, and the gravel or larger stones as the implements, by which the work has been done.

H. STEWART.

MACON COUNTY, N. C.

The Opossum as a Chicken Thief.

LLANO, Texas.—To add to your notes on this subject, I send clipping from our town paper: "B. Lange is a champion opossum killer, but he don't always kill. He overtook one raiding his chicken roost Monday night, beat it to jelly, and left it on the wayside for dead. Understanding the traits of the animal, that he does not always appear to be what he really is, he concluded to shoot it, so took his lantern, and while one of his folks held it by the tail, he placed the muzzle of the gun close to its 'possumly breast and pulled the trigger. But presto! change! The 'possum had vanished away like the prismatic tints of the rainbow. In common parlance, he had vamoosed. How it was done he is unable to say; but it is certain that Lange and the 'possum in a one-act tragedy before the footlights, would make a hit, for their magic would surpass Hermann himself."

I have captured many 'possums in hen houses, trees, under rocks and other places, but can any of your many readers explain what went with this 'possum? Mr. Lange is a straight man and what he says is sure to be correct. He is much woried over the incident, because he thinks he tried to capture a spirit.

J. H. CARTER.

An Elephant's Memory.

MEMORY is usually the strongest point with an elephant, and an amusing instance of this quality was recently told us by an indigo planter, whose veracity we have no reason to doubt. Some twenty-five years ago our friend bought a fine female elephant. Shortly after, his purchase produced a fine calf of her own sex, and both mother and daughter throve exceedingly; the latter as she grew up becoming a regular domestic pet, and being allowed into the dining room at dessert and fed on fruit and biscuits. Both the young one and her mother were then sent off to another factory belonging to the same concern, a good many miles away, and remained there for twenty years or more. After that the youngster, now a fine and well-grown animal, was brought back to her birthplace. Immediately, remembering the dainties of her babyhood, she made a valiant attempt to get into the dining room. Unfortunately, the verandah round the house was rather a low one, and the elephant had not allowed for her increase in stature in the meantime. The result was a shower of about half a ton of masonry, and very frightened dusty miller of an elephant, who bolted tail on end down the nearest road for two or three miles.—The Asian.

"Quicker than Lightning."

PLAINFIELD, Mass.—There is a red squirel living on the Mill Brook in this town, which beats all records for speed. Old Joe Beasley says he saw the critter running down the big maple when lighting struck the tree, and he kept ahead all the way to the ground!

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

The Deer of America.

OF the three volumes for the American Sportsman's Library, edited by Caspar Whitney, which have appeared during 1902, that on the "Deer Family" will, of course, seem to big-game hunters by far the most important. There is cause enough for this feeling in its title, but when in addition the papers which it contains are by such men as Theodore Roosevelt, T. S. Van Dyke, D. G. Elliot and A. J. Stone, there is a special reason for this interest. The four writers for the volume of about 330 pages contribute to it in unequal sections. Mr. Roosevelt's portion furnishes about one-half the book, Mr. Van Dyke about 100 pages, Mr. Elliot 30 and Mr. Stone about the same amount. Each of the contributors has done his work well and interestingly, and no big-game hunter can afford to be without this volume in his library.

Perhaps the most important portion of the whole volume is Mr. Roosevelt's introductory chapter of twenty-seven pages, in which he sets forth with great force and earnestness the value of big game to our people at large and the advantages to be gained from following it, and hence the importance of preserving this big game, not necessarily so that it may be killed, but in order that it may serve as an incentive to men to lead wholesome outdoor lives. Incidentally, he points out, as he has done before in written and spoken word, that proper game laws are essentially democratic, that is, are in the interests of the people as a whole, because it is only through their enactment and enforcement that the people as a whole can preserve the game and can prevent its becoming purely the property of the rich, who are able to create and maintain extensive private preserves. The very wealthy man can be certain to have hunting, but the man of small means is dependent solely upon wise and well-executed game laws for his enjoyment of the sturdy pleasure of the chase. Surely this is good doctrine, and doctrine to which every intelligent man can subscribe. It would be hard to find a stronger and more effective sermon in favor of intelligent game legislation than is offered in these ringing words of the President.

The same thought—and it is well that it should be often repeated—occurs elsewhere, when he says: "If we are really alive to our opportunities under our democratic, social, and political system, we can keep for ourselves—and by 'ourselves' I mean the enormous bulk of men whose means range from the moderate to very small—ample opportunity for the enjoyment of hunting and shooting, of vigorous and blood-stirring out-of-doors sport. If we fail to take advantage of our possibilities, if we fail to pass, in the interest of all, wise game laws, and to see that these game laws are properly enforced, we will then have to thank ourselves if in the future the game is only found in the game preserves of the wealthy; and under such circumstances only these same wealthy people will have the chance to hunt it."

Beside this introductory chapter, those of the first section of the book treat of the "Mule Deer or Rocky Mountain Blacktail," the "Whitetail Deer," the "Prong-Horned Antelope" and the "Wapiti," or round-horned elk. Mr. Roosevelt very wisely does not attempt to deal with the various species and races of the different groups of deer found in America. That is something for the systematists to do; and as yet the systematists are hardly agreed among themselves as to the species or sub-species in the different groups, or the names of each. What he does is to give clear ideas of the ways and habits of the different forms of deer and the different modes of hunting them, and this is done very largely by the relation of his own experiences in the West and elsewhere.

Few things are more interesting than to observe the very different conclusions concerning an animal or its habits which will be drawn by two different observers, whose experience, powers of observation and honesty are perhaps the same. It is interesting to note that Mr. Roosevelt considers that the chase of the wapiti and the mule deer calls for more hardihood, power of endurance and moral and physical soundness than that of the whitetail deer. There are many old hunters who would scarcely assent to this, but admitting its truth, there comes in, of course, the question of skill—here "stealth and noiselessness" among other qualities—which, practiced successfully, is in many instances the chief pleasure of the chase. The man who accomplishes something which requires real skill in the performance is likely to be better satisfied with himself, and to take more pleasure in his feat, than he who performs an act requiring only strength and endurance. There are many hunters we fancy who will contend that still-hunting—i. e., tracking or stalking—the whitetail is the most difficult big-game hunting of America, except possibly stalking the moose. We should be inclined to consider the whitetail deer the hardest of the North American deer to hunt.

Of course these are only matters of taste. One man may think that the pear is the best of fruits, while another may prefer the peach.

We read with special interest the chapter on "The Prong Horned Antelope," that extraordinary species concerning whose habits too much cannot be known. We are glad to see that Mr. Roosevelt refers to the extraordinary abundance of the antelope in old times, when in traveling across the prairies, or over the great tablelands of the central plateau, antelope seemed almost as abundant as buffalo used to be, herd after herd appearing as each succeeding rise of the prairie was crossed; and in winter when the animals were bunched up on the winter range they commonly appeared in close herds, reminding one of the flocks of domestic sheep of to-day. This is a matter that has been overlooked by most writers.

Beside the active pleasure to be felt by each big-game hunter in the matter contained in Mr. Roosevelt's contributions to this volume, is the charm of his literary style. This means only that he writes with strong feeling about the sport that he is describing, and that he thus

communicates to the reader a part of the enthusiasm that he himself feels.

Mr. Van Dyke's contribution to this volume covers three species—"The Elk of the Pacific Coast," "The Mule Deer" and "The Columbia Blacktail." He describes the range of the elk in California, Oregon, Washington and British Columbia, and their practical extermination in California, except for the small band near Bakersfield and in the extreme northern part of the State, and tells of hunting amid the giant forests of Oregon, concluding that the elk of the Pacific coast is probably the hardest game animal to secure by any means of hunting. His paper on the mule deer contains much that is new to us, especially the common practice of the deer feeding on cactus and the damage which they do to the crops in California. His description of the mule deer calls attention to certain differences among deer of different sections, many of which have often been noticed. Mr. Van Dyke's account of the Columbia blacktail is very full and is interesting reading.

Mr. Elliot's account of the caribou is notable not only for its interest, but for the wealth of its illustration of heads and of antlers. There is extraordinary diversity among these, and one can easily understand the position of the writer when he hints that conclusions drawn from the antlers are valueless in determining specific characters.

One of the most interesting chapters in this interesting book is Mr. A. J. Stone's paper on the moose. It contains much material that is new, and much which if not new is put in a fresh way. Mr. Stone declares—and the editor disagrees with him—that the bull moose is not attracted by the call of the horn, because he believes it to be the cry of the female. Probably we never shall know the precise motive which attracts the moose, but it is certain that during the rutting time males of the deer family do many strange things. While watching a bull elk which was herding his cows during the rutting time, we have called him up alarmingly close to us by the simple expedient of breaking a stick. No doubt in this case the bull believed that another bull was hidden in the brush, and wanted to fight the intruder. In the same way we have known the whitetail deer in rutting time to make an unprovoked attack on a man.

Extremely interesting and valuable are five maps prepared by Dr. C. Hart Merriam, of the Biological Survey, which show the range of the mule deer and of Caton's California mule deer, of the whitetail deer and the Arizona dwarf whitetail, of the antelope, elk and blacktail deer all in 1900. In the map showing the range of the elk, should not an area of Vancouver Island have been shaded? Certainly within a year or two there have been elk there in considerable abundance, according to our information.

The illustrations in the volume are chiefly by Mr. Rungius, whose skill as an animal painter is well known. The frontispiece, an artotype, is a very striking and beautiful thing, and all the illustrations are admirable, but there are two unhappy cases of the misnaming of plates, which should not have occurred. The deer shown facing page 50 is certainly not "The Blacktail of Colorado," nor are the animals shown facing page 76 "Whitetail in Flight." It is difficult to understand how these blunders should have occurred, since, of course, both the artist and the editor know the mule deer and the whitetail, but their occurrence is unfortunate.

Coons.

Editor Forest and Stream:

Our survey was in an unsettled region on Coldwater River. From the railroad station we went by wagon over a "blind road" to Edwards' Ferry, where Lee and I found room to spread our pallet on Mr. Edwards' floor and a welcome at his table. The four negro axmen pitched their tent in the woods near by, and sang into the late hours, ostensibly because they were happy, but in reality to scare off the supposed "varmints." In the morning the men, who were new to the work, were cautioned to use sparingly the water that each carried in his half-gallon jug, but by early afternoon the supply was exhausted, and by mid-afternoon they had begun to suffer from thirst.

With a detachment to carry jugs, a search was made, which was rewarded by the discovery of a small "puddle" in a large cypress brake nearly gone dry, about half a mile from the line, and through undergrowth that made traveling difficult. The water covered a small surface and was very shallow. Four large moccasins were peacefully reposing therein, beside tadpoles, spiders and bacilli. After these had been frightened away the jugs were filled and were soon delivered to the thirsty workmen, who asked no questions. The initiated can quench his thirst with the bugs and reptiles in sight, but the novice must have his medicine sugar-coated. Blissful ignorance was the sugar coat.

One day the men discovered a 'coon on a limb, and surveying operation were suspended. Henry, the "lead axman," is not a brave man about some things. He will walk far around a toad or a snake. But Henry has plenty of 'coon bravery. With a cane knife, he climbed that tree till he came to the coon, about forty feet above ground, and chopped its head open before it could get into a hollow already congested with 'coon. This sounds akin to Antoine's 'coon story, but it is not.

Under the stimulus of a sharp-pointed stick, another young 'coon was induced to seek fresh air, and he, too, was dispatched with the cane knife when his head was well out.

The dead 'coons were half-grown and looked sweet and tender. By the growls now coming from the hollow limb when the stick was punched in, we knew that the third one would need parboiling to make her tender.

The old one wouldn't come out, so the tree was cut, a notch taken out of the side at the hollow, and Mrs. 'Coon killed "in situ."

Some field notes were needed from the county site at Belen, which was said to be twenty miles by road, following some of the windings of the river. The map showed Belen only twelve miles away, and on the theory than one can come back if he can't go on, I started.

The woods and cane were thick in places, but the river was struck again after some hard walking, and a settler ferried me over in his dugout. The trip to Belen occupied five hours, and it was late afternoon when the start back was made, with little hope of getting through, but a chance to get so far on the way back as to finish the journey in the first daylight next morning, and get the party started to work on time. A pocketful of matches had been provided in anticipation, and when at late dusk the river was left, I drank enough for all night. Half an hour later I was in a tangle of cane and vines, where further progress was impossible in pitchy darkness, and I decided to camp.

Over my leafy bed the dark, heavy foliage had spaces through which the sky was seen, with the stars shining very brightly against the blue, and the fireflies tried to shine as brightly against the dark tree leaves; then my little fire would flare up and bring out strongly the mainy strange shapes of the leaves and boughs, lighting them till the sky beyond was black, and the fireflies made dimmer sparks.

It is good sometimes to be alone in the broad woods. Unmistakably something alive crawled in the dead leaves around me, almost against me, and on several sides. It proved to be katydids, attracted by the firelight.

With the first light of day I awoke and resumed the march. A cow bell is very sweet music at times; then as one comes nearer, there is the lighter tinkling of the sheep bells mingling in, and after a while the numerous untraceable cow paths in the cane merge into one that is plainer, and this with others more defined, then the bells sound louder and a rooster crows in the distance.

At Mr. Crutcher's house, where we are now boarding, there is plenty of fresh water and a good breakfast waiting.

The "town man" has no realization of the interest which such surroundings lend to a comfortable meal at a table, and especially to having enough drinking water.

Cutting a line through a continuous tangle of cane and briers where the tree growth is too scant for much shade—in an old "deadening" or "hurricane"—five miles from the nearest palatable water, and with a July sun pouring down, one guards zealously the few warm drops in the jug, that must last till night, and takes a minute's breathing spell under a shading bush to indulge in wistful reveries of and longings for the "old oaken bucket" and broken gourd dippers and cool, decaying well curbings under big elm trees. At night when you have come out of the woods, you linger round the cool pump, reluctant to leave while there is a possibility of drinking a few drops more.

In one such brier patch, six miles from Mr. Crutcher's, the big rattler was met. He was carried out, over very rough ground and through several cypress brakes, bound full length to a hickory pole. Joe himself weighs eight pounds by the scales, and the pole weighed about thirty.

Joe is now in the box with Jonah, whom Coahoma told about.

After the survey the party was on a march back to the railroad. Near the trail four 'coons were climbing a tree that looked impossible for any one but Henry. It was not for him, and he didn't hesitate. Fifty feet from the ground he had them cornered on a small limb. With a pole cut with his ready cane knife he punched them off, one at a time, and each 'coon, in turn, found himself surrounded by a "cordon" with clubs. The four 'coons were triumphantly swung at the backs of the four darkeys.

More About Sport.

Editor Forest and Stream:

The subject, "What constitutes true sport?" has been discussed at large by a number of your contributors of late, very entertainingly, and doubtless with profit to your readers, as throwing many lights on the subject from different view points.

While not a partisan myself for either the big-game or the small-game side of the controversy, the issue being merely a question of taste, based upon habit as the result of environment, I may be permitted to offer some reflections upon the fundamental principles involved in the question, What is sport? I may, however, remark by the way, that as between the desirableness of small-game and large-game hunting, there is one feature about the latter, in its present-day pursuit, that invariably arouses my deep aversion when reading of the exploits of big-game hunters. It is the fact, which appears conspicuously in all these narratives, that the "sport" of big-game hunting has degenerated from the pursuit of the game for itself to the pursuit of the horns carried by the game—the trophy, instead of the good meat of which little account is taken. And in this I believe a fundamental principle of "true sport" is violated; which brings us again back to the "previous question." In order to consider the question intelligently, and get at its fundamental principles, it seems proper to inquire into the origin and genesis of field sports.

Your latest contributor to this discussion, Mr. Jos. W. Shurter, embraces in the general category of "sport" all the athletic games that are practiced, which would appear to be wholly unwarranted from the viewpoint of the FOREST AND STREAM confraternity. These games, it is true, are conventionally denominated "sports," but as between such form of diversion and true field sports, the pursuit of nature's children in nature's haunts, there is no kinship either in character or genesis. The athletic games are contests between men and men, a kind of mimic war, having for their basis the struggles for supremacy between men and tribes in the primitive history of the race, causes that still persist in more or less modified form and keep alive the spirit of conflict between man and his fellow, a spirit that it is the mission of the higher moral culture to eliminate from man's nature. Field sports on the other hand had their origin in man's necessities, during the whole period of his racial infancy, and to a large degree to a much later period in the race history, when his subsistence depended absolutely upon his proficiency in the capture of the wild creatures around him for the food and clothing which they yielded for his use, and which were necessary to his survival.

This trait in man's nature, like other deeply implanted instincts in men and animals, still persists after the conditions that gave it birth have ceased. Hence it may be concluded that the procurement of something useful to man as the result of the chase, is an essential element of true sport. By way of illustration, it is suggested that my good friend Didymus, who experiences such ecstatic delight in a day behind the pointer on the stubble, not a small part of which is derived from exhibiting a plump game bag at the end of the day, to those who will share with him in the gustatory sequel to his performance, I say that neither friend Didymus nor any other true sportsman, would enjoy the killing of a big bag of swallows, for instance, though more skill in handling the gun might be required.

It may be concluded, therefore, that the destruction and absolute waste of half a ton of good meat for the sake of a head and pair of horns to be exhibited as trophies of the chase, is in violation of the basic principle of true sport, and is contrary to the ethics of nature, so to speak, by which man finds justification for slaying his fellow creatures.

The terms "head hunter," "skin hunter," are mentioned with much obloquy by your "true sportsman" when applied to some one else; but when I read in FOREST AND STREAM some months ago—and I mention this merely as a sample—that a party of two sportsmen with two guides, spent two or three weeks in the Rockies, and very conscientiously limited their slaughter to the strict permission of the law, yet triumphantly paraded a record of four elk, four bear, eight deer, with an assortment of mountain sheep, goats, antelope and what not (I write from memory, and perhaps exaggerate some, but the wasted meat must have run up into the thousands of pounds), and all for the sake of heads and horns, I turn from such a recital with feelings of deep aversion, and think of the aphorism of whose ox is gored.

There are many big-game hunters who refrain from killing more meat than can be utilized; and it is common for fishermen to restore to their native element, none the worse for their novel experience, the superfluity of fish caught; but the insensate greed for "trophies," that carries so many into the woods for the sole purpose of securing heads and horns with an enormous sacrifice of meat in the process, must greatly hasten the final extinction of those animals of the chase that have afforded sport, and food and raiment, to man, from the earliest infancy of his race down to the present time.

COAHOMA.

Taking in a Buck.

BELLEVUE, Pa.—*Editor Forest and Stream:* As the time for our annual vacation is approaching, and as the Georgian Bay district is the objective point this year, I am reminded of a story my father once told me of how he captured a big buck, back in the forties, in the same region. The interest in the story was revived a few years ago from a somewhat like experience, when with a party of friends from Pittsburg we were hunting deer near Romney, W. Va. Our deer ran near to the last crossing, having passed two of our party unhurt, when the third man started in the direction of the deer, and coming to a large hound chained near by, unloosed him and started him on the trail of the deer, which he soon overtook and threw in front of an old lady's house on the mountain. Seeing so rich a prize at hand, she quickly ran to the house, and returning with her wood ax, killed, skinned and had nearly all of the deer stowed away when our party arrived to demand the share due us, which she reluctantly surrendered.

Father had spent the fall months with his brother, helping at clearing and getting out timbers for his house, and as he was somewhat skillful with the ax, they persuaded him to stay over the winter until they had the house finished.

One clear moonlight night he lay awake listening for some time to the barking of the dogs some distance off in the bush, and prompted by curiosity, got up, pulled on a pair of trousers without suspenders and quietly set out on the lumber road to investigate. After a brisk walk, he came upon the scene of the two dogs with a large buck at bay, in front of a big rock. He got down in the grass and crawled up as close as he could to watch them a while.

Finally to set things going, he spoke to one of the dogs to "Get him, Doc." At the sound of his voice the deer cleared the road, landing with both dogs having good holds, and thus the buck could not get up and away. As the deer lay there for an instant, the now enthused spectator also pounced upon the deer and took hold of him by the horns. He now had him sure, but what was he going to do with him. Father had no knife with him, and after a while he had to encourage the dogs to hold on. Then he began calling to the house, from which for some time there came no answer, but his brother's wife heard the voice and wakened her husband, when he started in a hurry. Upon arriving, he took in the situation, and after a good laugh and some queries as to what father was going to do, he, too, was soon at his wits' end; but having a pair of suspenders loosely tucked round his waist, father suggested that they could tie him with the suspenders and take him home, which they accordingly proceeded to do. With the one suspender they tied his forefeet and with the other his hind ones. As soon as the buck found himself in that condition, he became as submissive and gentle as a Mount Washington goat. Finding a stick near by, they strung him on it, and with the end of the pole resting on their shoulders, the deer swinging between them, took up their march for the house, the two dogs bringing up the rear.

When they got to the house they placed their burden at the door to look him over and decide what to do with him. Opening the door, they placed him on the kitchen floor, and after lighting a lamp, proceeded to take off his suspenders. As soon as the buck felt himself free again his spirit returned, and he sprang across the room, upsetting a small table at the same time, then faced about. The two men were standing at the door watching the deer, which with a toss of his high head made a dive for them. The glare of the lamplight gave additional gleam to his now wicked eye, and prompted the spectators to be doing something. Father sprang behind a large table and uncle out of the door and he closed it to keep the deer in. Running to the woodpile, he returned with an ax and slid into the room again. A short discussion decided the fate of the deer. Using the table for a guard, they rolled it toward the deer, and having him sufficiently cornered, the experienced hand soon dealt the blow that turned him into venison for future use.

JAS. H. TAYLOR.

Ducks at Cape Hatteras.

Editor Forest and Stream:

Every fall finds me suffering from an attack of duck fever, and last season it seemed more severe than usual, knowing that I could not make my accustomed trip to Dawson, N. D., so when I received an invitation to make one of a party of four bound for Cape Hatteras, N. C., I at once accepted. The party was made up as follows: Dr. L. S. Blades and O. F. Gilbert, of Elizabeth City, N. C.; N. W. Green and C. E. Wilson, of Troy, N. Y. Mr. Green and myself arrived at Elizabeth City, N. C., on Dec. 28, where we found the Doctor and President waiting for us, with all stores aboard, and the Captain ready to sail. As we had a little over 100 miles to run, we were anxious to be off. Our vessel was a three-masted schooner, 125 feet by 23½ feet, owned by Blades Lumber Company, and engaged in carrying lumber from one of their numerous mills to their distributing point at Elizabeth City.

We left the wharf at 4:15 P. M., and, owing to head winds, made but ten miles, anchoring in the Pasquotank River. The next morning we got under way in good season, and when the steward announced "Breakfast ready, sah," we all responded promptly and enjoyed it as one only can after taking a constitutional on deck, and inhaling the fresh morning air.

Crossing Albemarle Sound the wind increased as the day advanced, and when off Roanoke Island a heavy squall carried away the gaff on the mainsail. This was somewhat exciting to us land lubbers, but the Captain and crew seemed to act as if it was an every-day occurrence, and at once lowered sail and lay to for repairs, which used up the rest of the day.

Monday morning found us trying to make time against a stiff head wind, with poor success, and after beating about all day we were again compelled to anchor about ten miles south of the island.

Tuesday morning we arose early and found that the Captain was an early bird and had been under way for some time, and we were going at a glorious rate, and our spirits rose accordingly, until we arrived at the Cape Channel, when the Captain made an error in the buoys and put the vessel on a reef with all sails set. After considerable effort on the part of the crew in carrying off the anchors from bow and stern, owing to the heavy seas, we commenced our tug on the lines and found we were in a dangerous position; we had but three feet of water forward and were on a hard bottom. The Captain fearing she would pound badly, set his signal of distress for the life saving crew, who reached us shortly after we got her afloat. I never fully appreciated the necessity of the life saving service before, but when Captain Gray and his crew came alongside, we gave them three hearty cheers, and were fully convinced that in the establishing of life saving stations along our coasts Uncle Sam is doing a glorious work. Captain Gray and crew assisted our Captain in getting the schooner back into the channel and stayed by him until out of danger. Our boatmen expecting us, and seeing us go on the shoal, came off and transferred our baggage and party to shore, where we found Dr. J. J. Davis waiting.

We had been in our room but a few moments when we thought we could smell smoke, and after one of the party made some uncomplimentary remark about the cigar I was smoking, we commenced to look around, and thought we saw smoke coming through the floor. We rushed downstairs and found the sitting room on fire. After forming a bucket brigade we went to work, and soon had it out. Dr. Davis had secured for us as guides N. T. Jennett, R. W. Midget and several others whose names I do not recall. We found them to be good men and always looking after our comfort, and were more anxious for us to get game than we were.

The second day after our arrival being very still, and the prospects poor for birds, we decided to go in the timber for deer. The timber extends from the sound to the ocean, being ten miles long and four wide, and a most beautiful spot. The principal timber is the North Carolina pine, growing, as it does, tall and straight out of the white sand, with here and there a holly tree with their red berries and green leaves, palms and bay trees in abundance, which all gives it a very tropical appearance, and one imagines he is in a foreign country. The deer are like our Adirondack variety, but much smaller, and in hunting them we took stands on the runways, using shotguns, as at times our watches were close together and rifles would have been dangerous. The guides had a small mongrel dog which was used to run the deer out of the swamps, and after running a short time they would return to us for another run, and in this manner we would sometimes make six runs in a day. I was much surprised to see how easily the deer were killed. They cannot carry off the loads our Northern deer do, and one of the party killed one with No. 4 shot, and the three killed were dropped in their tracks.

We saw some gray squirrels in the timber, and were told they lived on buds, as there are no nut trees in that section.

The yeopon tree, which I forgot to mention, grows in abundance, and has a bright red berry similar to the holly. The leaves are gathered by the natives, who make a tea of them, which is used in place of Sir Thomas Lipton's, but, upon the advice of Dr. Davis, we did not try it.

On the sound we found ducks, geese and brant in countless numbers, but also found them well educated, as I never saw birds that understood blinds better; and we were told that in many sections of the sound they were decoying poorly. We shot from pier blinds six days and got about 150 birds, so I don't think we can be classed with the game hogs, as this was but an average of six birds per day per man; but of course this record is generally beaten. We had planned a 'possum hunt, but our president entertained us so pleasantly evenings with his guitar and plantation songs, we did not have the necessary enthusiasm, and his playing and singing were a delight to us all.

Our trip returning was made on a tug, which arrived off Cape Channel Saturday, Jan. 11, at 10 A. M., and, after getting aboard with our game and baggage, we all took a hand in decorating the tug, and by evening had her well covered with holly, palms and game. We had been running all day in quite a heavy sea, and by 9 P. M. it got so bad that we decided to run for harbor, which we found west of Roanoke Island, where we lay until 2 A. M., when we got under way, only to get caught in another heavy blow in crossing Albemarle Sound. The boiler leaked, and we could only keep eighty pounds, and were making about three miles per hour. The engineer and fireman worked for seven hours trying to keep the water below the fires. Sea after sea boarded us, freezing as it struck, so that moving about was dangerous; in fact, we rolled so that it was impossible to walk, and we were very thankful when we tied up to the wharf at Elizabeth City, where we left the boat. With all of our unpleasant experiences, our trip was a delightful one, and will be long remembered. We are under many obligations to our goods friends in Elizabeth City, who made our trip possible, and our stay in their prosperous city so pleasant. If any of your readers care to try the shooting at the Cape, I would advise them to stop, if possible, with Dr. J. J. Davis and his good wife, to whom we are greatly indebted for their kind attentions.

C. E. Wilson.

Adirondack Notes.

A Bear Mortality Theory.

The crop of Adirondack bears has been larger than usual this season, and the reason is not particularly obvious. Harvey Alford, of Lake Placid, accounts for the abundance by stating that the past winter was particularly favorable for bears in that there were no hard thaws and freezes. Alford believes that hibernating bears are often frozen in their dens, and either frozen to death or starved as a result.

"In Canada," says Alford, "when the bears den up they make a big nest for themselves of cedar bark and one thing or another under the roots of a tree or on the surface of the ground, where they can have some protection from the weather. I have seen dozens of such places where they secured the bark and made their dens, but I never saw where they denned in ledges.

"Here in the Adirondacks our country is very rough naturally, and the bears almost always go in the ledges. They crawl into some crevice in the rocks, and if by chance a heavy thaw sets in and the water runs down and freezes, they are caught in a trap. The ice does not thaw out in such places till late in the spring, and if they are not killed outright they have lots of chance to starve before they can get out.

"Bears are naturally prolific. They are apt to have two cubs at a birth, and they are long-lived animals. If the supply did not suffer from natural causes, there would be more bears than there are at present in the Adirondacks.

"The number of bears trapped is not very great, and practically none are killed still-hunting. Most of the bears killed are small bears, large bears being very exceptional. This, I think, indicates that the big ones die from natural causes. They have just so many chances to escape being frozen in, and the number that survive to maturity is limited."

Theft of a Bear.

Walter Derby, a farmer, collector of geological specimens, and trapper who lives in the town of Lewis, in the eastern Adirondacks, has had bad luck in his bear-trapping operations recently. Several bears have pulled out of his traps, leaving portions of their feet, and the other day a bear, trap and all was stolen by some tough characters living on a mountain farm in a neighboring valley.

Derby, following the trail left by the trapped bear, came to a point on a wood road where the trail suddenly ended. There was evidence to show that the bear had been killed and afterward loaded on a wagon. The wagon had been drawn by mules, and Derby, noting this fact, was able a few hours later to locate the mules and the men who had taken the bear.

At first the thieves denied their guilt, but eventually they gave up the trap, and now Derby proposes to sue them for the value of the bear. Had they left the trap and taken only the bear, it would probably have been impossible to convict them, as Derby would have had hard work to prove that the bear was his while it yet had a chance of liberty.

An Adirondack Cave.

In company with Derby, Mr. H .B. Walmsley and myself visited a cave which Derby discovered not long ago near Black Mountain. Derby, while looking for graphite in a limestone ledge above a tributary of Roaring Brook, accidentally stumbled on the entrance, which is a narrow cleft half-way up the face of a forty-foot cliff. The entrance is so well concealed that the chance trout fishermen who pass down the brook have never seen it, and as far as we could ascertain, the cave is absolutely virgin soil.

A small brook runs through the cave, which is in all probability the subterranean outlet of Jack McCann's Pond, half a mile away, as it is said the water from this pond runs into the ground and disappears.

Derby, Walmsley and I entered the cave in the order given. We wore rubber boots and were provided with enough candles to have supplied us with food for a week had an accident imprisoned us in the cave.

A hundred feet beyond the entrance was a side channel opening on an off-shoot of the cave which proved upon investigation to be only about fifty feet in length. Just beyond this a slab of rock which had fallen from above almost barred the passage, but by stooping so that the water almost ran in our boots, we managed to get under the obstruction.

Two hundred feet from the entrance rocks again barred the way, but by crawling over them and worming our way upward at an angle of forty-five degrees, we soon came into a chamber twenty or thirty feet in diameter and twenty feet high. Beyond, one of the channels extended fifty feet, but fallen rocks blocked the way, and this proved the limit of the cave as far as we were concerned. As there was a strong rush of air at this point, sufficient to blow out a candle, it is probable the cave has a much greater extent, and by removing some of the boulders it is not unlikely a way would be disclosed to go in much further.

We were content, however, to sit in the chamber and smoke and speculate as to what would happen if some of the loose rocks nearer the entrance should fall and make us prisoners in the cave. As we had the discoverer of the cave with us, our chances of receiving external aid in such a predicament were, to say the least, not very encouraging.

The sides, floor and roof of the cave were covered with corruscations, which appeared to be miniature stalagmites and stalactites. Breaking off some of the precipitated limestone surface covering, we discovered graphite particles in the crystalline native limestone rock beneath. Below our feet we could hear the noise of the water where it had found a lower channel under the fallen rock. There was absolutely no evidence to indicate that this chamber had ever before been visited by man, and no charred birch bark or candle grease on the rocks or torch remnants such as would have been left if white men or Indians had entered the cave. There was also nothing to indicate the presence of animals. The place would have made a good bear den, but the running water had no doubt served as a barrier to animal ingress.

This cave is, I believe, the largest found so far in the Adirondacks, where limestone is not common, and the geological conditions generally unfavorable for cave formation.

J. B. Burnham.

Indian Territory Quail.

Editor Forest and Stream:

Mr. Woodward's advertisement in the Forest and Stream is based on a misapprehension of the law.

The Lacey Act does not prevent the transportation of any dead or live birds or other game, except such as are *caught or killed in violation of the local laws.* If it is unlawful, under the State law, to net or trap quail in Illinois, it is consequently unlawful under the Lacey Act to ship them from one State to another. The amendment Mr. Woodward really needs is to the *local laws,* so that quail may be lawfully *caught for propagation.* There are at present no States that are willing to have their quail netted for shipment, and if there had been no Federal law to prohibit the transportation, the parties engaged in netting or trapping the quail would be liable under probably all of the various State laws.

The laws of the Indian Territory were not changed by the Lacey Act, and remain just as they were in the Revised Statutes of 1873, as follows:

"Section 2137.—Every person, other than an Indian, who, within the limits of any tribe, with whom the United States has existing treaties, hunts or traps, or takes and destroys any peltries or game, except for subsistence in the Indian country, shall forfeit all the traps, guns and ammunition in his possession, used or procured to be used for that purpose, and all peltries so taken, and shall be liable in addition to a penalty of $500."

All of the live quail shipped by any one out of the Indian Territory have been caught in violation of this section of the Revised Statutes of the United States of 1873.

The people in the Indian Territory could have enforced this law at any time since 1873 by penalty of $500 for each capture for shipment. The trapping and netting of the quail there has been a Federal crime for thirty years.

J. F. L.

Editor Forest and Stream:

Permit me to call your attention to several inaccuracies in the editorial on "Live Quail for Stocking" which appears in the Forest and Stream for Aug. 9. Not only in what is said, but in what is implied, the article is very wide of the mark, and is calculated to convey an entirely erroneous impression to readers who are not familiar with the facts in the case.

(1.) The editorial states "any notion that the restoration of the game supply would be advanced through the agency of the Department of Agriculture has by this time been dissipated." It is true that no game birds have been imported from foreign countries, or native game birds distributed, but this is simply because there has been no appropriation for such work. With an adequate appropriation and the legislation necessary to establish game preserves in the forest reserves, there will probably be no ground for complaint of inaction. As a matter of fact, persons desiring to secure game birds have been aided whenever possible and no opportunity has been lost to urge amendment of local laws so as to provide for export of game for propagation. Every facility has been extended to importers of foreign game and assistance has been rendered in securing the removal of the prohibition against importation of eggs of game birds. This long-desired object has now been accomplished, and eggs have already begun to come in, although the law only went into effect in June.

(2.) "The Department has interfered in a manner which is claimed to be wholly arbitrary and without warrant of law in various private enterprises in live-quail transportation for stocking purposes." If any private enterprises have been interfered with, it is because their operations were conducted in an illegal maner.

(3.) "It has interfered with a lawful traffic in live game, and by the seizure of such quail passing through the States has thwarted numerous attempts to restore shooting." This broad statement rests on a very slight foundation. So far as I am aware, the only live quail "passing through the States" which have been interfered with en route were two consignments intercepted by deputy marshals because illegally forwarded from the Indian Territory by a shipper already under indictment on a similar charge of shipping game, and who has since been convicted in the United States Court.

(4.) "The birds have come from the Indian Territory, whence under the existing United States statute relative to game their export is not forbidden." This statement is purely a matter of opinion, which is not supported by records of the courts. The inclosed copy of a notice signed by the United States Attorney for the Southern District of Indian Territory, warning all persons against shipment of game, was published in the local papers in the spring of 1901, and shows how the law is interpreted in the Territory. During the past year there have been at least four convictions for shipping quail from two different districts of the Indian Territory, which shows

that in the opinion of two Federal courts the present law prohibits export of quail.

WARNING TO THE PEOPLE.

Ardmore, I. T., March 27, 1901.

To the Commissioners:

The department of justice is very anxious that every effort be exercised to suppress the shipping of quail and other game out of the Indian Territory, and your attention is respectfully called to Section 2137 Revised Statutes, and also to an Act of Congress approved May 25, 1900, which provides the penalty.

Judge Townsend last week at Purcell, passing upon this question, explicitly held that quail was included in the term game.

The deputy marshals will seize all nets, guns, traps and ammunition and write me a complete description of same, giving the full name of the defendants and their residence, also stating where and to whom the game was consigned.

If the employes of the railroad or express company persist in receiving same for shipment, have them arrested also.

You are at liberty to give this publicity, that all people may be duly warned.

Wm. B. Johnson,
United States Attorney.

The article is entirely correct in stating that existing difficulties will not be met by amendment of the Lacey Act, but it fails to point out that the way, and the only way, to overcome them is by amendment of the State and Territorial laws, so as to permit export of live game for propagation. WASHINGTON.

Taking Sport Too Seriously.

One of the evils of the day is thoroughness as applied to sports and recreations. There is no game, however difficult or however simple, but it is hedged about by difficulties which actually turn pleasure into pain. Time was when a game at whist, for example, was a genuine diversion; now it has become so scientific that it is distinctly hard work to play a good game. So as to bicycling, golf, ping-pong—everything, in a word. We have got so into the habit of taking our pleasure seriously that those pleasures are no longer recreations, or at least not the recreations they might be were perfection not so persistently insisted upon. In these days no sooner is a game invented or imported from other lands than somebody has to go to work to make its playing a science, and in order to this end a newspaper or magazine devoted to that particular game is indispensable and inevitable. So that the drain upon the mental faculties produced by the playing of the game is rendered more drastic by the reading one has to do to keep up with the times. Oh, for a game that cannot be made scientific, that will for ever escape a literary organ, and which will always and for ever be just good fun and nothing more!—Boston Transcript.

July Woodcock in Pennsylvania.

SAYRE, Pa., Aug. 9.—A particularly unfortunate feature of the game laws of this State makes legal the shooting of woodcock during the month of July. No swifter method of exterminating the supply of long-bills can well be devised than this July provision, and the next session of the Legislature should witness the prompt repeal of this clause of the game code.

The July woodcock, as a rule, is only a partially grown, immature bird, with but little substance and greatly deficient in the delicious flavor that makes the October cock a sovereign prince among table delicacies.

Moreover, there is an incomparably finer measure of sport in bagging one of these great, athletic October birds than in blanketing a July weakling that pitches from a steaming marsh on listless wing.

For the sake of the sportsmanship that hath its happiest and most beneficent compensations, we say: Abolish July woodcock shooting. M. CHILL.

Not a Bird.

The only time Justice Gray, of the United States Supreme Court, was ever known to make a joke while seated on the bench, was one day when Judson Harmon, then Attorney-General, was arguing a case before him. Mr. Harmon had occasion to display a map, quite a small one, and he referred to it as a "bird's-eye view." The Justice could barely see it from the bench, and after peering at it for a moment he said: "Mr. Attorney-General, I regret to tell you that I am not a bird."—Chicago Daily News.

Mongolian Pheasants in Massachusetts.

GLOUCESTER, Mass.—The Mongolian pheasants are doing well in this locality. I hear the cocks crowing every morning. The male has a peculiar way of crowing. When I chance to come upon one in the brush he crows, then flaps his wings and runs like the deuce through the underbrush. HERMIT.

Called for his Gun.

A RECENT visitor to Chadwick (formerly "Bill" Chadwick's) was a gentleman who called there to get a gun and some fishhooks that he had left at his last visit, thirty-five years ago. He got the gun and thinks that the people about the place are the most honest in the world.

W. H. EDDY.

"Benefits of Co-operation Between the States."

THE admirable paper on this subject printed in our issue of last week should have been credited to Executive Agent Sam. F. Fullerton, of the Minnesota Commission.

100 Sportsmen's Finds.

Some of the Queer Discoveries Made by Those Who Are Looking for Game or Fish.

87

A sensation was caused in New Westminster, near Vancouver, the other day, by the discovery of $12 worth of fine and coarse grain gold in the crop of a wild goose. The goose was shot at Pitt Lake, which is fed by numerous mountain streams. The sand bars along the shore were known to contain gold, but had never been prospected.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

Anglers of the St. Lawrence.

THE Anglers' Association of the St. Lawrence River held its nineteenth annual meeting in the parlors of the Thousand Island House at Alexandria Bay on Aug. 6 last. There was a large attendance and a great deal of interest was taken in the proceedings. This organization, which is made up in the main of wealthy men from various parts of the country, who own summer residences among the Thousand Islands, and prominent citizens of river towns on both the American and Canadian sides, has during its existence accomplished a grand work, and is constantly supplying fresh evidence to prove the desirability and necessity for its existence. Through its energetic efforts the St. Lawrence River has been freed from the thraldom of the net fishermen who formerly held unrestricted sway in those waters, and violations of the game laws are now rare. As an immediate result of this work and the important and wise laws regulating the fishing which have been enacted through the influence of the Association individually and collectively, game fish have increased rapidly in numbers and anglers no longer have reason to complain of their scarcity. The Association is also entitled to credit for the splendid work it did in securing the establishment of the international park known as the St. Lawrence Reservation, and the many other benefits it has secured for the island region.

Among those present were Henry R. Heath, Brooklyn; Hon. Charles R. Skinner, Major J. W. Pond, Albany; Gen. I. B. Van Petten, Claverack; Major C. E. Britton, Gananoque, Ont.; D. C. McEwan, Brooklyn; G. De Witt, Col. O. G. Staples, Washington, D. C.; Frank H. Taylor, Philadelphia, Pa.; Thomas B. Kerr and Hudson P. Rose, New York city; Wm. H. Thompson, A. C. Cornwall, Joseph Northrup, Walter Fox, G. L. Olds, Dr. J. D. Cole, Alexandria Bay; R. P. Grant, Clayton; Alexander Robb, Brooklyn; N. L. Tunis, New York; W. E. Wolcott, Utica.

The meeting was called to order at 11 A. M. by First Vice-President Henry R. Heath, of Brooklyn, upon whom the duties of presiding devolved in the absence of President William C. Browning, who was unable to be present. W. E. Wolcott, of Utica, was elected secretary of the meeting. Mr. Heath congratulated the members of the Association on the fact of this being its nineteenth annual meeting, and he expressed the pleasure it afforded him to see so many in attendance.

Alexander Robb, of Brooklyn, and Hudson P. Rose, of New York, were appointed as an auditing committee. The minutes of the last meeting were read and approved. Mr. Heath announced that there was no formal report from the President to present. He said, however, that there had been a good deal of correspondence during the year in regard to legislation and the prevention of objectionable legislation. It seemed to him that no other class of people took such an interest in benefitting this region as a resort. See the parks which have been established through the efforts of the Association, and what has been done to prevent netting and improve the fishing. The Anglers' Association has accomplished a great deal and there is more for it to do. It is the only thing you can depend on to protect the river and build it up as a popular resort. The Thousand Islands are known the world over and there is no reason why they should not have the necessary protection. I think that if you take away the fishing you take away half of the life at least.

Treasurer R. P. Grant, of Clayton, presented his annual report, which made this showing: Balance on hand last year, $307.17; receipts, $154.57; disbursements, $104.05; balance on hand, $357.69.

Secretary W. H. Thompson, of Alexandria Bay, said that letters had been received from many members who were unable to attend the meeting, containing assurances that they were with the Association heart and soul in its work.

The Auditing Committee reported that it had examined the Treasurer's accounts and found them correct.

The following new members were elected: Alfred Costello, N. L. Tunis, Charles A. Terry, New York city; Alex. Robb, Brooklyn; R. C. Vilas, Chicago; Dr. J. D. Cole, Henry Folger, Howard S. Folger, Alexandria Bay; Thomas W. Bakewell, Pittsburg, Pa.; Hugh Mellon, Clayton; P. Bailey, Redwood; Chester Inglehart, Watertown.

The Secretary reported that the following members died during the year: John G. Baker, Rev. Charles Eaton, H. F. Inglehart, Judge I. C. Spencer. The following committee was appointed to draft appropriate resolutions: Hon. Charles R. Skinner, D. C. McEwan.

Secretary Thompson in his annual report stated that Assemblyman Day of Jefferson county had assured the Association that he would do what he could in regard to protecting bass in the vicinity of Sacket Harbor. The old law only protected the bass a mile from the shore, and beyond that they were netted by the ton. Mr. Day said he would do what he could to obtain the legislation desired by the Association, and he did. We got the co-operation of Senator Brown and Commissioner Middleton and secured the law which we have to-day, which protects bears in the St. Lawrence Reservation and the county of Jefferson. We got the law without expending much money. I think we owe Mr. Day a vote of thanks for what he did for us. Secretary Thompson then read the present bass law, and said he thought it would work very great good to the bass. He understood the law protected bass up to Oswego, and to the State line in Lake Ontario. Fishermen say that bass are already more plentiful in the lake. We can not propagate bass as other fish are propagated, and have to depend on their natural breeding. Mr. Thompson then alluded to the migration of black bass. He said that Judge Van Cleef, who had looked up the matter thoroughly, concluded that bass do migrate. They have their natural breeding grounds, and go down the river from there. There is a time when the bass are quite plentiful in the river, then they become more scarce, and in September when they go back again they are more plentiful. This establishes the fact that they migrate and the new law will be a benefit to them. The netting of bait in front of residences along the river in places where property owners had baited the minnows became such a nuisance that an attempt was made last year to secure legislation regulating it, but it was finally thought best to devote our entire attention to the bass bill, or we might lose both. Every effort has been made along the river, and especially in this vicinity, to interest people in the protection of fish, but I am sorry to see that the interest is not as great as it was at one time. Perhaps some had rather fish than attend our meetings.

Secretary Thompson then broached a subject concerning which there seems to be quite a difference of opinion among those who are interested in the protection of black bass. He said: There is a petition to be presented to the next Legislature to allow the netting of certain coarse fish in the St. Lawrence Reservation, which is being circulated and signed by quite a few at Cape Vincent and Clayton. I am told it is signed by the Treasurer, but he can speak for himself. I once heard a member of the Legislature arguing on the subject of netting, and he said that if he were drawing a net for coarse fish and should catch a muskallonge he would throw out the others and keep the muskallonge. [Laughter.] Unless something is done that petition will go before the Legislature. If such a petition should go to the Legislature, backed up by one of the Forest, Fish and Game Commissioners, it will have a powerful influence. I have worked in the interests of protection until I have grown gray, and do not feel like having the laws revamped. We had a change in the netting law once and it injured the fishing and prevented people from coming to the river. Then our Association put up a brilliant fight, and we got the St. Lawrence Reservation and had it protected. We have good fishing now, but even with the present law the protectors have to work to save the bass. It seems to be an immutable law that some men will go further to violate the law than they will to observe it. Fortunately we have a good protector who does his work well and makes offenders settle. In order to have the laws enforced, we must have protectors who will do the work. Last year we got an increase of protectors, and the number in the State is now fifty. On the river we have one at Chippewa and one at Alexandria Bay. Every business man along the river should be interested in preventing the passage of the bill to allow netting. We know what such a law would do. When we had the law before nets came here by the hundred and one man alone had forty of them. I once went out with the protectors, and we pulled up some nets, and the owner was arrested. The man when questioned as to what fish he took, replied, "When I fish I take all I can get," and his boy told us that they took their coarse fish to Clayton and the scale fish to Cape Vincent. When you allow a man to go in and net he will not discriminate in the kind he takes, and if he does he will keep the best and let the rest go. The laws are in good shape as they are now, and I believe that every man interested in the river should try to prevent the passage of a law calculated to permit netting in the St. Lawrence Reservation.

Treasurer Grant—I fully agree with what the Secretary has said in regard to the fight which we put up to prevent netting in the St. Lawrence, but there are two sides to the question of which he speaks. If I have signed the petition to which he referred I have no recollection of it. The object of preventing netting in the river was so that summer visitors could have fishing. We learned, as Mr. Thompson said, if netting was allowed the fishermen would take the best fish. A man who netted fish once told me that when he found game fish in his net he took them out and threw them back—"back under the seat," he added. [Laughter.] We can not propagate black bass in the river as we do other fish. The Anglers' Association has stocked the river with two millions of wall-eyed pike fry and millions of muskallonge fry. In order to have black bass, it seems to me we ought to have some kind of restrictive netting in the river. The bass lay their eggs on the shoals, and suckers, bullheads and eels are gormandizers of their spawn. When no restrictive netting is allowed these fish come in great numbers and subsist on the bass spawn. I claim if the restrictive netting of coarse fish could be allowed, under the inspection of State authorities, it would improve the bass fishing.

Hon. Charles R. Skinner—Is it a new thing for coarse fish to eat the bass spawn?

Mr. Grant—No, but netting has taken away many of the coarse fish.

A. C. Cornwall—Do not bullheads and eels frequent muddy places?

Mr. Grant—Yes, they like muddy bottom.

Mr. Cornwall—They and the bass are not apt to get together then, are they?

Mr. Grant—The suckers, bullheads and eels go on to the bass spawning beds. The lives of these coarse fish are protected by the prohibition of netting, and I think if restrictive netting were allowed under the supervision of a State official it would be a good thing for the bass. I am not in favor of general netting in the river as it was allowed once, but there is quite a sentiment in favor of netting coarse fish.

Thomas B. Kerr, of New York—It seems to me the situation is peculiar. Many of the members of this Association who do not permanently reside here are interested in the fishing, but if the people who live here and have votes want to pass a law to allow netting, I do not see what we could do. If the prohibition of netting is to result in the destruction of the bass, we seem to be between Scylla and Charybdis. I think the danger is with the side Mr. Thompson presents—from the greed of men and not the greed of fish. It is possible we could get up a petition against a bill to permit netting. I think that those who live on the river can get more money out of the people who come here in the summer than they could from winter fishing.

Vice-President Heath—The question seems to be "Is restrictive netting detrimental to black bass?" My experience during the past thirty-two years has been that netting destroys the fishing in the river. The fishing was poor when netting was allowed, whereas now that it is prohibited good catches of bass are reported.

Chief Game Protector Pond being asked for an opinion, said he was not there to advocate the passage of any bill. His duty was to see that the laws are enforced. He said, though, that there was quite an argument that coarse

fish which live on bass spawn are increasing. He told about a New Yorker who was in the habit of spending the summer at Point Salubrious, Lake Ontario, who a few years ago objected to the use of nets, but had since changed his mind, as he had been convinced that the netting of suckers, bullheads and other coarse fish which was conducted under the supervision of a State official in Mud Creek and Mud Bay had improved the bass fishing in that vicinity.

Mr. Grant—These coarse fish also eat the muskallonge fry which we put in the river. I believe that the whitefish is the only fish in Lake Ontario which is a vegetarian. All the others are cannibals. I am not in favor of general netting.

Mr. Skinner—Are not the black bass brave defenders of their spawn?

Mr. Grant—They are, but the coarse fish go on the shoals in a great army and devour the spawn.

Mr. Thompson—My remarks applied to the time when there was a law permitting the netting of coarse fish, but providing that the game fish must be separated, not to the time when promiscuous netting was allowed. Things have changed within fifty years. People who come here now want to catch fish. You cannot have bass fishing and have netting.

Major C. E. Britton, of Gananoque, Ont.—In regard to discretion in netting, I am opposed to opening the door to netting. I have no faith in the honesty of the man who fishes for a living. He will do just as Mr. Grant's man said, throw the game fish back under the seat. There were just as many rough fish in the river years ago as there are now. Much of the talk you hear comes from those who want the privilege of selling fish in open market. If you allow netting you are bound to lose your game fish, for they will then have both enemies, their natural enemy, the coarse fish, and man as well. I saw in a newspaper recently the report that some party in Alexandria Bay had caught 125 bass in one day. I never fish or eat fish, but am always glad to help the fishing interests. Major Britton suggested that a special committee be appointed to confer with S. T. Bastedo, Deputy Minister of Fisheries for Ontario, in regard to certain fishing matters.

Protector Joseph Northrup, of Alexandria Bay, said he had investigated the case referred to by Major Britton, where 125 bass were caught in one day. It frequently happens that some man takes out a party in a yacht with several skiffs for a day's fishing. When the party comes in the man is credited with the entire catch made by five or ten men.

Hon. C. R. Skinner—I am a good deal like Mr. Britton. I would not care about catching all the fish in the river. I live principally upon scenery while on the river [laughter], but there are others who delight to fish and there is no mistaking the fact that fishing makes the river more popular as a resort. That we now have good fishing is due to the efforts of this Association. We ought to do all we can to preserve the attractions. If we let up one iota we are gone. I have no more faith in those who fish for a living than Mr. Britton has, and that is nothing at all. They take everything they catch. If any netting is done the nets should be drawn under the supervision of a State officer. The only other way would be to have a provision in the law that all men shall be honest. [Laughter.]

Mr. Skinner offered the following:

Resolved, That the Anglers' Association is unalterably opposed to any legislation licensing the netting of cull fish in the waters, bays and creeks of the St. Lawrence River, and we call upon all representatives in the Senate and Assembly representing districts bordering upon the St. Lawrence River to oppose any and all measures permitting such netting.

Resolved, That the secretary of this Association be directed to procure a supply of petitions for circulars against any modification of the present law in this respect.

Resolved, That the executive committee be instructed to use all honorable means to carry out the wishes of this Association.

H. P. Rose, of New York—I do not think there are very good grounds for the belief that suckers and other coarse fish should be netted.

D. C. McEwan, of Brooklyn—I regard all these stories of catching bass here as fish stories, for I have not fished. I think the only practical way to preserve bass is to prohibit netting.

Mr. Cornwall—I agree with what Secretary Thompson has said. I am totally opposed to any legislation allowing netting in the river excepting with minnow nets.

Gen. I. B. Van Petten, of Claverack—My sentiments in regard to the matter are well expressed by Mr. Skinner. I am rather of the opinion we had better keep all the legislation we have against netting.

Col. O. G. Staples—When I go out fishing I take four or five oarsmen and never take as many bass as the law allows. Unless there is good fishing on the river the great mass of people will not come here. When I first built this hotel, nearly every person who came here was a fisherman. I indorse Mr. Skinner's resolutions and suggest that the Secretary send out petition blanks and see if we cannot counteract this action regarding netting legislation.

Mr. Robb—I am in favor of the resolutions and feel that I can aid proper legislation in some way. There is no doubt fishing is what brings people to the river.

Major Britton—One of our fishermen says he has seen more black bass this year than ever before, but they would not bite. I think the bass can take care of their spawn themselves.

Mr. Skinner—Perhaps the reason the bass would not bite was that they were living on the spawn of the bullheads.

Walter Fox—I think we should hold on to all the laws we have and get as many more as we can to improve the fishing.

Dr. Cole—I have lived on the river twenty years and have been fishing three times. I indorse the resolutions of Mr. Skinner and think they should be adopted.

Vice-President Heath—I am delighted that the newspapers are able to report big catches of fish. I think it would be a sad day for the river if we opened up to netting in any form. If we indorsed anything in the way of netting they would have everything inside of two years. I think the thing is wrong all through.

The resolutions offered by Mr. Skinner were then unanimously adopted by a rising vote.

Messrs. Cornwall, McEwan and Robb were appointed as a Nominating Committee.

A letter from S. T. Bastedo, Deputy Minister of Fisheries for Ontario, in regard to angling matters, was read by the Secretary.

The Nominating Committee reported in favor of the following officers, and they were duly elected: President, W. C. Browning, New York city; First Vice-President, Henry R. Heath, Brooklyn; Second Vice-President, Hon. Charles R. Skinner, Albany; Secretary, W. H. Thompson, Alexandria Bay; Treasurer, R. P. Grant, Clayton. Executive Committee—A. C. Cornwall, Alexandria Bay; Frank H. Taylor, Philadelphia, Pa.; A. E. Clark, Chicago; C. W. Crossmon, Walter Fox, G. T. Rafferty, Alexandria Bay; George C. Boldt, New York; Col. O. G. Staples, Washington, D. C.; T. A. Gillespie, Pittsburg, Pa.; C. E. Britton, Gananoque, Ont.; Charles G. Emery, New York; W. H. Nichols, New York; T. B. Kerr, New York.

Mr. Grant—But for the action of Major Britton American anglers would have to pay $10 for going into Canadian waters to fish. I move that we extend him a vote of thanks. Carried.

Mr. Grant then moved that the Executive Committee be empowered to appoint the necessary sub-committees to meet Mr. Bastedo or other officials in regard to fishing in the International Park. Carried.

Mr. Kerr offered the following, which was adopted:

Resolved, That the executive committee take measures to secure legislation at the next session of the Legislature prohibiting the netting of minnows for bait within 100 feet of any private dock, without the consent of the owners of the dock.

The Association extended a vote of thanks to Vice-President Heath for the efficient manner in which he performed the duties of presiding officer; to Major J. W. Pond for what he has done to regulate the catching of minnows, and to Col. O. G. Staples for his courtesy and hospitality.

Hon. Charles R. Skinner invited the Association to hold its next annual meeting at Central Park, and the invitation was accepted.

At the conclusion of the meeting the members of the Association enjoyed a sumptuous dinner at the Thousand Island House, tendered to them by the proprietor, Col. O. G. Staples, and subsequently they were taken on a tour among the islands on the latter's pretty steam yacht Nereid.

The petition which occasioned so much discussion at the meeting of the Anglers' Association has the following preamble:

"Owing to the elimination of the net fishing in the American waters of the River St. Lawrence for the past fifteen years, it has increased the numbers and qualities of cull fish to such an extent that further efforts of the Commission to propagate the said waters by introducing fry of the different game fish amount to simply the furnishing of food for the cull fish named below, viz.: bullheads, catfish, dogfish, suckers, eels, rock bass, sunfish, perch, billfish, chub and menhaden. We recommend a law to license the netting of cull fish in the waters, bays and creeks of the River St. Lawrence bounding on the county of Jefferson, State of New York."

Several rules and regulations in regard to the matter are also recommended in the petition.

W. E. Wolcott.

Utica, N. Y., Aug. 7.

Fishing on the Delaware River.

It was impossible to learn much of the fishing in the Delaware between Mast Hope Falls and Pond Eddy, for the reason that the river was in flood and rain fell every day; but there are many rifts and small fishy-looking eddies all the way, while the mountain scenery and the surroundings are pleasing to any angler. Lackawaxen is one of the best towns at which to stop, as at that point the old dam forms a long pool into which the Lackawaxen River debouches, and this is a noted place for trolling for bass, while they told me the Lackawaxen contains pickerel and perch as well. Then York Lake is within a mile. It is deep and clear and good catches are made there. It is a good place to go if the river is muddy.

Shohola is on the river, and it has its eddies and rifts, the latter being more rocky than those further up. Washington, Highland and Montgomery lakes, in New York, and Walker Lake in Pennsylvania, are all within six miles, while Panther and Shohola brooks in Pennsylvania and Little Mill, Half-way, Beaver and Stony brooks on the other side are still nearer, and all contain trout in season.

At Parker's Glen, four miles from Shohola, one has a choice of the Delaware, Walker and Twin lakes, Samentine and Parkers Glen brooks in Pennsylvania, all within a few miles and easily accessible, as at all of these little towns one can find some one who will take him in a conveyance at a moderate charge.

Pond Eddy is the nearest point to New York city that is on the river, although Mongaup—at the mouth of the stream of that name—Mill Rift, Sparrow Bush and Port Jervis each boasts good fishing. The eddy at the twin towns of Pond Eddy is long, wide, deep, and some big bass, pickerel and wall-eyed pike have been taken there this season. The water clears quickly after a freshet, and it is beautifully situated for trolling or casting. Small catfish are the best bait, and if one uses these the bass cannot resist them. Grasshoppers, crickets and live frogs are also much used. There are boats and boatmen to be had for a small fee, and there is a bridge across the river within a half mile of the villages. The rifts, both above and below the eddy, can be fished from shore, where ledges of stone jut out into the water. The old towpath follows the New York side of the eddy, and when the river is low and clear the boulders along that side form clean spots from which one may cast into the deep water that is but a few feet off shore. Unfortunately there are not very good accommodations at either village for anglers, but the fishing will make up for this deficiency. One may camp on the shores of the eddy in shady places near the bridge, where there is good spring water. One spot is within five hundred yards of the station, and another is at the mouth of Carpenter's Brook and just above the suspension bridge. We have been at this eddy five days, during which time the river rose, fell and cleared, so that today trolling in the eddy has been accompanied by results in the shape of big small-mouths. One of the anglers took a bass of which we had a momentary glimpse, and it was a very large one, indeed.

One who visits this village should by no means fail to visit Fish Cabin Brook, on the New York side and distant something over a mile from the station. Take the camera along. The brook flows through a deep gorge and reaches the river after a descent of 1,500 feet or thereabout, in beautiful cascades. Station Creek is at the village and Bushkill is two miles distant, both on the Pike County side, while Middoux and Strassers ponds are in New York, distant six and two miles, respectively. But Carpenter's Brook is of goodly size, and it is within a mile, in Sullivan County. It was once a well-known trout stream, but the floods of last winter were disastrous to these fish, and while some good catches have been made this season, better ones will no doubt be waiting the angler when open time comes next year.

Any angler who contemplates a visit to the Delaware this month will do well to write to the postmaster or the station agent at the village he intends to visit and inclose a card for the reply he will receive promptly. We found every person we met willing and ready to tell us all they knew concerning the fishing, and they are courteous and thoughtful of the welfare of others who come to their vicinity. They do not all fish as anglers do, and, as a consequence, they sometimes believe the fishing is not so good as it really is, because they will not go to the trouble or expense of procuring the proper bait and lure. But they are familiar with all the best places for fishing, and in this respect we found them reliable. As the Delaware rises and falls rapidly and is affected by countless smaller streams that find an outlet in it, it is well to ask for information as to the condition of the river as late as possible before starting from home. There are so many lakes, however, near all the stations, and streams as well, that one can go to one of these for a day or two if the river is high or colored from freshets. It should be low all of this month, but there has been a great deal of rain this season in the region it drains, and may be more, so the lakes are well to remember.

Perry D. Frazer.

Pond Eddy, Pa., Aug. 6.

Random Notes of an Angler.

Trolling for Bluefish.

Yes, one may obtain capital sport in trolling for bluefish, provided the essential conditions obtain, such as a good yacht or sail boat, an experienced skipper and a-plenty of free-biting fish. The invigorating sea breeze, the swiftly gliding boat upon the bright and rippling waves, the unclouded sky and a number of jolly comrades along all make an environment that is truly exhilarating, and added to this the sport of capturing one of the most gamy of fish affords a recreation that is almost unsurpassed.

My reminiscences of this sport are many and varied and they are always pleasant in their recalling. While it may not be a strictly sportsmanlike method, it has a special fascination, and there are many who make it their chief salt-water fishing, provided the fish are to be found, but this is not always the case, for the bluefish is a wanderer and one so capricious in its migrations that it has been known to visit a given locality by myriads in one year and perhaps will not return to it for several succeeding seasons.

It is a well known species on the Atlantic coast from New England to Georgia, and is known by a multiplicity of names, such as horse mackerel, skip-jack, green fish, etc. So wide are its wanderings, it has been found on the coast of Brazil and British Guiana, at the Canary Islands, in the Mediterranean Sea, and is a common market fish in Australia and even at the Cape of Good Hope.

In its spring migration it appears on the South Carolina coast in March or early in April, and moves steadily northward, its arrival in Vineyard Sound being about the last of May. Until the middle of June it is chiefly a bottom feeding fish, but after that period and until it leaves for the South late in the autumn, it is a higher-moving species and takes the troll or other bait near or at the surface. My bluefishing has been done entirely in New England waters, and consequently, I cannot speak of my own knowledge regarding the best localities near New York.

Scott, in his "Fishing in American Waters," says: "The best grounds for large bluefish are outside and near the inlets of Fire Island. These inlets are formed by the tides of the Atlantic passing through Fire Island into the south bay; the principal ones are opposite Islip and South Oyster Bay, but late in the fall the best trolling is off Rockaway and Jamaica Bay, the grounds extending from the Highlands, off the Jersey shore, to some ten miles below the light-ship."

In New England it is now rarely found north of Cape Cod, and it is most abundant in the waters around Nantucket and as far east as Provincetown.

The bluefish is undoubtedly the most destructive species that we have; it kills, absolutely for the sake of killing. Rushing into a school of mackered, or menhaden, it cuts a swath as wide as it can reach, its path being marked by a trail of blood and by the pieces of fish that it mangles and scatters around. The statement has been frequently made that it destroys more than twice its own weight, daily, of other fish, and it is so gluttonous that it eats to repletion, and then disgorges in order that it may again be filled.

A hand-line fisherman states in the 1871-1872 Report of the U. S. Commissioner of Fish and Fisheries that he has taken forty-two scup about two inches long out of the stomach of one bluefish. The scup referred to is the scuppaug of Connecticut, Massachusetts and Rhode Island, and is identical with the porgie of New York, New Jersey and localities further south.

Another fisherman states that he has seen hundreds of little scup in them, and when no other food is to be obtained crabs and small shellfish are eaten by them.

Lieut.-Gov. Stevens said: "I have found bluefish with young scup in them; when taken in gill nets we almost always find scup in them. Bluefish caught with a drail often vomit up the food in them. Sometimes three-

fourths of the food would be young scup. To-day I picked up one and pressed on the belly of the fish and found that he was full of them. I have seen the little striped smelt (capelin) packed in them and looking like a row of pencils." Another witness stated that a bluefish will destroy a thousand fish in a day. When they get into a school of menhaden there is a stream of blood as far as one can see. They go into them and they will destroy the whole school before they hold up.

All the evidence that was given at the hearing reported by Prof. Baird, seemed to show that the bluefish had decreased very considerably both in size and numbers, and the diminution was attributed to the traps, pounds and weirs.

I have before me the Report of the Massachusetts Commissioners of Inland Fisheries and Game for 1900, and the statistics printed therein are valuable and interesting, particularly so for the reason that that State seems to be at the present time the northern limit of the migrations of the bluefish.

I find that in all the pounds and weirs, traps, fykes and seines there were taken in the nineteen years, 1882-1900, inclusive, an annual average of 116,000. Approximately, the greatest catch, 325,473, having been made in 1882 and the smallest, 20,325, in 1899, that for 1900 being 9,650 more than the catch for the preceding year, the 1900 catch thus being only about one-fourth of the average for 19 years.

A rather curious fact appears in the tabulated returns and that is that fully one-half were taken in the waters around Nantucket, and in 1899 of a total catch of 20,325, 14,170 were also taken at Nantucket.

Now, the diminution that I have noted may possibly have been caused to some extent by the erratic migrations of the fish, as some pound owners declare, but as the fish was pretty regular in its visits during the years I have named, it would seem that the traps and pounds have been largely to blame, and no doubt we may look for a further decrease in the ranks of this species, which, despite its destructiveness, have proved to be not only one of the most delicate and valuable of our food fishes, but a game fish also of no little importance. Genio C. Scott well says of this fact: "Were it not that the electrical jerk of the bite of a large bluefish has such great power in it as to make the angler sometimes feel that he, too, is being fished for, and that its teeth are so sharp as to make strong and heavy tackle necessary, it would be considered incomparably the highest game fish of the American coast.

"When estimating the value of angler's fishes by the play they give, and the scenes into which the angler is led in search of each kind, the bluefish must occupy a foremost rank; and the man who has neither trolled nor still-baited for this peculiar fish—the best breakfast fish on our coast, except the Spanish mackerel—has two treats in store, which, the sooner he improves the earlier he will regret that he had not tasted before."

In trolling for bluefish, an imitation squid made of metal, bone, ivory or mother-of-pearl, which is attached to a very strong line, fifty or more yards in length, is used; an eel skin drawn inside out over the heavily leaded hook makes also a capital bait; in fact, my best fishing had been done with one of these homely lures.

A bluefish will seize anything that is in motion in the water, and almost any bait, therefore, will answer provided it is tough enough to withstand the sharp teeth of the fish and remain intact on the hook. The eel skin meets all requirements, and as it has a peculiar glisten when being dragged through the water, it makes as good a bait as one can have.

The lure is trailed astern the swiftly moving yacht, which is sailed in different directions over the shoals, quartering the water as the trained pointer covers the ground until the presence of bluefish is discovered by the practiced eye of the skipper, the fact being established by a "slick" of oil, which escapes from the feeding fish and makes a greasy scum on the water.

The oil slick, however, is not always to be seen; in fact, if menhaden or mackerel are not being eaten there is little show of oil.

In former days we used to get a good many bluefish in Dorchester Bay, Mass., and even further in shore in the small bay at Quincy. There were no menhaden or other oily fish there, and in trolling we had no "signs" to depend on. We used the eel skin bait and got a good many fish. They were not large, a ten-pounder being the heaviest that I ever knew of being captured there, but they gave most capital sport. I have no doubt that they visited that particular piece of water in pursuit of smelts, which are very abundant there; an adjacent river, the Fore River, being probably the greatest breeding ground for those dainty little fish on the Atlantic coast.

In more recent years the bluefish became more scarce there, and now I doubt if there is one to be found in that neighborhood; in fact, there has been taken in all the pounds, weirs, etc., of Eastern Massachusetts only a few scattering fish in the last six or seven years, for example, 1895: Swampscott, 3; Gloucester, 81; Magnolia, 18. In 1897, Gloucester, 8. In 1900, Nahant, 7.

So beggarly a showing as this is hardly worth mentioning, and it shows pretty conclusively that no matter how abundant the bluefish was in earlier times above Cape Cod, Provincetown now seems to mark its northern limit.

As before stated, the course of the yacht is changed in various directions in search of a school until finally the bait is seized by a voracious fish and the sport begins.

The fisherman feeling a sharp tug and heavy pull at his line, excitedly begins to "haul in," but he soon finds that he has no puny antagonist to deal with, for the bluefish is one of the strongest and quickest moving fish that swims. It darts about in every direction, now diving down deep in the water and anon leaping clear of it, and while refusing to yield an inch, attempts in every way to shake the hook from its mouth; and the fisherman, to secure his prize, must be strong of hand and arm and ready to meet all the feints and artifices of his antagonist with coolness and dexterity. A pair of thick woolen gloves is a necessity, for the strain is so severe, when a large fish is hooked, that unless the hands are thus protected, the line is sure to cut them severely. The battle continues sometimes for a number of minutes, but the fish is at length conquered, and finally, with a quick pull, the glistening prize is lifted out of the water and swung into the boat.

And what a beauty it is with its silvery sides and blue and green and leaden-colored back! A different fish it seems, indeed, from the specimens which are seen in the markets; fish that have been out of their native element for days and weeks and perhaps for months.

When the bluefish is swung into the boat it jumps around in the most energetic manner, apparently anxious to continue the fight, and the fisherman does well who quickly gives the jumping captive its quietus; for its sharp teeth and vice-like jaws are capable of inflicting dangerous wounds, as many a man will testify. Many a time have I seen a boot bitten through as cleanly as if it had been cut with an axe, and more than once have seen feet cut and toes severely injured when they were incautiously exposed to the jaws of the bluefish.

Still-fishing for bluefish is really the most sportsmanlike method, and when the fish are abundant is an intensely exciting sport. I was initiated into this mode of taking these very gamy fish by my old friend, Charles Lovett, Esq., who was for many years connected with the Massachusetts State Government. He was a keen sportsman and angler, and a most estimable gentleman. He was, I would say, en passant, the only angler with whom I ever was acquainted who succeeded in capturing the shad with the fly and light tackle. He used to get considerable sport out of this novel and apparently impossible angling, for the shad is a heavy fish with a very tender mouth, one that would seem to "break out" at the least pull of the hook.

Mr. Lovett asked me on one occasion if I would like to enjoy a day's bluefishing with rod and reel. Of course I answered in the affirmative; and with the proper tackle a short time subsequently we found ourselves in a boat anchored on the edge of a shoal; the water was hardly six feet in depth on one side of us, but on the other there was a quick drop of twenty or thirty feet.

For rods, lines and hooks we had tautog tackle, such as was described in my last article, but the hooks were attached to a fine piano wire for leader, any other leader being easily cut through by the sharp teeth of the fish.

We used a variety of bait, clams, sand worm and capelins all being greedily taken, and for a quarter of the flood and three-quarters of the ebb tide we had most capital sport. The fish did not run large, the average being not over three pounds, but they were gamy in the highest degree. Long runs were frequently made, our reels singing right merrily as the lines ran out, and the fish often jumped two feet clear of the water. We captured eighteen fish in all, and no fish of equal size and numbers ever excelled them in out and out gaminess.

Since that time still bait-fishing for bluefish, with rod and reel, has become a common recreation, but prior to it, it was, I think, never practiced. If one likes an abundance of labor in fishing, he can get it by bait-casting from the shore. A heavy sinker with hook attached is fastened to the end of a strong linen line which lies coiled up by the side of the fisherman on the beach. The hook is baited with a reversed eel skin, and after being whirled around the fisherman's head several times, in order that sufficient impetus may be obtained, is cast out into the ocean as far as possible and then is drawn back hand over hand. If a bluefish seizes it he is drawn ashore, but if one fails to take it the operation is repeated.

It is hard work. I have tried it and can speak understandingly. I have pulled in several September fifteen-pounders, and they gave me all the work I wanted, but I am not yearning to pull in any more in that way.

Edward A. Samuels.

[TO BE CONTINUED.]

New England Waters in August.

Boston, Aug. 11.—Mr. George Loud and Mr. A. I. McLauthlin, of Boston, with wives and children, have gone on a fishing and vacation trip to Clearwater Lake, near Farmington. The fishing is said to be moderately good there, even in hot weather. They will occupy Camp Runaway, the property of the F. E. Whiting party, of which Mr. Loud is a member. This camp was built last year, and is said to be a model of convenience and comfort. Mr. Walter L. Hill, of Arlington, will start this week for a fishing trip to Pond-in-the-River, below the Middle Dam, Richardson Lake. Later he will take his two boys, aged 10 and 12 years, to the Richardson Ponds region, at the head of the same lake. They will camp there; a great treat for the boys. Mr. Prentis Cummings, of Boston, is at Bemis, for his usual summer fishing trip. Mr. John S. Doane, of Boston, has made another trip to the Upper Dam. This time he has caught a salmon of 5 pounds and 7 ounces, one of 3 pounds and 7 ounces, and a trout of 3 pounds. Mr. L. H. Witherell, of Boston, stopping at Pleasant Island camps, spent one day at the Upper Dam last week and landed a salmon of 7 pounds. S. G. Hamilton, of Boston, also got a salmon of 3 pounds 14 ounces. These record fish were all caught on the fly. At Haines Landing considerable fishing is yet being done, with the women making the best catches. Miss Alice M. Nelson, of Malden, Mass., has lately made a catch of three salmon, weighing 2, 2, and 3½ pounds. Mrs. R. H. Chandler, of Thompsonville, Conn., has landed a salmon of 5½ pounds. It took 30 minutes of close work to conquer this fish. Miss Robinson, of Malden, has taken a salmon of 4½ pounds. Hon. Millard Voorhees, of New Brunswick, N. J., has made a catch of three salmon in one day, weighing 3, 4 and 5 pounds. At the Birches all is summer gayety, with little fishing being done, though a number of Boston anglers are there. At Kineo, Moosehead Lake, the summer vacationist is in the ascendency, but side trips for fishing and camping continue to be in order. In the neighborhood of Rangeley Lake, Kennebago Lake, Loon Lake, Quimby Pond, Seven Ponds and Reddington, the fly-fishing is reported to be excellent by a number of Boston sportsmen, who are there or have recently returned. At Belgrade Lake trout fishing has not been very good of late, though Otto von Kimbusch, of New York, has lately taken one of 4¾ pounds. Fly-fishing for bass is said to be remarkably good there. Dr. I. H. Hartman, of Baltimore, caught a bass there last week that weighed 3 pounds and 13 ounces. The law does make close time on trout in the northern New Hampshire waters on Aug. 1, though it does on the waters of the southern counties of that State. Grafton, Carroll and Coos counties are still legally open, and a good deal of trout fishing is being done. Col. H. C. Fisher, of Boston, is at his estate, Woodstock Road, and is taking some fine strings of trout. In the towns of Holderness and Campton the brooks are being fished with good success. The wet summer and high water have been particularly favorable to trout fishing. A salmon weighing 5 pounds has been taken at Tufts Pond, Kingfield, Me.; another instance of the rapid growth of landlocked salmon, that pond having first been stocked only five years ago. Row Ponds, Bingham, Me., are famous for the late fly-fishing, and this year is no exception. Brook trout of two and three pounds are on the late record.

Secretary L. Dana Chapman continues to receive word of remarkable fishing on the Megantic preserve, especially near the Megantic club house. D. D. Clapp, of Boston, recently caught 114 trout of good size, in one afternoon, from Spider River, not far from the club house. P. W. Leavitt, of Cambridge, has also made a catch of seventy-five in a few hours. The steward writes that other fishermen are also doing about as well, but are too modest to say much about it. Fishing has continued to be the best ever known at the preserve, and it is a matter of great satisfaction, both to members and officers, since the rule is to kill no fish not needed for food at the camps. Hence the good fishing is being conserved, and will continue to be good. A new fly is the latest invention in tackle that has been brought out. This fly is called the William F. Beal, the name of the inventor, a man prominent in real estate circles and a fisherman, who has invented the fly for his own amusement. The fly is made on a body wound with tinsel, and the wings are all tinsel, curled in such a manner as to give a good deal of realistic motion in the water. They are made in both silver and gold tinsel, with no feathers whatever.

Boston gunners are not doing much at shore bird shooting, although the open season begun immediately after July 15. The season has been unusually cold and wet, and very few flights of what are termed "big birds" have been seen. C. H. Tarbox and Senator Bailey, of Byfield, went down to their blinds on the beach the last day of July. They spent a part of the day in the blinds and shot about eighty peep, but saw no yellowlegs or plover. They account for the lack of "big" birds, under the theory that the birds are late in rearing their broods north, and hence the flights southward have not begun. Gentlemen interested in gunning, and summering down on the Cape, say that there have been no flights yet of summer yellowlegs, though these birds are due. One gentleman spent part of the day Thursday off shore in the neighborhood of Brant Rock, but saw no "big birds." Peep are unusually plenty.

Special.

American Fisheries Society.

The thirty-first annual meeting of this national association of fishculturists and other persons interested in fish, fishery and allied subjects, was held at Put-in-Bay, O., Aug. 5-7, and the sessions were notable on account of the attendance and the practical value of the papers read and discussed.

Put-in-Bay is not readily accessible on account of its isolated situation, and yet the attendance represented the fish commissions of the United States, of Connecticut, Rhode Island, Ohio, Michigan and Wisconsin. The members present during the sessions were from fifteen States and the District of Columbia. Among the new members elected at Put-in-Bay were persons from five additional States. This will serve to show the wide distribution of the membership of the Fisheries Society and its capacity for influencing public opinion.

A portion of the first day was devoted to routine business—reports of officers and committees—and to the election of officers for the ensuing year. The officers elected are as follows:

President—Hon. Geo. M. Bowers, U. S. Commissioner of Fish and Fisheries.

Vice-President—Prof. H. B. Ward, University of Nebraska, Lincoln.

Recording Secretary—Geo. F. Peabody, Appleton, Wis.

Corresponding Secretary—J. E. Gunckel, Toledo, O.

Treasurer—C. W. Willard, Westerly, R. I.

Executive Committee—G. T. Mathewson, Enfield, Conn.; W. H. Boardman, Central Falls, R. I.; Prof. E. A. Birge, Madison, Wis.; J. J. Stranahan, Bullochville, Ga.; Dwight Lydell, Mill Creek, Mich.; Tarleton H. Bean, New York city.

A committee was appointed to urge upon Congress the desirability of establishing a biological station at Put-in-Bay for the study of natural history problems related to fishculture and the fisheries.

The report of the Treasurer showed the prosperous condition of the finances of the Society, and the character of the papers read and discussed indicated its ability to contribute materially to the discovery of important facts and to make them known.

The following is a complete list of the articles presented:

"The Rôle of the Larger Aquatic Plants in the Biology of Fresh Water," R. H. Pond.

"A Successful Year in the Propagation of the Whitefish," Frank N. Clark.

"The Brook Trout Disease and Cement Ponds," M. C. Marsh.

"Some Remarks on the Time of Planting and Habits of the Rainbow Trout." Geo. A. Seagle.

"Fishculture on the Farm," J. J. Stranahan.

"The Habits and Culture of the Black Bass," Dwight Lydell.

"Discouragements in the Culture of Black Bass," H. D. Dean.

"A Few Points on the Black Bass," J. B. Lamkin.

"Food and Game Fishes of the Rocky Mountain Region," J. A. Henshall.

"Feeding: Its Effects on Growth and Egg Production," W. T. Thompson.

"Inbreeding Pond-Reared Trout," Arthur Sykes.

Two very important papers on the surface life of the lakes were unfortunately omitted, because of the lack of facilities for lighting the lantern slides necessary for their illustration. The discussion of the articles was animated and highly interesting, especially of the paper on black bass by Mr. Lydell, which is a very valuable contribution to our knowledge of an important game fish.

During the course of the meetings the Society was addressed by Dr. Bean, on behalf of the World's Fair at St. Louis, regarding the advantages of St. Louis in 1904 as a place of meeting. Woods Hole, Mass., was selected for the sessions of 1903.

Through the courtesy of Commissioner Geo. M. Bowers the Fish Commission steamer Shearwater was placed at the disposal of the Society for visits to the great hatchery on the island and to the adjacent fishing grounds. This meeting was unquestionably the most interesting and enjoyable ever held in the West, and it will be remembered for its effective handling of a remarkably good programme.

T. H. B.

Fish and Fishing.

Newfoundland Angling.

Mr. W. F. J. McCormick, of Biscayne Bay, Florida, who has made his headquarters, as usual, for the greater part of the summer, at Lake Edward, left a few weeks ago for Newfoundland, after salmon and sea trout. He is now on the coast of Northern Labrador, and will probably go as far as Nain. Writing me from St. John's on July 24, Mr. McCormick reports having found the ouananiche in Sou'west Brook and the Gander River, and has sent to Lake St. John for skins of the fish taken there, in order to be in a position to make careful comparisons. There is no doubt whatever that the fish to which Mr. McCormick has reference is identical with that of Lake St. John, for specimens which could not be mistaken, were identified in 1899, in Newfoundland, as true ouananiche, by both Colonel Haggard and myself. The distribution of the fish is very much more extended than was supposed up to a few years ago, and as exploration and industrial enterprise continue their northward march, we are likely to learn much more than we at present know of other sub-Arctic varieties of the Salmonidæ.

It is gratifying to learn that no more netting of salmon is now allowed in the estuaries of the Newfoundland rivers, and as a result, Mr. McCormick reports that a number of splendid fish have been taken this year out of the Humber in the vicinity of the Bay of Islands. When I visited the island with Colonel Haggard, we found the Humber perfectly honeycombed with nets, and promptly reported the matter to the Hon. Mr. Morine, of St. John's, who was at that time Minister of Fisheries. It is only justice to Mr. Morine to say that he took prompt measures to remedy the evil, dispatching his deputy, Mr. Watson, to the scene of the poaching by the same train with us.

Mr. McCormick reports splendid sport with the ouananiche and also with the sea trout at Main River Bridge, Bay St. George. His only complaint of the latter locality is that the fish are too plentiful, and that he had as much of the sport as he could stand in two tides.

Effects of Fish Planting.

Specimens of the steelhead salmon have been lately taken in pound nets on the north shore of Lake Superior, which indicates that some of the fish deposited by the Fish Commissioners of Minnesota had found their way into Canadian waters. In consideration of the fine game qualities possessed by these fish, arrangements have been made with the fishermen for the preservation of any caught, and their transfer to a small spring water lake in the vicinity for distribution therefrom, as may be required. It would seem to be only right that these fish, having been planted by a friendly neighboring State, should be returned to the waters whence they were taken, and not transferred to other and inland lakes. However, it appears that only a few specimens have been so far taken in Canadian waters.

The wholesale planting of black bass is still continued in Ontario waters, but it is understood that they are not being introduced into natural trout waters, except in cases in which the trout have wholly or almost wholly disappeared, for it is a pretty well recognized fact that where bass have been introduced and have largely increased, the trout have all disappeared. The provincial authorities are understood to favor the introduction of landlocked salmon in preference to black bass in some of their waters, but find it impossible to obtain either the fish or their spawn. The Quebec authorities might assist their neighbors of the sister province if they cared to, but apparently prefer to keep to themselves whatever good things they have. This policy may succeed for a time, but it cannot endure in the long run, in our present advanced state of civilization. A good many anglers and students of fish life are of the opinion that it would pay the Ontario people better to plant steelhead salmon and lake trout, or better still, to replenish worn-out brook trout waters with he young of this latter variety, artificially hatched, than to continue the planting of black bass in so many of the inland waters of the province.

Undesirable Fish.

It would be difficult to overestimate the evil that may be caused by the planting of undesirable fish. It is said that much injury is likely to be caused to the many splendid species of Salmonidæ in Lake Sunapee by the introduction there of black bass. From the beautiful Nepigon come loud complaints of the rapid increase of pike. Fishermen on the great lakes are very much concerned at the vast increase of suckers, and suggest that those taking them in nets should be required to bring them all ashore and to burn or bury what they cannot market of them. One correspondent says: "On the grounds here where our fishermen used to take their large catches of whitefish, they get as much as from five to ten tons of suckers. These are all thrown back into the water. If the fishermen could get about 25 cents per cwt. for bringing them ashore and burying them, or selling them for manure, there is no doubt that hundreds of tons of them would be destroyed, and the fisheries tremendously benefitted." The Ontario Department of Fisheries reports that carp are making great headway and becoming established almost everywhere, being no longer confined to international waters. They are increasing to an alarming extent in Lake Simcoe, and already hundreds of acres of rice fields in the vicinity of Holland River have been destroyed. All legitimate means of caputure have been approved and encouraged by the department, but there seems to be no feasible means of exterminating them or even of checking their inroads.

North American Association.

Hon. F. R. Latchford, president of the North American Fish and Game Protective Association, has fixed the third Wednesday in January, 1903, for the annual meeting at Ottawa, of the association, and notices to this effect will be received by the members in due time. It will now be in order for members to set about preparing papers and addresses for the coming meeting. The city of Ottawa is the center of a grand sporting country, and the home of many rod and gun enthusiasts, from whom the association may expect a warm welcome to the capital of the Dominion.

An Interesting Report.

I am indebted to Mr. S. T. Bastedo, of Toronto, Deputy Commissioner of Fisheries for Ontario, for a copy of the third annual report of his department. Not only is it full of valuable information from cover to cover, but it is very fully illustrated, containing not only figures of all the principal fish found in the province, but several very interesting views of the different pools of the Nepigon River, as well as of Lake Nepigon and of the Virgin Falls. It is gratifying to note the beneficial results attributed to the prohibition of the sale as well as of the export game fish in Ontario. The report correctly states that there is no agency for protection so potent as prohibiting sale.

E. T. D. Chambers.

CHICAGO AND THE WEST.

More Fun with the Mississippi Small-Mouths.

Chicago, Ill., July 28.—In an earlier letter I spoke of the fun I had with the small-mouths on the Mississippi River below Wabasha, Minn. On my first day out I fished but a few hours and sundown came all too soon. We landed at the little town of Alma, which is on the C., B. & Q. Railroad, or the side opposite from Wabasha, the Burlington Road and the St. Paul Road paralleling each other for some distance on opposite sides of the river. I had telegraphed a friend to meet me at Alma, but of course the friend did not materialize. Hence I let Ira Weeks take my boatman Louis back to Wabasha on his launch, and I cast about for a local guide. I found Henry Henning, who was recommended to me by Mr. Emmet, of Chicago, as a good man, the latter having employed him several times with great success. Henning is a market-fisherman, and he and his partner Louis Le Bras, rely upon the rod and line altogether for a living. They fish exclusively for black bass and wall-eyed pike, and if they do not make $3 or $4 a day each they are disappointed. One hundred pounds of small-mouth black bass a day is not an unusual amount for them. Henning charges $3.50 a day for his services, with boat.

At least this gave promise of one thoroughly acquainted with the lurking places of the bass, and I must say that the promise was more than fulfilled. Henry told me that he did not intend to go out fishing that next day himself, because the river was too high to offer any chance of success. However, he agreed to take me, and hence early on the following morning we started, I having spent the night at Alma. Henry had a good boat, and I quickly saw that he was a good river man. He began to tell me all kinds of bass stories, including some of the experiences of his friend, Mr. Emmet, of Chicago. He told me that the latter gentleman at one time had fifty-seven bass on in the course of one day's fishing with the fly. Only a few of these bass were landed, as the tackle which Mr. Emmet had along was not strong enough. As for myself, I had a powerful 6½-ounce rod with plenty of backbone. My leaders were especially strong and my flies of the special McHarg pattern, tied on hand-forged hooks, and in the Onondago pattern, which I have always fancied for this Mississippi River fishing. With this tackle anything like delicate casting is impossible. The fly is so heavy that it sinks down as soon as it lights. I pointed out to Henry that with this rig of mine the black bass of the Mississippi River were entirely at my mercy, that they could not get away if I once socked the hook into them, etc. Henry had seen other people come there fly-fishing. Hence he maintained a respectful silence.

We worked on down the river that morning under a glaring sun, which would have made fly-fishing almost an impossibility even had the river been in decent condition, which it certainly was not. It was a tremendously powerful flood which poured down the ancient Mississippi. That any one should go out on that waste of waters and expect to catch bass on the fly seemed the height of folly. I don't think any one less foolish than myself would have undertaken it. Indeed, perhaps there was not a fly-rod out on that part of the Mississippi excepting mine.

Henry showed me different favorite spots of his as we worked on down the river four or five miles. These proved fruitless. The wing dams were buried under two or three feet of water. Here we saw great schools of fish chasing minnows, but though we cast repeatedly and changed our flies through our whole repertoire, we were unable to inveigle those small-mouths in any way whatever. By noon I had taken only one small-mouth, a fish of 1½ pounds weight, which made a good fight, but which was snubbed into subjection early in the game. We made coffee near the end of a wing dam, where Henry told me we ought to get four or five bass. I had two strikes here, one of a white bass and one of a black bass, both of them breaking away. Henry looked rather mournful at my endeavor, but did not make any criticism.

I now suggested that we take to the sloughs, as the bass did not seem to be working in the big river, and after lunch we made for the mouth of the Belvidere Slough, or rather one of the mouths. Here there was a swift current of water flowing between high banks. At the mouth of the slough, buried now well beneath the surface of the waters, there was one of the Government wing dams. Just below this wing dam as we pulled into the slough we could see fish dashing about and playing among the schools of minnows. Henry thought some of these might be black bass, but we saw that most of them were the worthless fish known as the hickory shad.

"I'll see if I can't hook one of those fellows," said I, and casting, I had what I thought to be a strike. To make a very long story short, we played this fish for twenty-three minutes, not having any idea of what kind of a fish it was. I thought it was a 12-pound catfish, and so did Henry. I could not feel any head motion or jerking on the line. Never were two anglers more deceived. When at last, at the risk of breaking the rod, we lifted the fish to the surface, we found it to be a hickory shad, hooked deep in the side! When this fish got deep down and square across the current of the Mississippi, it gave my fly-rod all it wanted to do.

Meantime Henry's eyes had discovered bass playing around a certain cut bank, where he and his partner very often made heavy catches. "They are always in there," said he. We gradually pushed over and ran along this bank, which ran in a semi-circle out to the mouth of the slough. I cast a few times and then all at once got a smashing strike. At once Henry reversed the boat and we shot out into the current of the slough. It was fifteen minutes now of rough and tumble with this red-eyed fighting bass. I must say that the hook held, and so did everything else, and at last we got him into the net.

"Now we'll get another," said Henry. And we did get another strike, and still another, and still another. Every one of these fish seemed to be hooked, but every one of them broke away. All the time we were never more than twenty-five feet from the bank, and could see the e big bass smashing among these schools of minnows and sometimes jumping into the air. On further under the bushes, and also to our right out into the main current of the slough, there were dozens and scores of hickory shad leaping out of the water in their assaults upon the minnows. It was certainly as exciting a little corner as I have got into in all my angling experience.

We saw an occasional heavy swirl under a bunch of grass which hung out from the bank, and casting in here at a distance of twenty feet, I felt a heavy strike. We pulled this fellow out into the water and fought him for a few minutes.

"Only a pickerel," said Henry. He weighed about five pounds, and the fly-rod killed him much quicker than it did a bass of half that weight. I struck four of these pickerel in the course of my fishing, and of the four we landed two, and purposely broke away from a third, which latter nearly cut through the sextuple gut strands of my favorite McHarg fly.

I went back once more under the bank and again I got a heavy strike. This fish I think was the quickest I ever saw in all my life. It struck, went under, and came out again high in the air, almost in the winking of an eye. Then it made a run straight out, struck a sand bar, doubled, came back, and went up into the air higher than I ever saw a bass jump. It was a beauty, weighing, I should judge, something over three pounds. The hook held for three jumps, but I got nervous and excited at this bass, it was such an exciting sort of business, and I imagine I put a little too much strain on my rod and finally wore a hole in his jaw. After playing him five or six minutes he went into the air once more, shook himself until he looked like a sort of blurred buzz saw, threw the fly back into the boat and kissed us good-by. Henry was very gloomy over this, but I was rather thankful. I don't know what that bass would have done to us if he had ever gotten into the boat. He might have chased us overboard. He was the savagest thing I ever did see!

Henry was beginning to think I couldn't fish a little bit. We crossed the river to change the luck, and Henry pointed out several places where he had seen bass at different times. We saw them now feeding along the banks. I lost six bass one after another, caught a pickerel, then caught two more bass, and then lost a whole lot more. As nearly as I could figure out, during the day's fishing I had something like twenty or twenty-five strikes, had hooked ten or a dozen bass, and had saved just four, only one of these of any great size.

I don't know what it was about this fishing which made it so difficult. I only lost one fly, which broke at the head of the hook through a fault of my own in putting it on the leader. The bass would take hold and go down deep, but the hook would be released as though they were simply holding on to the feathers. I know that a bass will sometimes hold on to a frog in this way, but I should be slow to think that they would hold on to the feathers of a fly. I can only say that I fished my best and prettiest, and in a day and a half of exciting fishing I landed just seven bass all told. This experience persuaded me that I was not so much of a fisherman after all, for I went there knowing something about this game, and had an equipment with which I can find no fault whatever. I came away convinced that this Mississippi small-mouth bass fishing is absolutely the best to be found in the United States.

Henry told me my hooks were not big enough, that the bend in my hooks was not right, that the flies had too much feathers on them, etc. Of course one is used to that sort of talk, but there was considerable ground for dissatisfaction on his part.

"That's the poorest day's fishing I ever had in all my life," said he. "I wouldn't go out with any one to catch a half-dozen bass."

Yet he admitted that very frequently he had fishermen out who had similar experiences with the bass. The fish find some way of breaking away, and I would consider the man who landed half the bass he raised at his fly very lucky in the ordinary fishing of that locality. Henry told me, and so did Louis, my other guide, that as quick as the river begins to fall the bass fishing will be prime. He told me that Mr. Emmet and Mr. Comstock, of this city, were to meet him at Alma on July 25 for a few days' fish-

ing. Mr. Emmet has a new lot of flies and he expects to do serious business with the bass this time. He has had very good success at different times with Henning at this part of the river above and below Alma, on the Q., and has taken more than twenty bass in one day's fishing. I shall be interested to hear of his luck this time. It ought to be very good luck, for as I came across the Mississippi River later, I saw that the wing dams were beginning to show, and that the river was falling and becoming clear. As quick as the water turns and begins to recede, the fish go on the feed.

Contrary to some reports, this fly-fishing does not end with June nor yet with July. Henry Henning told me that the fly-fishing lasted as late as November. He said that in the month of August or September, very frequently in October, one could have sport on the wing dams which is simply indescribably good. Old market-fisherman as he is, and contemptuous of frills and furbelows, Henry Henning still expresses admiration for these fighting bass. He and his partner catch them on long poles and stout lines, but they like to see the fly-rods and flies used for a change.

If any one wishes to go to that country, I would say don't risk your pet trout rod in these waters. You want a powerful fly-rod, weighing at the least six ounces. The strain is too heavy for a light stream rod of 3½ to 4½ ounces. Use double gut leaders, heavy and perhaps not more than three feet in length. One fly is enough. I did not try the bucktails, as my hooks were all very small, No. 1. You want big hooks. Your flies ought to be tied so that they will spread when in the water, but not tied with too heavy a feather. The extremely large flies, according to Henning, are not the ones which raise the biggest bass, but the best killing flies in that country are still very large bass flies. There is always a chance of running across a pickerel in that fishing, and of course a pickerel may take off a fly in a short time. Hence the necessity for reinforced gut at the heading of the hook.

One of these days I am going back to that country to see if I can get revenge on those black bass. At this stage of the game they have got away the best of me. I thought that a fellow who had knocked around a good deal could certainly circumvent almost any kind of a fish after he had tried it for a little while. I have fished for these bass several days now, and I have more respect for them than when I started in.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

The Buffalo Fish in Harvey's Canal

NEW ORLEANS, La., Aug. 8.—*Editor Forest and Stream:* In your Aug. 9 issue Charles Cristadoro seems to think the story of the buffalo fish in Harvey's Canal somewhat exaggerated. It is absolutely true. The steamboat stopped by the fish was a tug towing a raft of logs to a sawmill behind the levee on the right bank of the Mississippi River, opposite New Orleans, at Napoleon Avenue. The canal is eight miles long to Lake Salvador, through which and connecting bayous light-draft vessels reach the Gulf. It extends to within a block of the river, with which it was to connect. An expensive lock was built but was never used, as the permit was revoked when it was completed on account of the clamor of the people through fear of a crevasse. This tug, for a long distance, had to back up like an engine with a snow plow and then take a run for it, and finally had to give it up. This large sawmill, said to employ 150 negroes, turned them all to work for three days and nights when the stench became unbearable. Lime and also burning were freely employed. The river is more than half a mile wide at this point, and St. Charles Avenue more than half a mile further, where it was decidedly unpleasant, especially when the wind favored. Our efficient, conscientious and determined president of the City Board of Health, Dr. Quitman Kohnke, after several personal inspections, decided that something must be done. The canal is in Jefferson Parish, the city in Orleans Parish. He had no right to interfere, but they gladly gave him free rein. You might as well attempt to fence in a cyclone as to wash those thousands of tons—miles of decaying fish to Lake Salvador. "Cut the levee," says the doctor. But riding a horse or allowing cattle to run on the levee is a very severely punished offense. Putting an iron pipe through to flood the rice fields with Mississippi's water—jamais.

From highest to lowest he chased the officials; all said, "I have no authority to allow cutting of the levee."

Dr. Kohnke said, "I shall cut that levee, and you can prosecute me afterward if you choose." With a thousand or more dollars of the money of the Parish of Orleans which he found was hard to get, he did the work in another parish in which he had no jurisdiction. It took the Mississippi a week or more to wash the canal of those putrid fish. The levee was restored as good as new, and people there returned to their homes. Dr. Kohnke, although guilty of a very grave offense, has heard no intimation of prosecution; on the contrary, the gratitude of every one. The end justified the means, but it took nerve.

J. A. SAMPSELL, M.D.

West Virginia Fish and Game.

ROMNEY, W. Va., Aug. 3.—*Editor Forest and Stream:* I will endeavor to write you a few notes on our fishing this summer and prospects for hunting this fall. The South Branch has more young bass in it than for the past in years, and some good catches have been made. I have seen four bass that weighed four pounds or over taken in the vicinity of Romney. The bass here have all been so fat from eating locusts, and so many minnows in the river, that they have not been biting very well. There are any number of people camping on the river, and will catch more or less fish, so that as there is practically no protection on our fish, it keeps them pretty well thinned out. With some of our so-called sportsmen who dig and snare them under the ice in the deeper water in winter, the floating of cross ties and pulp wood down the river, and the river being full of large carp, which eat the bass spawn, it is no wonder that this stream is not in good fishing as it was once upon a time.

We now have a club house built on a trout stream four miles and a half above this town. It is an extremely pretty situation, being only a quarter-mile from the river, and has two fine springs a few hundred yards from the club house. They have a natural trout stream for about eight miles, and will only have to build two or three dams to keep it stocked. The stockholders are principally from Wheeling and Pittsburg. In a short distance from the club house they have fine hunting grounds for deer, turkey, pheasants and, in fact, there are some black bear within five miles of the club house.

Our hunting this fall promises to be above the average. Quail are more numerous than for a long time. The winter here being as a rule milder and the snows not staying on the ground as long as usual, the birds did not starve last winter. It will be good shooting here this fall for turkeys, pheasants and quail.

I noticed on our streets the other day one of your contributors, George Beall, who, with his friend favored us with an article in FOREST AND STREAM some time ago entitled "Midst Reef and Rapids." He was on his way with two canoes to the headwaters of this river, to make a trip down it. Am sorry, but the river is now as muddy as it could possibly be, and their trip, as far as fishing goes, will be spoiled. Suppose they will favor us with an account of this canoe cruise.

J. B. BRADY.

To Tell the Weight of a Fish.

CAN you give in the FOREST AND STREAM any table of the weights of fish according to lengths that is reasonably accurate? The reason for this question now is, I slipped down to the river last Sunday morning at 5:30, kindled a fire, boiled coffee and ate a breakfast by moonlight, and just at the break of day I caught a large bass, for this stream. On account of the day I had no chance to weigh the fish, but one of the leading merchants here measured him with a yard stick, and he was just 17½ inches from point of under jaw to end of tail, and no one here can estimate the weight satisfactorily.

FISHERMAN.

The formula given by Mr. J. A. L. Waddell, for determining the weight of fish is this: Weight in pounds is equal to square of girth in inches, multiplied by length in inches and divided by 800. This formula was repeated by Mr. Waddell in our issue of July 26, where it was applied to estimate the weight of a tarpon 6 feet 2 inches in length by 36 inches girth. The square of 36 is 1,296. The length in inches is 74, 1,296 × 74 = 95,904 ÷ 800 = nearly 120 pounds.

Bass in Lake Nipmuck.

HOPEDALE, Mass.—I have been having some good sport with rod and reel at Nipmuck Lake in the town of Mendon, Mass. In three afternoons' fishing I have taken fifteen bass, the largest weighing two pounds. There are three kinds of bass in the lake—"Oswego," small-mouth black bass and rock bass; also yellow perch and pickerel. It is a very pretty little lake, and the electric car company have fitted up a theater, dancing pavilion and restaurant, and have made it quite attractive.

I write this, hoping that some of our brother sportsmen in Boston and Worcester who want a day's outing will try their luck in Lake Nipmuck, as there are some large bass in it.

C. W. ARRAND.

Pennsylvania High Waters.

SAYRE, Pa.—A succession of heavy rains during the past month has reduced the angling situation in the Susquehanna and Chemung rivers to a condition anything but satisfactory. In fact, it is scarcely worth one's while to fish either river at present. Occasionally some unusual turn of luck rewards the angler with a catch of bass or pike which under the most favorable circumstances might be esteemed good, but on the whole the fishing may be declared nil.

M. CHILL.

Canada Fshing Club.

A valued friend and correspondent wishes to join a good Canadian fishing club. A moderate entrance fee and annual dues are essential. Trout or bass fishing, with camping-out opportunities are desired in connection with the advantages of a club, as compared with the average free-for-all fishing resort.

Any friend who can recommend such a club, with particulars, is requested to address M. J., care of the Editor.

To a Trout.

J. J. Montague in Portland Oregonian.

Thou solitary tenant of my creel,
Thou only victim of my feathered hook,
Though "skunked" I scarce could more disgusted feel
Wert thou still swimming in thy native brook.
For thee alone I've walked ten weary miles,
And, what is worse, must walk them back again;
For thee alone I've crawled through stinging brush
And clambered over harsh barb-wire stiles,
Slept troubled slumber in the ice-cold rain,
And soaked myself in grasses all too lush.

And what art thou, thou slim and speckled mite?
Scarce large enough to save thee from the act
That makes it crime for five-inch trout to bite,
A worthy "speckled beauty," for a fact!
Where, tell me where, were all thy sluggard kind,
That I could not inveigle them to rise?
In all the summer season they will find
No more persistent fisherman than I,
No bait more tempting than my high-priced flies,
Yet thou alone art here. Dost thou know why?

And now my tired footsteps must I turn
Along that hilly road that homeward trends,
And spent and footsore, bear with unconcern
The jibes and jeers of all my loving friends.
For once they cast their scornful eyes on thee,
Thou smallest of thy kindergarten school,
They'll take a keen delight to point me out,
For all the mocking, scoffing world to see
As that weak-minded, idiotic fool,
Who fished two days, and only caught one trout.

The Kennel.

Canine Elegies and Epitaphs.

READERS are invited to send for this column any epitaph or elegy of departed dogs of which they may have knowledge. We continue the series from last week:

XVI—Byron's Boatswain.

The inscription on the monument in Newstead Park reads:

Near this Spot
Are Deposited the Remains of One
Who possessed Beauty without Vanity,
Strength without Insolence,
Courage without Ferocity,
And all the Virtues of Man without his Vices.
This Praise, which would be unmeaning Flattery
If inscribed over Human Ashes,
Is but a just Tribute to the Memory of
BOATSWAIN, A DOG,
Who was born at Newfoundland, May, 1803,
And died at Newstead Abbey, Nov. 18, 1808.

EPITAPH.

When some proud son of man returns to earth,
Unknown to glory, but upheld by birth,
The Sculptor's art exhausts the pomp of woe,
And studied urns record who rests below;
When all is done, upon the tomb is seen,
Not what he was, but what he should have been;
But the poor dog, in life the firmest friend,
The first to welcome, foremost to defend,
Whose honest heart is still his master's own,
Who labors, fights, lives, breathes for him alone,
Unhonor'd falls, unnoticed all his worth,
Denied in heaven the soul he held on earth;
Vain man, vain insect! hopes to be forgiven,
And claims himself a sole exclusive heaven.
Oh, man! thou feeble tenant of an hour,
Debased by slavery, or corrupt by power,
Who knows thee well must quit thee with disgust,
Degraded mass of animated dust!
Thy love is lust, thy friendship all a cheat,
Thy smiles hypocrisy, thy words deceit!
By nature vile, ennobled but by name,
Each kindred brute might bid thee blush for shame.
Ye! who perchance behold this simple urn,
Pass on—it honors none you wish to mourn;
To mark a friend's remains these stones arise;
I never knew but one—and here he lies.

XVII—On a Tombstone in Stamford, E g.

Pause, stranger, here; beneath these stones there lay
The dumb companions of a bygone day;
As we life's onward journey still pursue
May we find human friends as staunch, as true!

National Beagle Club of America.

Aug. 11.—At the last meeting of the executive committee of the National Beagle Club of America, the thirteenth annual field trials were ordered to be held in the week commencing Nov. 3, 1902. The place of holding the trials, the judges who will act and the headquarters of the club will be named later after the committee have taken action and reported.

The following are the committees appointed who will have charge of the thirteenth annual trials: Field trial committee—James W. Appleton, New York city; H. D. Bruns, M. D., New Orleans, La.; G. Cadwallader, Philadelphia; John Caswell, Prides Crossing, Mass.; A. H. Higginson, Boston, Mass.; H. S. Joslin, Boston, Mass.; H. T. Peters, Islip, Long Island; George B. Post, Jr., New York city; George F. Reed, Barton, Vt.; W. G. Rockefeller, New York city; William Saxby, Ilion, N. Y.; Charles R. Stevenson, Haddonfield, N. J.; D. F. Summers, Downingtown, Pa.; B. F. Turpin, Roxbury, Mass.; Harry Payne Whitney, Westbury, Long Island; A. J. Purinton, Palmer, Mass.; S. E. Thurston, Mt. Vernon, N. Y.; and Ernest Gill, Baltimore, Md. Committee on grounds—James W. Appleton, William G. Rockefeller and Chas. R. Stevenson. Committee on judges—George F. Reed, A. J. Purinton and William Saxby. Committee on arrangements—Geo. F. Reed, John Caswell and Charles R. Stevenson. Committee on premium list—Jas. W. Appleton, A. J. Purinton and W. G. Rockefeller.

Mr. J. Otho Paget, who will judge beagles at the coming show of the Ladies' Kennel Club, was elected an honorary member of the club.

CHAS. R. STEVENSON, Sec'y,
106 Market St., Camden, N. J.

Massachusetts Kennel Club.

WORCESTER, Mass., Aug. 7.—The Massachusetts Kennel Club is to have its inaugural show in conjunction with the Worcester Agricultural Society Fair, Sept. 1 and 2.

It being the first bench show of the season, large entries are expected, and we have the assurance of many of the best dogs in this part of the country.

The first day is Labor Day, and on the second day President Roosevelt will be present, which assures the club of a large attendance.

The show is held under the American Kennel Club rules.

The list of the judges and the dogs which they are to judge: Foxhounds—Robert M. Perry, Phillipston, Mass. Fox-terriers, wire and smooth—C. W. Keyes, East Pepperell, Mass. St. Bernards, Great Danes, mastiffs, pugs, King Charles, Prince Charles, Blenheims and ruby spaniels—Miss A. H. Whitney, Lancaster, Mass. Greyhounds, pointers, English, Irish and Gordon setters, field spaniels, cocker spaniels, rough-coated collies, English bulldogs, English bull-terriers, French bulldogs, Boston terriers, Airedale terriers, Irish terriers, Scottish terriers, dachshunde, poodles, miscellaneous, and any other kinds—Mr. G. Muss-Arnolt, Tuckahoe, N. Y. Beagles—Arthur D. Fiske, Worcester, Mass.

HERMAN S. HASTINGS, Secretary.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., New York, and not to any individual connected with the paper.

Yachting.

Yachting Fixtures, 1902.

Secretaries and members of race committees will confer a favor by sending notice of errors or omissions in the following list and also changes which may be made in the future.

AUGUST.

15. Penataquit-Corinthian, annual cruise, Bay Shore.
16. Royal Canadian, 30ft. class, Toronto.
16. Shelter Island, open regatta, Shelter Island Heights.
16. Horseshoe Harbor, Y. R. A. of L. I. S., open, Larchmont, Long Island Sound.
16. Huntington, Y.R.A. of L. I. S., open, Huntington, L. I. Sound.
16. Hartford, Y. R. A. of L. I. S., open, Saybrook, L. I. Sound.
16. Hull-Massachusetts, club, Hull, Boston Harbor.
16. Seawanhaka Corinthian, club, race for Centre Island cup, Oyster Bay, Long Island Sound.
16. Duxbury, club, Duxbury, Massachusetts Bay.
16. Winthrop, club, Winthrop, Boston Harbor.
16. Beverly, fourth Corinthian, Monument Beach, Buzzard's Bay.
16. Corinthian, club championship, Marblehead, Mass. Bay.
21. Plymouth, M. Y. R. A., open, Plymouth, Massachusetts Bay.
22. Kingston, M. Y. R. A., open, Kingston, Mass. Bay.
23. Bridgeport, Y. R. A. of L. I. S., open, Bridgeport, L. I. Sound.
23. Hull-Massachusetts, club, Hull, Boston Harbor.
23. Winthrop, club, Winthrop, Boston Harbor.
23. Huguenot, Y. R. A. of L. I. S., open, New Rochelle, Long Island Sound.
23. Royal Canadian, 16ft. class, Toronto.
23. Penataquit-Corinthian, Lighthouse cup, Bay Shore.
23. Shelter Island, ladies' race, Shelter Island Heights.
23. Corinthian, club championship, Marblehead, Mass. Bay.
23. Beverly, fifth Corinthian, Monument Beach, Buzzard's Bay.
23. Wollaston, club, Quincy Bay, Boston Harbor.
23. Seawanhaka Corinthian, club, Oyster Bay, Long Island Sound.
23. South Boston, club handicap, City Point, Boston Harbor.
23. Duxbury, M. Y. R. A., open, Duxbury, Mass. Bay.
23. Marine and Field, Y. R. A. of Gravesend Bay, Sea Gate, New York Bay.
24. Mosquito Fleet, club, City Point, Boston Harbor.
25-26. Wellfleet, M. Y. R. A., open, Wellfleet, Massachusetts Bay.
28-30. Cape Cod, M. Y. R. A., open, Provincetown, Mass. Bay.
30. Winthrop, club, Winthrop, Boston Harbor.
30. Beverly, sixth Corinthian, Monument Beach, Buzzard's Bay.
30. Columbia, race to Waukegan, Lake Michigan.
30. Manhasset Bay, club, Port Washington, Long Island Sound
30. Larchmont, club, Larchmont, Long Island Sound.
30. Atlantic, club, Fire Island and return, New York Bay.
30. Hull-Massachusetts, club, Hull, Boston Harbor.
30. Indian Harbor, Y. R. A. of L. I. S., open, Greenwich, Long Island Sound.
30. Royal Canadian, dinghy and 25ft. classes, Toronto.
30. Kennebec, club, Bath, Maine.
30. Hartford, Y. R. A. of L. I. S., open, Saybrook, L. I. Sound.
30-31. Corinthian, annual cruise, Marblehead, Massachusetts Bay.

For Cruising Yachtsmen.

WITH the purpose of stimulating the interest in cruising, and the keeping of a detailed log by cruising yachtsmen during the season of 1902, the publishers of FOREST AND STREAM offer prizes for the best stories of cruises submitted to be published in FOREST AND STREAM. It is believed that these will form not only entertaining records of pleasant summer days spent afloat along our coasts and waterways, but will furnish information of practical value to other yachtsmen making subsequent cruises on the same waters.

Prizes will be awarded to the three best stories as follows:

First prize, $50.00.
Second prize, $30.00.
Third prize, $20.00.

Contributions are invited under the following conditions:

1. The cruise must be made in waters of the United States or Canada in the season of 1902.

2. The cruise must be made in a sailing yacht, power to be used only as an auxiliary, if at all.

3. The story must be prefaced by a description of the boat. Cruises should be treated in as interesting and readable a way as possible, but should be practical and contain all possible information and data that would be of value to men going over the same route. A description of the handling of the ship in all weathers will be regarded very favorably in making awards, and it is suggested to writers that an accurate account be kept of all incidents happening while under way.

4. An outline chart suitable for reproduction, showing the course taken, must accompany each article. When possible, articles should be accompanied by amateur photographs taken on the cruise, including one of the boat. Good photographs will be considered in making the awards.

5. The story should contain about seven thousand words, written on one side of the paper only, and must be received at the office of the Forest and Stream Publishing Company, 346 Broadway, New York city, on or before Nov. 15, 1902.

Mr. T. C. Zerega has very kindly consented to act as judge and to make the awards.

New York Y. C. Cruise.

RENDEZVOUS, NEW LONDON.

Monday, Aug. 4.

No finer fleet of sailing and steam yachts ever assembled than that which gathered in New London Harbor on Monday, Aug. 4, to journey eastward on the fifty-seventh annual cruise of the New York Y. C.

In an extremely light wind the white-winged pleasure craft drifted into the anchorage at the old Connecticut town until long into the night. At colors upward of 100 craft were moored off the club station No. 4 by the popular Pequot House. Among the best known were the following:

Schooners—Corona, Com. Ledyard; Emerald, W. E. Iselin; Constellation, Francis Skinner, Jr.; Shenandoah, Gibson Fahnestock; Marguerite, Thomas E. Stillman; Quickstep, Edward Shearson; Iroquois, Price Collier; Endymion, E. R. Thomas; Ingomar, Morton F. Plant; Elmina, F. F. Brewster; Muriel, Charles Smithers; Sylph, C. Fabyan Monroe; Katrina, J. B. Ford; Gavalia, T. O'Connor Sloane; Hildegarde, Edward D. Coleman; Chanticleer, George W. Weld; Water Witch, David Banks.

Sloops—Mineola, August Belmont; Rainbow, Cornelius Vanderbilt; Yankee, J. Rogers Maxwell; Neola, George M. Pynchon; Weetamoe H. F. Lippitt; Hester, Cleveland H. Dodge; Eelin, F. L. Rodewald; Cymbra, F. C. Henderson; Eclipse, L. J. Callanan; Queen Mab, L. H. Smith; Ailsa, H. S. Redmond.

Steamers—Colonia, Vice-Com. Frederick G. Bourne; May, Col. Alexander Van Rensselaer; Waturus, Randal Morgan; Intrepid, Lloyd Phœnix; Narada, Harry Walters; Lady Torfrida, Col. R. M. Thompson; Rheclair, Daniel J. Reid; Ariadne, H. W. Putnam, Jr.; Idler, Henry T. Sloane; Tuscarora, Walter Jennings; Roamer, N. G. Herreshoff; Celt, J. Rogers Maxwell; Columbia, James Stillman; Pantooset, Albert S. Bigelow; Anemone, J. Murray Mitchell.

At 5 o'clock P. M., in answer to signals previously displayed, a meeting of the captains was held aboard the flagship Corona, Com. Lewis Cass Ledyard presiding. Enthusiasm ran high and never before in the history of the premier organization were Corinthians more eager for the fray.

Representative captains of the world were there, including such well-known names as Cornelius Vanderbilt, William E. Iselin, S. Nicholson Kane, J. Rogers Maxwell, August Belmont, Jr., Newbury D. Lawton, Edward H. Wales, Vice-Com. Frederick G. Bourne, F. D. Rodewald, Henry W. Putnam, Jr., H. F. Lippitt, Charles Smithers, F. V. Brewster, Gibson Fahnestock, Francis C. Skinner, Jr., Edward R. Coleman, Morton G. Plant, James B. Ford, G. Shearson, E. A. Thomas, Willard P. Ward, George A. Cormack, C. Fabyan Monroe, Anson Phelps Stokes, William M. Ivins, H. B. Duryea, F. C. Henderson, Cleveland H. Dodge and many others.

Several important questions regarding the conduct of the cruise were decided. The owners of the 70-footers, Mineola, Yankee and Rainbow came forth with the plan of carrying club topsails during the squadron runs. The proposition was referred to the Regatta Committee, which decided that the boats should contest in strictly cruising trim. This barred the big sails from all but the race for the Astor cups off Newport on Wednesday, Aug. 6.

It was decided to make the course from Vineyard Haven to Provincetown the same for all classes. This made a run of seventy-nine miles through Pollock Rip, leaving Handkerchief Lightship to port, Shovel Full Lightship to starboard and Pollock Rip Lightship to port. There was some talk of classes A, B, C, G, H and I going out to the whistling buoy nine and a half miles east of Great Round Shoal Lightship, which would make a journey of ninety-five miles to the picturesque town on the tip end of Cape Cod. This plan was abandoned.

On considering the question of time limit to the different runs it was agreed that for those from New London to Newport, Newport to Vineyard Haven, and Provincetown to Marblehead, the time limit should be 10 o'clock P. M., and that no yacht would be timed after that hour. On the run from Vineyard Haven to Provincetown no time limit was set.

A number of special classes were arranged by the Regatta Committee and given out late on the evening of the rendezvous as follows:

Keel Schooners (Class I)—Thistle, Endymion, Shenandoah and Hildegarde.

Special Schooner Class—Shamrock, Katrina, Quickstep and Seneca.

Special Sloop Class—Hester, Eelin, Senta and Queen Mab.

Isolt and Eclipse also decided to run in a special class, as did Cleona and Mermaid. Mira and Hebe were put together, as were the auxiliaries Lady Torfrida, Mohican, Ariadne and Idler.

Special classes were also arranged for keel schooners betwejen 70 and 100ft. waterline, and all under 70ft., and for sloops and schooners in the motor auxiliary classes.

Among the Eastern craft noted in the harbor was the steam yacht Pantooset, belonging to Com. A. S. Bigelow of the Eastern Y. C., which had journeyed around the Cape to do honor to the organization soon to be entertained at Marblehead.

First Squadron Run.

NEW LONDON TO NEWPORT.

Tuesday, Aug. 5.

The first run of the magnificent squadron from New London to Newport, a distance of some forty miles, was characterized by the excellent work of the amateur skippers on board the class D schooner Muriel, and the 70-footer Yankee.

Muriel led the fleet to anchorage and incidentally gave her old rival Elmina a good beating, heading her at the finish by 17m. and 3s. Charles Smithers, the owner of Muriel, was at the tiller of that craft, and the victory came as a fitting tribute to the dogged, sportsmanlike persistence which has characterized his conduct throughout the season.

Yankee, resplendent in a new well-fitting suit of Ratsey sails, was the third boat to end the journey from the rendezvous. J. Rogers Maxwell, Jr., handled the 70-footer, and brought her over the finish line 23m. and 33s. ahead of Mineola, and 26m. and 30s. in front of Rainbow. This victory, too, came as a reward of the "never-say-die" spirit which dominates the owner of the Herreshoff creation.

Rainbow and Mineola had a stubborn luffing match to the southward of Watch Hill, which cost them many minutes.

Com. Lewis Cass Ledyard's schooner Corona was the second craft to finish the run. During the latter part of the contest, when the wind had freshened a bit and was blowing from the southwest, the flagship began to overhaul Muriel, the leading boat. A stern chase is always a long one, and the best Corona could do was to wrest second position from Yankee and get within less than 3m. distance of Muriel.

Corona made the best elapsed time over the course and won in her class, beating the new schooner Chanticleer, belonging to George W. Weld, of Boston, and William E. Iselin's Emerald.

In sloop class I Queen Mab was an easy victor. She had no trouble in defeating the new 60-raters Weetamoe and Neola. The latter, after a poor showing, did not cross the finish line.

Effort, sailed by Addison Hanan, did remarkably well on the run, and gave the other boats in class L a bad drubbing.

There was hardly enough wind for the big schooners Shenandoah and the ocean record-holder Endymion. The former did not finish.

Fifty-two yachts made the journey from New London to Newport. The first signal of the morning from the flagship ordered the yachts to get under way by 9 o'clock A. M.

When the committee boat Navigator reached the starting line, off Sarah's Ledge Buoy, there was hardly a breath of wind blowing. The start was consequently postponed, and not until 10:40 A. M. was the preparatory signal sounded.

Ten minutes later the small sloops were sent away. Saunterer led, followed by Eclipse, Alcatorda, Hebe, Humma, Bonnie Kate, Cleona, Effort, Altair, Yvette, Lotowana, Challenge, Mira and Ondawa in the order named.

At 10:55 the 70-footers and class I craft were sent away. In the former class Yankee got away first, Mineola was second and Rainbow third.

The smaller schooners got the gun at 11 o'clock. Muriel timed the signal well and was first over the line, followed by Gevalia, Elmina, Indra, Quisetta, Amorita, Agatha, Seneca, Shamrock, Quickstep, Ingomar and Katrina.

In going over the line the auxiliary Ariadne came very near hitting the committee boat. The latter was started ahead to avoid a collision. The other classes got away without mishap, the last going over shortly after 11 o'clock.

At the start the yachts had a beat to windward. After a while the breeze freshened and hauled a bit to the southward, allowing sheets to be eased somewhat. The last part of the contest was a close reach to the finish line.

Charles Lane Poor, owner of Mira, protested Hebe and Eidolon for passing inside the whistling buoy off Point class for single-masted vessels and yawls. The summaries follow:

	Start.	Finish	Elapsed.	Corrected.
Schooners.				
Elmina	11 13 36	3 26 04	4 12 28	4 10 44
Muriel	11 10 44	3 24 42	4 13 56	4 12 20
Amorita	11 15 00	3 20 16	4 15 16	4 15 16
Single-masted Vessels and Yawls.				
Ailsa	11 06 03	2 41 38	3 35 35	3 35 35
Mineola	11 14 23	3 03 03	3 48 40	3 39 59
Yankee	11 07 55	2 56 42	3 48 47	3 40 06
Rainbow	11 06 52	2 55 56	3 49 04	3 40 23
Hester	11 09 02	3 28 00	4 18 58	4 02 22
Senta	11 07 57	3 39 54	4 31 57	4 05 35

Second Squadron Run.

NEWPORT TO VINEYARD HAVEN.

Thursday, Aug. 7.

The second squadron run of the cruise, a thirty-seven-mile journey into picturesque Vineyard Sound, was held on Thursday, Aug. 7. The yachts had a fair wind for the greater part of the distance, and fast time was made.

J. Rogers Maxwell's 70-footer Yankee led the fleet of fifty-three boats to the anchorage between East and West Chop. She beat August Belmont's Mineola 2m. and 8s. and Cornelius Vanderbilt's Rainbow 6m. and 55s.

The big schooner Constellation, belonging to Francis Skinner, Jr., of Boston, made the best elapsed time for the thirty-seven miles, doing the distance in 3h. 32m. and 15s., close to the record. She was also a winner in the larger class for schooners.

Elmina defeated Muriel, but by only 8s. The flagship Corona headed class B schooners. Queen Mab was a winner in class I for sloops, Humma in class K and Ondawa in class L. Yawl Ailsa scored a sailover.

The breeze was rather fresh coming up the sound and a number of mishaps resulted. Sloops Ondawa and Isolt carried away their topmasts. Weetamoe again experienced trouble with her steering gear; Endymion had her big main topmast staysail in trouble for a while, and a host of other minor accidents were recorded. C. W. Nason's Isolt ran aground on the shoal running off from West Chop. The boat got off, however, without damage.

The day was one to stir the most sluggish yachting blood to action. The preparatory signal was fired at 9:55. At that time a fine ten-knot breeze was blowing out of the northwest. The air was clear and sparkling and the boats, as they maneuvered for the line, made a picture of unusual animation.

At 10:05 the first of the fleet got away on the seventeen and one-quarter mile leg to Vineyard Sound Lightship. The wind was almost astern and the yachts broke out spinnakers to starboard.

Wahtawah, one of the Buzzard's Bay thirties, sailed by Archibald Rogers, was first over the line. The remainder of the smaller sloops started on this gun.

At 10:10 the signal for the larger sloops was sounded. Ailsa, winner of the Astor cup on the day before, led. She appeared no worse for the bumping received from a poorly managed steam yacht which ran into her while at anchor in Brenton's Cove the night before.

Yankee, Mineola and Rainbow followed the yawl closely, the former going over the line with a huge balloon jib topsail drawing to perfection.

The other yachts were sent away at 5m. intervals, the smaller schooners going first, and the auxiliaries last. All of the fleet were away by 10:40.

After the craft had traveled about five miles the breeze began to back toward the west. Spinnakers were taken in for the time being and, under balloon jib topsails, the racers bowled along at great speed.

The 70-footer Yankee showed a determination to lead from the start and before the lightship was reached had passed Ailsa. On rounding the mark the leading boats were timed as follows: Sloops—Yankee, 11:59:40; Ailsa, 12:01:45; Mineola, 12:03:45; Rainbow, 12:05:15; Neola, 12:09:10; Queen Mab, 12:11:30; Weetamoe, 12:11:30; Humma, 12:12:30. Schooners—Elmina, 12:06:05; Constellation, 12:06:20; Corona, 12:06:45; Muriel, 12:08:45.

On rounding Vineyard Sound Lightship spinnakers were broken out to port for the run to the finish off West Chop, a distance of some twenty-six miles. The wind went into the southwest for good now and the run was dead before it.

The craft presented a scene of indescribable beauty as with booms broad off they proceeded up the sound between Martha's Vineyard on the starboard and the little chain of Elizabeth Islands to port.

About a mile from the finish spinnakers were taken in and the fleet started to reach for the finish line. The wind had by this time increased to about eighteen knots and some of the smaller boats had all they could do to carry sail into the harbor.

The tide was running to the eastward and favorable to the yachts until about 3 o'clock, and this undoubtedly helped the boats materially in making fast time.

Yankee was first to finish. Then came Mineola, Ailsa, Corona, Rainbow, Constellation, Elmina, Muriel, Chanticleer, Hester, Queen Mab, Quisetta, Amorita, Neola and Endymion.

In the following summaries given out by the Regatta Committee, corrected times are not figured

	Start.	Finish.	Elapsed.
Schooners—Class A.			
Constellation	10 22 00	1 54 01	3 32 01
Hildegarde	10 22 00	2 02 11	3 40 11

Eidolon	10 07 00	2 51 00	4 44 00
Alcatorda	10 05 27	3 33 19	5 29 52
Buzzard's Bay Class.			
A., 6	10 07 00	2 56 50	4 49 50
A., 3	10 06 08	2 56 45	4 50 37
A., 0	10 07 00	2 59 30	4 52 30
A., 7	10 06 31	3 00 47	4 54 16
Wahtawah	10 05 18	3 04 13	4 48 55

The winners were Constellation, Corona, Elmina Agatha, Ailsa, Yankee, Hester, Humma, Ondawa, Effort and A., 6. Special classes—Chanticleer beat Hildegarde, Endymion and Shenandoah; Katrina beat Seneca, Shamrock, Quickstep and Ingomar; Hester beat Queen Mab, Caressa and Senta; Eclipse beat Isolt; Hebe beat Mira; auxiliary Ariadne beat Idler, Intrepid and Lady Torfrida.

Third Squadron Run.

VINEYARD HAVEN TO PROVINCETOWN.

Friday, Aug. 8.

The seventy-nine-mile run from Vineyard Haven to Provincetown, on the tip end of Cape Cod, was made on Friday, Aug. 8. With a fair wind and tide the yachts fairly tore through the water in record-breaking time.

Forty craft started in the race, including sixteen sloops, twenty-one schooners and three auxiliaries. The 70-footer Rainbow, owned by Cornelius Vanderbilt, was the first of the fleet to finish. She made the seventy-nine miles in 7h. 2m. and 7s. August Belmont's Mineola was beaten by 2m. and 6s., and J. Rogers Maxwell's Yankee by 3m. and 40s.

Of the schooners, Constellation, belonging to Francis Skinner, Jr., of Boston, covered the distance in 7h. 1m. and 5s., and the flagship Corona, owned by Com. Lewis Cass Ledyard, in 7h. 2m. and 35s.

Once more the two sister schooners, Elmina and Muriel, were at it. The former was victorious by only 2m. and 35s., actual time.

The wind was whistling in a merry way throughout the run. A number of accidents to spars and rigging were recorded, although none of them resulted seriously. Among the mishaps noted were the loss of topmasts on the schooners Shamrock and Mavis.

The Regatta Committee was aboard Col. R. M. Thompson's steam yacht Lady Torfrida. Early in the morning Judith. The schooner Hildegarde also flew a protest flag as she crossed the finish line. The summaries follow:

	Start.	Finish.	Elapsed.
Schooners—Class A.

The winners were Constellation, Corona, Muriel, Indra, Yankee, Queen Mab. Altair, Ondawa, Effort, Saunterer. Special classes—Chanticleer, Seneca, Queen Mab, Isolt and Ariadne.

Race for Astor Cups.

NEWPORT, R. I.

Wednesday, Aug. 6.

In a heavy wind and rough sea the annual struggle for the beautiful cups given by Col. John Jacob Astor took place on Wednesday, Aug. 6. Frederick F. Brewster's Elmina won the trophy for schooners, valued at $1,000, while Henry S. Redmond's 90ft. yawl Ailsa captured the $500 cup for single-masted vessels and yawls.

Three schooners, one yawl and five sloops started the contest. Ailsa being a yawl and racing against sloops, was rated at 93 per cent. of her regular measurement. She had to concede each of the 70-footers, Yankee, Mineola and Rainbow, 8m. and 41s. for the thirty-eight-mile course.

At the finish Ailsa on corrected time was 4m. and 24s. ahead of Mineola, 7s. more in the lead of Yankee, and 4m. and 48s. ahead of Rainbow.

Mineola sailed a good race. She started 7m. and 31s. after Rainbow and 6m. and 28s. after Yankee, yet she outsailed the former 24s. and the latter 7s. actual time.

Elmina's victory in the schooner class was wrested from her old rival Muriel, after the hardest kind of a fight. On corrected time she won by 1m. and 36s. Amorita was defeated by 4m. and 32s.

Astor Cup Day is always a gala one at Newport. Society is afloat for the time being, weather permitting. In spite of the rough conditions encountered in the contests of 1902 a large number of cottagers witnessed the struggle from numerous steam yachts.

The day was replete with accidents, one of which resulted fatally. Schooner Quisetta, Samuel C. Davis, owner, came to the line off Brenton's Reef Lightship for the start. While maneuvering a seaman was swept overboard, and although a life buoy was thrown, the unfortunate sunk before the eyes of his shipmates. After cruising around some time in hopes of finding the body, Quisetta returned to harbor.

A steward aboard Mineola was also washed overboard. At the time the mishap occurred the man fortunately held a capstan bar in his hands. He could not swim, but the wood kept him afloat until a dinghy could be lowered.

The 60-raters Weetamoe and Neola were slated for the event, but did not start. The former deranged her steering gear and during the trouble lost a man overboard. He was, however, quickly recovered. Neola went out to the lightship, but a taste of the weather there sent her to harbor. Her owner, George M. Pynchon, did not considered his chances of the best in the heavy sea running.

At the start of the race the wind was blowing about southeast by south. As the contest progressed it hauled toward the southward, until at the finish it was almost due southwest.

Col. Astor's steam yacht Nourmahal acted as judges' boat, having among others on board, beside her owner, the Regatta Committee, consisting of S. Nicholson Kane, Newbury D. Lawton and Edward H. Wales.

Many of the yachts before leaving the harbor had set club topsails. When the heavy winds of the outside were met, however, these sails were lowerd on all but Yankee.

The preparatory signal was sounded at 11 o'clock A. M. Five minutes later the signal for single-masted vessels and yawls was given.

The course was seventeen and a quarter miles east southeast to the Vineyard Sound Lightship, then four and a half miles north to the Hen and Chickens Lightship, then sixteen and three-quarter miles west, three-quarters north, to the finish off Brenton's Reef Lightship.

Ailsa crossed the line first. Mineola was way to the northeast of the start and did not cross until long after the others. The times and order of the start were: Ailsa, 11:06:03; Rainbow, 11:06:52; Yankee, 11:07:55; Senta, 11:07:57; Hester, 11:09:52; Mineola, 11:14:23.

The schooners were started at 11:10. Muriel crossed the line at 11:10:44; Elmina at 11:13:36, and Amorita at 11:15:00. Soon after they got away the wind started on its journey toward the south. This aided the boats, who were all close hauled, in fetching the first mark of the course, the lightship at the entrance to Vineyard Sound.

Ailsa had established a fine lead on the first leg. The boats gybed around the lightship and set spinnakers to port for the four and a half mile journey to the next mark, which the shifting wind had turned into a run. Times taken at this stage of the contest showed Ailsa had beaten Mineola 4m. and 20s.; Rainbow, 7m. and 11s.; Yankee, 7m. and 33s.; Hester, 13m. and 1s.; Senta, 19m. and 31s. Elmina beat Amorita 1m. and 13s. and Muriel 3m. and 21s.

On the run to the next mark Yankee beat Ailsa 35s., Rainbow 1m., Mineola 1m. and 50s., Senta 6m. and 5s., Hester 7m. and 10s. Amorita did well and gained 5s. on Muriel and 33s. on Elmina.

The next leg was a reach to the finish. A number of the racers set club topsails. Ailsa gained on the others and crossed the line amid a loud cannonading from the assembled fleet of pleasure craft out to see the finish of the race.

On this stretch Ailsa beat Rainbow 5m. and 51s.; Yankee, 6m. and 12s.; Mineola, 7m. and 28s.; Hester, 14m. and 45s.; Senta, 21m. and 29s. In the schooner class Muriel beat Elmina 1m. and 14s., and Amorita 3m. and 4s.

After the race was over August Belmont, owner of Mineola, visited the Regatta Committee and said that no one aboard his craft had heard the preparatory gun or had seen the blue peter set. The committee decided that although Mineola was handicapped at the start, her actual time should be taken. On actual elapsed time Mineola beat the other 70-footers.

Muriel was the first schooner to finish, but Elmina won on time allowance. Ailsa scored the victory in the the flagship Corona signaled the harbor start for 5:30 o'clock. An hour later the race was begun off East Chop Light.

It was an early start, but the yachtsmen were on hand. The signal for small sloops was sounded at 6:30. Eidolon was first over, followed by Humma, Effort, Notos, Mira, Hebe and Altair in the order named. They all went over on the starboard tack with sheets started slightly.

The 60-footer Weetamoe was the first craft to cross on the next signal. Yankee came next, followed by the yawl Caress, Neola, Mineola, Senta, Hester and Rainbow. The Vanderbilt boat crossed 1m. and 25s. astern of Yankee, and 51s. after Mineola.

The small schooners were sent away at 6:40. Agatha was first over, followed by Katrina, Shamrock, Quickstep, Seneca, Quisetta, Amorita, Elmina, Muriel, Gevalia and Indra. Elmina led Muriel by 10s.

The class for larger schooners was the last to leave the Haven. Chanticleer was away first, followed by Corona, Constellation, Emerald, Endymion, Iroquois, Mayflower and Hildegarde, in the order named. The last craft crossed the line just before 7 o'clock.

The course was a close reach to Cross Rip Lightship, twelve and a quarter miles away. Then keeping off a bit, the yachts had another reach of nine and a half miles to Handkerchief Lightship. From here sheets were eased for a freer wind to Shovelful Lightship. A close fetch brought the craft to Pollock Rip Lightship, the next mark on the course. Here booms were eased broad off and spinnakers set for the run toward Highland Light.

All along the course the yachts had been sailing fast. Lee rails were awash nearly all of the time, and, sailing with eased sheets, the white-winged pleasure craft sent clouds of spray into the air as they bowled along to the eastward. It was a real test of seamanship and seagoing qualities, and pleased the Corinthians immensely.

From the first the 70-footer Rainbow did well. She gradually worked by Yankee and Mineola, and was the first of the class to round Cross Rip Lightship. At this mark Corona headed the schooners of the larger class, while Elmina was slightly ahead of Muriel. Here the breeze flattened a bit and working topsails were sent aloft on the sloops, while some of the schooners put up main topmast staysails.

The 70-footers Mineola and Yankee had a luffing match half way between Cross Rip and Handerkerchief Lightships, which put hem quite a little off the course, and allowed Rainbow to increase her lead. Mineola was still ahead of Yankee when they squared away for the lightship.

Schooner Constellation was first to pass the mark. The 70-footer Rainbow was second and the flagship, Corona, third. Elmina headed Muriel by 30s. at this mark.

At Shovelful Lightship the order was nearly the same. Mineola and Yankee were sticking to each other, separated by less than a minute. Elmina gained slightly on Muriel. At Pollock Rip Lightship the boats were still in almost the same order.

Off Nauset the fleet ran into a series of rain and wind squalls which made things decidedly lively while they lasted. As the 70-footers caught it they heeled over to an unusual degree. Mineola and Yankee were sent up into the wind and with difficulty topsails were housed.

The wind was blowing hard as the yachts sped along toward the finish, and the big schooners were down to lower sails only. The whole sweep of the sea as it rolled in from Massachusetts Bay was encountered.

The finish would have been a superb subject for some marine artist. Vice-Com. Frederick G. Bourne's steam yacht, Colonia, acted as judges' boat. At 1:38:53 Rainbow, heeling at a great angle, came tearing across the line. Mineola was but 15s. astern and Yankee 1m. behind Mineola.

The other leading craft ended the long journey in the following order, the seventies on the last part of the race having passed the big schooners: Constellation, Corona, Hildegarde, Chanticleer, Endymion, Emerald, Elmina, Muriel, Hester and Mayflower.

Unless time allowances materially change the order of finishing, Rainbow won the Commodore's cup for single-masted vessels and yawls, and also a trophy offered by Royal Phelps Carroll for the winner in class H. Corona won the Commodore's cup for schooners, and Elmina captured the trophy offered by Cornelius Vanderbilt for the winner in schooner class D. The official summaries follow:

Schooners—Class A.	Start.	Finish.	Elapsed.

Notos	6 32 00	Not timed.	

Last Squadron Run.

PROVINCETOWN TO MARBLEHEAD.

Saturday, Aug. 9.

The last squadron run of thirty-eight and one-half miles from Provincetown to Marblehead was sailed on Saturday, Aug. 9. It was a tedious journey across Massachusetts Bay, many of the fleet not anchoring in Marblehead Harbor until well into the night.

The breeze, when it blew at all, was light. More than half of the time the yachts drifted about with hardly steerage way on. The 70-footer Yankee, sailed by her owner, J. Rogers Maxwell, led the fleet at the finish. She beat Mineola 4m. and 53s. and Rainbow 11m. and 24s.

Elmina was the first of the schooners to end the journey. She beat Muriel 1m. and 21s. and also captured the cup offered by Vice-Com. Frederick G. Bourne, for the schooner making the best time on the run, all sailing in one class with full allowance.

Frederick F. Brewster, owner of Elmina, may justly feel proud of the record made by his craft on the cruise of 1902. Elmina won the $1,000 Astor cup, the Commodore's cup for schooners sailing in one class from Vineyard Haven to Provincetown, the Vice-Commodore's cup, the Navy Challenge cup for the schooner winning the greatest number of runs and the trophy given by Cornelius Vanderbilt to the schooner in class D winning the run from Vineyard Haven to Provincetown. Beside these trophies, Elmina won two first and two second prizes given by the New York Y. C. for the daily runs.

Among the smaller sloops, Effort ended her brilliant record of the week by again crossing the line victorious. All through the cruise this boat has done excellent work under the management of Addison and Wilmer Hanan. In the last race she beat out Mira, her nearest class competitor, by 15m. and 32s.

Effort, with a big time allowance from Yankee, won the Vice-Commodore's cup for the race. She also captured the Navy Challenge cup, going to the sloop winning the greatest number of runs, all sailing in one class. Beside these trophies, Effort got four first prizes for squadron runs.

The 70-footer Rainbow won the cup offered by Royal Phelps Carroll to the winner in class H in the run from Vineyard Haven to Provincetown. Yankee was first in three squadron runs.

The winners in the other classes in the last race were: Constellation, Corona, Agatha, Weetamoe, Humma, Meemer and Ariadne. In the special classes, Chanticleer, Katrina, Hester and Mira. A list of prizes won during the cruise as given out by the Regatta Committee follows:

Schooners, Class A—Constellation, 4 first; Hildegarde, 1 second; Endymion, 2 seconds.

Schooners, Class B—Corona, 4 firsts; Chanticleer, 2 seconds.

Schooners, Class D—Elmina, 2 firsts, 2 seconds; Muriel, 1 first, 2 seconds; Amorita, 1 first.

Schooners, Class F—Agatha, 3 firsts; Indra, 1 first; Mavis, 2 seconds; Gevalia, 1 second.

Sloops, Class H—Yankee, 3 firsts; Rainbow, 1 first.

Sloops, Class I—Hester, 2 firsts; Weetamoe, 1 first, 2 seconds; Queen Mab, 1 first; Neola, 2 seconds.

Sloops, Class J—Humma, 3 firsts, 1 second; Altair, 1 first; Eclipse, 1 second.

Sloops, Class K—Ondawa, 2 firsts; Lotowana, 1 second.

Sloops, Class L—Effort, 4 firsts; Hebe, 3 seconds.

Sloops, Class M—Saunterer, 3 firsts; Cherokee, 3 firsts.

Special classes:

Keel Schooners—Chanticleer, 3 firsts, 1 second; Hildegarde, 1 first, 1 second.

Special Class for Class D—Katrina, 2 firsts, 2 seconds; Seneca, 2 firsts, 1 second.

Sloops, Class I—Hester, 3 firsts, 1 second; Queen Mab, 1 first, 1 second; Seneca, 2 seconds.

Sloops, Class L—Special—Hebe, 2 firsts; Mira, 2 firsts.

Sloops, Class J—Special—Isolt, 1 first; Eclipse, 1 first.

Auxiliaries—Ariadne, 4 firsts; Idler, 2 seconds.

Signals from the flagship Corona early Saturday morning announced that the yachts were to leave harbor at 8:15. The wind was then light but steady, with every indication of holding. The start was made about a mile to the southwest of Wood End Light.

The preparatory signal was sounded at 9:15 o'clock. Ten minutes later the start of the smaller sloops was in order. Effort was first over the line, followed by Meemer, Mira, Altair, Cherokee, Humma and Hebe in the order named.

On the next gun the larger sloops started. Rainbow got away first. Then followed Neola, Hester, Mineola, Yankee, Weetamoe and Caress, the latter two crossing after the handicap gun.

The smaller schooners were sent off at 9:35. Elmina was to the windward and led Muriel by 3s. Quisetta came next, then Katrina and Amorita. Seneca, Agatha, Gevalia, Indra, Mavis and Charmer all went over after the handicap signal.

At 9:40 the big schooners were sent off. Emerald led, followed by Constellation, Corona, Chanticleer, Hildegarde and Endymion.

The wind, which was at first in the westward, began to back after they had been on the journey a bit over an hour and grew much lighter. Around 11 o'clock it died cut altogether.

At that time the boats were in the following order: Effort, Mineola, Rainbow, Hebe, Mira, Hester and Yankee. Elmina was leading the schooners. During the calm the 70-footers drifted close together. A light wind sprang up just before 1 o'clock. Yankee gradually forged ahead and was soon leading boat.

The finish was off Half Way Rock, and the yachts passed the judges' boat in the following order: Yankee, Mineola, Rainbow, Weetamoe, Neola, Elmina, Muriel, Corona, Effort, Hester, Quisetta, Amorita, Mira, Chanticleer, Constellation, Katrina and Emerald.

Com. Ledyard was seen after the squadron had been at anchor some time. He expressed himself as highly pleased with the success of the cruise, and thought it would be one long remembered. In the following summaries, the times of the boats finishing before 9:30 o'clock are given:

Schooners—Class A.	Start.	Finish.	Elapsed.
Constellation	9 42 00	6 52 48	9 10 28
Hildegarde	9 42 00	7 23 23	9 41 23
Endymion	9 42 00	.. .. ..	.. .. ..
Class B.			
Corona	9 42 00	6 23 43	8 41 43
Emerald	9 41 42	6 59 24	9 17 42
Chanticleer	9 42 00	6 42 02	9 00 02
Class D.			
Amorita	9 36 16	6 32 19	8 56 03
Quissetta	9 35 50	6 32 13	8 56 23
Katrina	9 36 04	6 53 30	9 17 26
Muriel	9 35 13	6 20 14	8 45 01
Elmina	9 35 10	6 18 49	8 43 30
Seneca	9 37 00	7 14 02	9 37 02
Class F.			
Agatha	9 37 00	.. .. ..	.. .. ..
Gevalia	9 37 00	.. .. ..	.. .. ..
Mavis	9 37 00	.. .. ..	.. .. ..
Rondina	9 37 00	.. .. ..	.. .. ..
Class H.			
Rainbow	9 30 19	5 49 34	8 19 15
Yankee	9 31 53	5 39 43	8 07 50
Mineola	9 31 16	5 43 59	8 12 43
Class I.			
Hester	9 30 45	6 31 12	9 00 27
Senta	9 31 28	7 28 39	9 57 11
Neola	9 30 20	6 17 00	8 46 40
Weetamoe	9 32 00	6 07 35	8 35 35
Caress	9 32 00	7 13 44	9 41 44
Class J.			
Humma	9 26 25	6 16 02	8 49 37
Altair	9 25 58	.. .. ..	.. .. ..
Class L.			
Effort	9 25 14	6 26 08	9 00 52
Hebe	9 26 30	.. .. ..	.. .. ..
Mira	9 25 31	6 41 55	9 16 24
Class M.			
Cherokee	9 25 29	.. .. ..	.. .. ..
Meemer	9 26 59	7 14 26	9 47 36
Auxiliaries.			
Intrepid	9 25 45	Withdrew.	
Ariadne	9 54 29	.. .. ..	.. .. ..

The winners were Constellation, Corona, Elmina, Agatha, Yankee, Weetamoe, Humma, Effort, Meemer, Ariadne. Special classes: Chanticleer, Katrina, Hester and Mira.

Seawanhaka-Corinthian Y. C.

OYSTER BAY, L. I.

Saturday, Aug. 9.

The sixth race of the series for the Center Island cup for Seawanhaka knockabouts was not sailed on Aug. 9 as scheduled, because the absence of a number of the Corinthians, who had not returned from the recent races with the Beverly Y. C. at Newport.

In its place a special contest was provided, in which Francis G. Stewart's Gowan was victorious. The race was for Seawanhaka knockabouts, over a twelve and three-quarters mile course. The wind was light and hovered between south and west. H. H. Landon's Lucile was the second boat to finish, crossing the line 1m. and 4s. after Gowan. The summaries follow:

Seawanhaka Knockabouts—Start, 3:20.

	Finish.	Elapsed.
Gowan, F. G. Stewart	5 46 05	2 26 05
Lucille, H. H. Landon	5 47 09	2 27 09
Heron, F. R. Coudert, Jr.	5 58 10	2 38 10
Wyntje, Colgate Hoyt	6 04 23	2 44 23

Hempstead Harbor Y. C.

SEA CLIFF, L. I.

The annual regatta of the Hempstead Harbor Y. C., which was scheduled to take place on Saturday, Aug. 9, was called off because of a lack of wind.

It was a contest on the Yacht Racing Association of Long Island Sound series. A good entry was on hand, upward of forty boats being at line for the gun. They waited until 4 o'clock P. M., when the regatta committee signaled "no race." No attempt will be made to hold the regatta this season.

YACHTING NEWS NOTES.

The final regatta and dance of the racing circuit of the Southern Golf Coast Yachting Association, West End, New Orleans, La., was held Saturday, Aug. 9, under the auspices of the Southern Y. C.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., New York, and not to any individual connected with the paper.

Seawanhaka-Corinthian—Beverly Y. C. Races.

Aug. 4, 5 and 6.

The first of a series of three races between boats of the 21ft. restricted class of the Beverly Y. C. of Massachusetts, and the 21ft. raceabouts of the Seawanhaka Corinthian Y. C. of Oyster Bay, L. I., was sailed in Narragansett Bay, off Newport, on Monday, Aug. 4. The contest was won by W. F. Harrison's Quakeress, class champion of the Beverly Y. C. for the past two seasons.

Jolly Roger, owned by T. B. Bleecker, of the Oyster Bay organization, was second; Terrapin, a new Herreshoff creation belonging to L. S. Dabney, of the Beverly Y. C., was third; H. M. Crane's Whistle Wing finished fourth; Indian, owned by J. Rogers Maxwell, Jr., and sailed by Sherman Hoyt, of the Long Island Club, was fifth, and Sylvia, a new Herreshoff boat, owned by S. D. Warren, of the Beverly Y. C., was sixth.

Sylvia took the lead early and was 2m. ahead of her nearest rival, Quakeress, when she lost her bowsprit. This was on the second round of the course. As the series was on points, Sylvia finished the contest.

The course was a leeward and windward one from Bishop's Rock to Dyer's Island and back, twice over, aggregating about twelve miles. The wind was light throughout, hovering between south and west.

Steam yacht Lavrock acted as judges' boat. Messrs. Walter C. Kerr and Daniel Bacon were the officials.

The contest of 1902 between the Seawanhaka-Corinthian and Beverly Y. C., is but the first of three to be sailed in succeeding years for a cup valued at $200, which goes to the organization winning the greatest number of points. On the record of the first day the Beverly Y. C. took first, third and sixth positions, while the Seawanhaka-Corinthians scored second, fourth and fifth places. On points the Buzzards Bay Club was one ahead. The record of the first day follows:

Beverly Y. C.—Quakeress, 6; Terrapin, 4; Sylvia, 1. Total, 11.

Seawanhaka Corinthian Y. C.—Jolly Roger, 5; Whistle Wing, 3; Indian, 2. Total, 10.

The second contest was sailed over a triangular course on Tuesday, Aug. 5. In this the Crowninshield creation, Jolly Roger, was victorious. Quakeress, winner of the first race, held the Seawanhaka boat throughout, and only by clever handling was the raceabout able to win. Indian finished third, Terrapin fourth, and Whistle Wing fifth. Again the Beverly Y. C. boat Sylvia, which started out so well at the beginning of the initial contest, met with a mishap which threw her out of the running. While rounding a mark boat off Conanicut Point she fouled the same, being in fifth position at the time.

Steam yacht Lavrock acted as judges' boat. The start was made off Bishop's Rock in the bay. The course was a beat to Dyer's Island, then a spinnaker run to a stake boat moored off Conanicut Point and a broad reach home. The standing on points at the end of the second contest show the Long Island Club slightly in the lead. The records follow:

Seawanhaka-Corinthian Y. C.—Jolly Roger, 11; Indian, 6; Whistle Wing, 5. Total, 22.

Beverly Y. C.—Quakeress, 11; Terrapin, 7; Sylvia, 1. Total, 19.

The third and last contest was sailed on Wednesday, Aug. 6. The course was a dead beat to windward and return, a distance of six miles, covered twice. There was a good breeze blowing. Quakeress, winner of the initial race, was again victorious. Jolly Roger was second, Indian third, Terrapin fourth, Sylvia fifth and Whistle Wing sixth.

Quakeress got off in the lead and remained in that position until the finish. Although the Beverly boats scored the greatest number of points for the race, the Seawanhaka-Corinthian Y. C. won the series with a total of 32 points against one of 30 for the Beverly Y. C. A record of the three days of racing follows:

Seawanhaka Cor. Y. C.				Beverly Y. C.			
Races:	1	2	3	Races:	1	2	3
Jolly Roger	5	6	5—16	Quakeress	6	5	6—17
Indian	2	4	4—10	Terrapin	4	3	3—10
Whistle Wing	3	2	1— 6—32	Sylvia	1	0	2— 3—30

Sachem's Head Y. C.

SACHEM'S HEAD, N. Y.

Tuesday, Aug. 5.

The third race for points in the series of the Sachem's Head Y. C. was sailed on Tuesday, Aug. 5. The contest of the day was among the Seawanhaka knockabouts. Frances eventually won out only 2s. ahead of Kattywynk. The same time separated Senta and Midge, third and fourth boats respectively. Senta leads in the series with seventeen points. Midge and Gloria are tied for second place with fifteen each. The summaries follow:

Seawanhaka Knockabouts—Start, 10:13.

	Finish.	Elapsed.
Frances, C. G. Lincoln	11 59 18	1 40 18
Kattywynk, J. J. Phelps	11 59 20	1 46 20
Senta, R. C. Mitchell	12 00 23	1 47 23
Midge, W. E. Peck	12 00 25	1 47 25
Gloria, E. C. & R. B. Seward	12 02 06	1 49 06
Ariel, Forbes Hawkes	12 02 59	1 49 59
Thelga, C. B. Clark	12 03 36	1 52 36
Sachem's Head One-Design Class—Start, 10:18.		
Kydart, Elliot	12 23 39	2 05 39
Possum, S. W. Sharp	12 30 03	2 12 03
Chipmunk, J. E. Wayland	12 58 08	2 40 08
Goorhka, J. P. Elton	1 18 00	3 00 00
Dories—Start, 10:23.		
Gretchen, W. H. Deming	11 29 05	1 06 05
Hunky Dory, Thomas Prentice	11 50 25	1 27 25

The winners were Frances, Kydart and Gretchen.

Seawanhaka Fifteen Footers.

The race committee of the Seawanhaka Corinthian Y. C. report that at the meeting of those interested in the proposed class of "Seawanhaka fifteen-footers," held at the clubhouse July 26, the following members agreed to build in the class: Henry C. Rouse, Daniel Bacon, Henry H. Landon, Emlen Roosevelt, C. W. Wetmore, Franklin A. Plummer, Frank J. Gould, Johnston de Forest, William J. Matheson, Colgate Hoyt, James R. Burnett, Frank D. Pavey, Percy K. Hudson, Walter

James, Commodore Alexander Van Rensselaer.

Others, among whom are the Messrs. L. L. Lorillard, Jr., and E. S. Willard, have intimated that they will probably build.

In addition to the above, many members of the Philadelphia Corinthian Y. C. have signified their interest in the class, and it is confidently expected that Commodore Van Rensselaer's order for one of the boats will be only the first of a number to be built for members of that club.

Commodore Robert E. Tod, of the Atlantic Y. C., has signified his interest, and intimated that perhaps the class may become popular in the Atlantic Y. C.

The interest aroused seems to justify proceeding at once with the construction of the boats. Contracts will be signed at once for the construction of these boats already ordered.

Seawanhaka Cup.

Challenger—The Bridgeport Y. C., Bridgeport, Conn. Defender—The Royal St. Lawrence Y. C., Montreal and Dorval, Canada. Conditions of match: Boats not to exceed the 25ft. class under Seawanhaka rule and not to carry more than 500 square feet of sail. General conditions, including scantling restrictions, same as last year. Five races to be sailed if necessary, one alternate triangular and windward and return courses, three races to be won to secure the cup. Crew limit four men, total weight not exceeding 650 pounds.

The Tecumseh selected by the Bridgeport Club as its representative boat, has already been described in FOREST AND STREAM, her superiority over all competitors in the trial races making her selection a foregone conclusion. Built by Jones on Lake Oshkosh, she is a typical scow of the type so successful on the small western lakes. She is not pretty, she is out of place in a fresh breeze and sea, but in light to moderate weather, when it is possible to keep her under delicate control, and sailing at her best angle of heel, she is fast and at times capable of great bursts of speed. The inspection by the judges showed that the builder had honestly lived up to the construction requirements, and she stood the hard pounding in the first and third races without apparent straining.

The defender Trident, the second of two boats built this year, is not a wide departure in general model from the Duggan boats of the last two seasons. Compared with Tecumseh, she is deeper and with flaring sides, giving much more power to carry sail. Trident has a handsome spoon bow. Tecumseh a shovel nose. Trident was originally fitted with three boards—a main center board and one in each bilge set at an angle which made the lee one perpendicular in ordinary sailing. After some trials the main centerboard was discarded and entire reliance placed on the bilge boards. This and nothing more apparently led to a lot of gossip to the effect that the Bridgeport Club would protest against the selection of Trident. No protest was made, however, and it would be difficult to discover grounds for any.

The division of the board is an old expedient, and while the application in Trident was novel for a racer, there is no rule against it, and no practical objection to it.

As usual, the races were managed by three judges, all selected outside the membership of both clubs. The representative of the Bridgeport Y. C. was Mr. Chas. P. Tower, secretary of the Yacht Racing Union of Long Island Sound; for the Royal St. Lawrence Club, Mr. W. Q. Phillips, of the Royal Canadian Y. C., Toronto. The two judges selected Mr. Owain Martin, of the Queen City Y. C., Toronto, who kindly consented to act as the third. The club steamer St. Louis, was used for starting and timing, and Mr. Post, of Ogdensburg, placed his steam yacht Karma at the disposal of the judges for logging the windward courses.

Thursday, Aug. 7.

Both boats being ready, sails were measured in the morning by the judges, the figures being as follows:

Official Measurements.

	Tecumseh.	Trident.
Gaff	15ft. 4½in.	13ft. 3in.
Boom	22ft. 5 in.	24ft. 0in.
Hoist	16ft. 8½in.	16ft. 9in.
Leach	35ft. 0 in.	32ft. 7in.
Throat to clew	26ft. 0½in.	27ft. 2in.
Area mainsail	369 sq. ft.	375 sq. ft.
Area fore triangle	99 sq. ft.	106 sq. ft.
Area spinnaker triangle	202 sq. ft.	202 sq. ft.

Tecumseh being under the limit of working sail allowed, raised her jib and spinnaker halliard blocks and was remeasured, not that it was intended to carry more sail, but it permitted the headsails to be set high if required in light winds.

A toss decided that the first one should be to windward and return. Fortunately, the wind was blowing fairly down the lake, making it easily possible to log two miles clear of all shoals and obstructions. The boats were started at 1.35 with the wind fresh and a choppy sea. Tecumseh had the advantage over the line of both a lead and a weather bearth, but to the astonishment of everyone, Trident simply romped through her lee and in a very few minutes established such a lead as to leave no doubt as to the result except in case of a breakdown. Trident traveled fast, cutting her way cleanly and holding on well with her bilge boards. Tecumseh jumped and pounded, her heel was at times excessive, showing her centerboard, and naturally she neither footed, pointed nor held on with her competitor. She lost four minutes on the windward work, but did far better on the run back, the first round being timed:

Trident .....2 17 35 Tecumseh 2 22 02

The second round was but a repetition of the first. Trident gaining steadily on the wind, some little of it being due to a favorable slant, for, although the wind was brisk, it was not perfectly steady, and the boats were so far apart that slants and shifts counted—always against the Tecumseh, so it seemed. The second round was timed:

Trident .....3 00 45 Tecumseh 3 11 05

When Trident had completed the third and final heat to windward and had set spinnaker for the home stretch, Tecumseh was over a mile to leeward and had not made the weather mark by the time Trident finished the race. There was, in fact, more than the length of the course between them, and as a spectacle the race had long ceased to be interesting. The finish was timed:

Trident .....3 33 21 Tecumseh 3 48 13

[The report of the subsequent races, owing to delay in the mails, had not been received at the time of going to press. Tecumseh won the second race Friday by 1m. 22s. Trident won in Saturday's race; and again on Monday, winning decisively by 5m. 27s. The Oshkosh Y. C. has challenged for next year.]

Tarratine Y. C.

ISLESBORO, ME.

On Thursday, Aug. 7, the first of a series of two races for the 15-footers was sailed. A first and second prizt has been offered by the club, the scoring to be done by a system of points. The course laid out was windward and leeward, to be sailed over twice, and logged seven and one-half knots. The start was made in the middle of the windward leg and was a windward start.

Mr. Forbes' launch Firefly took up her position on the line at 2:30 P. M. and blew the preliminary whistle at 2:35. Five minutes later came the final whistle, and the boats crossed well bunched, Water Rat ahead and Lapwing and Breeze following closely. The wind was light to the south'ard and gave little indications of holding for the afternoon, but had strength enough to keep the boats sailing along fairly well. Water Rat tacked to starboard soon after the start and lost all her wind, Breeze and Lapwing held along well together on the port tack, Lapwing seeming to point higher than Breeze, but not foot as fast. Breeze soon fore-reached her and established a considerable lead. Water Rat was far astern and seemed to be losing. Breeze rounded the outer mark at 3:07:07, followed by Lapwing at 3:11, and Water Rat at 3:14:30; all boats held their booms to port on the run. Breeze gained, if anything, as did Water Rat.

The leeward mark was rounded by Breeze at 3:54; Lapwing at 3:58, and Water Rat at 3:59. Just as Breeze hauled in her sheets for the second beat the wind freshened into a very brisk blow and started the boats along at a good gait. Breeze made long tacks across the harbor, followed by the other boats. She continued to gain, whereas Water Rat lost to Lapwing. Breeze rounded the windward mark for the second time at 4:28:30; Lapwing at 4:36:20, and Water Rat 4:39.

The run was uneventful, except that the wind died down at the end of it, and Water Rat again gained on Lapwing. Breeze hauled around the leeward mark well in the lead, Water Rat and Lapwing being close together. The beat home was slow and fluky work, but fortunately the boats did not alter their positions.

Breeze finished at 5:21:00; Lapwing at 5:30:15 and Water Rat at 5:32:30.

The summary of times follows:

	Finish.	Elapsed.
Breeze, T. Lewis	5 21 00	2 41 00
Lapwing, Kissel	5 30 15	2 50 15
Water Rat, W. Markoe	5 32 30	2 52 30

Saturday, Aug. 9.

The third race in the series for Dr. Derby's cup that has been postponed since last Saturday, was sailed on Aug. 9, at 2:50 P. M. The course was a large triangle three miles to a leg, the first being to windward and the wind at the start light to the south'ard. Shortly after the start, however, it increased to a heavy blow that ran into an ebb tide and kicked up a nasty sea. The starters, Opitsah, Pirate, Raider, Persimmon, Daydream and Peterkin crossed the line in the order named. Pirate was slightly to weather of Opitsah, but did not stay there long and lost what little advantage she had. All were on the starboard tack, but soon flung around to the port. The boats were all getting different puffs and none sailing on equal terms. Peterkin and Daydream tacked to starboard again and headed under the islands, whereas Raider went out into the bay on the port tack, Opitsah, Persimmon and Pirate kept making short tacks dead to windward. The wind suddenly increased to a heavy blow, and Opitsah, Persimmon and Pirate took it first, thus gaining a big lead. Daydream and Peterkin took it next and Raider last. All the fleet but Raider stood out into the bay in hopes of getting the benefit of the strong ebb tide, whereas Raider sought smooth water under the islands. It was an ideal breeze for a race and the conditions made it a splendid thrash to windward. Persimmon passed Pirate and was in hot pursuit of Opitsah, who was, however, too fleet for her in the heavy sea.

Opitsah rounded the windward mark at 3:45:25, followed by Persimmon at 3:45:28, Pirate at 3:46:00; Daydream at 3:48:00; Peterkin at 3:57:32, and Raider at 4:00:57.

The reach to the second leg was one of the fastest ever sailed up here. The wind was quartering, and all the boats had about all they could carry. Pirate gained fast on Persimmon, and it looked as though she would beat her. Peterkin and Raider were far behind. Opitsah rounded the second mark at 4:15:55, Persimmon at 4:14:27; Pirate at 4:14:32, Daydream at 4:16:08. The times of Peterkin and Raider were not taken.

The reach home was also fast, and again Pirate threatened Persimmon. Both gained on Opitsah. Pirate was sailing beautifully and had the leg been a bit longer would have beaten Persimmon.

Opitsah crossed at 4:37:10, Persimmon at 4:38:16; Pirate at 4:38:25; Daydream at 4:40:30. Peterkin did not finish and Raider's time was not taken. The summary, start at 2:50:

	Finish.	Elapsed.
Opitsah, R. H. Daniels	4 37 10	1 47 10
Persimmon, E. Dodge	4 38 16	1 48 16
Pirate, P. Metcalf	4 38 25	1 48 25
Daydream, J. W. Minturn	4 40 30	1 50 30
Peterkin, T. Kissel	Did not finish.	
Raider, R. Derby	Did not finish.	

Great credit is due Opitsah and Pirate for the splendid performances they made in the heavy wind and seaway. Opitsah scored 10 points on the series, Persimmon 7, Pirate 4, Daydream2 and Raider 1.

The score now stands: Persimmon, 28; Opitsah, 19; Peterkin, 10; Daydream, 10; Pirate, 8; Raider, 3.

RICHARD DERBY.

Western Yachts.

Macatawa Meet.

CHICAGO, Ill., Aug. 9.—Misfortune seems to have attended the seventh annual regatta of the Lake Michigan Yachting Association. On day before yesterday something more than half a gale postponed the sailing of the first race of the regatta. The Macatawa Bay Y. C. having a course much more sheltered, on the inner bay, pulled off the first of its events with five starters, among these Macatawa, Raven, Defiance and Problem. The wind was stiff and puffy at the start, 11:21 A. M., and the boats had bad heather of it. Defiance lost her jib on the second leg and withdrew. The fight narrowed down between Raven and Macatawa. Raven had the race at her mercy, when, on the starboard tack close in shore, Macatawa crowded Raven and forced her to leave her course and come about, thereby losing the lead. Macatawa won by 21 seconds. Raven filed a protest, which will probably be sustained.

In the second day's races at Macatawa yesterday, Aug. 8, the bad luck seemed to continue, and the contests practically broke up in a misunderstanding, which amounts to complete confusion. The yacht Klondike was sent to mark out the end of the second leg of the triangular course, the buoy having drifted a mile or more away by reason of the high seas of the night and day before. Klondike held her place as stake boat for a time, her her crew found the sea too rough, and were glad to abandon the spot and get home. As a consequence, all sorts of confusion existed as to the turning point. Some of the boats even turned the old buoy, which had drifted entirely out of its proper position. It could not be said that any race was sailed. The heavy sea caused several accidents, Snipe, Mildred, Red Devil and others getting into trouble. The latter boat sprung a leak and had to be beached.

Among the big ones, Vencedor finished first, La Rita second, Illinois third, Columbia fourth. The race scheduled for to-day is to be sailed, barring accidents, over the triangular course, six miles to the round and twice over.

Among the Macatawas yesterday, Problem was first, Macatawa second, Raven third. Accidents caused others to withdraw from the race.

Third Day at Macatawa.

Aug. 10.—The last day of the regatta of the Lake Michigan Yachting Association was also unsatisfactory, though from causes different from those which worked disaster to the regatta on the first two days. A calm came off and in the regatta only two boats were able to finish within the time limit, 4½ hours. These were Illinois and La Rita, which established superiority enough early in the game to enable them to finish. Illinois had 50m. to spare, but La Rita had a close thing to get in under the time limit, having but 24s. margin.

Macatawa Bay Y. C. had trouble in pulling off its sidewalk races for similar reasons. It was a drifting match throughout. Macatawa won with Raven second. The former boat now has two winnings to its credit on the local cup.

The disputed race of the previous day was allowed by the judges to stand in its earlier unsatisfactory form. There would seem to be little merit in a win where nobody knew where the turning point was stationed. Under the ruling of the judges, Sallie won in the schooner class, Vencedor in class 1 A, Illinois in class 2 A, La Rita in class 3 A, Beatrice in class 2 B, Elinor II. in class 4 A, Snipe in class 4 B.

The following summaries will cover the racing of the meet for the different classes, all the events having been unsatisfactory for reasons above cited.

Class 1A—Start, 10:15.

	Finish.	Allowance.	Corrected.
Vencedor	Did not finish.		
*Sallie	Did not finish.		

Class 2A—Start, 10:10.

Illinois	2 00 00	0 00 35	3 15 00
Kaybosh	Did not finish.		

Class 3A—Start, 10:05.

La Rita	2 34 36	0 05 22	4 24 14
Columbia	Did not finish.		
Nymph	Did not finish.		

Class 2B—Start, 10:10.

Beatrice	Did not finish.
America	Did not finish.

Class 3B—Start, 10:10.

Vixen	Did not finish.

Class 4A—Start, 10:00.

Eleanor II.	Did not finish.
Mildred	Did not finish.
Alpha	Did not finish.
Snipe	Did not finish.
Imp	Did not finish.
Blackbird	Did not finish.
Bacchante	Did not finish.
Zeta	Did not finish.
Vision	Did not finish.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Brooklyn Y. C.

BENSONHURST, L. I.

Saturday, Aug. 9.

Open launch races were held on Saturday, Aug. 9, under the auspices of the Brooklyn Y. C. over courses on Gravesend Bay. The winners in the different classes were Gaviota, Americus, Isabel and Columbia.

It was rather a poor time of year for a large entry and only thirteen starters came to the line. The races were exceedingly well handled, however, and ably illustrated the possibilities of such contests under proper management. The following craft competed:

Launches 15ft. and under—Gaviota, C. P. Rosemon; Zingara, Coburn Brothers; Rain-in-the-Face, T. Hatch.

Launches over 15ft. and not over 20ft.—Americus, A. P. Dunlap; Coyotte, Wells Brothers; Elsie, A. F. Knox; Nemesis, F. D. Maltby.

Launches over 20ft. and not over 25ft.—Isabel, R. M. Haddock; Jean, W. F. P. Feeley; Anna M., F. A. Meyer.

Launches over 30ft.—Columbia, C. H. Pope; Cora, G. Ashton Kay; Mystic, R. P. Leavitt.

The Graef system of handicapping proved satisfactory, the elapsed time in nearly all cases showing about the relative merits of the contestants.

In the arrangement the boats are put in classes according to length, and later beam and horse power are taken into consideration in figuring allowances. The contention is, that beside the evident handicap caused by the difference in horse power, a narrow craft has a distinct advantage over one of greater beam.

The speediest boat in the race was A. P. Dunlap's Americus, winner in the class for launches over 15 and not over 20ft. She was built for speed purposes and is 4ft. 4in. beam, 17ft over all, draws 4in. water and carries a 4 H.P. Palmer engine.

The two smaller classes sailed once over a triangular course, between 4 and 5 miles in extent. The third class covered the distance twice, and the larger boats three times. Actual starting time was taken. The summaries follow:

	Start.	Finish.	Elapsed	Corrected.
Launches—15ft. and Under.				
Gaviota	3 35 20	4 08 53	0 33 23	0 30 38
Zingara	3 35 43	4 15 12	0 38 29	0 32 59
Rain-in-the-Face	3 35 45	4 10 30	0 34 45	0 34 45
Launches—Over 15ft. and Not Over 20ft.				
Americus	3 40 54	4 08 15	0 27 21	0 24 00
Elsie	3 40 28	4 12 34	0 32 06	0 27 25
Coyotte	3 41 11	4 08 38	0 27 27	0 27 27
Nemesis	3 41 00	4 13 49	0 32 49	0 28 34
Launches—Over 20ft. and Not Over 25ft.				
Isabel	3 46 04	4 35 43	0 49 39	0 49 39
Jean	3 45 40	4 44 51	0 59 01	0 50 34
Anna M.	3 46 41	4 46 14	0 59 33	0 53 27
Launches—Over 30ft.				
Columbia	3 56 46	4 59 56	1 03 10	1 01 36
Mystic	3 56 42	5 18 10	1 21 28	1 08 45
Cora	3 55 14	5 13 00	1 17 46	1 10 19

Shelter Island Y. C.

SHELTER ISLAND HEIGHTS.

Saturday, Aug. 9.

The regular club races of the Shelter Island Y. C. on Saturday, Aug. 9, were gratly marred because of an absence of wind. On this account the course for small boats was considerably reduced, one leg of the regular journey being sailed.

Howard Keim's Arrow won in the contest for class R boats, crossing the line nearly a half mile in front of J. N. Lunning's Harp. The latter was disqualified for not rounding one of the marks in the proper manner, and second honors went to San Toy, belonging to Marmon Edson. Psi, Andrew Bancker, owner, was third. Snook, John Weber and Awa, A. W. Cochrane, did not finish.

The disqualification of Harp puts Psi in the lead for the trophies presented by Messrs. Weir, Edson and Brigham for competition in this class.

In sub-class R, Guy Hutchinson's Eelskin won out from much larger rivals, having nearly two minutes the best of the other contestants at the finish. Winniwish, H. N. Schickel, was second, and Duchess, Carl Dickhardt, third. Eelskin now leads in the point contest for the season cup in sub-class R.

The annual regatta of the Shelter Island Y. C., for all classes, occurs on Saturday, Aug. 16. A good entry is expected.

Rifle Range and Gallery.

Willow Rifle and Gun Club.

CHICAGO, Ill., Aug. 9.—The Willow Rifle and Gun Club held its annual picnic and prize shoot on Aug. 3, at Schelle's Grove, Lincoln and Lawrence avenues. The shoot as well as the picnic was the most successful one ever held by any short-range rifle club in the West. The weather was fine, and consequently the picnic was well attended by shooters from all over the city, accompanied by their families and friends. Shooting commenced at 9 A. M. and closed on account of darkness at 7 P. M. Four hundred scores were shot by about fifty shooters for the twenty-two prizes, which consisted of two solid gold medals and twenty merchandise prizes, some of which were a Stevens target pistol, parlor lamp, 100 Peters Ideal shells, hunting knife and sheath, cut-glass ice-water decanter, photo album, etc. The booby prize was a comical doll made of sea weed, which was won by one of the five lady contestants, Miss Roushe.

The first prize, gold medal, was won by Geo. Springsguth with the extraordinarily good score of 74, 73, 73—220.

The second gold medal went to Alf. Rieckhoff with 72, 71, 70—213.

J. W. Grace won third with 72, 68, 67—207. The seven others of the first ten prizes were awarded as follows:

Fourth, W. Wittmeyer, 206; fifth, F. M. Garden, 202; sixth, Chas. Oestreich, 201; seventh, Phil Wagner, 199; eirghth, Nitche, 197; ninth, Von Tesmar, 196; tenth, Klinkert, 193.

The shooting was at 75ft., any .22cal. rifle; lens sights and palm rest not allowed. Target was the target of honor, with a 2in. black and ¼in. bullseye center, ⅛in. rings. Bullseye possible single shot counts 25. Three shots at each target; the best three-shot scores of each shooter to count for prize.

Shooting Committee: Alf. Rieckhoff and S. Fischer.

Trapshooting.

Fixtures.

Aug. 14-15.—Greenville, Pa.—Alexander's second annual trapshooting tournament; $50 average money. John A. McNary, Mgr.

Aug. 14-15.—Greenville, Pa.—Alexander's annual target tournament.

Aug. 14-16.—Hamilton, Can.—Dominion Trapshooting and Game Protective Association's tournament.

Aug. 14-15.—Vicksburg, Miss.—Mississippi and Louisiana Trapshooters' League target tournament. C. W. Walton, Sec'y, Natchez, Miss.

Aug. 16.—Cape May, N. J.—Cape May nine-man team against Philadelphia nine-man team.

Aug. 19.—Holyoke, Mass.—Holyoke Shooting Club's annual tournament. J. R. Blamy, Sec'y.

Aug. 20-21.—Kane, Pa.—Kane Sportsmen's Club's amateur target tournament.

Aug. 20-21.—Ossining, N. Y.—Two days' shoot of the Ossining Gun Club; first day handicap (100 targets, 14 to 21yds. rise, open to all) and R. I. clam bake; second day, regular programme.

Aug. 20-21.—Rensselaer, Ind.—Rensselaer Gun Club's tournament. C. E. Hershman, Sec'y.

Aug. 21-22.—Milton, Pa.—Two days' tournament of the Milton Rod and Gun Club. G. Dal Fox, Pres.

Aug. 23.—Chicago, Ill.—First annual tournament of the Chicago Gun Club. G. V. Weart, Sec'y.

Aug. 23.—Westwood, N. J.—Tournament and clam bake of the Westwood Gun Club. E. L. Greenin, Sec'y.

Aug. 26-27.—Peru, Ind.—Peru Gun Club's sixth annual midsummer tournament, at Bass Lake. Frank Dunbar, Sec'y.

Aug. 26-29.—Okoboji, Ia.—Amateur shooting tournament, under management of Messrs. C. W. Budd and E. C. Hinshaw.

Aug. 27-28.—Haverhill, Mass.—The Interstate Association's tournament, under the auspices of the Haverhill Gun Club. S. G. Miller, Sec'y.

Aug. 27-28.—Ruffsdale, Pa.—Ruffsdale Rod and Gun Club's first annual two-day target tournament. Added money, $30. Rose system. Lloyd H. Ruff, Sec'y.

Aug. 30.—Watertown, Mass.—First all-day open tournament of the Watertown Gun Club. Chas. H. Philbrook, Acting Sec'y.

Aug. 29.—Pleasant Hill, Mo.—Sixth annual merchandise and sweepstake tourney. T. H. Cohron, Sec'y.

Aug. 30.—Watertown, Mass.—All-day tournament of the Watertown Gun Club.

Sept. 1.—Edgewater, N. J.—North River Gun Club's handicap at 100 targets, $6 entrance, for new piano.

DRIVERS AND TWISTERS.

The programme of the Milton, Pa., Rod and Gun Club's grand tournament at targets and live birds, Aug. 21 and 22, has ten target events, 10, 15 and 20 targets, on the first day, of which No. 7 is a merchandise event, with thirty-two prizes; 15 targets, entrance $1; No. 8 is at 15 targets, $2 entrance, unknown prizes, exceeding entrance fee in amount. On the second day three of the eight events are at live birds, each of which is at 7 birds, respectively $2.50, $3 and $5 entrance. The programme presents other information as follows: "Each day shoot to begin at 9 A. M. Shooting to be done over a new magautrap, Sergeant rapid-fire system. All ties in sweepstakes will be divided. Expert and paid shooters can shoot for price of targets only. All moneys divided in three purses—50, 30 and 20. One and one-half cents will be charged for targets on all sweepstake events, included in entrance fee. Dead birds will belong to the shooter. Grounds situated east of city, at Rangler's Park. Club house and covered stands. Hacks will be run from the Riverside Hotel, and will meet all trains. Refreshments and loaded shells for sale on grounds. Guns and ammunition sent by express to G. Dal Fox & Bro., will be delivered on the grounds free. The shoot will take place rain or shine."

The programme of the Interstate Association's trapshooting tournament, given for the Nappanee, Ind., Gun Club, Sept. 3 and 4, has ten events each day, alternately 15 and 20 targets, $1.50 and $2 entrance, $5 added to the 20-target events. Lunch will be served on the grounds. Targets, 2 cents. Rose system, ratios 5, 4, 3, 2. Guns and ammunition marked with owner's name, forwarded to Carpenter & Hamblin, Nappanee, Ind., will be delivered on the grounds free. The Nappanee Gun Club will give $50 average money, divided as follows: $10 to the manufacturers' agent making highest average, and $5 to the manufacturer's agent making second highest average; $10 to the amateur making highest average, and $10 to the amateur making second highest average; $5 to each of the three lowest averages. To participate in division of average money the entire programme must be shot both days. Free 'bus leaves the hotel for the grounds in time for the shooting, which commences at 9 o'clock. Mr. Ed. J. Bowers is the secretary.

Mr. L. B. Fleming, secretary, writes us as follows: "The weekly prize shoot of the Cape May, N. J., Gun Club, held to-day, Aug. 9, was won by L. B. Fleming with a total of 45 out of 50 bluerocks. J. W. Harvey was second with 44 and Barr third with 43. On Saturday, Aug. 16, beginning at 10 A. M., the Cape May Gun Club will contest against Philadelphia shooters in a team race of eight men on a side. Invitations have been sent to the shooters of Baltimore, Trenton and New York, and a large crowd is expected. During the day sweepstakes will be shot, which are open to all. The Cape May Gun Club will offer several fine prizes, to be given the shooters making the highest average for the day. All shooters are cordially invited to attend. First class loaded shells for sale on the grounds. Ship shells care of the Cape May Gun Club."

The Wanderers, an informal body of New York city shooters which recently banded together on lines first suggested by Capt. A. W. Money, has great opportunities and possibilities for the good of trapshooting if it follows the principle it first declared prospectively. This was simply to promote trapshooting and good fellowship by going in a body to one club ground after another in successive weeks, thus insuring a good shoot at one club or another each week. To this, however, from their active beginning was added a policy of financial profit to the body. The prospectus and practice were widely different. As there is a possibility that the Wanderers in the near future may adopt a policy of sport instead of a policy of bargaining and profit, we suspend judgment for the time being.

The sixth annual merchandise and sweepstake tournament of the Pleasant Hill, Mo., Colored Gun Club, to be held on Aug. 29, has ten sweepstake events on its programme, alternately 10 and 15 targets, 75 cents and $1 entrance respectively. High average prizes; first, $5; second, $3.50; third, $2.50; fourth, $1, and a merchandise prize to low gun competing in all the events. Percentage system of moneys in 15-targets events; Rose system in 10-target events. The merchandise events are six in number, all useful in the matter of prizes. The management extends an invitation to white shooters, for whom an extra set of traps will be provided. Much credit is due the management for its earnest work and broad purpose to advance and uplift its people.

The programme of the Indians' fourth annual tournament and pow wow, Sept. 9 to 12, Battle Creek, Mich., provides twelve events each day—eight at 15 and four at 20 targets, $1.50 and $2 entrance. Cash, $900 added. Shooting commences at 9 o'clock. The Sergeant system will be used. Purses divided, 40, 30, 20 and 10 per cent. in 15-target events; 30, 25, 20, 15 and 10 per cent. in the 20-target events. Ship shells to Mr. John Parker, Battle Creek. For programmes and information concerning this tournament, address Mr. C. W. Budd, Des Moines, Ia. There are ten cash prizes for the ten high guns for the four days, as follows: $20, $15, $12.50, $10, $10, $8, $7.50, $7, $5, $5. All sportsmen are invited.

The Pawtuxet, R. I., Gun Club, recently finished the series of twelve contests for silver spoons. The best six scores were to count. There were eight prizes, won as follows: First, W. H. Sheldon, 123 out of 150; second and third, J. Armstrong, Jr., and Dr. Inman, 120; fourth, F. Sherman, 118; fifth, W. Stainton, 116; sixth, J. Willis, 113; seventh, Ray Sheldon, twelve years old, 95; eighth, W. Monteith, 78. The Kent County Championship trophy was won by Dr. Hammond, one of the best shots of Rhode Island. Mr. Barstow, who tied him, was incligible.

The list of merchandise prizes to be awarded at the Interstate Association's trapshooting tournament, given for the Brunswick Gun Club, Aug. 13 and 14, is varied and valuable. There also are high average prizes for each day. Competitors will be divided in Classes A, B and C, respectively 90 per cent. or better, 80 to 90 per cent., and Class C will include all others. Distances, 22, 19 and 16 yards. Entrance fee $1, re-entries unlimited, high guns. The committee on prizes is Messrs. Geo. B. Webber, Oscar B. Nason and Samuel Whitmore.

The programme of the Rensselaer, Ind., Gun Club's first annual tournament, Aug. 20 and 21, provides fifteen events the first day, fourteen on the second day, a total of 200 targets, $20 entrance each day. Three moneys, 50, 30 and 20 per cent. Shooting commences at 9 o'clock. The gold medal contest is open to residents of Jasper, Pulaski and White counties. Targets 2 cents. All shoot from the 16yd. mark. All known 90 per cent. men barred. Loaded shells can be obtained on the grounds.

Mr. L. W. Graves, secretary, North Adams, Mass., under date of Aug. 11, writes us as follows: "We have started a club here under the name of North Adams Gun Club. The officers are: President, Mr. E. H. Pratt; Vice-President, Mr. Albert Hawkins; Secretary, Mr. L. W. Graves; Treasurer, Mr. F. J. McHale; Captain Trap Team, Mr. A. J. Adams; Captain Rifle Team, Mr. Chas. Hamel. We have secured good grounds, and have three traps set and a 200yd. rifle range."

Mr. John M. Lilly, of Indianapolis, Ind., writes us as follows: "After an extensive correspondence with the prominent shooters throughout the country, we have decided to make the fees for admission to the National Gun Club, for charter members, as follows: Membership, initiation and dues to and including Dec. 31, 1903, $2; annual dues after that date, $1."

Mr. Everett Brown, of Pleasant Grove, Ind., writes us as follows: "I wish to notify the trapshooters that we have organized a gun club at Rensselaer, Ind., with twenty-nine members. The club is doing well, and I think we will have forty members in a short time. I send you programme of shoot, to be held on Aug. 20 and 21."

The Hell Gate Gun Club Annex, the target shooting contingent of the Hell Gate Gun Club, held its first shoot at Dexter Park, Brooklyn, L. I., on Friday of last week. Nearly all the events were team races. The regular shooting days of the Annex are the second Friday of each month, excepting July and December.

Mr. J. T. Atkinson was high average on each day of the Interstate Association's two-day tournament, given for the Columbian Gun Club, of Marietta, O. He scored 181 out of a possible 190 on the first day, and 177 out of a possible 190 on the second day, a fraction over 94 per cent. for the total of the two days.

The Baltimore, Md., Shooting Association contemplates giving an open shoot in September next, the date of which will be announced later. The main contest will be for a cup, open to all. The average system of handicapping will be used.

On the first day of the Burmister and Klein tournament, Mr. Fred Gilbert broke 200 straight, the total of the entire programme. On the second day he lost 9 out of 200; thus he scored 391 out of 400 for the two days, a total of .977 per cent.

Mr. C. F. Lambert, of Lynn, Mass., contemplates a change of domicile to Syracuse, N. Y., some time the latter part of this year. No doubt he will imbue that section with the trapshooting enthusiasm for which he is noted.

On Sept. 1, Labor Day, the North River Gun Club, of Edgewater, N. J., will hold a handicap at 100 targets, $6 entrance, targets included, for a new piano.

BERNARD WATERS.

Cincinnati Gun Club.

CINCINNATI, O., Aug. 2.—Two matches were shot on Friday, Aug. 1. Herman and Geo. Osterfeld shot a race at 60 targets for a private stake; George managed to win out with his handicap of 20 added targets. George's in-and-out scores are the result of using three different guns.

The race between Herman Osterfeld and Van Ness was interesting all the way through. It was a tie at the 87th round, when Van came to grief on his favorite target, a straightaway, and missed two more of the same kind before his string was finished. Van says 83 is no good, but if he shoots on these grounds he will find out it will win more than lose at 18yds., barring experts, and some of those have their troubles.

Hood Waters paid us a visit Saturday, and though he did not break 'em all, he landed on top in the medal race, but stood at 16yds. Cincy is always glad to see the experts, and no one more than the Superintendent. Come, see us again, Hood.

The sixteenth contest for the C. G. C. cash prize. The scores: Waters (16) 44, Roll (17) 43, Harris (17) 42, Coleman (18) 39, E. Trimble (18) 39, R. Trimble (20) 39, Van Ness (18) 39, Peters (18) 39, Gambell (18) 38, Hoosier (18) 37, Smith (18) 36, Butts (17) 36, Du Bray (17) 36, Falk (17) 35, Heyl (17) 35, Herman (17) 33, J. B. (17) 30, Boyd (16) 29, Ahlers (18) 28, Braig (16) 27, Jack (16) 26, Corry (17) 26, Brown (16) 25, Anderson (16) 24.

Fifty targets, two high guns, 18yds.: Gambell 43, Peters 41, Coleman 39, Roll 39, Van Ness 35.

Aug. 1.—Match race, 100 targets, $10 a side, 18yds.: H. Osterfeld 83, Van Ness 80.

Match race, 60 targets, 18yds., handicap added targets: H. Osterfeld 50, Geo. Osterfeld (20) 53.

Birch Brook Gun Club.

LYNN, Mass.—There are only three more shoots in the Birch Brook Gun Club series, and in just what order the five highest will finish is not easy to guess. At the shoot Aug. 9 some bettered the totals of their eight shoots, and some did not. Hebbard was high man in merchandise, with Straw a close second.

Events:	1	2	3	4	5	6	7	8	9	10	11
Targets:	30	50	10	10	10	5p	10	10	10	15	10
Straw, 17	23	39	9	8	7	7	9	7	..	12	..
Rand, 17	21	36	9	..	..	..	..	..	..	..	..
Hebbard, 18	24	42	8	..	6	..	7	7	9	..	..
Dudley, 16	20	35	4	..	4	7	8	..	4	..	..
Yelmah, 16	12	..	5	6	5	..	2	..	..	..	..

Rowe, 18	18	32	8	..	5	2	5	..	6	..	4
Mose, 16	..	..	..	5	..	..	..	..	..	..	..
Stevens, 16	..	..	..	6	..	..	..	..	..	..	..
Riley, 16	..	..	..	..	..	..	..	..	8	..	12

No. 1 is handicap distance; No. 2, merchandise; No. 3, medal.

HENRY ROOD, Sec'y.

Ossining Gun Club.

OSSINING, N. Y.—Herewith please find scores of the Ossining Gun Club, made at the regular weekly shoot, Saturday, Aug. 9. That the time for the bake and big handicap of this club, Aug. 20-21, is drawing near has been brought to our mind by the arrival of several boxes of ammunition. The merchandise shoot on the second day is taking on big proportions, about twenty prizes having been received to date, with more to come:

Events:	1	2	3	4	5	6	7	8	9
Targets:	10	10	10	5p	10	10	10	10	5p
W Henry	3	7	4	7	10	8	8	6	8
J C Barlow	9	7	8	6	8	7	6	6	8
C G Blandford	10	..	10	8	9	9	9	10	..
A Bedell	..	..	..	..	10	8	10	6	..
E Becker	..	..	..	..	9	10	6	9	..

The striped bass fishing here is fine, plenty of large messes have been caught. Thursday of last week the best catches were by B. F. Kipp 29, J. Terwilliger 31, Chas. Washburn 23, ranging in size from ½ to 4½lbs.

C. C. B.

Baltimore Shooting Association.

BALTIMORE, Md., Aug. 9.—The attendance at the Baltimore Shooting Association to-day was slim. The scores were not up to the usual standard.

In the club race, under the new handicap system, Edwards and Biddle made clean scores of 50 with their extra target allowance. E. H. Storr made high score in the open events, breaking 93 out of a possible 100. Scores:

Targets:	10	15	10	15	*	50	Targets:	10	15	10	15	*	50
Edwards	8	12	6	12	16	50	Biddle	10	8	7	12	15	50
Chew	8	14	8	14	7	46	Storr	9	13	9	15	..	47
Jones	5	13	..	..	16	46	Street	8	11	10	12	..	..
Roberts	5	10	..	12	17	44							

* Allowance.

Cheapeake Gun Club.

NEWPORT NEWS, Va., Aug. 6.—Mr. G. B. James won the gold watch fob which was given by Mr. Harry Westacott as a trophy to be shot for by the members of the Chesapeake Gun Club. He won the trophy with the excellent score of 90 out of 100. Mr. Thomas F. Stearnes was second with 86.

Each contestant was allowed 100 targets, the largest number in any shoot ever held here. Some remarkably good scores were made. A large number was on hand to witness the shooting.

Mr. E. S. Robinson, one of the best shots in the club, who was expected to shoot, was unable to attend.

Following are the records of the seven trapshooters who competed for the prize: G. B. James 90, T. F. Stearnes 86, Dr. Charles 80, W. K. Stow 80, B. B. Semmes 79, H. Westacott 70, F. Palmer 68.

Shooting on the Water.

THE Beardstown, Ill., Gun Club gave another of its unique floating tournaments on the Illinois River, Aug. 7. The fact that a good crowd can always be depended on shows how popular this plan of tournament is with those who have once tried it. To-day there were in all forty participants. The day was clear and cool, but a gale blew steadily so hard as to make accurate shooting impossible. Scores follow:

Events:	1	2	3	4	5	6	7	8	9	10	11

WESTERN TRAPS.

Chicago Gun Club Tournament.

CHICAGO, Ill., Aug. 9.—The Chicago Gun Club, of this city, will give its first annual tournament on Aug. 23, and the event ought to be one of general reunion to all the local shooters and many who do not live in this city. We have, for obvious reasons, had a very dull season in trapshooting, and it is pleasing to believe that this little event will liven things up a bit for a time. There will be two sets of traps, targets 2 cents. The tournament is open to all, except that professionals and manufacturers' agents shoot for birds only. The purses will be Rose system; $5 goes for high average, $3 for second, and $2 for lowest average to all programme shooters. To reach the club grounds of Chicago Gun Club, take Wentworth avenue cars to Seventy-ninth street and Wentworth avenue. This event will be targets only, twelve events of 10, 15 and 20 birds each. G. V. Weart, secretary, 115 Dearborn street, Chicago.

Tom Marshall for Congress.

Advices are received from Monmouth, Ill., bearing date of Aug. 8, that Thomas A. Marshall, the well-known trapshooter and immemorial mayor of Keithsburg, Ill., has been nominated by the democrats of the 14th Congressional district as candidate for Congress. Mr. Marshall's great popularity in lower Illinois ought to be of great service to him if he really cares to go to Congress. Hitherto Tom has borne a very good reputation. If live-bird shooting were not forbidden in this neck of woods I doubt if he would have time left to run for Congress.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Garfield Gun Club.

Chicago, Aug. 9.—The appended scores were made on our grounds to-day on the occasion of the first trophy shoot of third series. In the trophy event Dr. Meek and T. W. Eaton tied on 24 each. Eaton won on shoot-off only by breaking 20 straight, Dr. Meek 19. McDonald won Class B trophy on 23, and Eldred Class C on 21.

The trophy shoot was immediately followed by a shoot at 15 singles and 5 pairs for the club cup, an elegant silver cup, gold lined, valued at $75. This was shot on a distance handicap, from 14 to 18yds., and was won by Dr. Meek from 18yd. mark on a score of 21. Rupel, a visitor, tied the score. The club cup shoot will be a regular feature of our shoots hereafter. A small entrance fee will be charged each contestant:

First trophy shoot, 25 targets:

Young	..	..	8	14	15	..	..
Antoine	..	..	..	13	15	..	..
C Von Lengerke	..	..	..	18	12	..	..

Nos. 1, 2 and 3 were at 10 targets each, 50 cents entrance; Nos. 4 and 5 were at 20 targets each, entrance $1; No. 6 was at 25 targets, entrance $1.50; No. 7 was at 15 targets, $1.

RAVELRIGG.

Interstate Tournament at Marietta.

MARIETTA, O., Aug. 9.—The Interstate Association tournament given at Marietta, O., Aug. 6 and 7, under the auspices of the Columbian Gun Club, was a most successful affair. Something over thirty shooters, but three of whom were manufacturers' agents, took part in the tournament. There was not a hitch of any sort, and everything went like clock-work from beginning to end. The cashier's office was in charge of Mr. W. M. Bryant, of Elwood City, Pa., and ten minutes after the close of the last event he was ready to pay off the different winners.

The Columbian Gun Club is one of the oldest organizations of the kind in the State of Ohio, is composed of first-class, genial sportsmen, and is represented by the following officers: Peter Schlicher, Jr., President; J. M. Loffland, Vice-President; Charles Bailey, Secretary-Treasurer, and George L. Alford, Captain.

The club house and shooting grounds are situated on the Fair grounds, overlooking the Muskingum River, and surrounded by beautiful trees, affording, as they do, shade for all who attend the tournaments. The grounds being but ten minutes' ride from the heart of the city, are easily accessible by trolley lines.

Shooters were present from different sections of the country. All expressed themselves as highly satisfied with the treatment which the local boys accorded them.

The opening day was an ideal one for shooting, with the exception of two showers of rain, which delayed the competition for a short time. J. T. Atkinson made high average for the day, with E. M. Stout second, and T. H. Bibbee third.

The second day, like the preceding one, was a fine one for making good scores, yet for some reason the scores did not rank high; this was especially the case with the manufacturers' agents, and caused them to receive some good-natured "joshing." Atkinson was again high man for the day, with Schlicher and Bower tied for second place, and Stout and Lang tied for third place. The scores of both days follow:

Aug. 6, First Day.

Chesapeake Gun Club.

NEWPORT NEWS, Va.—Although it poured down rain all yesterday afternoon, the Chesapeake Gun Club held its weekly shoot July 30. Some good shooting was done, although only a small number of shooters were present. The scores were as follows:

Events:	1	2	3	4	Events:	1	2	3	4
T F Stearnes	24	21	24	22	H D Turner	11	15	..	..
B B Semmes	20	21	20	21	J De Pass	17	12	..	..
G B James	22	20	23	19					

F. F. S.

IN NEW JERSEY.

Jackson Gun Club.

Paterson, N. J., Aug. 9.—In event 9 each contestant shot a strange gun. Several members of the Wanderers were visitors. The latter held an informal meeting, and elected a board of Governors. The scores follow:

Events:	1	2	3	4	5	6	7	8	9	10

Twenty-five target handicap for a Powers brass cleaning rod, presented to the club by Henry Krug; entrance 25 cents. All money went to club: E. B. Smith (8) 17, F. Buttler 21, Chas. Sedore (6) 25, G. Dodds (4) 21, H. Brinkerhoff (9) 22, Con. Sedore (6) 25, H. Krug (5) 25, L. Lambrix (5) 19, C. D. Williamson (9) 18, R. McLees (4) 21.

Shoot-off, miss-and-out: Chas. Sedore 1, Con Sedore 0, H. Krug 0.

Winchester Gun Club.

DETROIT, Mich.—The regular shoot, Aug. 9, was much enjoyed by the members present, and the goodly number of visitors, among the latter being old Mr. Osmun, of Pontiac, who did his first event of 15 straight. Maybe his forty years of shooting has helped to keep him strong and affable as he is and pleasant to meet.

In the club event of 25 targets, in spite of that killer of good scores losing the first, Henry Guthard, Class B, ran 23 straight and missed his last. If he hadn't dropped the first he surely would have got the last, and no one would be more welcome to the silver cup. Shiell won in Class A with 22, and Ford in Class C with 18. Following are the scores:

Events:	1	2	3	4	5	6	7	8	9	10	11
Targets:	10	10	10	15	10	15	15	15	25	25	25

Calow	..	..	..	11	9	..	..	..	12	9	..

Dover Sportsmen's Association.

DOVER, N. H.—The soft west wind that blew over Gage's Hill, the white clouds in the eastern sky, interspersed with great splashes of blue, made an ideal day for shooting at targets at the grounds of the Dover Sportsmen's Association, Aug. 9.

That the contestants enjoyed the meeting and were satisfied with the results of their efforts, go without the saying.

To the surprise of all, little Dixey alighted from somewhere with her flying machine, dismounted and advanced to the firing line, smashed the first two objects of art into the dust whence they came, although she modestly said that she could not hit "a flight of barns." Then her good man Charlie, not to be outdone by his spouse, advanced alone with sangfroid, drove the broken pottery in minute fragments to settle amid the luxuriant grasses that grow at the foot of Gage's Hill.

Frank blew his horn, challenged the best among us. Captain Nat advanced to the contest, and although he did not win, he had a good run for his money. One cannot win when the other fellow is selfish enough to break them all—15 straight.

The summary—well, that is immaterial—we found what we sought—social converse, health and pastime.

D. W. H.

Bristol Gun Club.

BRISTOL, Conn., Aug. 6.—At the weekly shoot of this club held on Saturday, Aug. 2, the following from the Colt Gun Club, of Hartford, were present and participated: R. Hollister, L. Hubbell, R. McFetridge, S. Colt and J. Alger.

Scores, 50 targets per man: A. F. Rockwell 47, H. J. Mills 45, R. McFetridge 44, J. Alger 41, W. Moran 41, R. Hollister 40, F. L. Fairbanks 36, S. Colt 34, E. R. Simons 34, L. Hubbell 33, S. J. Large 33, H. J. Hart 29, A. H. Porter 28, W. Casey 27, E. R. Burwell 23, W. H. Merritt 19.

R. McFetridge broke his last 25 birds straight. There will be no club shoot this week, as all members are invited to attend the Colt Gun Club shoot in Hartford. There is quite a friendly rivalry existing between these two clubs, and no doubt some interesting matches may result before the season closes.

DUKE.

Lafayette Tournament.

LAFAYETTE, Ind., has been noted for many years for its large well-conducted tournaments. They are ever popular with the State shooters and also draw from all the adjoining States.

This year is memorable as being that in which was held the sixteenth annual tournament. It drew shooters from Illinois, Kentucky and Ohio. There has been a great deal of shooting in Indiana this year, yet the shooters do not seem to tire. They were here from almost all the towns in the State. In all, there were over sixty shooters present, yet I am sorry to mention that a number of those who came on the first day shot in a few events only and then sought early trains for home. This can be accounted for in this way: there was a strong wind facing the shooters, and the targets were quite uncertain in their flights. Then the traps were screwed up so that the targets were alighting in the next township, and as the boys could not get in the money, they declined to shoot.

The dates were Aug. 6 and 7.

The rules provided for the Sergeant system, American Association rules, revised. What the revised rules were was hard to find out. Part of the time the Interstate rules were used, and a part of the time the old American rules governed.

The grounds are first class. They face to the northeast and are situated quite near the street car line. There is nothing elaborate in the way of club house and amphitheater such as the old grounds were provided with, yet the small club house was ample for office work. There was a large tent provided for the shooters, with tables and benches.

The club has not a large actual membership such as it once had, but the same men are at the head, as they have been for about ten years, viz.: M. W. Thompson, President; Dr. J. W. Mullen, Vice-President; Jas. Blistain, Secretary; Louis Krauss, Treasurer; Alva Livinguth, Captain. Of these, Krauss and Mullen have given up shooting, owing to imperfect vision, but Thompson, Blistain and Livinguth are the same old target smashers of yore. They shot in every event. Blistain also kept the books, yet he made a few straight scores just to keep the boys thinking of him.

"Slow's" system of bookkeeping was well worth copying, and if adopted would save much work and delay in figuring and paying out the money.

Using but one set of traps, the programme was not finished at sundown, and three events were carried over to the second day. Considering the wind and flight, Thompson, who was high man with but 14 goose eggs, while Phellis was second and Kirby third, some of the regular old-timers like Partington fell away below their average.

Following is a list of those present: M. S. Wills, N. Judson, Ind.; W. W. Washburn, New Richmond, Ind.; J. G. Miller, Oxford, Ind.; John A. Sutton, Otterbein, Ind.; Jas. T. Crane, Joe Bourell, J. C. Axtel, and A. T. Jacobs, Earl Park; C. E. Hershman, Ransaleer; T. J. Blessing, Oxford; Dr. J. A. Martain, Lafayette; J. W. Murphy, Morocco; A. G. Sheets, and G. W. Dewey, Wingate; C. E. Adamson, Muncie; C. B. Lamb, Attica; Joe Blistaine, Lafayette; Mr. Flynn, N. Manchester; J. M. Lilly, Indianapolis; Frank Snyder, Crawfordsville; C. B. Hind, Lafayette; C. W. Phellis, Cincinnati, O.; H. M. Clark, Wabash, Ind.; E. H. Tripp, Indianapolis; J. R. Johnson, Greenhill, Ind.; Sam Gay, Shodeland; W. T. Knowles, Mount Morenci; W. F. Baker, Greenville, O.; John W. Cooper, Indianapolis; Ed Vories, Crawfordsville; Dr. O. F. Britton, Indianapolis; John Deitrich, Crawfordsville; M. F. O'Brein, Lafayette; C. M. Gay, Shodeland; Max Stillwell, Crawfordsville; Gus Mohler, Indianapolis; H. C. Meyers, Lafayette; A. W. Kirby, Greenville, O.; Milton Forbs, Muncie, Ind.; W. A. Wildhack, Indianapolis; Frank Dunbar, Peru; J. W. Farrel, Muncie; F. B. Nichols, Meadowville; H. Schumach, Muncie; T. Sherwood, Bedford; J. L. Head, Peru; H. Dando, Springfield, Ill.; W. M. Glover, Bedford; C. O. Le Compte, Eminence, Ky.; M. W. Thompson, Lafayette; H. W. Veitmeyer, Chicago, Ill.; A. D. McDonald, Montpelier; A. Livenguth, Lafayette; J. T. Kinney, Chicago; W. B. Sayles, Indianapolis; W. B. Anderson, Mount Morenci; W. W. Bell, Hoopston, Ill. The scores:

The morning sun was bright, and the day promised fair, but before noon the clouds gathered and there was a slight rainfall, which, however, delayed the shoot but a short time; but this was sufficient to cause the wind to blow for the remainder of the day and in a different direction from yesterday, and coming mostly from behind, caused many a target to jump down and out of the load of 7½ shot. Especially was the wind heavy during the badge shoot; hence no phenomenal scores were made, and yet that of Phellis with 47 and Thompson and Glover with 46 were above the average, if the conditions are considered. Several new faces were seen on the grounds to-day, and many present yesterday were absent. After the medal shoot was over the delegations from Indianapolis and Crawfordsville took their leave.

The center of attraction was in favor of Thompson to win the diamond badge. He did win out, but with a struggle, as he was tied by Glover, and had but one to spare in the shoot-off. This is the first time during the ten years that the badge has been shot for that it has been won by a member of the Lafayette Gun Club. Thompson is now the most prominent man in the shooting line in the State, being president of the Lafayette Gun Club, president of the Indiana State League, and winner here of high average for first day, and the wearer of the diamond badge—good many honors for one man, but he is modest and bears them all without undue emotion. The scores:

Glover 46, Farrell 43, Williamson 44, Dunbar 39, Pard 44, Phellis 47, Clark 42, Mark 32, Slow 42, Washburn 40, Tack 40, Wildy 36, Dando 45, Partington 42, Sherwood 39, Head 42, Kirby 41, Voris 45, Le Compte 43, Thompson 46, Forbes 37, Murray 38.

B. and K. Tournament.

SPIRIT LAKE, Ia., Aug. 7.—Burmister and Klein's two-day tournament, Aug. 6 and 7, had about thirty shooters each day. The programme called for eight 15 and four 20 target events each day; $7 was added to each of the 20-target events.

The tournament was open to amateurs only. Manufacturers' agents were welcome to shoot for targets. Budd and Gilbert were the only two agents in attendance. The shooting was from one set of traps, Sergeant system. A high wind each day made the shooting quite difficult.

Gilbert was in fine form, and made a remarkable score, shooting the entire programme of 200 the first day without a miss and losing but 9 out of the 200 on the second day. On the last day a 15-live-bird handicap was shot. A high wind prevailed. Some of the birds were quite fast, but the majority were slow and hard to make fly.

Aug. 8.—Klein will take a party of his shooting friends fishing, and promises them some fine sport.

Aug. 6, First Day.

HAWKEYE.

Greenville Tournament.

AUG. 9.—Situated not far from the center of the State, which is almost surrounded by the Great Lakes, may be found the lively city of Greenville, Mich. There are enough shooting men here to organize and maintain a good shooting club, and to get in touch with the shooters they advertised a tournament to be held during the Good Roads Convention, which carried with it half fare rates on all the railroads. The club is fortunate in having enterprising officers, as Mr. C. H. Rich as president, and Mr. J. M. Fisher as secretary are a team hard to beat, both at shooting and hustling shooters. These gentlemen were a little disappointed in not having more shooters present, yet most of those who were here kept the trap going all day, though some of the visitors found attractions in the base ball and other amusements that were "on tap."

As to Mr. Fisher, to whom had been intrusted almost the sole management of the shoot, and whose name will not appear in the scores, I am sorry to mention that, while wrestling with a load of targets he was thrown from the wagon by a sudden start of the team, and falling on his shoulder, was so much shaken up that he could not even be present on the grounds. However, as the trap worked well—yes, too well, as its throwing capacity was beyond the limits of "fair targets"—and there was a good man in the office to handle the cash—and Mr. Rich was busy all the time when not shooting—there was only one complaint, that of poor scores, and that was caused by too much speed on the targets. Many of the shooters put up their guns on this account and sought other sources of amusement. Here the scribe feels constrained to remind all clubs deserving to hold tournaments to avoid dates which are holidays or when there is some other attraction in town. Even the club members cannot attend the shoot on such days.

The club has good grounds, facing north, situated west of town, easily reached by foot or wagon. While there are no buildings, ample shelter in the way of tents was provided.

Among those present were A. D. Caldwell, of Flint, Mich.; Max Hensler, Battle Creek, Mich.; J. S. Cole, Hinsdale, Mass.; Dr. S. M. Gleason, Jr., M. Debree, E. A. Kemp, C. H. Rich and J. M. Fisher, of Greenville; J. A. Skinner, John Beuchas, J. W. B. Turk, R. C. Blackburn, of Cedar Springs, Mich.; W. W. McQueen, Bay City, Mich.; M. H. Spanogle, Orleans, Mich., and Geo. E. Flint, F. A. Wright, S. J. Case, and Luther Bishop, of Carson City, Mich.

Mr. McQueen was easily high man and few straight scores were made. The scores:

Interstate at Haverhill.

HAVERHILL, Mass., Aug. 9.—Those readers of your entertaining paper who have no speaking acquaintance with trapshooting could with reason be excused for thinking that instead of an Interstate Association tournament, together with Manager Shaner and all the "fixings," there was to be just an ordinary three-ring circus showing in Haverhill, Aug. 27 and 28.

The committee who are doing the hard work are of one opinion, that some features of this tournament will cause the prospect of a circus to look small in comparison.

Should the dreams of the said committee materialize, a certain little lady shooter will grace the occasion, Miss Annie Oakley; and should nothing serious occur to prevent his attendance, such, for instance, as a radical advance in price of U. M. C. goods, the President will be one of our number. President Roosevelt? Oh, no! President of the Interstate Association, Dressel. During the progress of the Association programme the committee will respectfully suggest to those who find the time between events hanging heavily on their hands, that they step due northeast from the club house about ten paces, where the uneasy ones who possess a close-shooting gun and who have the capability of pointing it right may secure some one useful article, ranging from a gold coin to a tooth brush. Judging from present indications, Manager Shaner will have on his hands a large, healthy and boisterous crowd.

The outlook for a good number of teams in the Interstate event is excellent. New York and possibly New Jersey will be represented, while at least four of the New England States are a foregone conclusion.

It should be well to remember this point. Express trains for Haverhill leave Boston at 8 and 8:30 A. M.

C. F. LAMBERT.

PUBLISHERS' DEPARTMENT.

$100.00 Cash Prize for a Name.

For the new Daily Limited train to California to be placed in service Nov. 1, 1902, by the Rock Island System and Southern Pacific Company, via the El Paso Short Line. The competition is open to the public, and conditions involve no fees of any kind. For circular of instructions, address at once John Sebastian, Passenger Traffic Manager, Rock Island System, Chicago.

Mr. A. H. Funke, 98 Duane street, New York, has introduced a new model Mannlicher rifle, 8 mm. (.315cal.), known as No. 3. It is made in 24, 26 and 28in. barrels, in general appearance like the high-priced models, but the finish will be American style, round barrel and plain stock, pistol grip and shotgun butt. The new catalogue is now ready, and can be obtained on application to Mr. Funke as per address herein given.—*Adv.*

To get up in the dark, hunt for a match, find the lantern or candle and light it, is to most of us an old story, and we know what a nuisance it is. Such inconvenience is abolished by the Evening Star Flash Light, which, by a mere pressure of the thumb, gives a brilliant light. Every camper should at least see the catalogue of the Electric Contract Co.—*Adv.*

The still-hunting shoes made by E. A. Buck & Co., of Bangor, Maine, are especially well thought of in the New England and Adirondack woods, and will no doubt continue to be popular. They are very easy on the foot and at the same time it is claimed for them that they are noiseless. They are said to be very useful in light skiffs and canoes, which they never injure.—*Adv.*

There are few gunners or anglers who do not possess among their household ornaments, mammals, birds or fishes, which are to them the visible representation of some especially happy day afield. The glass eyes in most of these come from the manufactory of J. Kanoffsky, who has been for so many years an advertiser in the FOREST AND STREAM.—*Adv.*

Mitchell rods have had a goodly fame among American anglers for, lo, these many years, and it is satisfactory to know that the business so long and so successfully conducted by the father is still carried on by the son, whose advertisement appears in another column.—*Adv.*

Most of us like to announce our membership in gun or yacht club by wearing the pin or badge adopted by the club. Van Sise & Chapter, manufacturers of fine jewelry of this city, make a specialty of designing and making such emblems.—*Adv.*

It is a good deal more than twenty years since the Thompson hunting boots were first talked of. Their usefulness has stood the test of time, and they are still popular and are now being advertised by Mr. T. H. Guthrie, of Newark, N. J.—*Adv.*

Mr. W. Starling Burgess, the naval architect, of Boston, Mass., continues to furnish designs and plans for yachts. At the conclusion of the present racing season it may be imagined that a great building season will set in.—*Adv.*

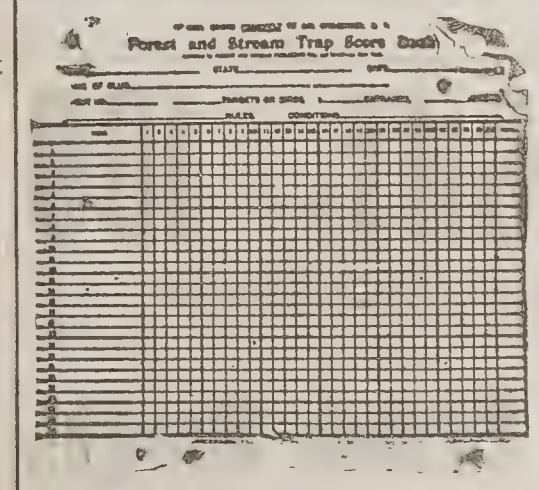
FOREST AND STREAM

Trap Score Book.

The only one containing the new (1902 revision) Shooting Rules of the Interstate Association, for targets and live birds; The American Shooting Association Rules; and the revised Hurlingham Rules. And a detailed description of all the shooting systems in practice for the divisions of money.



FOREST AND STREAM'S new Trap Score Book will admirably fill the needs of clubs and contestants in affording a means of keeping a faithful record of contests. Each book contains a generous number of sheets, so ruled as to make all the chief divisions of the shoot plain at a glance. For instance, the horizontal spaces are numbered from 1 to 25, every sixth line being distinctly heavier than its fellows; hence the squads are distinguishable at a glance. The perpendicular spaces are numbered from 1 to 30, ample space first being left for the contestants' names and their handicap allowance. Heavy dark lines are between each five spaces, and the numerals 5, 10, 15, 20, 25 and 30 are in heavy-faced type. The birds to be shot at are apparent at a glance. The heavy ruling also prevents straining of the eyes in distinguishing the lines of the scores. Each sheet is perforated, so that it may be readily torn out when manifold copies are made, and yet each sheet is strong enough to hold firmly in place if the book is desired for permanent club records. A neat pocket on the inside of the back cover holds carbon sheets for manifolding. The book is neatly and substantially bound in cloth, and contains 150 score sheets. The price is $1

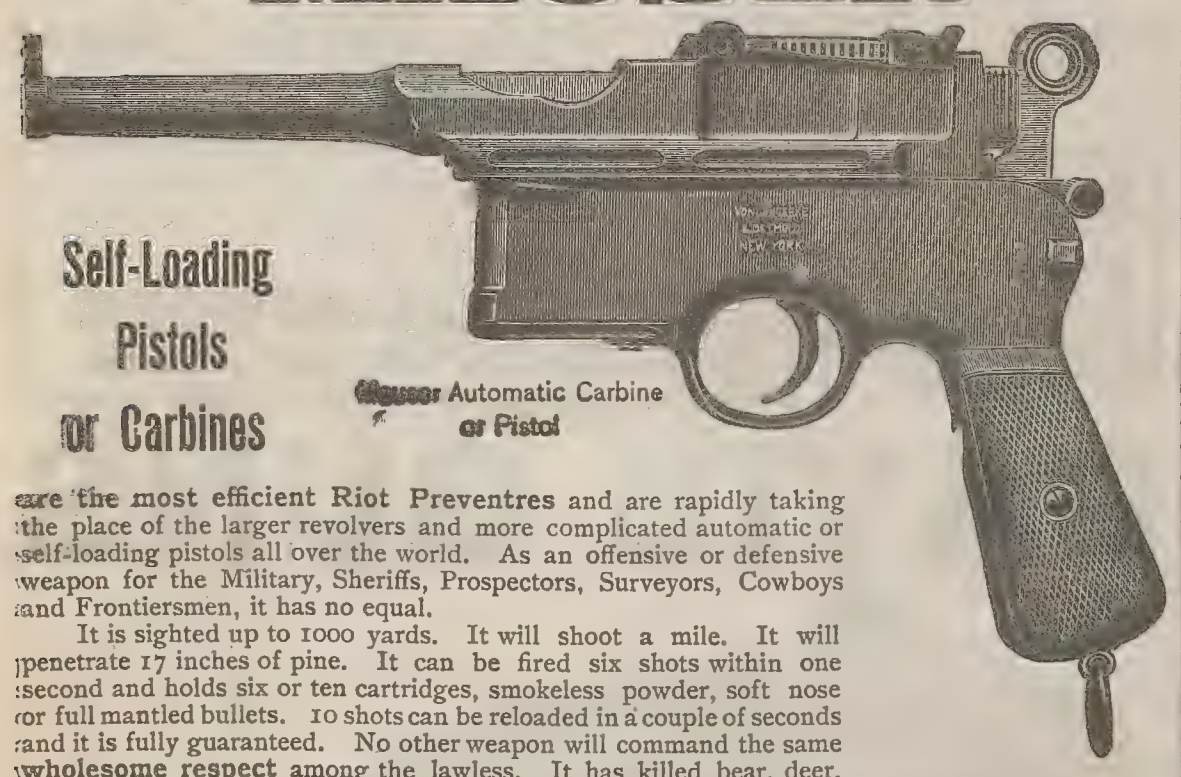
"MAUSER"



Self-Loading Pistols or Carbines

Mauser Automatic Carbine or Pistol

are the most efficient Riot Preventres and are rapidly taking the place of the larger revolvers and more complicated automatic or self-loading pistols all over the world. As an offensive or defensive weapon for the Military, Sheriffs, Prospectors, Surveyors, Cowboys and Frontiersmen, it has no equal.

It is sighted up to 1000 yards. It will shoot a mile. It will penetrate 17 inches of pine. It can be fired six shots within one second and holds six or ten cartridges, smokeless powder, soft nose or full mantled bullets. 10 shots can be reloaded in a couple of seconds and it is fully guaranteed. No other weapon will command the same **wholesome respect** among the lawless. It has killed bear, deer, and nearly all big game and little game to be found on this continent, and its small size and light weight make it a most desirable auxiliary.

A New English Gun.

"Great Value for Little Money."

THE REGENT. PRICE $65 NET

We have just received the first few cases of a new English gun which we have named "The Regent". They are made for us by the best gunmaker in England and bored on the same principle that has won world wide honors for English guns. The barrels are best Siemens Martin steel, and the shooting is unexcelled. The stocks are selected English walnut, half pistol grip, latest model Anson & Deeley action, nicely engraved, and the finish and workmanship throughout are up to the English standard. English guns have long been the standard of the world, and this new product will mark a new era in price as well as quality. We have never before been able to offer so fine and good a gun for so little money. They can be supplied in weights from 6¼ lbs. to 8 lbs., in 12 bores, and from full choke to true cylinder.

We carry a large line of guns and rifles from $6.00 to $600.00, and are sole U. S. Agents for the celebrated guns of W. W. GREENER.

WINCHESTER

BOX MAGAZINE REPEATING RIFLE MODEL 1895.

.35 CALIBER.

WE have adapted the Winchester Model 1895 box magazine repeating rifle to handle a new Smokeless Powder cartridge, known as the Winchester .35 Caliber which is the most powerful shooting cartridge, at both long and short ranges ever offered. Rifles for this cartridge are made with 24 inch round nickel steel barrels and weigh about 8 1-2 lbs. The Winchester .35 Caliber Cartridge embodies high velocity and consequent flat trajectory, great energy and striking power, making it a very desirable cartridge for hunting the biggest game known. Some idea of its tremendous killing power may be gained from the fact that the striking energy of this cartridge at 200 yards equals the muzzle energy of the .45-70. This cartridge is loaded with a 250 grain soft point metal patched bullet, and special Smokeless powder, which imparts to the bullet a muzzle velocity 2,200 foot seconds, thereby developing a muzzle energy of 2,685 foot pounds. The penetration at 15 feet from the muzzle is 15 7-8 inch pine boards. Owing to their size and high velocity, .35 Caliber soft point bullets upset, or mushroom, in a most perfect manner. Send for circular fully describing this rifle.

CANOE CRUISING AND CAMPING.
By Perry D. Frazer. Illustrated. 95 pages, cloth. Price $1.
This interesting little volume is a practical guide for the cruising canoeist, the man who wishes to start away from the city and for a short time to make his canoe his home. With this in view, Mr. Frazer, who regards canoeing as a healthful and economical method of passing away leisure hours, has written briefly but attractively of canoes, camping outfits, clothing, firearms and ammunition; fishing tackle, photography, and in general of cruising, camping and all that pertains to this phase of outdoor life. While the volume has been written chiefly for the younger men, it is yet full of practical information and suggestion that appeals to those who have had a wider experience.
Such a book as this should be in the library of every man who is interested in outdoor life or the things which pertain to it. It is one of the manuals which should stand on the shelf alongside of "Woodcraft," of which, in fact, it is a part.
FOREST AND STREAM PUB. CO.
346 Broadway, New York.

HOLLOW-SPARS (SPRUCE). Send for our **No. 4** Booklet and Price-List.
EXTREME LIGHTNESS COMBINED WITH GREAT STRENGTH. The particular construction employed by us enables us to produce a *Hollow Mast, equally strong and reliable, and yet stiffer than one of the same dimensions of solid spruce, yet the former will be anywhere from thirty-five to seventy-five per cent. (depending upon the thickness of shell), lighter than the solid.*

"THE CHALLENGE."
This spirited picture of the American Elk has been engraved as an artotype in size and style companion to "Alert," The plate is 13 x 19 inches on 22 x 28 Price (mailed in a tube, postpaid), $3.00
FOREST AND STREAM PUBLISHING CO. NEW YORK.

YACHT ARCHITECTURE.
By DIXON KEMP, Associate of the Institute of Naval Architects, and Member of Council. Second edition. Super-royal 8vo. Price, $16.80.
This work enters into the whole subject of the laws which govern the resistance of bodies moving in water, and the influence a wave form of body and wave lines have upon such resistance. It also deals comprehensively with the subject of steam propulsion as applied to yachts. An easy system for designing is provided, and every necessary calculation is explained in detail. The latter part of the work is devoted to yacht building, and engravings are given of every detail of construction and fitting, including laying-off, taking bevels, etc. The list of plates (exclusive of over thirty devoted to the elucidation of the text, and nearly 200 wood cuts) exceeds fifty, and comprises the lines of some of the most celebrated yachts afloat by the most successful builders and designers.
FOREST AND STREAM PUBLISHING COMPANY, NEW YORK.

Hints and Points for Sportsmen
Compiled by "Seneca." Cloth, illustrated, 224 pp. Price $1.50.
This compilation comprises six hundred and odd hints, helps kinks, wrinkles points and suggestions for the shooter, the fisherman, the dog owner, the yachtsman, the canoeist, the camper, the outer; in short, for the field sportsman in all the varied phases of his activity. The scope of the information it contains embraces a wild field, and "Hints and Points" has proved one of the most practically useful works of reference in the sportsman's library.
FOREST AND STREAM PUBLISHING CO., NEW YORK.

STEAM YACHTS AND LAUNCHES.
Their Machinery and Management. By C. P. Kunhardt. With plates and many illustrations. 267 pages. Price, $3.00.
A complete veview of the development and present status of the marine engine and boiler as applied to steam yachting. The theory of the engine is set forth and its parts fully described. The functions of the boiler and its mountings are explained. Simple and compound engines are compared, and the latest results in high expansion and high steam are detailed. Numerous examples of modern practice are introduced, including all the patent forms of pipe boilers and special machinery. Also kerosene and naphtha motors for launches, with many tables and rules, specifying their construction. The U. S. Government laws of inspection and Rules of the Road are given, and also rules for racing steam yachts, and complete directions for the care and running of machinery. CONTENTS: Theory of the Steam Engine. Boiler Efficiency. Boiler Mountings. The Engine and Its Parts. The Screw. Laws Applicable to Steam Yachts. Lloyds Rules. Racing and Steam Yachts. Management and Care of Machinery. Principal Types of Yacht Machinery. The Design of Hulls. Practical Construction. Small Cruising Steam Yachts. Lights on Steam Yachts and Useful Tables.

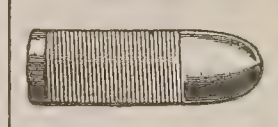
Guaranteed to remove all rust spots and foreign matter from inside of shotgun barrels. It will fit any standard rod, and is made for any barrel, choked or otherwise. With a new pair of sides now and then it will last a lifetime. For sale by All Gun Dealers.

CLEANERS, any Gauge, $1.00. WIRE SIDES, per pair, 10c.

MANUFACTURED BY
THE BRIDGEPORT GUN IMPLEMENT CO., 313-317 Broadway, New York.



Here's a Bullet that will not injure your gun.

LUBRICATED WIRE PATCHED BULLETS,

Just the thing you have been looking for for years.

Prevents Fouling, leading and deposit of meta in the grooves of the rifling.
Cleans and Lubricates the barrel with every shot, making swabbing entirely unnecessary.
Are Perfectly Adapted to any style of gun, slow or rapid twist, Black or Smokeless Powder, and are more uniformly accurate in shooting than any other form of missile known to the inventor.
Perfectly fill all the Grooves of the rifling, and are thus backed by the full charge of gas generated by the powder explosion.
There being less Friction, the velocity is greatly increased and the trajectory is flatter than with any other bullet ever made.
Sample bullets mailed to any address on receipt of stamps to prepay postage. **Catalogue free.**

VOL. LIX.—No. 8. No. 346 BROADWAY, NEW YORK.

AMONG WILD CHERRY BOUGHS.

ABOVE the growth of thick weeds and bushes that stand like a fringe along the old stone wall, the wild cherry tree towers high. Yet it is high only by comparison with its nearer neighbors, for a little further along the fence stands a sturdy hickory, which is much taller, and again beyond, a superbly symmetrical sugar tree. Later these greater trees may claim more attention, the one for its rich fruitage of sweet nuts, dear to the small boy and the squirrel; the other for the glorious and changing colors which it will assume when sharp nights and full maturity shall paint its frondage with a hundred different hues. But the wild cherries are ripe now, and to its branches come many birds to feast on the luscious berries, and so just now the cherry tree is the one that shows most life and most interest.

Though taller than its nearest neighbors, the outlook that the wild cherry tree commands is not a very wide one. To the west is the weed-grown pasture in which, day after day, the same horses feed, standing during the midday hours under the shade of a gnarled and ancient apple tree, where the grass has been worn away by their stamping to drive away the persistent flies. They are old friends now after all these years—the horses and the tree. Off to the east is the yellow stubble of a shorn wheatfield, where pale green tips of the new springing ragweed are just beginning to show above the polished straw left standing. Along the wall are the blooms of the goldenrod and the fruit of the blackberries now changing from red to black. Over the stubble, back and forth in wide and ceaseless circles, now high, now low, swallows are swinging on tireless wing. There are white-bellies and cliff swallows, and the forked-tailed beauties that have been reared within the barns and—higher in air—the sooty and less graceful familiar friends which we call chimney swallows—but which are not swallows at all.

Each bird coming here for cherries shows something of its character by the method of its approach. Only a few fly boldly into the tree from a distance, but one of the confident ones is the robin, who comes from across the field, alights with a great plunge and spreading of wings and tail, and almost at once begins to feed hungrily. The kingbirds are beginning to gather for their autumnal flight southward, and now and then one comes into the tree openly, alighting in the very topmost branches, snatching a cherry or two and then darting away, as if he regretted the time lost for the meal. The little chipping sparrow seems to have no thought that he must conceal his movements. He comes straight as an arrow's flight, from a blackberry bush twenty yards away along the wall, alights in one of the lower branches, picks a cherry, which is far too large for him to swallow, tries to break it to pieces, drops it in the most stupid fashion and then plucks another, which he also drops. Then seemingly discouraged, he flies back to his thorny resting place, to return a little later for another trial.

Flying by easy stages along the wall and at last stopping in the very top of a butternut tree, not far from the cherry, comes a silent, sleek recluse, named from the fruit it is approaching, the cedar bird, waxwing or cherry bird. He is an interesting fellow, the more so no doubt because we know so little of him. He is cautious and prudent, but not a bit timid, very quiet in his habits, a thorough gentleman in deportment, reserve and dress. Perhaps it is the mystery that surrounds him that leads us to credit him with all sorts of qualities that some humans have. He sits for a long time in the butternut, sometimes crouched low on the branch or again standing absolutely erect with pointed crest raised to its fullest height. At last, moved by hunger, he flies to the cherry, but when he has reached there he is in no hurry to begin, but stands for a long time considering the meal. Then, moving sideways along the branch like a parrot, he reaches up and takes a berry, which he swallows deliberately. The fruit is thicker than his neck, and its passage down his gullet can be traced. After a pause, another cherry is eaten, and then another, and then presently the waxwing melts away and is no longer seen.

Suddenly, without warning, a long, smooth bird appears, crouched low along a branch close to a tent caterpillar's nest. We cannot tell where he came from, nor how he reached his perch, but he is there, looking keenly about him, but without moving his head. It is a black-billed cuckoo, another avian recluse, who yet on occasion may be evident enough to ear if not to eye. We might call him the detective among birds from the quiet way in which he slips about. Rain crow he is named, and his loud calls are familiar enough to country dweller, even though their source be not always known. One of the most useful of insectivorous birds, who can tell whether he has come here to have a taste of cherries or to destroy some of the tent caterpillars whose webbed nests, inclosing brown dead leaves, ornament the ends of several branches of our tree. Whatever the cuckoo's motive, he keeps it to himself, as befits the most shy and secretive of our birds. He moves a little nearer to the caterpillar's nest, seems to pick something from the branch, and then suddenly disappears.

A little later the peevish notes of a catbird sounding from the midst of the branches tell of a new arrival. But is not injustice done the catbird when we call his note peevish and imagine that it denotes ill temper or distress? He is graceful, active and talkative, and—because of his note, perhaps—unpopular, but, of all the Northern birds what one has sweeter and more varied strains?

A long chapter on bird habits might be written concerning what one sees among the boughs of the wild cherry even at this season of the year, when the birds are least obtrusive. Spend an hour near one and see for yourself what goes on there.

MINNESOTA FOREST.

WE print to-day a review from the pen of Mr. Charles Cristadoro of the work and the workers in the cause to preserve some of the primeval pine forests of Minnesota. It was a noble object, and as Mr. Cristadoro's review shows, enlisted the active co-operation of a host of individuals, societies and associations, representing the men and the women of Minnesota and the Northwest. If in the final outcome all was not accomplished that had been hoped for and striven for, that which was won was nevertheless a rich reward and an achievement of public good which entitles those who labored for it to gratitude now.

Where so many gave unsparingly of time and effort it would be ungracious in a public review to overlook the part which each one had in the common cause; and it is a pleasure then to put on record the names of those who thus contributed to the reforestation of Minnesota. In one respect only is Mr. Cristadoro's review incomplete. It will be recalled by those who followed the struggle that Mr. Cristadoro was himself one of the most intelligent, active, devoted and effective of all who talked and wrote and labored in season and out of season; and no record of the Minnesota forest preservation movement can be a true one which does not write large the name of Charles Cristadoro.

THE COMMON INTEREST.

THE Los Angeles County Game and Fish Protective Association, of California, is one of the successful protective organizations of the day, and one important factor in its success is its adopted principle that game protection is to be desired as a benefit, not by the sportsmen only, but by all the citizens of the community. In other words, the Association acts upon an assumption directly the opposite of that recently advanced by Judge Van Dyke in a California case, when he declared that the game laws were for the benefit of a favored class. The game laws, says the Los Angeles Association, are for the common good; and the membership is drawn from the community, irrespective of the shooting or fishing proclivities of those who are invited to join. The annual dues are $1.00; the funds go to enforcing the game and fish laws, and the Association does not limit its concern to game species, but aims to prevent the wanton destruction of harmless birds and animals. All the wild animate things that minister to the pleasure of man are under its care.

The success of the Los Angeles Association should encourage similar movements elsewhere. It is a common mistake of the promotors of game and fish protection movements to confine themselves too narrowly to the ranks of those who are active with rod and gun. Such organizations are made distinctively sportsmen bodies; and this naturally tends to set the sportsman's interests apart as something distinct from those of the public at large. This, of course, is unfortunate. The interests of the entire community, both of those who go afield and those who do not, lie in the preservation of the game; and a recognition of this principle by the sportsman will inevitably be followed by its recognition on the part of others. The sooner and the more completely we get away from the notion that the sportsmen of a district are in any sense a class apart by themselves, whose good is not the good of the people at large, the more quickly shall we come to the time when the community as a whole will sustain effective game and fish protection.

CONCERNING CLASSES.

THE courts of California in rendering decisions on the game statutes speak of the "class of sportsmen" or "the sportsman class." Is this a correct use of terms? Do sportsmen constitute a class?

Used in this sense, a class may be defined as a body of individuals grouped together as possessing certain common characteristics. What are the characteristics common to all sportsmen? We fancy they are very few. Sportsmen are drawn from the ranks of the rich and the poor. They may be educated or illiterate; rough diamond or highly polished; they may be pious or irreligious; Roman Catholics or Methodists; Episcopalians or Dutch Reformed. They are long and short, fat and thin, with blue eyes or green.

In what are they all alike? The sportsman delights in recreation, but in this he does not differ from all other members of the human family. He takes his pleasure by preference out of doors, but so do all sorts and conditions of men, women and children, whether they attend *fetes champetres* or lawn parties, or simple picnics and May parties. The sportsman kills game and fish, or sails his boat over the waters, but these are recognized avocations the world over, and have nothing to do with sportsmanship. Even the judges of the California courts do not call the Chinamen and Italians, who comb the beach of San Francisco Harbor, sportsmen.

Sportsmen appear to possess one characteristic; that they—usually, but not always—pursue game or fish or toil over their yachts or canoes for pleasure, rather than for gain; but does an eccentricity like this entitle them to be put in a class by themselves?

Mr. William K. Vanderbilt, Jr., has bought all of the land which was held by private owners surrounding Lake Success, in Roslyn, Long Island, and all the interest in the lake itself which was in private ownership. A part title to the lake is vested in the town of North Hempstead; and the town also owns three rights of way to the lake. To make his control of Lake Success complete and absolute, Mr. Vanderbilt has offered the town authorities $50,000 for its title. The town can do nothing without legislative action, and it is probable that a bill will be introduced at Albany next winter to empower the town to alienate its interests in the lake and approaches. The price offered is an alluring one, and the people of North Hempstead may perhaps not be blamed for adding such a substantial sum to their treasury. Nevertheless the policy of surrendering public waters—or waters open to the public—into private control is a wrong one. The number of lakes in the vicinity of New York to which there is access for fishing, boating and other recreations is extremely small, and is constantly diminishing, because, one after another, they are passing into the control of clubs and individuals. Those that are left should be kept for the people. Their value as public pleasure resorts will be all the greater as the years go by. Legislatures should be very slow to remove the obstacles to alienation of such waters now contained in town charters.

The humors of the political campaign have already begun in New York, where a letter has been written to Senator Platt (and of course given out to the press for advertising purposes before Mr. Platt himself could receive it), averring that in the event of the renomination of Governor Odell the writer of the letter would cause 25,000 sportsmen to vote against him. The reason assigned for the opposition to the Governor is that his acts have been inimical to the interests of the sportsmen of the State. The humor of this lies in the assumption that, whatever may have been Governor Odell's record with reference to game legislation, there are 25,000 men in the State who would be controlled by a consideration of it and would be influenced by it to vote the Republican or the Democratic ticket. As a matter of actual fact and the cold arithmetic of election returns, there are not in the whole length and breadth of New York twenty-five who would be so controlled; probably there is not one.

The Sportsman Tourist.

The Organ Grinder.

A Day in His Life.

Nicolo Brignati was tired. He had traveled miles over a dusty road beneath the blazing sun. Beads of perspiration stood on his swarthy lean face, and he limped along laboriously with his organ strapped to his back and his monkey perched above.

Suddenly he stopped and looked about him. The place was inviting. A great cool umbrageous tree stood by the roadside, while underneath was a carpet of rich green grass, bedecked with daisies. And hark! What was that? Yes, it was a gurgling stream, which presently revealed itself along the fence as it reflected a sunbeam.

Nicolo's eyes brightened and he heaved a sigh of satisfaction. Uttering a word of command, he glanced up at the monkey, which instantly jumped to the ground. Then Nicolo unwound his organ and proceeded toward the stream. Taking a little tin cup from his pocket, he filled it three times with the pellucid water and drank. It refreshed his weary soul and he muttered his thanks to "Sancta Maria." Before putting the cup away he filled it once more and held it to the monkey's lips, with a "Chico, amico!" Chico took a little sip and turned away his head. Nicolo then put up the cup and seated himself on the grass with his back to the tree. Diving once more into his capacious pocket, he took out some nuts, which he gave to Chico, who expressed his feelings with a great chirruping and began to crack the nuts in such a comical way as would have made any one smile but his sombre master. Having furbished in his pocket for the third time, Nicolo produced some stale bread and an onion, with which he began to regale himself, with eyes fixed far away, as one in a dream. His frugal repast ended, he stretched himself on the grass and was soon wrapped in slumber. As he lay there he presented a spectacle at once odd and pathetic. His hair was matted and covered with dust, and his careworn face was covered with several days' growth of beard. As for his clothes, they were not much more than an assortment of rags patched together, while his stockingless feet were encased in a pair of heavy rawhide shoes, studded with nails.

The birds came to look at him. First a robin cried from the tree: "Who are you? Who are you? Wake up!" Then a vireo cried: "What is it? Great Scott! Hi, there! Do you hear me?" Then an oriole (that exquisite among the birds) cried: "Oh my, oh my! How really very shocking, don't you know!" Then a yellow warbler cried: "Tut! Tut! Asleep on such a day as this!" Then a song sparrow chipped in: "Wake—wake—wake! Get a move on you!" And then a crow flew past and laughed a hoarse "Haw—haw—haw!" as it espied the queer, unkempt figure on the grass.

The insects, too, were filled with curiosity. First came the flies and mosquitoes and lit on the face and hands of the sleeper. Then came the ants, and wandered all over him. Then came a darning needle and lit on his nose. Then came a bee and buzzed in his ear. And then came a butterfly and lit on the collar of his red flannel shirt.

But through it all Nicolo slumbered undisturbed, for he was tired, as we have said. At length as the sun began to decline and was gilding the trunks of the trees, the sleeper started up and rubbed his eyes. One glance toward the west sufficed to tell him that evening was nigh, so he hastily arose and strapping his organ about him and bidding the monkey mount, set off at a brisk gait, or at least at a gait that was brisk for him.

In half an hour he came to a little village. As he entered the slumberous street children seemed to spring out of the ground and set up a great shout as they observed the monkey. Crowding about it, their eyes shone with mingled fascination and fear, and though some were bolder than others, the majority hung back as if ready to flee at a moment's notice. Nicolo, blasé with many a similar scene, paid no attention to all this, but selecting a likely looking cottage, unslung his organ and began to grind away, while Chico, who was held by a string, jumped up on the veranda. A woman with a babe in her arms was the only occupant of this. The babe at sight of the monkey gave vent to a cry of terror and clung to its mother. It was in vain that the latter used reassuring words, so Nicolo was ordered away. He had better luck at the next cottage, where Chico, cap in hand, collected three cents from as many young ladies, who were not so much taken with the attentions of the Simian gallant as melted at the strains of Nicolo's organ, wheezy and dismal though they were. At the third cottage a maiden lady, apparently, of severe aspect, put her head out of the window and declared shrilly that if "that hideous beast," referring to the monkey, was not taken away instantly she would send for the village constable.

With varying luck like this Nicolo, without any display of emotion, made his tour of the village, until he came to the poorer quarter. The crowd of children here was much greater than at the upper end, but the pennies were few and far between. At length Nicolo, apparently discouraged, ceased grinding and slung his organ over his shoulders. Then he looked about him inquiringly for a few minutes, and finally approached a man who sat on his doorstep.

"Italiano mans liva here?" asked Nicolo, evidently with the object of finding a lodging for the night.

"Eh? Haow's that?" drawled the man, condescendingly.

"Italiano mans liva here?" repeated Nicolo.

"Oh!" exclaimed the man. "You want to know if there be any Eytalians here?"

"Si, signor."

"No. No dagoes, no monkeys, here," adding in a lower tone, "Thank God!"

Nicolo received this rude rebuff without any open show of resentment, though a keen observer would have seen a lightning flash in his dark eyes as he turned away. There was a little provision store across the street, and to this he made his way and purchased five cents' worth of bologna sausage. Then he plodded down the street, the children continuing to follow him to a little stream spanned by a rustic bridge, which marked the limits of the village. Here the youngsters gave the stooped, retreating figure, or rather we should say the monkey, a parting cheer and returned to their play.

Onward Nicolo plodded through the dust, while the shades of evening began to fall around him. The village was left behind, the shouts of the children died away and he once more found himself alone with nature. His mind, singularly enough, ran on the rebuff he had just received, and to his customary mood of vague melancholy was added the bitterness of wounded feelings. It is true he had not been used to much consideration in his own country, but in even the contempt of an aristocrat, or rich man, of his own race, there was a certain sympathy. Here his portion was scorn unmixed. Once he had rebelled against it, in his fierce fiery way, with the only result that he got felled to the ground. As he thought of it all, his heart swelled with bitterness and a sob rose to his lips.

Suddenly a woodthrush began to pour forth its vesper hymn from a grove by the wayside. The rich, measured cadence of the notes, instinct with serene joy and happiness, floated on the evening air like a divine summons to troubled mortals to be at peace. Nicolo halted and listened. His eyes were fixed on the western sky, where the after glow of the sun, full of a gracious sentiment, yet lingered. For some time Nicolo continued to gaze and to listen, and then with a sudden impulse he raised his eyes, welling with tears, and crossed himself reverently. It was the tribute of this poor, unlettered soul to the beautiful, beneficent Mother Nature.

The thrush ceased its song, and Nicolo, calmer in mind, resumed his plodding march through the dust. But night was glooming apace across the country, so the wayfarer began to look about him for a lodging. He had not gone far before he espied a little rivulet which ran by a wood. His eyes lit up with pleasure: this was the very spot he had been looking for. Unloading his organ at once he proceeded to quench his thirst, as well as that of the monkey, and then lifting himself and his belongings across a rail fence, entered the wood. The fireflies flashed in the gloom and lit his way to an open space, which was covered with moss. Here the weary wanderer threw himself down with a sigh. How sweet and cool it was here after the hot dusty highway! And how solemn and still and suited to repose. When he was a little rested he sat up and made a sop of bread and milk (the latter he carried in a small medicine bottle) for the monkey. The animal appeared not to be hungry, but Nicolo coaxed it as a mother might her babe, and finally succeeded in having the sop eaten up. Pleased with his success, he took out his bologna sausage, with some remnants of bread, and fell to himself in a manner very different from that of the monkey. The world might be hard on Nicolo, but his appetite seldom failed him. The sausage and bread disposed of, he filled an old black pipe and lit it. With his back to a tree he smoked on pensively and gradually there stole over him a sense of comfort and contentment even which only the old black pipe ever brought him. The weed is a blessing to the rich, but what an infinitely greater blessing it is to the poor and miserable!

The last faint glimmerings of day at the edges of the wood died out and all was cimmerian gloom, set off, as it were, by the flashings of the fireflies. But soon a soft mysterious light began to steal through the trees and fret the mossy ground beneath. As Nicolo observed it his heart leaped with a sympathetic joy. Ah! here was something that reminded him of his dear Italia, if nothing else did. "Bella luna!" he muttered fondly, gazing up through the trees. At the words memory awoke in him, and his youth, with its wild romantic glamor, came back to him. Unconsciously he fell into an old love song of Lombardy. This he sang in a subdued droning key with occasional mournful pitches, the effect of which as it echoed through the wood was at once weird and pathetic in the extreme.

When the song came to an end the singer's head fell on his breast, and he remained thus for awhile; then he rolled over on the ground. And there, beneath the whispering trees, with a quiet moonbeam on his face, Nicolo Brignati slept.

Francis Moonan.

New York, June.

Maudellon.

"Come into the garden, Maude,
I'm weary here alone."

So I was. There had been no garden, however, just to walk into for months. Only gray walls and stone pavements and streets sometimes dusty, sometimes muddy. There was a library to go to where illustrations in magazines simulated country life quite truly and where I have looked into many pretty garden paths in this country, and, on hot afternoons, I have even made sea trips across to France, and there in his voluptuous Midi helped Monsieur Alphonse pick his beloved Jacqueminots. But this did not satisfy to-day, for the full tide of summer is in in Tennessee, so I looked up impatiently from my book several times before Maudellon's eyes from the phaeton at the curb said, "Come." My smile in return was as loud as the rules of the library allow, and I left Miss Wharton and her "Hour in Italy" quite unceremoniously and bounded to Maudellon's side. As we turn out the Boulevard I will add that when her eyes have just this look it means we are to seek this day country lanes and lonely hilltops and glades with only a stream's noise in them, so I was more than content to give her the lines.

The city's borders had scarcely been passed when we delved into a place so like the one I had seen in Maudellon's yes that I had to rub my own to be sure that her wand was not still waving over the lovely creation before us. It was Melrose, reached through a lodge gate half-hidden in trees, and then on by a circuitous drive over a stream which twists itself as if by contract, and is lost in wild hydrangea bushes and woodbine. This drive being circular, is always a surprise, and I know of no English park which is more effective and pleasing. Blue grass is lush and riotous everywhere under great trees, and when at last the house is reached one drives through the porte-cochere and forgets it in the wide view of undulating corn and pasture lands to the south, relieved by the fine soft outline of the Knobs. Here we stopped to chatter with children, eager to blend with our adventure, as they always do in such things, and bringing always an imagination which is beautiful and encouraging to see. How admirable is the man who sprinkles this youthful faith in the unseen things (but in the things possible) all through the days of his life! So we would live in a new world for three hours, we said, and drove on down into the wood again, accompanied by a gay troupe of bluebirds, ever leading us on, and from the glen the wood pewee called with a mournful September sound and the wood thrush tinkled his sad chimes to the closing day.

Outside the gates again me turned into a new road which neither knew, but this was better, it would lead to that delightful somewhere where our gypsy supper would be spread. After the promises of several turnings, the next always hidden from the last by plumed corn rows, we debouched finally into the Franklin road only. But this was not bad, the hills being topped by old colonial houses, the white columns shining through the lawn trees, and the rich meadows of the opposite side covered with short-horn and Durham cattle, their deep bay sides outlining against the green with an effect as soft and placid as a picture.

Later came into view the turrets of the famous Oak Hill country place. The lawn and drive is better kept, but less alluring than that of Melrose, and the house in plain view from the road, has lost somewhat of its exclusiveness by this. The crenelated rock fence also is too low and gives every passer, like ourselves, too complete an idea of the garden seats, summer arbors and the vivid patches of flower color, relieving the walks. But we will learn some day that four feet more of limestone wall makes us entirely English, so let us hope. We should have been sorry, however, not to have seen the paddocks, with the brood mares grazing and the colts gamboling under the trees. We had turned into a lane which seemed interminable, and at the sound of sheep bells clinking in the distance we stopped. A cardinal began his whistling in a hedge near by and from a fence post a vesper sparrow took up his long-drawn and mellow note. An indigo bunting, tireless as he is always, and bubbling over all day long with happiness, still sits gayly on his tiptop bough and warbles away the hours. Maudellon alone of all this group of fragile and errant beauty is not quite happy, but says "Let us drive on. What we seek is just there, where that shower of golden arrows is falling through the vines." The bright pink of her dress blunted every arrow, however, and I was then content to drive on. Further on in this enchanted lane we saw rabbits playing by the roadside, as is their custom late in the afternoon. She clapped her hands joyfully and the rabbits ran, and, friend of the rabbits as I am, how could I stop those hands from clapping?

We spread our lunch in the rabbits' tracks for luck and I learned Maudellon how to drink from a bottle, making it gurgle, and she learned me how to eat cherry syrup from a knife blade, and so we made a feast as simple but as royal as any of Marie Antoinette's on the green around her thatched cottages in the Little Trianon.

Great masses of gold and purple clouds hung in the sky as the sun of our day set. The pink in her dress began to soften and her gray eyes grew dark as though grieving at a passing happiness. Here the thin crescent of the new moon came out. Her hands were raised ecstatically again—but she looked at me reproachfully as they fell back in her lap and we drove on homeward.

Nashville, Tenn., Aug 7.

Sport.

Webster defines sport as "That which diverts and makes mirth: game; diversion; mirth."

Coahoma tells us in Forest and Stream, page 127, that field sports had their origin in man's necessities during the period of his racial infancy, when he captured wild things for food and clothing; that this trait still persists, and "That the porcurement of something useful to man as a result of the chase is an essential element of true sport." In elaborating this definition of sport he makes it very plain that the "something" which is "essential" is in his judgment "goot meat."

Now it is plain that either Webster or Coahoma is wrong, because these definitions of sport antagonize each other. As a rule there is very little diversion or mirth in what we do to maintain our existence. I think a little investigation will show that Webster's definition is the commonly accepted one, and that Coahoma's conclusions are fallacious, and his position untenable.

I regard his teaching as pernicious, because if generally inculcated it would degrade our fields and forests to the level of abattoirs, our game to the level of swine and our sportsmen to the level of gluttons.

Words are used to convey ideas. What idea does the word sport convey? An effort to secure food? No. It does not convey that idea now; it did not convey that idea in Webster's day, and I dare say if the word was used during the period of the racial infancy of man it did not convey that idea then.

To illustrate: I have a great admiration for our illustrious President, as a man, as a warrior, as a statesman, but most of all as a true sportsman. He exemplifies all that is best in field sports, yet we have no reason to believe that he ever ate any of the California lions which he has killed.

Fox hunting is undoubtedly a true sport, and is practiced by a large number of genuine sportsmen and sportswomen, yet what is procured by it that is useful to man? Certainly Reynard has never been regarded as a choice titbit by the devotees of the sport. Then we have coyotes, wolves, and many other unsavory "varmints" which figure largely in true sport. Again there are anglers who turn away from the toothsome trout and salmon to catch tarpon that is comparatively worthless as a food fish.

It cannot be successfully denied that men, of whom J. A. L. Waddell is a type, have a clear conception of what constitutes true sport.

Field sports may, or may not, have had their origin during the racial infancy of man, but the contention that they had their origin in man's necessities is a square contradiction of facts as we find them at the present time. How long would the pursuit of any sort of game continue to be sport to the sportsman who should be compelled to pursue it continually to maintain his existence? Agricul-

ture was also found necessary to maintain man's existence, and was co-existent with the killing of game for man's support. Why is it then that the labor of agriculture has not become a trait in man's nature, and have been raised thereby to the realm of sport along with the pursuit of game? Is it not because the labor of agriculture is performed almost solely to procure something useful to man while the pursuit of game has become largely a diversion? Exceptions prove the rule. I know of a few cases where wealthy persons have turned to agriculture as a diversion from other business, and who regard it as sport. But how is it in the case of the laborers they employ, who dig their potatoes and ditches at $1 per day?

On the other hand, I have seen market-shooters and fishermen who got about the same amount of sport out of their avocation that they would out of digging potatoes or ditches.

Coahoma tells us the including of athletic games in the category of sport is unwarranted. To maintain this contention he must show that there is no diversion in these games.

I must take issue with Coahoma in another matter. He tells us the sport of big-game hunting has degenerated from the pursuit of the "good meat" to the pursuit of the trophy.

It is true that sportsmen are pusuing big game more for the sake of the sport and less for the commercial value of the game than formerly, but if this be degeneration let us have more of it.

I can see why a sportsman spends valuable time, and say $200 in money, and endures privations and hardships to secure a fine head of moose, elk or other coveted trophy, for mounted in the semblance of life it becomes "a thing of beauty and a joy forever." It is not only a handsome embellishment of his home, but is also a constant and pleasant reminder of his sport.

I cannot see why a sportsman should spend valuable time and $200 in money and endure privations and hardships to secure say $25 worth of meat.

No one can deplore the unnecessary waste of game more than myself. However, when a person kills game lawfully and allows all of it but the trophy to lie and rot where it fell, the loss is solely his, and no one else suffers greater loss than they would had he eat the good meat. It does not follow necessarily that the person who kills big game for the trophy wastes the meat. There are usually lumbermen, trappers, or residents near by who are only too glad to get it and make good use of it when notified by the person who killed the animal. This I think is done in a majority of cases, and I sincerely hope it will always be done in all cases where otherwise the meat would be left to rot.

Jos. W. Shurter.

Gansevoort, Aug. 16.

The Reforestation of Minnesota.

The Chippewa Reservation, situated in northern Minnesota, with its thousands of acres of primeval pine forest interlaced and interwoven with placid lakes and running streams, was to be thrown open to the lumberman, and what existed as a sylvan paradise was to be speedily turned into a desert waste of stump-covered, cut-over lands.

Early in the winter of 1897 the Minnesota State Medical Society, the State Educational Society and the Minnesota Federation of Women's Clubs, started the movement toward saving the pines upon this reservation.

The Forestry Committee of the Federation of Women's Clubs, headed by Mrs. Bramhall, visited the Governor of Minnesota and urged the appropriation by the Legislature of a sum sufficient to enable the State to purchase some wooded islands and promontories in this reservation. This being impracticable because of the many other appropriations then being asked of the Legislature, the committee appealed to the Secretary of the Interior to withhold the entire reservation from public sale, and at the same time requested of the Minnesota Legislature that a memorial to that effect be passed, which was done, and the Chippewa Reservation was withdrawn from the market.

This was unquestionably the most vital step taken in the whole history of the struggle to save this reservation, and to the club women and doctors of the State belongs this credit. Had this effort not been made, long ere this would the land and pines have passed into the hands of private owners.

And now comes Col. John S. Cooper, of Chicago, an enthusiastic lover of the piney woods, who, after a visit to the reservation, learning of the efforts being made to save these pine forests, enthusiastically entered into the project. With a view of enlarging the scope of the work and bringing influence to bear beyond the State of Minnesota, a meeting was called at Chicago. This was attended from St. Paul, Minneapolis, Duluth and other parts of Minnesota and from Chicago.

A map was shown at this meeting, of the proposed national park and forest reserve. It embraced an area of territory far in excess of the Chippewa Reservation, so much so as to include a number of villages and settled tracts many miles in extent, in the aggregate about 7,000,000 acres. It was such an enlargement of the original plan that it at once aroused the ire of the Duluth delegation and war was declared then and there through its spokesman, Judge Morris, who pledged himself to fight it to the death.

The mistake of expanding the Chippewa Reservation over scores of miles of more or less thickly populated territory already in the hands of settlers and private owners, was manifest, and it was immediately corrected, and the Chippewa Reservation was held to only, which mollified the opposition somewhat.

Printed matter issued subsequent to the meeting contained what was known as a compromise site, which was simply the area of the reservation originally asked for.

The women's clubs throughout the State of Minnesota and the medical associations were daily discussing and exploiting the subject of forest preservation. Petitions and private letters poured in upon Minnesota's representatives in Washington, making life a burden to them.

The village of Cass Lake and the greater part of Duluth were violently opposing the permanent closing of the reservation.

A Congressional visit was planned and made to the reservation, but unfortunately some of those selected as moving spirits on this trip were so notoriously against timber preservation that this Congressional excursion was looked upon with more or less suspicion, and the advocates of the National Minnesota Forest Reserve were accordingly regarded by many as tools of the lumbermen, helping them to keep a large body of timber out of the market temporarily, until they were ready to purchase.

The papers publishing the enlarged area of the proposed park were circulated among the villages and settlers interested and much hostility to the measure resulted therefrom.

Trips to Washington and other points were made at various times by Mrs. L. P. Williams, Miss Sanford and Mrs. C. S. Cairns, representing the Federation of Women's Clubs of Minnesota. President McKinley was visited, as well as the members of the Minnesota delegation. Col. Cooper likewise visited Washington on this same mission. There were others not herein mentioned who were, in their own way, persistently spreading the gospel of forestry.

The Federation of Women's Clubs met at Duluth, the hotbed of the opposition, and Dr. Schenck was brought from Biltmore, N. C., to explain the meaning of practical forestry. The meeting, if inharmonious, was nevertheless instructive and interesting.

Meetings were being held throughout the State, and people were gradually being educated as to the necessity of saving some of the remaining pine trees.

Mr. Tawny was prepared to bring the matter before Congress, but Mr. Morris prevailing upon the Speaker, Mr. Tawney failed to get recognition and Congress adjourned.

The Federation of Women's Clubs once more, through their representative, Mrs. Bramhall, approached our State Legislature for endorsement of the measure to save the reservation, and succeeded in securing it. Failure to secure favorable action from Congress had well nigh discouraged every worker in the cause, even the most enthusiastic. The endorsement at this time of the Minnesota Legislature was not only opportune, but of the highest importance. It was a notice to our representatives that the struggle to save some of the forests had not been abandoned.

Cass Lake village, anxious for more lumber-jack prosperity, sent a delegation to St. Paul and Minneapolis urging the opening of the reservation, but received no encouragement. In the meantime the cutting of the "dead and down" timber on the reservation was again allowed under the Nelson Bill, and the usual infamous thievery and scandals followed. Then in due course the Morris Bill was framed, and after much negotiation and compromise, was whipped into the present form.

Mr. Tawney, of all the Minnesota delegation, was the one and steadfast friend of this forest reserve movement from start to finish.

Final conferences having been held, at which at various times were present the Minnesota Congressional delegation, Prof. Pinchot, Prof. Schenck, Col. Cooper and Cass Lake representatives, the clauses relative to reforestation in the Morris Bill were agreed upon, and it was duly presented, passed and finally signed by the President and became law.

The bill was not what the forest reserve advocates hoped for, as the timber cutting was reversed, instead of cutting approximately ten per cent. annually and thus perpetuating the forests under forestry rules, it is proposed, under the Morris Bill, to cut at once ninety-five per cent. and depend on reforestation for the future.

The sum of results is that about 20,000 acres of primeval forest are saved intact for the people, and the forest lands, outside of the allotments to the Indians, are to be turned over to the Bureau of Forestry for reforestration after ninety-five per cent. of the pine timber has been cut.

The Morris Bill gives the first great impetus to reforestration in Minnesota, and although Judge Morris has consistently and persistently fought every attempt to save the timber on the Chippewa Reservation, and although he no doubt would much prefer that his bill contained no forestry clauses whatsoever, yet in spite of all this, Judge Morris is doomed to have his name go down to posterity inseparably conected with forest preservation in Minnesota. One hundred years from now, when new piney giants will have grown and matured from between the stumps of those now about to be cut, and when the reservation will have once more taken on its primeval appearance, then will a grateful public come forward and, amid the pines he loved so well, will it erect a statue to Judge Morris and will his name go down upon the receding waves of the ocean of time as the father of forestry in the great Northwest.

It certainly has been difficult to educate the average citizen of Minnesota up to the necessity of saving the remnants of the pine forests, but during the educational campaign of the past five years much sentiment toward forest preservation has been created.

To the initiators of the movement, our medical men and our club women, is due all credit. Drs. Bell, Craft and Dunning, and Profs. Northrup and Green were ever on the alert in the interests of the movement. Mrs. L. P. Williams, Miss Sanford, Mrs. Bramhall, Miss Margaret J. Evans and Mrs. Cairns, representing the Women's Clubs of our State, and Miss Obenauer, editor of the Courant, were more than enthusiastic and absolutely tireless and indefatigable.

Then there was Gen. Andrews, who loved the forest, and who from the first gave valuable aid and advice, and who stood always ready to serve the cause. His lectures on forestry throughout the State and his annual forestry reports as Chief Fire Warden, giving much space to forest preservation, did much to create sentiment in favor of forestry.

And immediately upon the passage of the Morris Bill, at the solicitation of Gen. Andrews, are 400,000 additional acres of pine forests along the shores of Lake Superior set aside for future generations as a forest reserve.

Our commercial bodies, the Chamber of Commerce, the Jobbers' Union and the Commercial Club, were eventually strongly committed to the scheme of forest preservation.

Our chief paper, the Pioneer Press, has pictorially and editorially stood by the forestry cause from the inception of the work and done immeasurable good throughout the State.

Outside of our own State, there is Col. Cooper, of Chicago, a man whose enthusiasm for the cause of forest preservation has known no bounds, whose time, energy and pocket book have been ever at the disposal of the good cause, and who has made at times the cause of forestry his daily work, leaving his law business to Sundays and such other moments as he had to spare.

To his enthusiasm and tireless energy and persistence are the people of Minnesota largely indebted.

It was on the part of all a labor of love and philanthropy throughout. Not a single forestry advocate had an ax to grind. The ladies, God bless them, went into the work with no reward awaiting them other than success. The doctors were selfish, for did they not want to save to the people a healing, balm-producing breathing spot among the pines where their racked and fever-consumed patients could be nursed back to health and strength?

Gen. Andrews had no ax to grind other than to save the pines we had left, and, if possible, to make two trees grow where one grew before.

As to Col. Cooper, he is not even a citizen of our State, so that no imputation of hoped-for political preferment can be lodged at his door.

Those forwarding this movement on the face of it have not gotten what they wanted, but as a practical fact it is a question as to whether they have not builded better than they knew. Heretofore "reforestation" has been a missing word in the dictionary of Minnesota. It is there now, and to "stay put." Yes, more, to spread and enlarge until thousands of cut-over acres of barren, rocky, sandy, stump-covered soil will in time begin to grow, under reforestation, their crops of pine. In other words, we will now begin to do what Germany and Austria began to do over a hundred years ago, conserve and reforest our pine lands.

Generations may come and go, but the Federal Government will go on, and under its protection the Minnesota pine forests will grow and thrive, until once more the white pine of Minnesota will take its place, although to a comparatively limited extent, among the merchantable lumber of commerce.

St. Paul, Aug. 2.

Natural History.

A Binary Mother.

Editor Forest and Stream:

A freak of nature has recently come under my observation, which has interested me not a little. It is a case of divided allegiance or duplex devotion to two mothers; and a refutation, therefore, of the postulate that one cannot serve two masters; and a signal proof that the difficult problem which the all-wise Solomon was called to solve might have otherwise worked out its own solution in a manner quite agreeable to all concerned, the judge included.

It is a case of two well-favored fowls, a white Leghorn and a Plymouth Rock, who "stole a nest" together one day last July, and after the customary period of patient incubation came off with a lone, diminutive white chick as the sole product of nine fresh-laid eggs duly set on. Whereupon an *entente cordiale* was established all around which three continuous weeks have failed to break, but rather seemed to strengthen. The brace of "biddies" cluck and scratch together like a working team, and brood together as far as they can, for whichever hen gathers in the chick, the other nestles alongside quite contented, and the buntling slips from under the one to the other just as if it were one common canopy of feathers. The mutual solicitude is marvelous to behold. The Siamese twins were not in closer accord, for what attracts or frightens one affects the other, and the chick conforms to both, running two ways at once as far as it can, and when both hens happen to scratch a bug or worm coincidently, the chick is heroic in its attempts to do double duty.

Notwithstanding this dual maternity, and this joint commissariat, and conserving care, the runt is hardly larger now at the end of three weeks than it was when it bursted the natal shell. But the mothers are still assiduous. Neither seems to be jealous of maternal prerogatives, though each claims preemption rights, and persistently hold down the same claim, as they say in squatter's parlance. Great expectations are manifestly banked on the future growth and development. The strongest part of the composite paradox is that neither fowl has shown the slightest interest to discover why a full clutch was not hatched out in the first place, according to the laws of incubation. Were this a case of natural selection or survival of the fittest, or an operation of the Malthusian process, the fact would remain and is sadly in evidence that the chick does not thrive well under the binary tutelage. It is obliged to "rustle" more than is good for its constitution. Too much effort at its callow age is exhausting; makes it thin and puny, bantling the antithesis of Banting, as it were.

Plainfield, Mass.

Wild Animals of the North.

From Richardson's "Fauna Boreali-Americana; or the Zoology of the Northern Parts of British America."

"'Persons who attempt to take beaver in winter should be thoroughly acquainted with their manner of life, otherwise they will have endless trouble to effect their purpose, because they have always a number of holes in the banks which serve them as places of retreat when any injury is offered to their houses; and in general it is in those holes that they are taken. When the beaver which are situated in a small river or creek are to be taken, the Indians sometimes find it necessary to stake the river across, to prevent them from passing, after which they endeavor to find out all their holes or places of retreat in the banks. This requires much practice and experience to

accomplish, and is performed in the following manner: Every man being furnished with an ice chisel, lashes it to the end of a small staff, about four or five feet long; he then walks along the edge of the banks, and keeps knocking his chisel against the ice. Those who are acquainted with that kind of work, well know by the sound of the ice when they are opposite to any of the beavers' holes or vaults. As soon as they suspect any, they cut a hole through the ice big enough to admit an old beaver, and in this manner proceed till they have found out all their places of retreat, or at least as many of them as possible. While the principal men are thus employed, some of the understrappers, and the women, are busy in breaking open the house, which at times is no easy task, for I have frequently known these houses to be five or six feet thick, and one, in particular, was more than eight feet thick in the crown. When the beaver finds that their habitations are invaded, they fly to their holes in the banks for shelter, and on being perceived by the Indians, which is easily done by attending to the motion of the water, they block up the entrance with stakes of wood, and then haul the beaver out of its hole, either by hand if they can reach it, or with a large hook made for that purpose, which is fastened to the end of a long stick. In this kind of hunting, every man has the sole right to all the beaver caught by him in the holes or vaults, and as this is a constant rule, each person takes care to mark such as he discovers by sticking up a branch of a tree by which he may know them. All that are caught in the house are the property of the person who finds it. The beaver is an animal which cannot keep under water long at a time, so that when their houses are broke open, and all their places of retreat discovered, they have but one choice left, as it may be called, either to be taken in their house or their vaults; in general, they prefer the latter, for where there is one beaver caught in the house, many thousands are taken in the vaults in the banks. Sometimes they are caught in nets, and in summer very frequently in traps.'"

"* * * Hearne goes on to say he had 'kept several of them till they became so domesticated as to answer to their name, and follow those to whom they were accustomed, in the same manner as a dog would do; and they were as much pleased at being fondled as any animal I ever saw. In cold weather they were kept in my own sitting room, where they were the constant companions of the Indian women and children, and were so fond of their company, that when the Indians were absent for any considerable time, the beaver discovered great signs of uneasiness; and on their return, showed equal marks of pleasure by fondling on them, crawling into their laps, lying on their backs, sitting erect like a squirrel, and behaving like children who see their parent but seldom. In general, during the winter, they lived on the same food as the women did, and were remarkably fond of rice and plum pudding; they would eat partridges and fresh venison very freely, but I never tried them with fish, though I have heard they will at times prey on them. In fact, there are few graminivorous animals that may not be brought to be carnivorous.'"

Richardson speaks of the occasional occurrence of beaver which are entirely black, but do not differ in any other respect from those of the ordinary dark brown color. He quotes Hearne as saying that it was rare to get more than twelve or fifteen of their skins in the course of one year's trade.

A Pair of Rain Crows.

All winter I observed, especially on my linden trees in front of my house, a number of dried leaves which persisted in sticking to the branches in spite of wind and rain and snow. In early spring I discovered that each of these leaves was doubled over and pasted fast, and inside were hundreds of small, white, hard-shelled eggs, about the size of a pin's head. They were, as I believe, the eggs of the white tussock moth (*Orgyia leucostigma*). All fall I had been making war upon the caterpillars of these moths. They had been exceedingly numerous, and for them I had a great dislike, as I have for everything that crawls. I immediately cleared the trees of these leaves as far as I could; but many of them were away beyond my reach, and I had to let them go. I anticipated a host of caterpillars, and I was not mistaken. When the summer opened up they were traveling everywhere, and it was impossible to walk under my trees even for a few minutes without coming away with one or more of the loathsome creatures crawling over me. I thought of Killingworth after the slaughter of the birds:

"In the orchards fed
Myriads of caterpillars, and around
The cultivated fields and garden beds
Hosts of devouring insects crawled, and found
No foe to check their march, till they had made
The land a desert without leaf or shade."

I was getting really nervous over it, when a couple of birds put in an appearance. They came mostly in the early evenings. I did not know what hey were at first, but I saw them hopping briskly among the branches of the lindens, and to my joy I perceived they were feasting on the dreaded white caterpillars. They manifested their satisfaction occasionally by calling out Ick-ick-ick-ick; ko, ko, ko. They were rain crows (*Coccyzus erythrophthalmus*). They come every evening for a couple of weeks or so, and still come occasionally; but I have not seen a caterpillar of that description for a month. Bless the rain crow! What a power of good one pair of birds did, not only on my own small place, but I suppose in other gardens over a large region. Shame befall the man, and severe punishment, who would harm an insectivorous bird. T. J. Chapman.

The Drumming Grouse.

Fox Lake, Wis.—*Editor Forest and Stream:* Several years ago there was quite a warm discussion in Forest and Stream as to what caused the noise made by a drumming grouse. I have forgotten how the matter was finally decided, but in talking with a hunting companion the other evening who is not only a keen hunter and a crack shot, but a close observer, I asked him what he thought about it. He said the noise was caused by the grouse striking the buts of his wings on the distended skin of his neck, that being filled with air, acted like a drum. Speaking of bitterns, he said he had often watched them in the early morning at a distance of a few yards, and the clacking noise was caused by striking the bill together; then they would distend the skin of their necks and shooting their heads out straight would make the booming sound. He gave us a perfect imitation of these noises, and it took us back very forcibly to a morning on the marsh. We still have a little game here, and if the laws could be enforced it would last, but as fast as laws are made some way is invented to get around them. There's only one thing to do, and that's stop the sale of game.

W. E. Warren.

Reclamation of Shifting Sand Dunes.

The protection of valuable property from the encroachment of shifting sand dunes is becoming an important problem in some portions of the country. The regions most severely affected are the Atlantic and Pacific coasts, the lake district of Michigan, and the Columbia River district of Washington and Oregon.

Two field parties from the Bureau of Forestry are at work on this problem. One will investigate the worst dune districts along the Atlantic coast, and will study carefully the grasses, shrubs, and trees that can be used either for temporary or permanent retention of the sand dunes, and will also inquire into other methods of holding the active dunes, or changing their direction. Very successful work in holding the sand by grass and shrub planting has already been done by the State of Massachusetts on a portion of Cape Cod known as the "Province Lands."

The problem along the Columbia River is somewhat different from that along the Atlantic Coast, owing to the different origin and character of the sand. It is expected, however, that the control of the sand there, like that of the coast sand, can be effected by means of grass or shrub planting, and afterward by forestation. Primarily the object of controlling the sand is to protect valuable property which is endangered by the dunes. The bureau has undertaken this work in order to give practical assistance to persons who have requested its aid in the protection of their property.

She Bear and Mother Moose.

Wellesley Farms, Mass.—*Editor Forest and Stream:* When in Maine last May at my camp, I visited a bear hunter who had quite a collection of bearskins. In our talk he described the various methods used in trapping which are well known, but one of his experiences was very interesting.

With another woodsman, they saw a cow moose and her two calves in a shoal water bay. The cow was evidently disturbed by something, and they quietly watched her. She faced the woods, but gradually worked her young into the water. Shortly a bear was seen coming in for the calves. The cow waited until the bear was close and deep in the water, when she rose on her hind feet and with her forefeet struck the bear as hard as she could, knocking her down and then pounding her with her feet until the hunters found the skin unfit to preserve. The men did not dare to meddle, because they could not shoot.

Another interesting experience of another hunter was as follows: Setting his bear trap, he used as a clog an old sled shoe of oak. Coming up the old logging road he saw what at first he thought was a man with a big stick in his arms, but coming closer he saw that it was a bear carrying his clog. He got the bear, but one must feel sympathy for such an animal. Evidently the black bear of Maine is no fool, and no fool can trap him.

C. A. D.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in Forest and Stream.

Big Game and Little.

Boston, Aug. 16.—Megantic Club sportsmen have the advantage of sportsmen who propose to spend the month of September in Maine. In Canada the open season on moose, deer, caribou and partridges, begins Sept. 1, while in Maine the law is off on partridges Sept. 15; on deer, Oct. 1; on moose, Oct. 15, while caribou are under a close season from Oct. 1, 1899, for six years. Now the Megantic Preserve is partly in Canada and partly in Maine, with its fishing waters largely in Maine, and since the close season on trout and landlocked salmon in Maine does not begin till Oct. 1, the Megantic Club hunter has the month of September for both hunting and fishing. Club members and their guests will take advantage of this situation. The Megantic Club register is already about full for September, and the guides are about all engaged. Secretary L. Dana Chapman has most satisfactory reports concerning the fishing so far this year. Returning members and guests express themselves as greatly pleased, not only with the fishing they have enjoyed, but also with the management, and the care that is being taken to conserve the fish by requiring that all the fish not actually required for the club tables be returned alive to the water. Among the members and guests lately returned from the preserve may be mentioned Henry W. Butterworth, wife and family, of Philadelphia; George Hayward, of Gardner, Mass.; G. N. Proctor, Fitchburg, Mass.; Harry T. Brown, of Winchester, Mass.; William L. Quimby, and party of friends, of Boston; George A. Gibson and son, of Boston.

Several Boston gunners went down to Chatham to-day to be gone till Monday. They hear of some good flights of birds, and want to be among them. A Boston gunner, A. T. Brown, returned yesterday with the report that he had seen a flock of eight curlew, an unusually large number for this coast. He got a long shot at them, getting three. But the Sunday law is troubling again, and the officers were out last Sunday, as well as the gunners. One of them, a Boston broker, saw a man coming down the beach of whom he was suspicious. He secreted his gun behind a blind and walked off the other way. The suspicious personage passed along, and our Boston gunner went for his gun, and also turned off in another direction along the beach. Soon he saw a man coming, and really it looked like the first man he had seen. There was no opportunity to turn aside, and he came boldly up and met the stranger. The stranger asked the man with the gun if he was out shooting, and he allowed that he was out walking. The stranger asked the gunner his name, and was answered, "Brown." The stranger suggested that "It's a very common name," with a twinkle in his eye, as much as to say, "I don't believe it." The gunner then asked for the stranger's name, and he turned back the lapel of his coat and showed a badge. It cost the gunner about $15 to settle the matter quietly. The gunners tell me that they dread the jobs that are constantly being put up on them by other gunners—sometimes friends having practical jokes—even more than they dread the officers. Other gunners who are strangers will get tin imitations of badges and play officer to anybody they happen to see near the blinds on Sunday, even though they may have their own guns secreted not far away. In this way they can easily dislodge hunters from blinds or desirable positions, and the dislodged gunners dare not return. One Boston gunner tells me of a job he had put up on him last year by other gunners, and he was a good deal annoyed, and is watching his opportunity to get even with the same party.

Special.

Jefferson County Fish and Game.

Watertown, N. Y., Aug. 10.—On Lake Ontario from Cape Vincent to the county line we have the finest smallmouth black bass fishing in the world, and along its shores and the St. Lawrence River vast flocks of wildfowl congregate and feed, affording fine sport during the fall and winter months. Since the spring shooting has ceased large numbers remain here and nest along our creeks and inland lakes. Even the young of the wild goose, that most wary of birds, has been seen on Black River Bay this month. Within the borders of this county we have hundreds of acres of grouse and woodcock cover, where but a few years ago these birds bred in countless numbers, where they are still to be found, but in rapidly diminishing numbers each year.

Trout streams are abundant, and would if the law was properly observed afford fair fishing for years to come. With the big-game hunting and the trout fishing of the Adirondacks and Canada just across our border, we are offered opportunities which no other county can give. Wise laws are enacted by the State for the preservation of our fish and game, and thousands of dollars are appropriated each year to secure their enforcement.

Why is it that the violators of these laws go unpunished year after year? Is it because there has been no expression of public sentiment in favor of these laws? I believe that a large majority of the citizens of this county are in favor of their rigid enforcement, and if we have any laws that are not right and just they should be repealed. I believe that a large majority of the residents who fish and hunt respect these laws, but there are a few persons in this city and in each town in the county who violate these laws without fear of punishment. The law protecting song birds is a dead letter, and even within the city limits they are slaughtered without mercy. Every day parties are seen leaving this city with guns to hunt in the surrounding country. Already complaints have come to me of the killing of young partridge and ducks. The law limiting the length of black bass that may be legally taken to ten inches has been openly disregarded, and thousands of bass are killed each year that should have been returned to the waters alive. Black bass were peddled from house to house in this city last spring two weeks before the season legally opened.

Last winter the law permitting licensed netting in Chaumont Bay was extended to permit fishing during the month of May, at a time when the bass return in large numbers to spawn. Not satisfied with this extension some of the fishermen permitted their nets to remain in the waters a week or ten days in June in direct violation of the law.

The annual killing of our game birds before they are able to fly has begun and unless the law abiding sportsmen of this county act promptly, we can expect the usual result, plenty of empty shotgun shells and few birds in our covers.

I would suggest that a petition from each town and a personal letter from each sportsman be addressed to Governor B. B. Odell, Albany, N. Y., asking for his aid and influence in securing a proper enforcement of the fish and game laws in this county. It would show that public opinion was in favor of their enforcement and would secure active support from the Governor.

W. H. Tallett,
President Jefferson County Sportsmen's Association.

CHICAGO AND THE WEST.

Where to Go for Prairie Chickens.

Chicago, Ill., Aug. 9.—A letter just at hand from one of the best-posted gentlemen in the Northwest contains the following cheering news regarding the game prospects in the State of Minnesota for the coming season:

"In regard to the good points for chicken shooting, I think I am safe in saying that Minnesota this year will furnish the finest chicken, grouse, quail and duck shooting that the State has furnished for years. This is not an idle boast, but comes from every quarter of the State where game abounds. I think the foremost places in the State this year are on the line of the Northern Pacific Railway, beginning at Ulen—in fact, we might begin at Detroit—and then say Lake Park, Winnipeg Junction, Ulen and clean up to Fertile—and Fertile is a good place, too. Red Lake Falls, on the same line, and Thief River Falls, still further up, are also good. Then if you want to go far enough the Great Northern line, beginning at St. Vincent, which is the boundary between Canada and our State, then coming toward St. Paul, through Hallock, Kennedy, Stephen and Argyle, and Warren; then Crookston; then coming down the Great Northern to Ada, and Felton, then down to your old hunting grounds, Campbell and Tintah. And, of course, anywhere around Fergus Falls is good hunting. Then com-

ng down still further toward St. Paul, we have Morris n the Great Northern line, Benson and Hancock. Then aking the Wilmar Division of the Great Northern line rom St. Paul, there will be elegant shooting along that ne from Montevideo, Granite Falls, Marshall and Han- y Falls.

"Of course there are lots of other places in the State; hese are the principal points where a man cannot go stray. My own shooting will be done with our war- en, Jimmie Jones, and his "meat dogs" are in splendid hape, so he writes me.

"You know that last winter and the winter before were reat winters for the feathered game. I have lived in Minnesota since '79, but I have never seen anything like he amount of birds that wintered in the State, and my bservations are borne out by every one of our wardens. here is no need of leaving our State to go south to unt quail if we have winters such as we have had in 00 and 1901. They have multiplied rapidly, and then opping the sale of course has been a great factor, as ell as the winters. The market-hunter had pretty near xtinguished our ruffed grouse, but they are now getting entiful again, and a man can make a good bag in almost ly direction.

"Sorry that I did not see you when I was in Chicago, t expect to be down there in the near future, and hope have better success. Whenever you feel like coming Minnesota to have a quail hunt, let me know and I ill see that the dogs are furnished, with some ice in e back of the wagon."

Illinois Sooners.

There has been considerable shooting on local plover d ducks in the upper part of this State, and in lower isconsin, even in this mid-summer month of August. general complaint has been issued to the Governor of e State of Wisconsin by the residents of that State who ell near some of the summer resorts. The local men y that the Chicago visitors to the summer hotels do not sitate to bring in guns with them and shoot every ing thing that flies. A report comes from Kenosha t many hundred snipe and ducks are being shot each y. This is more than can be killed in the open season, d it looks as though the sooners were, as usual, getting best of it.

A Drama of Sooners.

ST. PAUL, Minn., Aug. 12.—Here is a little comedy, a ama this week enacted out in Minnesota, a drama of oners. In it the villain is foiled, and virtue is tri- mphant. It also has a moral, which, however, belongs the other end of the drama.

The principal figures in the comedy are D. C. Shepard, millionaire of St. Paul, with a tendency toward sport on occasion, sport of the private-car sort. His per- nal and private car figures in the play. Also comes one ed Noble, a dog trainer and dog accumulator. His other, Arthur Noble, runs a creamery. The place of action is Twin Valley, Minn., and the Noble boys live re. Non-resident parties to the action, in addition to aforesaid millionaire, Mr. Shepard, are one Mr. Nes- , ostensibly of Fergus Falls, and one Jno. T. Swan- n, who has blue eyes and talks Swedish as though born der the flag of King Oscar, which he wasn't by any ans. A bird dog known as Trump, lost last year in Paul, is a sort of incidental and side-line actor.

Mr. "Nesbit" doesn't live in Fergus Falls, but in St. ul, and has offices in the State Building. He was out the State fish hatchery one night last week, when a one message came for him. He was in bed, and the ntral operator had forgotten who rang up, by the time got to the 'phone. The next day he got a message ich said a good many chicken feathers had been seen Mr. Shepard's buggy at Twin Valley. The caller nted Mr. Nesbit to meet Mr. Shepard's private car en it pulled into St. Paul. There might be feathers in car. This was Tuesday, Aug. 5, a little early for cken feathers.

t was too late to meet the car, so Mr. Nesbit tele- phed to Detroit for Mr. Swanson, and they both went to Twin Valley. Mr. Nesbit went out and found Mr. ble, the dog trainer, who was reported to have been the npanion of Mr. Shepard. Mr. Nesbit didn't want to a dog without seeing him tried in the field. "That's y," said Mr. Noble. "We always show the dog on ds and prove he's a shooting dog."

Is that so?" said Mr. Nesbit. "Well, let's try this , then." So presently they started out. Mr. Noble n unbosomed himself fully. He said Mr. Shepard nted to get a dog, and he was anxious to get some birds Mr. Shepard, so he shot eleven chickens and had m waiting for him when he came. He also shot some re after Mr. Shepard came.

Mr. Nesbit made a deposit on a certain dog, and said would come up later and get him. Then he and Mr. anson went home. It was night when Mr. Nesbit got St. Paul, but he called up Mr. Shepard at his resi- ce.

Who's there?" asked a voice.

Why, I'm Noble, of Twin Valley," was the answer, d I want to see Mr. Shepard."

Well, Mr. Shepard is lying down," said the other of the 'phone, but I'll see about it."

Mr. Shepard was apparently interested in this word n Mr. Noble, for in a moment he was at the wire asked, "What is it? What's the matter?"

Why, the devil is to pay," said the false Mr. Noble o was the alias Mr. Nesbit). "Those fellows we ed in the buggy have informed on us, and I'm pinched. re all up against it."

The ——— you say!" ejaculated Mr. Shepard. "Lord, you don't say so?"

What are we going to do about it?" asked Mr. Noble, iously.

I don't know," came the reply. "I'll see you in the ning about it."

Mr. "Swanson" took care of the rest. In a couple of s Mr. Shepard's lawyer came around to intercede for wealthy client. For need we explain, gentle reader, "Mr. Nesbit" was State Game Warden for Minne- , and "Mr. Swanson" his able deputy, Stephens, of roit? Need we add that the "fellows we passed in buggy" were simply a guess—a bluff, a subterfuge that luckily correct and practical?

Mr. Shepard's lawyer saw Mr. Fullerton and besought him to keep the case out of court and to say nothing about it. "Mr. Shepard is sick in bed," said he, "and can't be disturbed just now (!). He admits that he brought those chickens home with him." (Which Mr. Fullerton couldn't have proved before that.) "He'll pay any fine you like. He didn't do any shooting himself, and he told Noble not to shoot, but Noble kept on shooting. Don't arrest Mr. Shepard. He is innocent. It's just a case of Dog Tray, you see." This last in a burst of affability.

Mr. Fullerton is going to fine both Noble and Shepard. In the matter of breaking game laws it isn't always safe to be even a Dog Tray.

Mr. Joe Henry, of the Hackett Hardware Co., of St. Paul, says that Noble ordered a case of shells Aug. 1, and he refused to ship him the shells.

Mr. Fullerton, or Mr. Nesbit, thinks this is one of the funniest game cases he ever had to do with. A special cause for content on his personal account is to be noted in connection with the dog Trump, earlier mentioned. In brief, Mr. Fullerton found his own bird dog in Mr. Noble's string. He took an "option" on his own dog, paying down a sum on the purchase. "Here's where it was hard," said Mr. Fullerton, or Nesbit. "I wanted to kick the tar out of something, but I knew the best way to do was to leave the dog there as a sort of bond of sympathy between Noble and myself."

No one knows how Noble got Trump. The dog is valuable. It probably drifted to Noble's well-stocked kennels in the course of trade. At any rate, if this isn't a nice little comedy in game matters, I don't know where you'd find one.

Other Sooners.

"I appointed one warden up north," said the State Executive Agent to me some time ago, "and they said he'd never do. I said if he'd catch the secretary of the Fergus Falls Gun Club he'd do for me. Since then he's caught that secretary twice, and a leading banker there three times. They've both promised to be good now. The deputy still holds his job."

Asked as to sooner shooting up at Thief River Falls, where a great many birds have been killed already, the hustling agent told the complainer that there is a warden in there now, that he had lost a jury case there last week, and that local sentiment was so lawless it is almost impossible to make a case stick. About half the population turned out with guns last year and tried to rescue some prisoners who were arrested for illegal shooting. The officers had to draw their own guns, and it looked like a fight for a time. The prisoners were held.

The Birds.

The game laws may be seen to be anything but a dead letter in Minnesota, and for that reason there are birds in Minnesota; lots of them. Some sooners shoot ahead of season, but they don't always lay up enough money at it to make them keep at it forever. At the gun stores and among sportsmen the feeling now in regard to the game supply is one of cheerfulness and confidence. A list of good Minnesota localities has already been given.

The summer in this part of the Northwest has been cool and damp. If this prevails for thirty days ,a good shooting season is assured. Hot, dry weather on Sept. 1 is the cause of many a poor chicken hunt. No chicken hunt is better than one's dog, and no dog can do much in very hot, dry weather.

In the Minnesota National Park.

There is good duck shooting in the region included in the Minnesota National Park. At the foot of Itasca Lake there is abundance of wild rice, and good duck shooting is often possible there. Park Rapids is a good place to remember. One can there get muscallunge fishing and duck shooting on the same fall trip. There is a good hotel at Park Rapids. One can get boats or canoes, as he likes. In the big waters of Cass Lake there are fish, big fish, giant muscallunge sometimes, but it is slow and uncertain getting them. Sometimes they strike old whales which break up everything and go off as they like.

Big Pike.

Mr. L. M. Ritten, of Minneapolis, fishing at Lake Carlos, one of the Alexandria lakes, recently caught a great northern pike that weighed 22½ pounds, and was 43½ inches long. A fine, symmetrical fish, and one of the largest recorded in Minnesota for some time.

Victim of Confidence.

At our cottage on Lake Minnetonka we had a pet crow, the property of Louis Gates, a neighbor boy, but which had adopted our place for its own use. This crow, which was named Jimmy, was entirely tame, and a most curious and interesting pet. It was fond of frogs, and would throw back its head and open its mouth, begging for frogs. If one were writing, Jimmy would perch himself on the table, carry off pen or pencil, and peck at the paper, all in the most charming familiarity. He would come up to one and allow himself to be taken into the hand, something which a crow rarely will do, no matter how tame. He had a hundred odd tricks of act and voice which made acquaintance with him a continued surprise and delight. What with our pet squirrels and this pet crow, we were very happy. That was until this week. One day Jimmy followed the boat down to Spring Park dock, something like half a mile, alighted on the boathouse porch, where he proceeded to make friends with the boathouse hand. The latter, seeing a bird so close at hand and so defenseless, picked up a paddle and killed Jimmy with very little difficulty before any one could prevent it. Comment is not necessary.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Death of the Musk-Ox.

THE little musk-ox, which was so fully described in FOREST AND STREAM last winter, and which, through the generosity of Hon. W. C. Whitney, became one of the chief attractions of the New York Zoological Park, is dead.

A few weeks ago it seemed in fine health and spirits, but last week it was attacked by pneumonia, and after a short illness succumbed. There are very few musk-oxen in captivity, and the death of this one deprives the Zoological Society of its chiefest treasure.

Camp-Fire Flickerings.

"That reminds me."

Mephitis Mephitica and the Deacon.

READING Mr. Hough's interesting letters from Minnetonka, reminded me of skunks, because, for certain reasons, I always associate skunks with Minnetonka, and when I am reminded of skunks I revert to old man Bassford's yarn about the deacon and the skunk.

Bassford was born down in old Calais in the State of Maine, and he can tell more stories of happenings in Calais than Chauncey Depew ever conjured out of the classic precincts of Peekskill-on-Hudson. And when he makes one of a fishing or hunting party there is no lack of merriment over the exhaustless fund of stories he spins out. His fishing and hunting experiences fifty years ago in the wilds of Maine have charmed many an interested listener around the campfire. He tells the following story on himself, and partly on the deacon, as well:

"When I was a boy down in Calais I was apprenticed to a machine shop proprietor, whose place of business was on the banks of the St. Croix River. The boss was a deacon in the church, and if there was one thing abhorred by him above all other things, it was profanity. Let a slip be made by any of the hands in the shop within the hearing of the boss, and he at once felt either the deacon's good right hand or the toe of his number 9 boot.

"There never was a heavy job of lugging or lifting but what the boss would sail in and help the rest. Many were the tight places they crowded him into, at such times pinching his fingers and bruising his shins, only for one purpose, just to hear the deacon swear—just once. But all to no avail, the deacon was proof against temptation.

"A new well was needed for the shop. A windlass was rigged up and with rope and bucket we boys took turns at digging and lifting. Before work commenced each morning the boss would have himself lowered in the bucket to look over and inspect the work.

"One morning I was early at the shop, and as I passed the well I looked down for signs of water, and instead saw the finest, prettiest and liveliest skunk I ever laid my eyes on walking around the clayey bottom of that well, making fruitless attempts to climb up the smooth clay walls.

"I said nothing to my mate, who came up in a few moments, but having hitched on the bucket, I kept it suspended over the opening of the well and waited for the boss, who came bustling along before the seven o'clock whistle ceased blowing.

"Getting into the bucket, he ordered us to lower away, and we slowly allowed the crank handles to reverse. All went well until the bucket reached within six feet of bottom, when the deacon let out an unearthly yell and ordered us to hoist. At this I let go my crank handle, the increased draft on the windlass pulling the other crank handle loose from the other boy's grasp, sending him sprawling on the ground and letting the bucket, deacon and all drop kerchunk to the bottom of the well.

"And then I ran to the shop and gave the alarm, and the men flew out like a swarm of bees and ran for the opening.

"One by one they hurriedly looked down, only to draw back their heads and snort with suffocation, because of the ascending effluvium. Every fresh face that appeared above the opening was hailed by the deacon and ordered to hoist up, but after a dozen idiots had looked down, snorted and done nothing, then the deacon broke loose and began to swear, and he swore only as a down-east Yankee deacon can swear, when he is drove to it.

"But the more he swore the more the men fumbled the rope and windlass, but finally the good old man was reeled up spluttering and swearing and smelling worse than a tanyard. The moment he reached the surface he ran for the river and waded out up to his neck.

"As soon as a change of clothes could be gotten for him from miscellaneous sources in the neighborhood, he emerged from the river and set to hunting me.

"But I had flown and remained away for a couple of days, and when I returned the explanation that the windlass crank slipped from my hands alone saved me from the worst hiding ever given a sixteen-year-old boy. But the deacon never swore again after that, although he certainly knew how."

CHARLES CRISTADORO.

Lord Justice Mathew is possessed of a mild and kindly exterior, which at first sight gives the impression that its owner is a simple country gentleman rather than an expert lawyer. At any rate, this was evidently the view of a professional seller of painted birds, who one day met Sir James in the neighborhood of the Strand Law Courts, and, showing him one of his birds, asked that eminent dispensator of justice to what species he would take it to belong. The Judge stopped, carefully examined the gaudy little creature, and then replied that he had not seen a bird exactly like that one before, but, judging from the old proverb that birds of a feather flock together, he should say that it was a jail bird. The intending vendor did not wait for more!—Liverpool Post.

Mr. Jasper Reynolds, a prominent citizen of Fordsville, O., is sitting in the shade trees these days entertaining himself with visions of wealth from a fish pond. Two years ago he built a dam across a ravine near his house, and put in a few catfish and thirty-six game fish. They have increased to such an extent that the water is alive with them, although the pond covers a quarter of an acre, and is eight feet deep. The people of the town and visitors feed them to see them eat, and Mr. Reynolds only has to watch them grow. The largest of the game fish now weigh over a pound, and the cats weigh twice as much. Nobody thinks of catching them, and no fish has ever been taken from the pond.—Louisville Courier-Journal.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

Random Notes of an Angler.

The Pickerel is the Poor Man's Game Fish.

I WONDER how many there are to whom it had occurred that the pickerel or pike is the chief game fish for the poor man of the rural districts. The game fish for farmers and farmers' boys, small traders, mechanics, factory operatives and others to whom the higher game fish are by reason of pecuniary and other conditions forbidden fruit; and although many of us who have for many years handled the rod and reel do not consider the fish to be of much value either for game or food, yet what a lot of sport there is derived from its pursuit by those who are accustomed to follow it.

A Fish that is Widely Distributed.

You see it is more generally diffused throughout a great portion of the country than is any other species. I think I am perfectly safe in stating that there are at least twenty acres of water in which these fish are found to one acre containing black bass or trout. I am speaking now collectively of the pickerel and pike portions of Canada, of the Eastern States and the Middle and most of the Western States, and the pike or jackfish of Virginia and further south, almost every river, pond and lake having its "long-snouted" denizens, which in some localities are very numerous.

It is sufficiently gamy in the opinion of many to be well worth following, and its pursuit is one of the few recreations that a large number of persons indulge in.

I know that the general impression is that the brook trout is the farmers' boys' game fish, but that honor, if it may be so called, belongs to the pickerel. To all who are familiar with rural affairs it is a common thing to see these boys at the end of the haying season rig up their tapering maple, ash or alder poles, to which is attached a strong line with a stout hook at the end on which is impaled a frog's hind leg or a strip of the skin of salt pork cut somewhat in the shape of a minnow, and sally forth of a cloudy day when the wind is in the "south'ard" or "so'westward" and "skitter" their bait on the surface of the water among the lilypads and aquatic weeds for the fish which "always are hungry." They really get a lot of sport out of it, and if success favors them and they return at night with a "good string," they exhibit their catch with as much pride and complacency as does the fly-fisherman offer for your admiring inspection the elegant creel of spotted beauties he has succeeded in taking.

Various Phases of Sportsmanship.

The older I grow the more I am becoming convinced that "sportsmanlike" is after all not a positive but a comparative term; that there is and can be no unwavering line drawn which shall decide arbitrarily that the capturing of certain species in certain ways is en regle only, while the taking of other species in other ways, more commonplace, if you will, is poaching, or rather "potting," because there are hosts of anglers who have never handled a fly-rod, yet who have all the true sportsman's instincts and really get "sportsmanlike" enjoyment out of the methods that are familiar to them. Of course I do not wish for a moment to imply that fly-fishing with light tackle is not the acme of the angler's art, for it is, but there are many who claim that in other methods there is as sportsmanlike enjoyment to be obtained.

For example, I have a friend who contends that fishing a trout stream with a live minnow for bait is the highest sport with the rod that can be named. He insists that it requires vastly more skill to quietly follow all the meanderings of the stream by wading and drop his minnow into every little eddy and deep hole down among submerged tree trunks and rocks or overhanging banks and to hook and save his fish in such places than it does to fish in the open with the fly.

I have another friend who is the veriest crank you ever saw in relation to fly-fishing. If he cannot take his trout with the fly and on a four-ounce rod at that, he will go without until doomsday. He would scorn to take one with bait, yet he just simply delights in fishing with a hand line for scup (porgies), black sea bass and blackfish or tautog.

Another gentleman who is quite celebrated as a sportsman, and whose views are as rigid as steel regarding the killing of game, both large and small, actually approves of and delights in trolling with a minnow or a spinning spoon for trout and landlocked salmon in the great lakes of Maine. He would rightly regard with disgust a man who would fire into a covey of running quail or at a partridge in a tree, yet he is oblivious of the fact that trolling for trout and salmon is, in localities where they may be taken with the fly, in the opinion of most anglers, simply potting, and is not a "sportsmanlike" method in any degree.

Value of the Pickerel as Food.

I have said that the pickerel or pike in the domestic economy of a large number of persons occupies an important position; in fact, it is almost the only food fish that is available to them, and it furnishes not only food, but sport also. I know something of farmers' boys and the slim opportunities they have for recreation with rod and line, for I was one myself. It was not very often that I had a chance to get away from the hayfield or cornfield to go a-fishing, but now and then the opening presented itself and it is not necessary to state that I availed myself of it.

The first large fresh-water fish that I ever caught was a five-pound pickerel, and though it occurred over a half-century ago, it is as fresh in my memory as if it had happened yesterday. It was in the brook known as the Pine Tree Brook, in Milton, Mass. It had formerly been a famous trout brook, and it is to this day, away up under the shadows of the Blue Hills toward its sources a home for the spotted beauties.

But below the dam at the Old Mill—so called on the crossroad running between the main road in Milton and the old Scotch woods road—and down through the long stretches of swamps and meadows the pickerel have exterminated all other species.

At the period I refer to a few fair-sized fish had from time to time been taken from it, but a two-pound fish was the largest that had been seen, and that was considered a good size, considering that the brook was not a large one.

On the occasion to which I refer, I started down the brook from the bridge on the crossroad, and working my way through alders and swale and thickets of brier bushes, I cast my bait over every foot of the brook.

I doubt if many anglers had ever preceded me through a portion of that jungle, but I was full of enthusiasm and determined to see just what there was to be obtained in the line of pickerel that day. It was not exactly a case of woodchuck and preacher, but I was simply determined to get fish.

As I moved along I found that there often were stretches of four or five rods in length in which the brook widened considerably, and among the masses of yellow lily plants and weeds that abounded there, were many quite deep holes. From these I succeeded in taking three or four good fish, and I felt mighty elated at my success.

At length I came to a wide stretch of the brook in which there was a large area of deep black water, and as I wormed my way out of the jungle and prepared a fresh bait of a frog's hind leg, I felt certain that here I was to get a good fish.

I cast my lure as far out into the pool as I could and then began to play it about on the surface of the water. I had not moved it more than a yard or two, in fact, I had hardly begun to give it the peculiar motion that successful pickerel anglers practice, when a great circle of water moved toward the bait an enormous pair of jaws opened and with a heavy splash the pickerel seized my bait and turned back to its lurking place, where it could swallow it at leisure.

I had, I remember, an old-fashioned bamboo pole, which had been a present to me, and which I prized most highly. In my excitement I raised it pretty sharply, and as I saw it bend into a half-circle, I expected it would go to pieces, but it proved sound and strong, and with a "long pull and a strong pull" I drew the fish to the bank where I was standing.

It was a bad place to land a fish on account of its steepness and the abundance of rushes that grew on it, but there was a little patch of aquatic grass a yard or two down the stream, and to this I led my prize; it came along rather passively, and I had fairly drawn the fish its length across the grass when the hook sprang out of its mouth.

The fish on finding that it was free began to flap around most vigorously, and it was just on the point of slipping back into the deep water, when I threw myself upon it bodily, and clasping it tightly in my arms, struggled back away from the water. I lost no time in giving it its coup de grace, and then, panting with excitement, I paused to admire my prize. And what a beauty it was, and such a monster, too. I thought I had never seen a pickerel half so large.

It did not take me long to string my fish, my big one on top, of course, and work my way out of the swamp and start for home. I am inclined to think I ran most of the distance, for when I entered the house I was quite breathless. Well, the fame of that pickerel spread far and wide, and I was for a time "high line" among the boys of the neighborhood.

That it was a highly colored, beautifully reticulated fish, I remember quite distinctly, but further than that I can say nothing regarding its identity. It may have been a pike, for it is said that five-pound pickerel are few and far between, but as we did not pay any attention to the scales on the cheeks of the fish in those days, we called it a rousing big pickerel, and so let it rest. How many years it had made that pool its home, lurking there like a Giant Despair for victims to whom no mercy was ever shown, who can tell? But that it had destroyed a large number of trout which had tried to pass up and down the brook there is no question.

The voracity of pike and pickerel is a matter of common observation, almost every angler being able to give his testimony in relation to it. The most striking example of it that ever came to my knowledge occurred in Lake Umbagog, the lower and second largest of the great Rangeley chain of lakes in Maine.

Until pickerel were introduced into its water it was one of the finest trout lakes in the entire system. Now scarcely a trout is to be found in it. The planting of pickerel in the lake was, according to one account, accidental, but another story which seems to obtain the greatest credence is that they were placed there out of revenge by a party who had been arrested for taking trout out of season, and who vowed that if settlers near the lake could not have the privilege of taking trout for their own use (some versions are that he caught the fish for market purposes) when they pleased, he would prevent all others from obtaining any forever after.

No matter how the pickerel found their way there, they are now so abundant that parties in fishing through the ice for them catch "cords of them," as one of the settlers told me, "they bring tenting outfits and remain by the lake a day or two, and when they go home they have a two-horse sled packed full."

These fish have multiplied and increased and diffused themselves so thoroughly that they have found their way down the Androscoggin River to and beyond the Erroll Dam, have been seen two miles or more up the Rapid River or Five-Mile Falls, and have ascended the Magalloway River as far as the Aziscohos Falls, a distance of fifteen or twenty miles from the lake, in most of which the water is shoal and sometimes quite rapid. The popular notion is that pickerel will not traverse quick water, but this example proves to the contrary.

They cannot ascend the falls, for they are too high and steep, they proving an effectual barrier to the ascent of trout, but in the pool below they are abundant, but all other fish have been exterminated.

It is a great pity, for I always regarded that pool as one of the finest in New England, and it used to be famous for its trout; bright colored gamy fish they were, the delight of anglers who were so fortunate as to reach them.

When I state that on June 17, 1860, I stood on a rock on the edge of this pool, and though it was snowing and hailing most of the time, and my fingers were so cold I could hardly take the fish off my hook, I landed upward of fifty elegant trout with the fly (red-hackle) in less than three hours, and I could have taken hundreds if I had wished, while ten years later not a trout was to be found there, one can form some idea of the destructiveness of the pickerel. At the southern end of Lake Umbagog, where the Cambridge River empties into the lake, the pickerel are especially numerous all through the stretch of river for a half mile or so below the dam, and one may catch all he desires, and with the fly, too. I have often taken a boat into the river—it is really almost dead water—and with an eight-ounce rod, strong trout line and big bass flies, particularly the red-ibis and the red-and-white-ibis, have had all the success I could have wished for. They were not gamy in the slightest degree, for the pickerel comes right into the boat without even a protest, reserving its energies for a tremendous "knockabout" after it is landed, and which it continues to indulge in until it is knocked on the head. Now those fish, coming as they did out of clear, cold water, were very good on the table, their meat being firm and sweet, quite different from that of ordinary summer pickerel, and, really, I used to enjoy taking them. To be sure, I did not need to have used flies, for the fish would have come to any moving lure I might have cast to them, but it seemed a little more like sport to use a sportsman's tackle. In speaking of bait for pickerel, one of my friends says that "any old thing will answer; a frog's leg, a minnow, a strip of pork rind, a mouse or small snake, a flannel rag, a strip of lemon peel or an old tin can will fetch 'em." While I may not agree with him as to the value of all these items, I am certain that there are but very few lures which will be refused. Although the pickerel have diffused themselves throughout Umbagog, they do not as a rule like cold water as an abiding place, preferring quiet bodies of more shallow water, which have an abundance of aquatic vegetation growing in it, and which have muddy bottoms. This is well shown by the following example:

It was during an outing on the Schoodic Lake (St. Croix system), in Maine, where I was enjoying myself among the landlocks. In passing up Grand Lake my Indian guide asked me if I would like to catch a few pickerel. I replied that although I was not craving for such sport, a little change in our work would be acceptable, upon which he headed the canoe for a stretch of low marshy shore, and we soon entered, not a stream, but a stretch of dark-colored dead water, which after many windings tapped a small body of water which the Indian called Muddy Lake. It was of perhaps twenty-five or thirty acres, and lilypads and other aquatic vegetation was abundant.

I rigged up a strong bait-rod, and with a spinning spoon for lure commenced operations. At the first cast I hooked a black-backed monster, which weighed at least ten pounds when it was landed in the canoe. The guide, after knocking the fish on the head, held it up for my inspection, and opening its jaws to their full width, which was at least eight inches, exclaimed, "What a mouth! These devils kill more young ducks than a few in the summer! How big would one look in that?" said he, again opening wide its mouth. "They eat everything and anything, even their own young ones."*

We remained among the pickerel an hour or so, during which I caught a dozen or so very large fish—they must have been pike—and then we returned through the outlet into Grand Lake, trolling the spoon behind the canoe all the way out, but not obtaining a single strike.

I mention this incident to show that if these fish can find such water as that of the small lake, they will not leave it for colder and clearer water. I doubt if any ever get out into Grand Lake, for its bottom is rocky and its shores are free from reeds, etc., among which they love to lurk. It is fortunate that this is the case, for if they were to diffuse themselves through that lake, the landlocks would soon begin to diminish in numbers, and it would not take many years to extirpate them.

EDWARD A. SAMUELS.

[TO BE CONTINUED.]

* With Fly Rod and Camera. Page 178.

New England Waters.

BOSTON, Aug. 18.—In New Hampshire the mountain streams are yielding some good baskets of trout. A party of five went to Elbow Lake last week, where they occupied the new Knights of Pythias camp for several days. They caught twenty-three trout, the largest weighing two pounds, and fifty-two pickerel. In the streams above Plymouth some good fishing has been enjoyed lately, though the season is late. John Webber, of Boston, and Harry Batchelder, of Exeter, caught a good string of trout from the upper waters of the Pemegewasset Wednesday. Other good strings have lately been taken. At the Rangeleys all is summer gaiety, with little attention being paid to fishing. True anglers are waiting to try these waters for the September fly-fishing. At the Pool at the Upper Dam an occasional trout or salmon is taken. At Reddington some fly-fishing is being done. E. P. Bliss, of Lexington; A. M. Aldrich, of Pepperell; B. E. Wood, E. A. Sprague, and A. J. Roberts, of Boston, have been taking some good trout the past week. Mrs. Arthur Hammond, and Miss Helen B. Withee, of Danvers, have taken some good strings of trout lately, at Reddington, though both have had little experience till this season. At Kineo, Moosehead, parties are going daily to the back ponds and lakes and returning as often with good strings of trout. On these trips camping out is in order, and is greatly enjoyed by boys and younger men. Big game is seen constantly, with the report that it is more plentiful than a year ago. Parties are in order making the long trip by canoe and carry to the Alleguash waters, and home via the Provinces; or the reverse, starting in at Van Buren, or further down, and out via Norcross or Moosehead. Multitudes of big game are reported. From the several stations and hunting and fishing resorts on the Aroostook Railroad come reports of excellent fishing, and big game in wonderful abundance. A Boston gentleman, interested in hunting, is just in from a business trip up the line of the Bangor & Aroostook. He says that he has seen more deer than he ever dreamed of seeing, and a great many moose. But he concludes that it is easier to run on to a dozen deer in midsummer than it is to find one in legal open season. SPECIAL.

Fish and Fishing.

Saw Mills vs. Fish Protection.

THE recent action of the Maine judge who granted a perpetual injunction against no fewer than forty-six saw mills and three pulp mills, forbidding the proprietors to throw the refuse of the mills into the Kennebec or any of its tributaries, might be repeated with good effect in many parts of Canada, where the laws forbidding the contamination of streams by sawdust or other mill refuse have been set at open defiance by numbers of mill men. Many of those operating establishments on the Ottawa River have been great transgressors in this respect, and at last, when their continued violation of the law began to produce its deadly result, the nuisance has been to a certain extent modified. I know rivers within a few miles of the city of Quebec which contained salmon up to a few years ago, but which not a single fish now enters because of the pollution of the water. They order these things better in New Brunswick, where the law requiring the burning of sawdust is strictly enforced.

Increased Supply of Whitefish.

Reports from the Great Lakes are to the effect that the catch of whitefish in the Georgian Bay has been better than for the last fifteen years, and the fishermen are rejoicing at present indications of a permanent increase in the supply of this important commercial fish. Two reasons are advanced for this increased catch. One is the provision introduced into the Provincial law and licenses some three years ago, making it illegal to capture whitefish and lake trout under two pounds in weight, which has enabled a greater number of whitefish to come to maturity and to reproduce their kind. The other is the prohibition of the export of Canadian logs to the United States, which has been enforced for the last two or three years. At first sight there would seem to be no connection between the trade in logs and the supply of whitefish. Under the old condition of affairs, however, the large number of logs towed from Canada to American ports, especially by way of Georgian Bay, resulted in a large accumulation of bark in the waters of the bay, and especially upon the feeding grounds of the fish. Marked improvements have also followed the planting of fry in various parts of the Great Lakes, and large catches of whitefish off Inverhuron, in Lake Huron, where only solitary specimens of the fish have been seen for many years past, is attributed to the deposit of fry at Kincardine some years ago.

To Dye Casting Lines.

A short time ago I was comparing salmon fishing tackle with a gentleman from Galway, who has fished most of the Irish salmon rivers, and many on this side as well. The various shadings of his casting lines attracted my attention, and he was kind enough to give me his simple recipe for staining the gut. Instead of using ink he boils the outside skins of onions for his dye, or pours hot water on the peel, and when it cools, bathes the gut in the solution. If the casting line should not be dark enough after one bath, it is given another. It is useful to have castings of different shades when setting out for a salmon river, for it is almost always impossible to know what color the water may be found in, or how much it may vary during one's stay on its banks by the influences of freshets or continued hot weather.

Where Salmon Take Bait.

As almost always happens when the relative merits of salmon fishing in Europe and America are discussed, the gentleman from Galway and the writer soon fell to talking of the apparent difference in the feeding habits of the salmon of European and of eastern American coastal streams. An American angler would as soon think of fishing for sturgeon with a fly as to endeavor to take salmon in the fresh water of a Canadian river with bait. Yet I have met and talked with numbers of English anglers who appear quite puzzled at the fact that there is no bait-fishing in America for *Salmo salar,* as there certainly is in the fresh-water habitat of the same fish in Great Britain. In the Irish waters fished by Mr. Mulholland—the gentleman already referred to—he tells me that the most successful baits for salmon are worms, shrimps and small spoons, the fresh shrimps being a particularly killing bait. Mr. Mulholland was very careful, too, to have me understand that European salmon take the baits above mentioned, far above tidal or salt water, or even brackish water. It is not very strange that this experience of British anglers, in taking salmon freely with bait, should strengthen the belief, which so many of them now hold, that *Salmo salar* fares sumptuously every day, whether in fresh water or in salt. When worms or shrimps are carefully thrown into a European salmon pool in which the movements of the fish can be observed, they may at once be seen nosing and often swallowing the food. It is a part of the theory of Mr. Mulholland and of other British anglers who share his views as to the feeding of salmon in fresh water, that these fish expel the contents of their stomachs upon being hooked or otherwise interfered with, exactly as black bass have been observed to do when hooked in clear water.

More About Whitefish.

From information which has lately come into my possession, it would seem that the taking of whitefish upon a fly-hook in northern waters is not quite so novel a performance as some people have imagined. Trolling for them in the early spring near the surface of the water, as mentioned to me some time ago by Mr. J. W. Titcomb, is by no means uncommon in some of the Northern States, and now my very good friend, Dr. John Duncan Quackenbos, the well-known authority on the fishes of North and Eastern America, writes me that thirty years ago he took whitefish on a fly in the Mettomee River below the falls; the fly used being a small black one. The Mettomee flows through Granville, N. Y., and discharges into Lake Champlain. That the success of this and similar experiments was not very generally known until comparatively recent times, is proved, I think, by the fact that the late Mr. Cheney, in his work on the fishing in and about Lake Champlain, makes no mention of the taking of these fish on the fly, though he does report on page 253 of "Lake Champlain and Its Shores," by Murray and Cheney, that "it is not so unusual for whitefish to take a baited hook as it might be supposed."

I have to thank Dr. MacCallum, of London, Ontario, for correcting the report of Dr. Bensley, recently quoted by me from the report of the Ontario Department of Fisheries, upon the identity of the so-called new whitefish of Lake Simcoe. Of course there can be no better authorities than Dr. H. M. Smith, of the United States Fish Commission, and Dr. Evermann, as to the correct classification of the whitefishes, and it is interesting to note in this connection that *Coregonus richardsonii,* which, accordng to Dr. MacCallum, they declare the specimen sent to them to be, is described by Dr. Evermann himself, in his monumental catalogue of the fishes of North and Middle America, prepared in collaboration with Dr. Jordan, to be "a doubtful species, perhaps identical with *Coregonus kennicotti,* or possibly with *Coregonus nelsonii.*"

E. T. D. CHAMBERS.

CHICAGO AND THE WEST.

Successful Grayling Trip in Michigan.

CHICAGO, Ill., Aug. 2.—In time past I believe I have chronicled my ambition to one day take a grayling. My angling experiences in this part of the world came long after the grayling had ceased to exist in the sporting equation. For many years we have heard that the grayling is extinct in the waters of Michigan, where in the recent memories of man it fairly swarmned. The best of anglers for a dozen years last past can scarcely report a grayling a year, no matter how extensive their fishing in the State of Michigan. Scientists have admitted that the species was extinct or doomed to early extinction, and sportsmen have ceased to hope any further experiences with the fish which once so delighted them.

Within the past year or so, I have been able to report some instances which would lead one to believe that the grayling is not altogether extinct in Michigan, and that with proper care it could be retained indefinitely as one of the sporting fishes of that State. In an issue of FOREST AND STREAM of last May I reported the catch of forty grayling made by a gentleman on some unknown stream in northern Michigan. The name of this angler I could not learn, but there was no doubt of the authenticity and extent of his catch. Later, I heard of a catch of grayling made by Mr. C. H. Davis and Maj. Farnham Lyon of Saginaw, in July of last year. These same gentlemen made another trip this spring to some unknown water, and again they came out with grayling. I heard of a few grayling being taken in the Little Manistee, and of still fewer in the Au Sable tributaries. I heard of the ineffective attempt of Mr. W. B. Mershon of Saginaw, to induce the Legislature of the State of Michigan to close the upper twenty miles of the Manistee River, making of it a grayling preserve. It was stated by many anglers that a few grayling, among those many smaller ones, had been seen in the Manistee. (This stream is not so good a grayling stream as it is a trout stream. It is hoped by many Michigan anglers that the Legislature will yet establish a preserve of this nature.)

So much for all the grayling data available up to the past week. My Saginaw friends had made mysterious threats about a grayling in my behalf. All at once came the invitation to get ready to start. Mr. C. H. Davis was this time the engineer of the party, and the latter was to consist of his friends, Mr. W. B. Mershon, Maj. Lyon and myself. Destination unknown. "Come! Come quick! Keep quiet and you will get your grayling." This was the bill of advice.

It is only fair to say that the predictions of my Saginaw sponsors were more than fulfilled. I got my first grayling, and got several others. The party of four rods in all killed numerous grayling. I am here to say now that the fish is not extinct in at least one stream in the State of Michigan, that this is perhaps the only stream where it has any chance whatever, and that in all likelihood another two years will see its finish even in those remote waters. It would be obviously unfair to hasten his finish by publishing the location of this stream, especially as I went under pledge of secrecy; and as a guest has no more privileges than those accorded by his host, I can only refer inquiries to Mr. Davis and Mr. Mershon, much as I would like to give all the readers of FOREST AND STREAM the benefit of my own investigations.

Far in the Woods.

We left Saginaw on Friday evening, July 25, and reached our destination far up in the south peninsula of Michigan on the morning of the 26th. That is to say, we reached our railroad town. Thence we drove something like thirty miles overland, across a sandy wilderness, where for twenty-five miles we did not see a house nor a settlement. I presume this is about as far as any one can get from a railroad in the State of Michigan. We were between the railroads and in the heart of whatever wilderness may be said to exist now in that region. It is a wilderness of sandy barrens and slashed off pine lands and scattered clumps of Norways still untouched. In the middle of it we found a mile or so of untouched forest, mostly hemlocks and Norways, a magnificent and beautiful vision of the primeval forest. I cannot picture its grandeur and beauty. Our road took us through what is without doubt the grandest hardwood forest in the West. Such maples and elms are not to be found anywhere else in this part of the world.

The Stream.

So at last, well on in the evening, we reached our destination. A beautiful vision of a winding, rippling stream came upon our view. We paused in front of a deep, bright pool, and decided here to pitch our camp. It was a beautiful spot, and here we passed four as pleasant days as ever have fallen to my own experience.

The Saginaw crowd go well equipped, and practically equipped, when they are on one of their sporting expeditions. We had in all four tents, one for the men, one big fly tent for a dining room, and two sleeping tents. The latter tents were made of water-proofed silk, and one of them, a gift by Mr. Davis to the Saginaw crowd, was about 14 feet square by 9 feet high, forming a wide room, the sweet interior of which was very comfortable indeed. The whole tent rolled into very small compass. Then there were sleeping bags and air mattresses, folding cook stoves, aluminum dishes, and all sorts of things delightful to the camper out. Harry, the helper of the Saginaw crowd, was on hand of course, and we had with us two splendid woodsmen, George King and George Higgins, both of whom are old pines woodsmen and well posted in this region, as we were later to discover. With this force we soon had things in comfortable shape. We did not find the mosquitoes and black flies very bad, the days were not too warm, the nights were not too cold, and everything was delightful in the extreme.

The First Grayling.

But I run slightly in advance of my story. Pray you, believe me, brothers, that if you want anything in all this world it shall be yours, provided that you want it badly enough and follow it sternly enough. For years I have been wanting a buffalo, a grizzly, a moose and a grayling. I got my buffalo when they were nearly all gone. I will get my grizzly some time, and my moose—that is to say, the rest of my moose. Also I got my grayling! I caught him on the second cast I made in the little river.

In the pool in front of our camp we saw fish rising. "Get your rod together," said Major Lyon. "You are just as like to get a grayling here as any other place." We all four of us put together our rods, and Mr. Davis, standing on the corner of the pool furthest from me, took out two or three trout. "Now cast across that pool under that tree," said Major Lyon, "and see what you can do." I had on two flies, a No. 10 Beaverkill and a No. 10 Wickham's-fancy. I made one cast over the pool to straighten the line, and with the next dropped the flies in the place indicated by Major Lyon. Instantly there was a double flash of white. The lower fish missed, but the upper one struck the Wickham's-fancy, and in a moment I knew that my ambition was on the point of realization, provided only that I was careful. I had been warned many times of the tenderness of the grayling's mouth. Be sure I did not need Major Lyon's advice. I took no chances. Very gently I kept the line tight as the fish started across the pool. I did not crowd him when he jumped once, twice and three times, nor force him when he ran. At last I quietly led him into shallow water, and there we had him, a beautiful picture, plainly visible above the sands. We called for a landing net, but none was forthcoming. At last, fearing something might happen, I gently lifted the captive out on the grass. Then there were whoops of exultation. I am sure that every one of those gentlemen was gladder than myself that I had caught my grayling, and done it so soon and so easily. This indeed was one of the purposes of the trip.

My fish was a beautiful, splendid, iridescent creature, bearing upon his back the banner of the Stars and Stripes, the sweetest flag that ever floated over land or sea. The sunlight played strange pranks on his shining sides as I held him in my hands. It was a fish 8 or 9 inches long, not a mammoth grayling to be sure, but yet a grayling.

This taking of half a dozen fish in one bend of the river even before we had camp finished set everybody in good humor. "If this keeps up," said Mr. Mershon, "we'll do a lot of business with these fish before we quit." It did keep up to greater or less extent, and we had a delightful trip all the way through.

The Fishing.

After lunch on the first day Major Lyon and Mr. Davis went up stream a little way, while Mr. Mershon and I worked down stream. In this wild country of course one has to be careful where he goes, for the river runs through a great deal of swamp, and a Michigan fishing stream is by no means an easily accessible proposition for the most part. Mr. Mershon and I cut off our experiences a bit earlier than we might otherwise have done, and left the stream in the early dusk, hopeful of finding a possible pathway back to camp. We found the fish suddenly gone off their feed after the fashion of trout and grayling in general. I turned over a couple of grayling which I did not fasten. I think Mr. Mershon did not have any grayling that first evening, though, if I recollect correctly, both Mr. Lyon and Mr. Davis brought one each into camp. Mr. Mershon and I could not do much with the trout. They were jumping along the edges of the pools, but would not take any fly we could offer them. At last my companion produced from his plethoric fly-book an English May-fly, of the cork-bodied, floating pattern. Casting this lightly closely against the opposite bank and nearly directly across stream, he let the current carry this floating fly down and outward from the bank. This scheme worked, and he caught half a dozen trout on this fly.

The totals that evening were: Mr. Mershon nine fish, Mr. Davis, five, Major Lyon and myself three each. If memory serves, we had three grayling in camp that night.

The next day Mr. Davis and Major Lyon took a longer strip of water above camp, Mr. Mershon and I going down stream once more. I presume that each party fished about three to five miles of water that day. Mr. Davis had excellent sport, and left fifty-two trout and grayling in his live box up the stream, where he stopped his fishing to come to camp. Mr. Davis had three grayling in his catch, two of them nice ones. Major Lyon was also fortunate in getting a grayling and had seventeen fish in his basket when he struck camp. Mr. Mershon and I also brought in five grayling, he taking twenty-three fish in all, and myself twenty. It may be seen that the grayling was a frequent visitor of our fly-hooks, and we were elated to find that the fish constituted a considerable factor in the fishing. We of course did not keep nearly all of our grayling, but turned back the small ones to the stream.

Schemes.

Mr. Mershon and I again found that we were against a hard July trout fishing game in our part of the stream. There were a great many berry pickers in the huckleberry plains below us, and a great many of these had fishing rods. We learned that five parties went down the stream before us. At any rate, when we went down the trout were even more capricious than before.

"I'll fix them yet," said Mr. Mershon. Again he dived into the fly-book. This time he brought out a lot of tiny English midges or sedge flies tied on the most flimsy of leaders. With this we began to cast as delicately as we knew how, dropping the fly as before, straight across stream from us, and allowing it to float downward. The scheme worked, and on these small flies we had considerable sport. We did not raise any very big fish, but made nice baskets of trout, running into the 8 and 9 inch class. We were all of us very happy when we rounded up at camp that night.

Hard Waters.

On the morning of the third day we inaugurated a change of campaign. Our guide, George King, insisted that Mr. Mershon and myself should go with him and fish a strip of almost inaccessible water some eight miles above our camp. Here he said were several miles of the deepest water on the stream, and here he promised us that we would find big trout and big grayling. To fish this water meant that we would need to drive six or eight miles through the plains and woods, get into the river at the upper end of a heavy alder swamp and then fish down until we got out at the foot of this swamp. Once in the river, there was no getting out at either side, for the stream passed through an impenetrable jungle of alders, cedars and the like, through which not even a black bear could penetrate. King promised to drive down and meet us at the foot of the stream, and he counseled us to fish fast, for we would find the trip a long one. The stream was very crooked, he said, and he could not tell how many miles it was. No one went into it, because everybody was afraid of getting stuck in the swamp. But King knew how to get out. He had gone through there once or twice, and he assured us it was worth the effort.

This sort of thing directly appealed to Mr. Mershon and myself. Before noon we were into this stream at the head of the swamp. We found the water here entirely different from what it had been at our camp. Before the river had been broken up by bright shallow places, with now and then deep holes or wide pools. The bottom was in some cases rocky in the lower waters. Up here in this swamp the stream had an entirely different aspect. The water was much colder. The river was much more crooked. The bottom was entirely of sand. At one side or the other of nearly every bend there would be a deep black hole, cut out under the bank, overlapped by a wide mat of alders. In places the alders nearly met over the stream, but for the most part it was possible to cast the fly, although one needed to be careful with his back cast.

It was a hard water to fish, yet as quick as we put foot into it we saw its possibilities in the way of big fish. Although we had breast-high waders, there were holes through which we could not pass with impunity. As in late July all the fish have taken to the deep water, we knew in advance that we had gotten into the hiding place of the big fish. Mr. Mershon went on below for a ways with a last injunction to King not to forget to call us when he reached the bank at the foot of the alders in the late evening. The sun was very bright and warm, and I must confess as I started fishing I had very little hope of doing anything. The water was entirely bright and clear, and it seemed impossible under the circumstances to lay out a fly to a distance which would be effective. I tried the plan which Mr. Mershon had found effective previously, allowing the fly to float down stream, trying meanwhile to work it in under the alders in the deep black water where I was satisfied the trout were lying. I did no good at it, nor did I expect to do anything, but moved down stream, hoping for a change of conditions. At last I found Mr. Mershon sitting on a sand bank at a bend of the stream looking intently into his fly-book.

"There's a half dozen awful big grayling in that hole," said he, pointing at the water in front of him, "and I can't get them to rise to anything I have got." Indeed we could see the fish there, one grayling more than a foot long, possibly 15 inches long. Mr. Mershon had one nice trout in his basket, but when I left him at this pool he had not succeeded in inveigling any grayling. I went on down stream, still sticking to the long line and the floating fly, and still meeting with no success whatever. I changed flies as best I might and cast my prettiest. At last I put on a fly which I suppose is called the "bee," which is a brown hackle, a body of black, with yellow bands, like the body of a bee. Noticing the trout rising at a little patch of grass where the current swung around, I made a long cast, and at the second try I hooked a beauty and quickly put him in my basket, a nice 10-inch fish. This roused my flagging spirits, and I concluded to try a little harder. In less than five minutes I noticed another trout rise under some heavy cedar boughs. I floated my bee here also, and just as it was in the right place, began to take it back for fear of getting snagged. The fish struck as I lifted. Away went my leader and three flies. This fish was so heavy that I did not start him up at all, nor did I again see any signs of him. I had one more bee left, and on this I got another strike or so, but in adjusting my leader I unfortunately lost my fly, which got into the water and so floated down stream. Then I tried a brown hackle and began to get some signs of life.

At this time, Mr. Mershon waded down on me.

"Put on a bee, if you have one," said I.

"I haven't any bees," said he, "but I'll try a McGinty."

He showed it to me. It had the same body and hackle as the fly I had been using, with a red tag and a black wing with white tips. Altogether it was a big and clumsy looking fly, and not what one would fancy for a bright day and a clear stream. Mr. Mershon passed me, stating that he intended to use this fly for a while.

The Other Fellow's Luck.

Perhaps an hour now elapsed before I again came up to him on the stream, we having both by this time worked far down into the swamp. When I did find him he was standing up to his waist at the head of a deep pool and was playing a fish. I had had no more success myself, although using the McGinty fly which he had given me. I could hardly believe him when he told me he had his basket nearly full of nice trout. "Why," said he, "I've bee ncatching them right along. What's the matter with you?"

I think the matter was that I had been using a tapered line and a long leader, and hence did not have as good control over the fly as I needed. Mr. Mershon was casting close into the bushes in the deep holes and giving the fly a twitching motion. Once more he had solved the problem of the day! Telling me to go in advance, I picked up three or four fish, but he picked up as many below me. He simply was a better fly-fisherman than myself, and that was all there was to it.

Dark in the Swamp.

Now it began to get dark and we had not the slightest idea in the world where we were or how far it was to any place of rest or comfort. The river was dark, deep and a bit uninviting in the twilight. We supposed we had perhaps half a mile or more of it to go, but in this supposition we were wrong. Mr. Mershon obliged me to stop fishing, and rolling up our lines, we started down as fast as we could go. We had traveled perhaps a mile when at last we heard a shout below us. We answered, and in the course of ten or fifteen minutes we came upon George King, our guide, who had waded up stream. He had been fishing a bit on his own account and had 20 fish in his basket.

"Do you know how far it is out of this swamp?" said he. He told us that it was over two miles. You may be sure that we were tired when at last we plunged out of the last reach of this difficult water and got up on the bank. We were then in the darkness and in an unknown country, but King, a very good woodsman, found a trail back to an abandoned logging camp, where he had cached his horses. We only lost our way once on the way back to camp, which we reached at 10 o'clock in the night, to find our friends somewhat stirred up over our absence. Mr. Mershon's basket of fish included three beautiful big grayling, like the old-time sort, every one of them a foot long and one I think over 14 inches. Naturally everybody was much elated over these grand fish.

Still More Grayling.

As to Major Lyon and Mr. Davis, they had gone down stream below the pools where Mr. Mershon and I had left off the previous day. They caught five grayling but had no very heavy fish. The records for the day were: Mr. Mershon 15, Mr. Davis 17, Mr. Lyon and myself 6 each.

Now came still another day of sport, and by this time we all had our blood up. Mr. Davis wanted to have a go at this alder swamp fishing, and Mr. King agreed to take him in at the lower end of the stretch over the old river drivers' trail, which would enable them to fish perhaps half of this water. Mr. Mershon said he would wade up the stream and fish below Mr. Davis in the alder swamp. Mr. Lyon and myself took the stream where Mr. Davis had made his big catch on the second day. As for the Major and myself, I found him to be a most lovable companion, quiet, steady and skillful. I must say that Major Lyon is a gentleman 73 years of age, or rather 73 years of youth. One would not take him to be over 55. He shoots and fishes right along with all the members of the Saginaw crowd, and holds up his end of the log in every particular. One may imagine that the water of a trout stream is none too warm in the misty morning. It was a novel sight to see so old a gentleman as Major Lyon go out in the morning and take his plunge in the pool along with the younger members of the party. I must say that he beat me on the stream fishing that day, for his fish were more numerous and better in size than my own. This he did in spite of the fact that he met the misfortune of breaking the tip of his fly-rod. This latter we mended as best we might, but it left him only a stiff stick about suitable for bait-casting. The Major never whimpered, but cast on with the short rod, and beat me fishing even with that sort of rig. Once we stood together at a deep water where a heavy spring broke in. Casting with the short line the Major yanked out four beautiful trout under my nose. Again he turned over or half turned over a very heavy trout, which he could not stop or do anything with. Again, as we stood side by side at the edge of a deep run over white sand, he cast in and at once was directly into a 12-inch grayling, which he promptly brought into his basket. He took three or four grayling that day, and I had as many to my own rod, although I kept but two. We came into camp that night, had supper a little after sundown, and then waited an hour or two for our friends who had gone on the upper stream.

During the afternoon, as I was wading down the stream in advance of Major Lyon, I saw at a distance of 200 or 300 yards ahead a glimpse of some red-colored object moving among the bushes at the edge of the stream. Of course, I knew at once that this was a deer, and as the presence of a long and noisy bit of fast water made the matter more practicable, I concluded to see what I could do in stalking it. I could see that it was a small deer and one much persecuted by flies. Its head was directly away from me and with its ears turned sideways and its tail upright, all three switching in discord or union, as the cast might be, the animal resolved itself into three moving points of white and gray. Whenever it put down its head, I moved down stream through the rapid water, and whenever its switched its tail with the peculiar signal a deer gives when about to raise its head, I paused motionless in mid stream, the gray color of my clothing rendering me inconspicuous in the surroundings. In this way I worked on down within 50 feet, 40 feet, even within 30 feet of the deer. It was a fawn, well-grown, but still in the spotted coat, and very beautiful, indeed, it seemed. It would stand and look at me curiously and half apprehensively, then, with a peculiar sidelong turn of the head, would go to feeding again at the edge of the water, with one eye on me the while. At this close range I dared not attempt to go nearer, and finally the little creature accepted me as part of its surroundings, and went on feeding undisturbed. I examined it very closely, the beauty and strangeness of the situation appealing to me very keenly. No doubt the fawn's mother was near by in the thicket, but if so she did not get any hint of danger, for there was no signal to the little one on the narrow beach. We stood thus, not a biscuit toss apart, for several minutes. Our little session was brought to an end in a manner somewhat singular. My quiet advance had brought me to the end of the rapids, and to the head of a bit of still water near whose edge the deer was feeding. I dared not go into this still water, for I knew that the ripples would give the alarm. Meantime, just at my left, at the foot of the rapids and in the still water, a good-sized trout broke water two or three times. The ruling passion was too strong, and at last, while the deer had its head down feeding, I gave a switch of the rod and tossed my fly over the rising trout. In an instant he had it, and in another instant he was out in mid pool, splashing on the surface as a hooked trout will do. This disturbance in the water sent up the deer's head as though by an electric shock. Now the whole expression of its face changed. There was fear and apprehension written all over it. It looked at me steadily, curiously, with ears uplifted and tail interrogative. I stood entirely quiet with my wrist firmly at my side, holding the butt of the rod. I doubt if the splashing of the trout in the pool would of itself have alarmed my little companion. Probably it saw the twitching of the tip of the rod, which the trout was jerking somewhat violently. At any rate after about half a minute of this intense staring, my little friend turned slowly aside and went off into the thicket with the most dignified, high-stepping, stiff-legged gait one could imagine. Its ears were rigid and its tail as straight and stiff as a spike above its back. It did not snort nor bound nor run, but with the utmost perfection of inimitable nonchalance, dignity and scorn, edged its way into the thicket, and I neither saw nor heard of it more. I fancy but few sportsmen have ever been thus close to a wild deer and a wild trout at the same time, nor have many anglers ever scared a deer in the playing of a trout. The picture was one to remain long in memory.

A Great Day.

It was a great day that Mr. Davis and Mr. Mershon had had. King had taken in the live box of Mr. Davis, and they reported just fifty splendid trout and grayling safely floating in the water where they left the river. Mr. Mershon brought home the biggest catch made on the trip, 44 trout, nearly a big bass basket full, even when they were cleaned. In this catch he had three whaling big grayling. "McGinty did it," said Mr. Mershon. He later told us that he had fished with a single fly of the McGinty pattern much as he had the day previous with myself. In a water which King had told him was good he took 12 trout out of one pool, 6 from another. After that it was easy. He had the trout beaten, and it was simply a question to fish still, go quietly, wait until the water cleared and then cast directly over the deep holes.

"I waited sometimes 20 minutes at the head of a deep pool," said he, "before I would begin fishing. The grayling think then you are a stump, and if you keep your feet still, so that no sand or mud will run down stream before you, and if you cast with as little motion of the arm as possible, you will catch fish. But it takes fishing to catch fish in there."

Thus two rods had that day taken nearly 100 fish, among them some splendid specimens of this "extinct" fish, the grayling. You may be sure that we had another grand reunion in camp that night, and congratulated ourselves upon the success of our trip. All the rods reported grayling, though all returned most of the grayling which were taken. In the day I probably took something like 30 trout and grayling fish, but put back all the small ones.

The Grayling's Habits.

The grayling in habits is different from the trout. It does not lie under the banks but sticks to the open waters. Instead of biting best in the morning, it bites best in the middle of the day. Instead of preferring a cloudy day, it likes best bright days for its feeding operations. Instead of jerking and yanking at the line like a trout when hooked, it makes a long swift run, going across the pool with its back fin up against the current. It jumps oftener than the trout, fights more rapidly, rises cleaner, and is a quicker fish. It does not fight as long as the trout and its mouth is more delicate. It is a quicker riser, and is, on the whole, a sportier fish than the trout.

"I call the grayling a gentleman fish," said Mr. Mershon. "It is the prince of all the American fishes except the salmon."

That night we put up all our grayling in a compartment basket filled with ice. We now had enough of them to make a beautiful display, and we simply gloated over our beautiful trophies.

The Last Day.

The next day was to be our last in camp, and we had to get back over the long drive to the railroad. The breaking of camp necessarily took us several hours, but by noon we found ourselves packed and en route. We made a pause at the part of the road close to our celebrated alder swamp. Major Lyon said he would fish below this point for a little way, while Mr. Davis and Mr. Mershon offered me my choice of the water above. We three started up stream wading, and I must record my honest admiration for the length and toughness of Mr. Davis' legs. He is built for high stepping and far going. The latter gentleman contented himself with a half mile or so of water at the lower end of the swamp. Mr. Mershon and I went up a half mile further until we found the trail which King had taken the previous day. Mr. Mershon gave me my option of staying back or taking the up trail. I choose the latter course and decided to fish the water deeper into the recesses of the swamp.

"You had better walk for half an hour before you stop," said Mr. Mershon. "You'll then be somewhere not very far from the stream, and maybe you can break through the alders, as the others did yesterday."

The cedar swamp through which the old river drivers' trail led, was like all other cedar swamps, hot, thick and decidedly nasty in every respect. Two or three times I had to pause, since the heat of my big waders, intensified by the glare of the mid day sun and unrelieved by any breath of air, made the going at times almost insupportably hard. None the less, I walked for 25 minutes

and then saw a glimpse of water on my right, over the heads of the heavy bushes. Into this I broke, and for 20 minutes I sat on a log waiting for the stream to clear from the stirring up I had given it.

The Day of Revenge.

This was the day on which I was to have my revenge on these trout of the alder swamps. The sky now rapidly became overcast. I saw an occasional splash under the bushes, the stream presenting more life than it had on the day when I first saw it. The air was cooler. All at once—every angler knows how it is—the trout went on the feed. From where I stood, hip deep in the water, with my feet carefully imbedded in the sand and turning neither to the right nor to the left, I saw a great, gleaming flash of silver greet the dropping of my first fly. I saw that old Col. McGinty was going to be the thing that day, also. I fished McGinty and royal-coachman, and they did the business, especially McGinty, which for some reason or other, proved to be a hot favorite in that particular alder thicket.

I remembered Mr. Mershon's injunctions about careful going and motionless casting. I was an hour in fishing two bends. I did not know how far I was above the rendezvous where I was instructed to report at half-past three in the afternoon. I did not mind the thunder storm which I could now hear approaching across the forest. I was alike the happiest and the most unhappy man in the world—happy because I knew I had trout coming, and unhappy because I knew I ought to hurry home. It was two o'clock before I had time to turn around, and I had four beauties in my basket. I had, even though by counsel of a superior officer, learned how to play the game. The loose bottom of this stream gives wide herald of one's approach, and the water is so smooth that one cannot wade without starting up a series of ripples which would be the best possible announcement of his coming. Therefore I adopted Mr. Mershon's plan, picking out my pool—and there were scores of them from which to select—and getting into a position which gave me the best chance for front and back cast. Then I would stand until the water cleared, not daring to move my foot one inch for fear it would start floating sand. I cast with the wrist altogether, showing as little motion as possible, and always standing as deep in the water as possible. I laid out my line with more eagerness than I ever did in all my life before, and used what little art there was in my repertoire to the very last degree. It would never do to go out of that swamp on this morning without some fish to show!

I must say that the fish did their part. Finally, I begun to see the great flaming flashes of brilliant colored trout as they rose from the black holes under the bank and struck the alluring McGinty. Time after time I felt the sharp tug of a well-hooked trout at the end of my line. I had not time for ceremony. I fought them fierce and hard and sharp, for I wanted to get as many in the basket as I could before my time was up, and the storm was coming on fast. One big fellow, which weighed an even pound, a trout 13¾ inches long, did give me a beautiful time of it. He wanted to go under the alders and I didn't want him to go there. I crowded him so hard that at last he came to the surface and simply quit, several minutes sooner than other smaller fish did. Then I lost a fish which broke through my landing net; lost still another in basketing, and still another, which corkscrewed off at my feet. They came and kept on coming, in spite of the thunderstorm, and my basket grew heavy at my side. I had 8, 10, a dozen fish! I dared not look at my watch. When I did I found that I was an hour past the meeting time, and with no one knew how much space between the river and the appointed place.

I may have been a very wicked man in my life, but if so, I think I suffered for it all then. There is no penalty worse than passing hole after hole filled with big trout which are eager to be caught, wading as for dear life, your line rolled up, your face bathed with perspiration and your heart sinking in your bosom with regret. I passed a mile or a mile and a half of beautiful trout waters, indeed, passed the best chance I had on the trip to make a fine basket of trout.

At length I came to two bushes stuck up in the water which marked the place where Mr. Mershon had started in to fish. This was a mile from the bivouac. Presently I heard a shout and hurried on as fast as I might. There was one special hole which Mr. Mershon had showed me where he had seen some good fish. I recognized it as I passed by some logs which lay at the bottom of it. "I'll fish this hole," said I to myself, "if I never get out." I allowed myself two casts, and at the first one I hooked a grand trout, which I bustled into my basket as quickly as most trouts ever travel over that road. Then, half choked with the misery of it, I rolled up my line for the trip, cut off my leader, and ended it by 15 minutes of as hard walking through the water as I ever had in all my life. I was wringing wet when I struck the team. I had 13 trout at that time. In an hour more I could have made it 26. Had the day held with the fish rising as they were when I was in the stream, there is no telling how many beautiful trout one might have taken. My only regret was that I did not secure a big grayling. Indeed, of my grayling, of which I caught ten or a dozen during the trip, none of them went over 10 inches or perhaps 11 inches. The record of that day showed other grayling, however, Mr. Davis having a nice one and Mr. Mershon bringing a couple more grand ones out of the alder swamp with him. The latter gentleman took 8 fish, Major Lyon 8 and Mr. Davis 9 that afternoon, there being only about 2 or 3 hours' fishing in all. Much of my own time had unfortunately been lost in the walk up the stream and the necessarily hurried walk down stream. This came of not thoroughly knowing the waters to be fished. As a matter of fact, I had gone into the river nearly where Mr. Davis and Mr. King had the day before. I do not think I fished more than half a mile of water in all, and must have gone over more than three miles of it that day.

Homeward.

Our storm blew over after giving us just enough rain to cool things nicely. We had a hurried cup of tea and then proceeded to hit the trail for the railroad. We drove again across that wilderness of the slashes, across the jack pine plains and over the huckleberry flats, among the Norway clumps and across the magnificent maple forests. We saw the storm clouds gather on the horizon like the peaks of some titanic mountain range. We plunged into the black pockets of the overlapping forest trees, and here and there crossed a rushing little trout river, some of these streams once historical as trout and grayling streams. And so in time we ended our trip, a grayling trip in the year 1902, one which was not only pleasant but successful. I shall very long remember it in the bright pages of my lengthening sporting calendar.

Totals.

Mr. Davis kept a record of our fish, and we find that the totals for the first day were 20 trout and grayling, for the second day 107 trout and grayling, for the third day 44 trout and grayling, for the fourth day 125 trout and grayling, for the last day 38 trout and grayling. On the first and last day we fished about 3 hours each. We found that the total taken on the different rods on these five days were: Mr. Davis 118 fish, Mr. Mershon 99 fish, Major Lyon 50 fish, and myself 57 fish. Geo. King, our guide, took 15 fish one day and 20 the day previous. We had a total of 339 trout and grayling. Of these 295 were trout and 44 were grayling. Of the grayling, we brought home but 30, returning the others. At the railroad we counted up our baskets of trout, wiped them all dry, put them back in the refrigerator baskets and admired them once more. We found that we had 221 trout. This I consider to be a remarkable catch for the last week in July. I do not need to state that this was strictly fly-fishing. There is no member of the Saginaw crowd who would any more think of using bait than he would think of shooting a bird on the ground. As to our take of grayling, if Mr. Mershon's photographs come out nicely, methinks we can show a basket of grayling which will offer more interest as a sporting picture to-day than almost any other which could be devised, unless it were one of a flock of wild pigeons or a bunch of wild buffalo. For myself, I was entirely gratified. I took no very large grayling, and I kept only 3 or 4 of those which I landed. The main thing was that I saw this beautiful fish in almost its last fastnesses, just as once I saw the remnant of the buffalo far down in the Pan Handle of Texas. Two years after that the buffalo were gone. Two years after this, I imagine, and in spite of all the care which can be exercised, in spite of the fact that this last Michigan stream has a good stock of grayling in it at this date, the grayling will have disappeared and have disappeared forever. The State of Michigan has grayling enough now in this stream to keep them forever, but it will not do it.

The First Pike Egg Hatching.

Franklin, Vt., Aug. 8.—*Editor Forest and Stream:* In Fred Mather's book, entitled "Modern Fish Culture," Mr. James Nevin states that he (Mr. Nevin) hatched pike-perch in 1877, and that these were the first pike-perch ever hatched artificially. Without wishing to detract from the credit of Mr. Nevin's early labors with pike-perch, it is only fair to Mr. Livingstone Stone to say that Mr. Stone preceded him several years in hatching the eggs of this fish. Mr. Stone began experimenting with these eggs, I think, in 1869, but at first without success, of course, the eggs being treated like trout eggs. Mr. Stone at last succeeded, however, in hatching pike-perch eggs by taking one layer only on panes of common window glass, and placing them edge down in a current of water. In 1872 I saw these eggs on glass myself, as I was there on the Missisquoi River, assisting Mr. Stone in making preparations for taking living fish to the Pacific coast in the first California aquarium car.

I do not know how much earlier Mr. Stone may have hatched pike-perch, but I am certain that he succeeded in doing it in 1872, which is five years earlier than Mr. Nevin claims that he hatched them.

Myron Green.

Fisherman's Rare Luck.

A remarkable affair is reported from Morehead City, which is vouched for by reliable parties here. A fisherman living near Bogue Sound in a small shanty, saw a large school of fish go up one of the creeks or blind guts that enter the marshes in that vicinity. He had a quantity of nets on hand and a numerous family, and they all turned out and closed up the mouth of the short creek, capturing the entire school of fish, which were mainly large trout. The lucky fisherman has kept the fish inclosed in the place, taking them out as fast as he could handle them, selling large quantities to the fish dealers at Morehead City. His sales have amounted to $4.000 worth of fish, and several thousand dollars' worth still remain in the pond. The facts were learned from a dealer who came here for additional funds with which to handle the fish for shipment. It is considered one of the most remarkable incidents on record on this part of the coast.—Raleigh (N. C.) Post.

Florida Lobsters.

Below Miami we have a substitute for the lobster that lives in the crevices of the coral rock till his season comes, and then he sprawls over acres of sand, fat and fine. This Florida sea crawfish is of excellent flavor, grows to four pounds in weight, is abundant and easily taken. He is not only the equal of the lobster, but better. It only remains that he be introduced to the gourmand with proper preparation, and he will immediately become a favorite. We would much prefer to see some Floridian grow rich on this Florida dainty, but if none of us will do so, let the fishers of the North Atlantic come down and take possession; it is not well that such good eating be left to the watery world alone.—Jacksonville (Fla.) Times-Union and Citizen.

All communications intended for Forest and Stream should always be addressed to the Forest and Stream Publishing Co., New York, and not to any individual connected with the paper.

The Weights of Fishes.

Wellesley Farms, Mass., Aug. 14.—*Editor Forest and Stream:* In your issue of Aug. 16, referring to the "weight of a fish," you say Mr. J. A. L. Waddell gives the formula for arriving at the weight of a fish by measurement. I do not think that Mr. Waddell would wish to be held responsible for this rule. In 1892 I was given this method by Dr. Cornell, of Brooklyn, N. Y., and gave this to others, and no doubt to Mr. Waddell. This rule will not hold good on all fish, but does on most varieties I have tried it on. Even Dr. Cornell did not claim to be the first, as he gained his information from some formula for weighing beef cattle.

Canine Elegies and Epitaphs.

Readers are invited to send for this column any epitaph or elegy of departed dogs of which they may have knowledge. We continue the series from last week:

Byron's Boatswain.

A Rochester correspondent sends us these comments on Byron's epitaph on Boatswain, which was printed in our issue of last week, and to which we hope the reader of Wm. Redmond's letter will turn again:

Editor Forest and Stream:

In the opinion of at least one reader you have added new interest to the ever-interesting pages of Forest and Stream through the establishment of the "Canine Elegies and Epitaphs" department, and I should have presumed, long ago, to offer my contribution, had I not supposed momentarily that I would be anticipated by some one, and I see now that you have published it—Byron's epitaph on his Newfoundland, Boatswain. It is probably the most famous epitaph and eulogy ever written upon a dog. It is needless to remark that, as the subject of such lines, the noble canine has been for more than ninety years, one of the immortals. It will be noted that the great poet, who was born in 1788, was only twenty years old when the epitaph was written. Let those who will carp at the misanthropic tone of the verse; but who with any knowledge of dog nature, will presume to question the absolute justice and truth of the prose part of the eulogium?

E. M. Redmond.

XVIII.—Neptune. On an Urn near Olney, Eng.

Here lies one who never drew
Blood himself, yet many slew;
Gave the gun its aim, and figure
Made in field, yet ne'er pulled trigger.
Armed men have gladly made
Him their guide, and him obeyed;
At his signified desire
Would advanve, present and fire.
Stout he was, and large of limb,
Scores have died at sight of him;
And to all this fame he rose
By only following his nose.
Neptune was he called; not he
Who controls the boist'rous sea,
But of happier command.
Neptune of the furrowed land;

And your wonder, vain to shorten,
Pointer to Sir John Throckmorton.
—William Cowper.

XIX.—Kaiser Dead.

What, Kaiser dead? The heavy news
Post-haste to Cobden calls the Muse,
From where in Farringford she brews
The ode sublime,
Or with Pen-bryn's bold bard pursues
A rival rhyme.

Kai's bracelet tail, Kai's busy feet,
Were known to all the village street.
"What, poor Kai dead?" say all I meet;
"A loss indeed!"
O for the croon pathetic, sweet,
Of Robin's reed!*

Six years ago I brought him down,
A baby dog from London town;
Round his small throat of black and brown
A ribbon blue,
And vouch'd by glorious renown
A dachshound true.

His mother, most majestic dame,
Of blood unmix'd, from Potsdam came;
And Kaiser's race we deem'd the same—
No lineage higher.
And so he bore the imperial name,
But, ah, his sire!

Soon, soon the days conviction bring.
The collie hair, the collie swing,
The tail's indomitable ring,
The eye's unrest—
The case was clear; a mongrel thing
Kai stood confest.

But all those virtues, which commend
The humbler sort who serve and tend,
Were thine in store, thou faithful friend.
What sense, what cheer!
To us, declining tow'rds our end,
A mate how dear!

For Max, thy brother-dog, began
To flag, and feel his narrowing span.
And cold, besides, his blue blood ran,
Since, 'gainst the classes,
He heard of late the Grand Old Man
Incite the masses.

Yes, Max and we grew slow and sad;
But Kai, a tireless shepherd-lad,
Teeming with plans, alert and glad
In work or play,
Like sunshine went and came, and bade
Live out the day!

Still, still I see the figure smart—
Trophy in mouth, agog to start,
Then, home return'd, once more depart;
Or prest together
Against thy mistress, loving heart,
In winter weather.

I see the tail, like bracelet twirl'd,
In moments of disgrace uncurl'd,
Then at a pardoning word refurl'd,
A conquering sign;
Crying, "Come on, and range the world,
And never pine."

Thine eye was bright, thy coat it shone;
Thou hadst thine errands, off and on;
In joy thy last morn flew; anon,
A fit! All's over;
And thou art gone where Geist hath gone,
And Toss, and Rover.

Poor Max, with downcast, reverent head,
Regards his brother's form outspread;
Full well Max knows the friend is dead
Whose cordial talk,
And jokes in doggish language said,
Beguiled his walk.

And Glory, stretch'd at Burwood gate,
Thy passing by doth vainly wait;
And jealous Jock, thy only hate,
The chiel from Skye,
Lets from his shaggy Highland pate
Thy memory die.

Well, fetch his graven collar fine,
And rub the steel, and make it shine,
And leave it round thy neck to twine,
Kai, in thy grave.
There of thy master keep that sign,
And this plain stave.
—Matthew Arnold.

* Come, join the melancholious croon
O' Robin's reed.
(Burns' Poor Mailie's Elegy).

XX.—On an Ingoldsby Legend Dog.

Simple and few, tender and true,
The lines o'er his grave. They have, some of them, too,
The advantage of being remarkably new.
Affliction sore long time he bore,
Physicians were in vain
Grew blind, alas! he'd some Prussic Acid,
And that put him out of his pain.

Foot Soreness in Sporting Dogs.

At this period of the year, which comprehends the time immediately preceding and following the opening of the shooting season, sporting dogs, whether at full exercise as in the first instance, or in full work as in the latter, are more than likely to suffer from foot soreness. Dogs, both young and old, which have been regularly and fully exercised over some length of time, are far less likely to suffer from foot soreness than those suddenly put to exercise or work, and its occurrence is best guarded against by gradually bringing the dogs into full exercise. Old dogs suffer, as a rule, more frequently than do the young ones, and with the former the trouble lasts longer and is less amenable to treatment than with the latter. Foot soreness proper is due, in the first instance, to the quick wearing away of the thick cuticle of the pad of the foot. Under circumstances of regular wear, when daily exercise or work is in full swing, this cuticle grows as quickly as it is worn away, but when put to sudden stress it not only wears away more quickly, but is very slowly replaced, the sensitive portion of the pad of the hoof being exposed, and, beside becoming inflamed itself, sets up sympathetic inflammation and fever in the other portions of the dog's feet. This, however, will pass away when the chief cause is dealt with.

Footsore dogs should have their feet carefully bathed with tepid water, all grit, sand, and the like being carefully washed away, and the feet carefully dried. A lotion of chloride of zinc and water (two grains of the chloride to each ounce of water), with a little essential oil of aniseed, should be applied to the injured and inflamed portions of the feet, and then they may be bandaged with linen bandages, well soaked with the lotion. A dog's boot or similar means must be employed to keep the bandages in place. This must be repeated daily, until the soreness goes off, and the dog be slowly brought back to work again. As a rule, a week or ten days should cover a complete cure if the dog be taken in hand at once.

Pointers are much more susceptible to foot soreness when working over hard, dry ground, especially where the cover is low and lying close to the ground, but all dogs that have not been regularly worked and examined over a period of time are liable to be affected, and frequently the redness showing between the toes and betwen the pad of the foot and the toes is taken to be the cause of the foot soreness, or leg weariness, as it is frequently miscalled, whereas this is only a symptom of the actual cause.

The lotion recommended is always beneficial to dogs showing slight signs of foot soreness, and should be kept on hand for use overnight upon the feet of dogs which may be liable to develop this simple but distressing ailment.—Shooting Times.

Yachting.

Yachting Fixtures, 1902.

Secretaries and members of race committees will confer a favor by sending notice of errors or omissions in the following list and also changes which may be made in the future.

AUGUST.

21. Plymouth, M. Y. R. A., open, Plymouth, Massachusetts Bay.
22. Kingston, M. Y. R. A., open, Kingston, Mass. Bay.
23. Bridgeport, Y. R. A. of L. I. S., open, Bridgeport, L. I. Sound.
23. Hull-Massachusetts, club, Hull, Boston Harbor.
23. Winthrop, club, Winthrop, Boston Harbor.
23. Huguenot, Y. R. A. of L. I. S., open, New Rochelle, Long Island Sound.
23. Royal Canadian, 16ft. class, Toronto.
23. Penataquit-Corinthian, Lighthouse cup, Bay Shore.
23. Shelter Island, ladies' race, Shelter Island Heights.
23. Corinthian, club championship, Marblehead, Mass. Bay.
23. Beverly, fifth Corinthian, Monument Beach, Buzzard's Bay.
23. Wollaston, club, Quincy Bay, Boston Harbor.
23. Seawanhaka Corinthian, club, Oyster Bay, Long Island Sound.
23. South Boston, club handicap, City Point, Boston Harbor.
23. Duxbury, M. Y. R. A., open, Duxbury, Mass. Bay.
23. Marine and Field, Y. R. A. of Gravesend Bay, Sea Gate, New York Bay.
24. Mosquito Fleet, club, City Point, Boston Harbor.
25-26. Wellfleet, M. Y. R. A., open, Wellfleet, Massachusetts Bay.
28-30. Cape Cod, M. Y. R. A., open, Provincetown, Mass. Bay.
30. Winthrop, club, Winthrop, Boston Harbor.
30. Beverly, sixth Corinthian, Monument Beach, Buzzard's Bay.
30. Columbia, race to Waukegan, Lake Michigan.
30. Manhasset Bay, club, Port Washington, Long Island Sound
30. Larchmont, club, Larchmont, Long Island Sound.
30. Atlantic, club, Fire Island and return, New York Bay.
30. Hull-Massachusetts, club, Hull, Boston Harbor.
30. Indian Harbor, Y. R. A. of L. I. S., open, Greenwich, Long Island Sound.
30. Royal Canadian, dinghy and 25ft. classes, Toronto.
30. Kennebec, club, Bath, Maine.
30. Hartford, Y. R. A. of L. I. S., open, Saybrook, L. I. Sound.
30-31. Corinthian, annual cruise, Marblehead, Massachusetts Bay.

For Cruising Yachtsmen.

With the purpose of stimulating the interest in cruising, and the keeping of a detailed log by cruising yachtsmen during the season of 1902, the publishers of Forest and Stream offer prizes for the best stories of cruises submitted to be published in Forest and Stream. It is believed that these will form not only entertaining records of pleasant summer days spent afloat along our coasts and waterways, but will furnish information of practical value to other yachtsmen making subsequent cruises on the same waters.

Prizes will be awarded to the three best stories as follows:

First prize, $50.00.
Second prize, $30.00.
Third prize, $20.00.

Contributions are invited under the following conditions:

1. The cruise must be made in waters of the United States or Canada in the season of 1902.

2. The cruise must be made in a sailing yacht, power to be used only as an auxiliary, if at all.

3. The story must be prefaced by a description of the boat. Cruises should be treated in as interesting and readable a way as possible, but should be practical and contain all possible information and data that would be of value to men going over the same route. A description of the handling of the ship in all weathers will be regarded very favorably in making awards, and it is suggested to writers that an accurate account be kept of all incidents happening while under way.

4. An outline chart suitable for reproduction, showing the course taken, must accompany each article. When possible, articles should be accompanied by amateur photographs taken on the cruise, including one of the boat. Good photographs will be considered in making the awards.

5. The story should contain about seven thousand words, written on one side of the paper only, and must be received at the office of the Forest and Stream Publishing Company, 346 Broadway, New York city, on or before Nov. 15, 1902.

Mr. T. C. Zerega has very kindly consented to act as judge and to make the awards.

Seawanhaka Cup.

Friday, Aug. 8.

A triangular course with light to moderate wind and no sea gave Tecumseh what every one said she wanted, and the result was a fine race, close and exciting throughout. The start was made at 1:55, the boats being instructed to keep all marks to port, giving windward work, a reach, and a run home. Tecumseh again led at the start, having an advantage of some fifteen seconds, and with conditions to her liking made a pretty race to the weather mark, both boats working out in short tacks. Trident led around by half a minute, but Tecumseh showed her quality on the reaching and running, and the first round was completed:

Trident .....2 47 45 Tecumseh 2 47 53

Then followed the finest work of the day, a series of short tacks and sharp work in stays. The boats were always on opposite tacks, diverging for a couple of minutes and then spinning around to try conclusions, only to stand off again just before questions of right of way were involved. Neither of the skippers cared to risk the chance of the other finding a better wind, and both avoided close quarters until they came together at the mark. Tecumseh should have made it first, but she failed to stand on far enough, and had to make a short hitch to fetch it. Trident turned with a lead of two seconds only, and on the reach to the second mark Tecumseh fairly established a lead, the leg being timed:

Tecumseh .....3 22 52 Trident 3 22 20

On the run home Trident gained a trifle, but Tecumseh was still leading when she tackled the windward work of the third and last round, and it was evident that if she could even hold her own Trident would never catch her when once around the first mark. As a matter of fact, she gained steadily all around, leading by a fair margin at the finish as follows:

Tecumseh .....4 22 25 Trident 4 23 47

Saturday, Aug. 9.

This race was in many ways a repetition of Thursday's—a windward and return course, with a fresh breeze blowing down the lake. There was enough sea to make things lively and both boats showed single reefs at the start, which was made at 1:15, with the usual preliminary signals. For some unexplained reason the crew of Trident failed to notice the signals, and only realized that the race had started when Tecumseh was seen crossing the line. This cost something like two minutes, and it would have spoiled any ordinary race. As it was, Trident weathered her opponent before turning the first mark, and continued to gain steadily to the finish. Tecumseh certainly did better than on Thursday, but the race was uninteresting, and the following times pretty well tell the whole story:

	1st Round.	2d Round.	3d Round.
Trident	2 00 57	2 41 16	3 21 31
Tecumseh	2 02 47	2 44 22	3 25 42

Monday, Aug. 11.

The race on this day being over a triangular course, a moderate wind was earliestly hoped for to give Tecumseh a fair chance to get on even terms. The morning was fine, the wind about the right strength, but variable, with smooth water. Shortly after noon, when the boats were ready to start for the course, there was a nice breeze up the lake, with a very obvious thunderstorm working down against it. Trident kept all canvas under cover and towed to the line, but Tecumseh's skipper insisted on sailing. On the way the storm broke, more rain than wind, clearing at 1 o'clock and leaving a light breeze from the southwest. This dropped entirely in a few minutes. Then Skipper Jones of the Tecumseh hailed the judges, asking for time to send for a dry mainsail, a request which provoked some amusement. He was informed that no start would be ordered until sufficient wind came, and that he might do as he pleased in the meantime. Com. Macdonald hailed the Karma and Mr. Post at once consented to run back to the club house for another mainsail, returning with it in about forty minutes. By this time there was a nice sailing breeze, and no reason for further delaying the start. The sun had come out, Tecumseh's sails were drying rapidly, and to attempt a hasty change looked foolish. However, Mr. Jones still seemed anxious to do it, saying it would take only fifteen minutes. After consultation the judges announced a start at 2:40, the time being 2:18, giving twenty-two minutes, so the crew of Tecumseh at once got to work. The sail-bending was completed at 2:35, by which time the wind had freshened to a squall. Trident's crew turned in two reefs, and Tecumseh's followed suit, anchoring to leeward of the line to do so. Just as they got under way the starting whistle blew. Trident crossed thirty seconds late, while Tecumseh lost four minutes working up to the line. It was a bad start, and evidently unnerved both skipper and crew. The triangle was sailed with marks to starboard, giving a hard beat to windward to the first mark, with the wind squally and freshening, and a short sea rapidly working up. Everything seemed to go against Tecumseh, and there was not a man or woman in the fleet but sympathized with the Bridgeport men. To make matters still more uncomfortable, it began to rain hard, and the sight of Tecumseh hopelessly astern of her competitor, pounding away to windward, but losing at every jump, was almost pathetic. Once round the weather mark she did better, and the first mark was timed:

Trident .....3 16 00 Tecumseh 3 22 28

The second round was but a repetition of the first, both boats carrying whole mainsails down the wind. Trident's lead was so great, over a mile in fact, that before the end of the round she sagged down again to guard against mishaps, and completed the race under easy canvas. The round was timed:

Trident .....3 52 36 Tecumseh 3 59 00

As a last resource Mr. Jones turned over the tiller to Mr. Jennings, who very pluckily took Tecumseh to windward for the last time under full mainsail, and by clever handling and keeping the crew aft, gained a minute or so on the round, the finish being:

Trident .....4 29 55 Tecumseh 4 35 22

This made three races for the representative of the Royal St. Lawrence Y. C., and there being no protests or

objections, the Seawanhaka cup remains with them for another year.

So far as the challenging club is concerned, the bulk of the work and responsibility fell on Com. MacDonald, who certainly deserves credit for pulling things through in the face of unexpected and somewhat embarrassing difficulties. He first of all headed a syndicate which built Massasoit, Mr. Jennings being retained as helmsman, with a thoroughly representative Bridgeport crew. Then when it appeared to be desirable to get a boat from Jones & La Borde, Com. Macdonald again came to the front, and Tecumseh was built. Her superiority in the trial races made her selection a foregone conclusion, and Mr. Jennings was then asked to take charge of her, but declined to do so, suggesting that it would be better to get some man who was more familiar with the type of craft. Under the circumstances the builders were appealed to for advice, and Mr. Jones offered to sail the boat himself, and to bring with him the Messrs. Gates, two Western men who had sailed on the boat at the trial races. This offer was somewhat embarrassing, as it was desired on the one hand to have a Bridgeport crew, even with a Western skipper, and on the other hand, there was some doubt as to whether Mr. Jones was really eligible to sail the boat. The conditions under which the matches for the Seawanhaka cup are sailed call for Corinthian crews and skippers, who must be members of the clubs represented. The accepted definition of Corinthian does not directly bar Mr. Jones, but he is certainly a professional boat builder. The Royal St. Lawrence Y. C. was asked to consent to his appointment, but declined to express an opinion on the subject, preferring to leave the matter entirely to the Bridgeport Club. Under the circumstances Com. Macdonald decided to accept the services of Mr. Jones and the Western men, together with that of Mr. Sherwood; Mr. Jennings, however, sailed in the boat in the last three races. It certainly was not very gratifying to the Bridgeport Club to have to depend upon a Western boat and Western men, but once Tecumseh had been selected Com. Macdonald could hardly be blamed for using every means to give the boat a fair chance. There was a good deal of comment on the matter, and some American yachtsmen who were present expressed themselves as anything but satisfied with the arrangement. It is certainly to be hoped that the next challenge will be accepted from a club which will at least provide a thoroughly first-class crew from among its own members.

With regard to the defenders, it is of interest to note that this is the first year that the Royal St. Lawrence Y. C. has sailed a match for the cup without the personal superintendence of Mr. Duggan. He designed both Osma and Trident, but owing to his removal to Sydney, C. B., all the details had to be worked out and the construction superintended by his trusty lieutenant, Mr. F. P. Shearwood, who completed with the present series his twenty-fifth race for the Seawanhaka cup. Trident was handled in the races by Mr. Charles Routh, a worthy successor to Mr. Duggan, and both in the building and sailing of the boat the traditions of the club have been ably upheld. The crew consisted of Mr. Macdonald, Mr. McNaughton and Mr. Shearwood, although a temporary change was made on the second day.

Aside from the fact that certain advantages usually accrue to the defenders, and that Duggan boats are hard to beat anywhere, especially on Lake St. Louis, it may as well be said at once that much of the success of the Royal St. Lawrence Y. C. in the present instance was due to superior racing organization. The class to which the boat belongs is well established, and in constant use and they began the season with several good boats, which were regularly raced, well tuned up, and constantly improved. The two boats built this year were not available until quite recently, but once they were ready the trained crews were put on board and a few races with the existing boats very soon showed how matters stood. The club, in fact, enjoyed the great advantage of a high standard with which to compare the new boats, and although Trident was not remarkably superior to the bunch, and had scarcely been tested in strong breezes, there was the satisfaction of knowing that she had proved herself a good boat in competition with other boats whose qualities had been well tested in all weathers.

Now on the other hand the challenging club began the season with no fixed standards whatever, and while commanding a much greater range of talent in every way, the boats came to the trial races so many unknown quantities, necessarily imperfect for lack of racing and requiring a great deal of tuning up. Once the trials began there was little time for work of this sort, and perhaps little inducement owing to the decided superiority of Tecumseh, but after all, it could only be said that she was the best of an untried lot, almost every one of which no doubt have been greatly benefitted by a season's hard racing and careful attention to details. For the good of the sport it is to be hoped that the most promising of these boats will be brought together again, and made to serve some useful purpose for the next challenger, which apparently will be some United States club. It can only be regarded as a profligate waste of means, to employ so many good designers and builders in turning out boats which are allowed to relapse into obscurity after a single short and unsatisfactory trial. The Royal St. Lawrence Y. C. fully realizes this, and in less than twelve hours after the final race declined an offer for Trident from a wealthy Chicago yachtsman, on the ground that a proved boat should not be carelessly lost to the club.

A challenge for next year from the Oshkosh Y. C. was received immediately after the final races, and the next day challenges by wire came from the White Bear Y. C. and the Manchester Y. C., so that a race next year is well assured.

WM. Q. PHILLIPS.

Mr. Frank Bowne Jones has recently made the following sales through his agency: Yawl Sultan, sold by Mr. C. S. Somerville to Mr. Charles A. Van Iderstein; sloop yacht Matahka, sold by Mr. R. T. Wainwright to Mr. W. C. Buckley; raceabout Viper, sold by Mr. D. H. Warner to Mr. A. B. Newcombe; raceabout Spindrift, sold by Mr. Samuel Comly to Mr. J. A. Dinning; steam yacht Chetolah, chartered by Mr. A. J. Wise to another member of the N. Y. Y. C.; cutter Infanta, sold by Mr. H. S. Wood to Dr. A. C. Knudson; schooner yacht Romono, chartered by Gen. B. F. Whitlock to Mr. Frederick W. Crosby.

Eastern Y. C.

A most fitting windup of the racing events on the New York Club cruise was the annual race of the Eastern Y. C., sailed off Marblehead on Monday, Aug. 11, which was open to yachts of the Eastern and New York yacht clubs. The Regatta Committee of the New York Y. C. was the guest of the Regatta Committee of the Eastern Y. C. on board the committee boat, and both committees took part in the management of the race. There was all kinds of weather for the racing, and at times there was promise of a regular Marblehead fluke day, but the luck which attended the yachts during the previous week stuck by them, and the race ended up in a strong southeast breeze. While the course was being covered a few rain squalls added to the uncertainty of the outcome, but these were generally welcomed. One of the yachts, Wahtawah, a Buzzard's Bay 30-footer, was dismasted.

The larger classes were sent over a course of thirty-four and a quarter miles, and the smaller classes were sent twenty-two and three-quarter miles, and both were found plenty long enough. The breeze was very light at the start and about southeast. It later shifted to the southward and, when about half of the first leg had been sailed, it strengthened with a rain squall. Later it fell again, and when the yachts were coming to the finish line it breezed on. This feature made the finishes much more interesting than they might otherwise have been.

There were the same close contests between the 70-footers Rainbow, Yankee and Mineola, and between the schooners Elmina and Muriel that had characterized all of the squadron runs. Rainbow and Mineola went over the starting line on split tacks, Rainbow first. As she crossed the line Mineola went to the port tack with Rainbow. Yankee crossed the line on the port tack. After all had crossed Mineola and Yankee took a short hitch to the southward to get nearer the wind, while Rainbow stood on well under Pig Rocks. This proved a good thing for her. She took a freshening breeze in there and when she went out on the starboard tack she soon opened up a big lead. Mineola was second and Yankee was third. This order was kept up to the first mark. There was much rain and wind as they approached this mark, and all hands traveled lively. After turning the mark Mineola picked up Rainbow in a lightening breeze, and the two had a luffing match, which brought them into close quarters, so close that they rubbed. Mineola went by Rainbow after they had both stood so high that they had to gybe and run for the second mark with spinnakers set. This was also favorable to Yankee. The breeze had hauled at this time to southwest, and it was a beat back to the first mark. Mineola and Yankee took short tacks, while Rainbow again took a long board to the westward. Again the judgment used was good, and she turned the mark in the lead, with Mineola second and Yankee third. This order was maintained to the finish, but it does not tell what a sight these three made as they came to the finish with spinnakers and ballooners set, only a few seconds apart.

In the fighting schooner class Muriel got the best of the start, and she sailed a great race all through against such a combination of schooner talent on board Elmina as Capt. Dennis and Capt. Nate Watson. The two were close all over the course, Muriel hanging to just a little lead. Muriel finished a little over half a minute ahead, but as Elmina started later, her elapsed and corrected times were both faster. Amorita sailed a good race and finished well up. Weetamoe and Neola were having one of the hottest races they have yet sailed, until Weetamoe was obliged to withdraw. They were working short tacks all the way out to the first mark, with Weetamoe in the weather berth. Another close race was between Shark and Humma. Humma was first to start and she led all over the course, but Shark pulled up on her when the breeze freshened and they finished close. This gave the race to Shark, which was handicapped at the start. Effort had a cruising sloop, Cossack, for a competitor, and she had no difficulty. In class A of handicap schooners Katrina won easily. In class B Mavis led the bunch, but lost to Colleen Bawn on corrected time. In the seventh class sloops Meemer, an old Y. R. A. 30-footer, sailed a good race and won. In this class a special prize was offered for Buzzard's Bay 30-footers. This was won by Notos, which had sailed a very fine race. In class A, handicap sloops and yawls, Ondawa finished alone, and this was the case with Intrepid in the special auxiliary class. The summary:

	Start.	Finish.	Elapsed	Corrected.
Second Class—Schooners.				
Elmina	12 17 00	4 56 10	4 39 10	4 37 48
Muriel	12 16 09	4 55 32	4 39 23	4 38 06
Amorita	12 16 54	4 58 05	4 41 11	4 41 11
Quissetta	12 16 20	Withdrew.		
Second Class—Sloops.				
Rainbow	12 15 27	4 52 34	4 37 07	4 37 07
Mineola	12 15 43	4 53 11	4 37 28	4 37 28
Yankee	12 16 55	4 51 42	4 37 47	4 37 47
Fourth Class—Sloops.				
Neola	12 15 55	5 05 19	4 49 24	4 49 24
Weetamoe	12 17 00	Withdrew.		
Fifth Class—Sloops.				
Shark	12 22 00	5 38 32	5 36 32	5 35 45
Humma	12 20 18	5 58 09	5 37 51	5 37 51
Sixth Class—Sloops.				
Effort	12 20 56	4 34 16	4 13 20	4 13 20
Cossack	12 22 00	4 50 45	4 28 45	4 26 09
Seventh Class—Sloops.				
Meemer	12 20 38	4 46 43	4 26 05	4 20 01
Notos	12 22 00	4 54 46	4 32 46	4 24 27
Zingara	12 21 20	4 57 30	4 36 10	4 27 51
Syren	12 21 00	4 53 45	4 32 45	4 32 45
Gamecock	12 22 00	5 15 53	4 53 53	4 45 34
Wahtawah	12 21 10	Disabled.		
Halaia	12 22 00	Withdrew.		
Class A—Handicap Schooners.				
Katrina	12 31 20	5 13 00	4 41 40	4 41 40
Adrienne	12 31 12	5 48 54	5 17 42	5 06 26
Seneca	12 30 38	5 42 12	5 11 34	5 11 34
Hope Leslie	12 32 00	Withdrew.		
Class B—Handicap Schooners.				
Colleen Bawn	12 37 00	5 00 50	4 23 50	4 11 02
Mavis	12 37 00	4 53 06	4 16 06	4 16 06
Rondina	12 36 12	Withdrew.		
Magnolia	12 37 00	Withdrew.		
Gerfalcon	12 34 48	Withdrew.		
Class A—Handicap Sloops and Yawls.				
Ondawa	12 32 00	6 38 00	6 06 00	6 06 00
Virginia	12 31 48	Withdrew.		
Special Auxiliaries.				
Intrepid	12 42 00	4 55 06	4 13 06	4 13 06
Amoureuse	12 45 00	Withdrew.		

Newport Special Thirties.

NEWPORT, R. I.

Tuesday, Aug. 5.

In a sweepstake race sailed over a triangular course on Tuesday, Aug. 5, Carolina won. The wind was light from the E. Wawa was first away, but at the first mark Carolina and Esperanza were both ahead of her. Carolina held her lead until the finish. The summary, start 3:49:

	Finish.	Elapsed.
Carolina, Pembroke Jones	5 09 02	1 20 22
Esperanza, H. O. Havemeyer, Jr.	5 13 00	1 24 00
Barbara, W. Rutherfurd	5 17 47	1 28 47
Wawa, R. Brooks	5 20 01	1 31 01
Veda, W. L. Stow	5 30 50	1 41 50

Friday, Aug. 8.

The 30-footers sailed a sweepstake race on Friday, Aug. 8, in half a gale of wind. The first leg was a run, and at the start the wind was S.W. When about at the mark the wind hauled to N.W., making it a reach to the finish line. Esperanza led from the start and won by over 3m. The summary, start 3:50:

	Finish.	Elapsed.
Esperanza, H. O. Havemeyer, Jr.	5 47 57	1 58 57
Veda, W. L. Stow	5 52 04	2 02 04
Wawa, R. Brooks	5 52 36	2 02 36
Barbara, W. Rutherfurd	5 52 47	2 02 47
Carolina, Pembroke Jones	5 53 58	2 03 58
Asahi, L. Warren and W. S. Miller	5 56 29	2 06 29
Hera, R. Guinness	5 56 52	2 06 52

Saturday, Aug. 9.

The sweepstake race that was sailed by the 30-footers on Saturday, Aug. 9, was won handily by Esperanza. There was a good sailing breeze from the S.W., and soon after the start Esperanza took the lead, which she held up to the finish. The summary, start 3:20:

	Finish.	Elapsed.
Esperanza, H. O. Havemeyer, Jr.	5 58 44	2 28 44
Wawa, R. Brooks	5 59 14	2 29 14
Veda, W. L. Stow	6 00 13	2 30 13
Barbara, W. Rutherfurd	6 00 47	2 30 47
Asahi, L. Warren and W. S. Miller	6 01 01	2 31 01
Hera, R. Guinness	6 01 57	2 31 57

Monday, Aug. 11.

The 30-footers sailed a sweepstake race over the Dyers' Island course on Monday, Aug. 11, in a strong S.W. breeze. Esperanza while gybing around the outer mark carried away her mast. At this time she was 2m. ahead of Wawa, which took the lead after Esperanza's accident and won with ease. The summary, start 3:24:

	Finish.	Elapsed.
Wawa, R. Brooks	5 37 31	2 13 31
Carolina, Pembroke Jones	5 38 04	2 14 04
Asahi, L. Warren and W. S. Miller	5 40 38	2 16 38
Veda, W. L. Stow	5 41 09	2 17 09
Barbara, W. Rutherfurd	5 41 46	2 17 46
Breeze, W. G. Roelker, Jr.	5 42 16	2 18 16
Esperanza, H. O. Havemeyer, Jr.	Withdrew.	

Tuesday, Aug. 12.

The race for the 30-footers sailed on Tuesday, Aug. 12, was won by Carolina by the small margin of 14s. The boats sailed twice over a triangular course. The wind was strong from the N.W. The summary, start 3:20:

	Finish.	Elapsed.
Carolina, Pembroke Jones	5 06 32	1 38 32
Barbara, W. Rutherfurd	5 06 46	1 38 46
Wawa, R. Brooks	5 07 02	1 39 02
Breeze, W. G. Roelker, Jr.	5 07 17	1 39 17
Veda, W. L. Stow	5 08 19	1 40 19
Asahi, L. Warren and W. S. Miller	Withdrew.	

Wednesday, Aug. 13.

Esperanza was well in the lead of the fleet in the race for the 30-footers sailed on Wednesday, Aug. 13, when she got afoul of a lobster pot. Before she could clear herself all the rest of the boats had passed. When Esperanza got hung up Wawa was in second place, and she won easily. The wind was from the N.W., and blew with considerable strength. The boats sailed twice over a triangular course. The summary, start 3:23:

	Finish.	Elapsed.
Wawa, R. Brooks	5 08 44	1 45 44
Barbara, W. Rutherfurd	5 09 26	1 46 26
Asahi, L. Warren and W. S. Miller	5 11 21	1 48 21
Carolina, Pembroke Jones	5 11 49	1 48 49
Breeze, W. G. Roelker, Jr.	5 11 54	1 48 54
Veda, W. L. Stow	5 15 56	1 52 56
Esperanza, H. O. Havemeyer, Jr.	Withdrew.	

Thursday, Aug. 14.

The first race for the cup offered by Mr. William L. Stow was sailed on Thursday, Aug. 14. The wind was fresh from the S.W., and the boats sailed over the Dyer's Island course. Wawa got the best of the start and led all over the course, winning by 16s. The summary, start, 3:18:

	Finish.	Elapsed.
Wawa, R. Brooks	5 32 48	2 14 48
Esperanza, H. O. Havemeyer, Jr.	5 33 04	2 15 04
Asahi, L. Warren and W. S. Miller	5 33 19	2 15 19
Barbara, W. Rutherfurd	5 33 31	2 15 31
Breeze, W. G. Roelker, Jr.	5 33 49	2 15 49
Carolina, Pembroke Jones	5 34 06	2 16 06
Veda, W. L. Stow	Withdrew.	

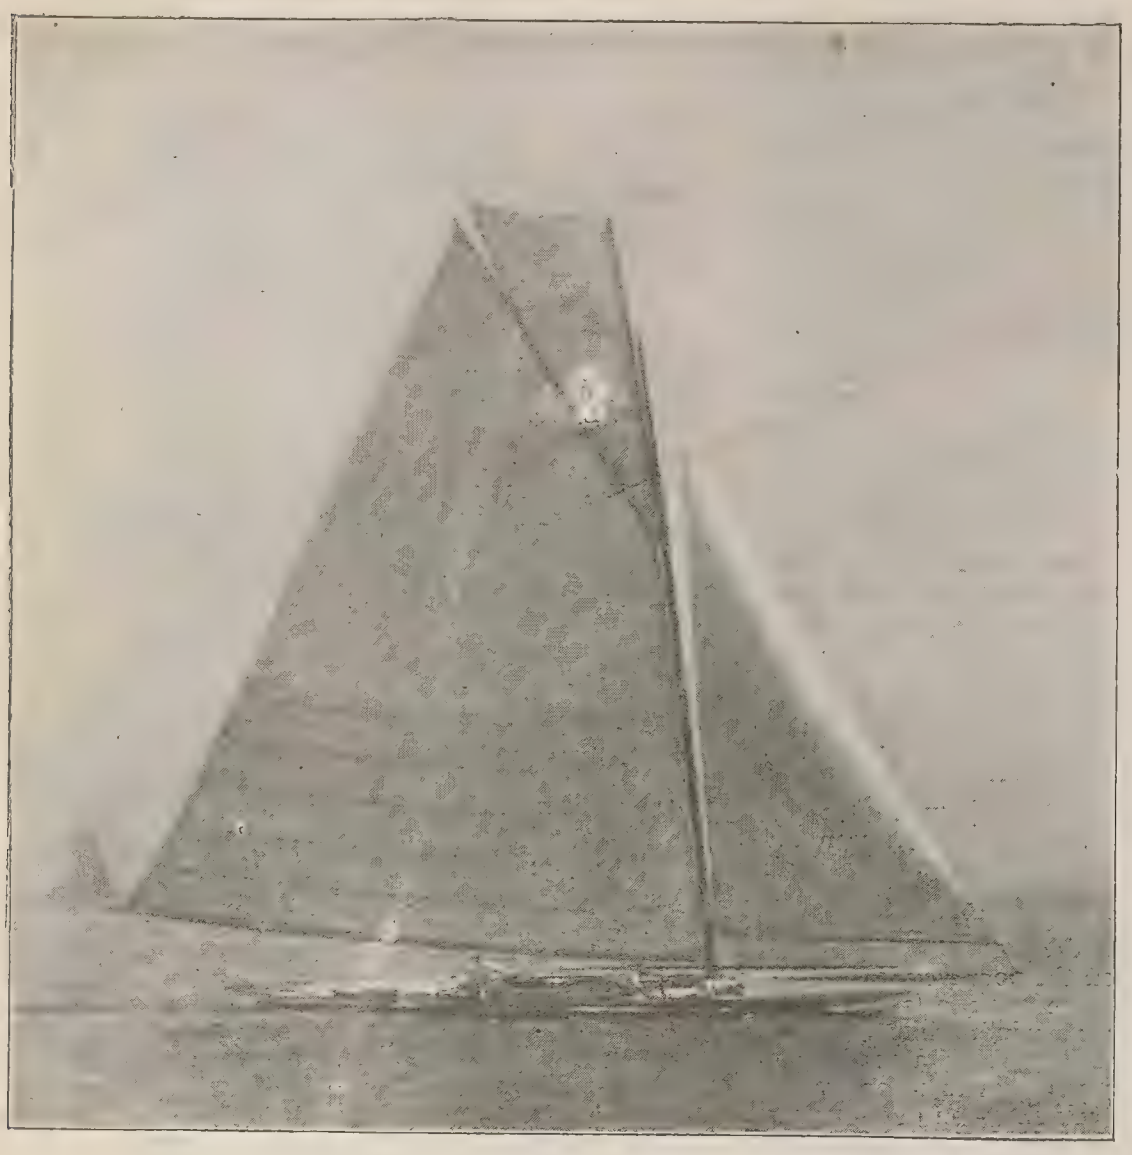
Friday, Aug. 15.

The second race for the cup offered by Mr. William L. Stow was held on Friday, Aug. 16. The wind blew strong from the S.W., and Veda and Wawa were forced to withdraw, owing to broken rigging. Asahi was first around the outer mark, but on the home leg Esperanza did better, and got ahead. When near the finish Barbara passed Esperanza and won by 5s. The summary, start 3:22:

	Finish.	Elapsed.
Barbara, W. Rutherfurd	5 38 46	2 16 46
Esperanza, H. O. Havemeyer, Jr.	5 38 51	2 16 51
Carolina, Pembroke Jones	5 39 38	2 17 38
Asahi, L. Warren and W. S. Miller	5 40 29	2 18 29
Wawa, R. Brooks	Disabled.	
Veda, W. L. Stow	Disabled.	

Mr. Stanley M. Seaman has made the following transfers through his agency: 35ft. sloop Saona, owned by Mr. J. Hunt Smith, to Mr. J. Langdon Ward. Chartered the 40-footer Choctaw to Mr. Harold W. Buck.

At the annual meeting of the Sea Cliff Y. C., held on Thursday evening, Aug. 12, the following officers were elected: Com., Theodore W. Sheridan; Vice-Com., C. E. Silkworth; Sec'y, C. Sackett Chellborg; Treas., Clarence S. Dunning; Trustees, Garrett Smith and Paul Grimm.



FLASHLIGHT—QUINCY CUP CHALLENGER.

OUTLOOK—QUINCY CUP DEFENDER.

Photos by N. L. Stebbins, Boston.

Quincy Y.C. Challenge Cup Races.

In the issue of Aug. 9 Forest and Stream had an account of the two boats built by the members of the Manchester Y. C. to defend the Quincy cup and of the series of races between the two before the Burgess designed Outlook was chosen to meet Flashlight, the challenger from Quincy. It is now meet that they should take a glance at the two latter boats, and to go into a detailed comparison of them.

Outlook has been already pretty well described in these columns, and I shall not describe her more fully than to say that beside her rival she seems a ship. And yet nothing is unnecessarily heavy, for the strains on a boat carrying nearly 2,000ft. of sail are very great, and when one stops to consider that Outlook carries nearly as much sail as a 46-footer, and that her spars are as large, it is not odd that much gear is needed to handle them.

Flashlight is also of the scow type, but very different in many ways from her rival. She was designed by Arthur Keith and built by Smith, of Quincy. Unlike Outlook, she is not covered with canvas, but is double planked with two layers of wood, laid at right angles. The inner planking is run across the boat, while the outer layer is run fore and aft. This construction makes a very strong bit of work, and one that holds its shape very well. Her rig is very light as compared to that of Outlook, and yet it seems to hold, and her crew seems to be able to handle her sails. She has a sail area of 1,500 sq. ft., or 300 sq. ft. less than the Manchester scow. She is 45ft. over all, has 11in. draft, with 5in. of dead rise, and a beam of 15ft. Her bilges are absolutely square, and show no flare at all, so that her extreme beam is the same as her beam at the waterline. Except for her bow she looks more like a square-sided punt than anything, as her sides have almost no sweep. But the bow is very odd, and it is hard to describe; she has three bows in reality, for on each side there is a hollow between the bilge and the center of the section. This queer conformation runs back about 20ft., gradually growing less and less evident, till at the waterline, or just aft of it, the hollow disappears entirely, and the section again becomes square. The idea of this hollow on each side I do not quite understand, unless it is to give her an easy entrance. Of course the lack of sweep on Flashlight gives her a very long side to reach on, and her square bilges make it easy to heel her over, so that in light airs she is very fast. Outlook is a very powerful boat, much more so than Flashlight, and she has a good deal less sail for her power. Her form is not quite so easy to drive and her wetted surface when heeled over is much greater, but to counteract all this she has a good deal more sail to drive her.

Not content with an ordinary board and rudder, Flashlight has two of each. Her two boards are of the dagger style, and are placed one in each bilge. Her two rudders, placed directly in line with the boards, are connected with a long cross rod, which runs on deck from two short tillers, which are arranged in the usual way.

Her support is wholly of wood, and no truss is evident above deck as in Outlook. Flashlight is comparatively speaking an open boat—that is to say, she has two large cockpits, while Outlook is completely decked over, having only two small hatches used to get into her to bail out whatever small amount of water she may make.

Flashlight was sailed in her races by Henry M. Faxon, with Arthur Keith, Frank Crane, H. B. Faxon and H. Morrison as crew. Outlook was sailed by Reginald Boardman, with A. H. Higginson, Frank Burgess, James Jackson and Alec Jansen as crew. Both skippers and crews are old hands at the game, and used to each other, they being almost the same crews that handled Hostess and Lookout in the Quincy cup races of 1900, when the cup was first won by the Manchester boat Lookout. With such skippers and crews both boats were done full justice to, and there was very little to choose between their handling.

On Thursday, July 31, Flashlight came down from Quincy to Marblehead, where she remained till the morning of the first race. The judges for these races were three in number—ex-Com. Fred B. Rice, of the Quincy Y. C.; Richard De B. Boardman, of the Manchester Y. C., and Geo. W. Mansfield, of the Corinthian Y. C. These gentlemen had as judges' boat the steam yacht Velthra. The Quincy Cup Committee, composed of Edward S. Grew, H. M. Mason, Horace B. Pearson, Reginald Boardman and A. Henry Higginson, had as a committee boat a steam yacht, Messrs. Boardman and Higginson being, of course, on Outlook.

A small fleet of Quincy boats were in Manchester Harbor, and members of the club followed the races in the steam yacht Josephine, while the Eleanor, another steamer, was packed with the backers of the Manchester boat. A large fleet of yachts propelled by sail and steam followed the races, and altogether the event assumed almost the importance of an international race.

First Race, Monday, Aug. 4.

Monday morning dawned fair, with a light southerly breeze coming in. At 8:15 A. M. Outlook came down from Fenton's yard, up the Manchester River, in tow of her tender, which was managed by her designer, W. Starling Burgess. In the tender was also Mr. C. H. Cousens, senior partner of the firm of Cousens & Pratt, whose suit of sails Outlook used. Outlook was pot-leaded to her rail only, her stem transom showing the priming coat of dark green, with a strip of faded canvas bearing her name Outlook, it having been cut from the

stern of the old successful Lookout, and the letters changed so as to spell the name of the new defender. On board beside her regular crew, were David Fenton, her builder, who, with his head rigger, John Brown, was busy putting final touches to his creation.

At 9:15 Flashlight came over from Marblehead under her own sail, slipping along easily in the light air. She was also attended by a steam tender. At 9:40 Outlook hoisted her jib and mainsail, but did not cast off from her tender. At 10 o'clock the judges hoisted the signal for course X, which meant a start off the western end of Misery Island and a beat to a mark boat two and a quarter miles to the south'ard and return. This course was repeated, making in all a race of four and a half miles to windward and return. Outlook immediately started off in tow of her tender, while Flashlight proceeded under her own sail. At 10:15 the preparatory gun was fired, and both boats began to manœuver for the start. Both seemed to move fast, but Outlook was faster in stays.

At 10:20 the gun went, and Outlook crossed the line four seconds behind the gun on the port tack. She had Flashlight under her lee and astern, which followed on the same tack at 10:20:47, forty-three seconds behind. Just after crossing Flashlight tacked to starboard, and was instantly followed by Outlook, which kept her under her lee. Accordingly Flashlight tacked again, and again. Outlook followed. Anxious to get out from the lee, Mr. Faxon tacked once more, and was instantly followed by the Manchester boat. In these short tacks Outlook gained a good deal, and seeing he could not shake his adversary, Mr. Faxon settled his beat for the outer mark, with Outlook on his weather bow. Then for the first time the difference became apparent, for Outlook outwinded and outfooted the Quincy punt, which could not hold what she made, but slid off to leeward. The wind hauled a bit to the eastward, so that Outlook fetched the mark, and at 10:46:55 tacked around it and with started sheets reached for shore again. Not so with Flashlight; she had to make two short tacks before she was able to follow suit, which she did at 10:52:35. I did not mention that Flashlight carried a small club topsail, which in my opinion did her more harm than good. Once off the wind, in addition to this sail, she sent her working jibs out on a pole beyond her bowsprit, and set a balloon jib inside of it, but Outlook reaching along with her working jib and mainsail drew steadily away from her. Half way in, off Baker's Island, she broke out her spinnaker to starboard, and with the pole eased way off it drew well. Flashlight followed her example. At 11:13:20 Outlook gybed around the mark and set out for her beat on the second round. Flashlight followed at 11:23:02, nearly ten minutes astern. The race had become a procession, Outlook in the lead doubtless profited by her lighter sails, which were better than those of her rival, and by perhaps a little better air, but she pointed higher and footed faster, and made the outer mark at 11:41:03. Flashlight tacked twice to weather the mark, and by the time she rounded it for the second time Outlook was two miles ahead, her spinnaker to starboard and drawing finely. She crossed at 12:10:40, amid the screeching of whistles, the banging of cannon and the cheers of the assembled fleet. She was at once taken in tow by her tender, and went to Manchester. Flashlight crossed at 12:50:40, the lightness of the breeze at the finish unquestionably accounting for her crushing defeat. The summary:

	Start, 10:20.	1st Mark.	2d Mark.	3d Mark.	Finish.
Outlook		10 46 55	11 13 20	11 41 03	12 10 40
Flashlight		10 52 35	11 23 02	12 03 50	12 50 04

Second Race, Tuesday, Aug. 5.

The race on Monday was so one-sided that every one interested hoped for other condition than those which had existed at the time of the first race. Even in their wildest dreams the supporters of Outlook had not looked for such a victory, and it was admitted by every one that for the best interests of sport the racing should be closed. The elements of design in Flashlight and Outlook were pretty well tested for light weather, and the first race demonstrated two things pretty clearly: First, the hard square bilges on the Quincy boat were a failure. She was very hard to heel, and when once heeled had no supporting bilge on which to sail as had Outlook. Second, that the more powerful boat had by far the best of it, and that the limit of beam and power had not been reached on the Quincy boat, if even on Outlook. What the result was in a breeze no one knew. Mr. Faxon held that his boat would go much faster in a breeze, and so when the wind gave indications of being strong on Tuesday morning, every one was glad. At 10 A. M. the judges displayed the signal for course 9—a reach to Archer's Rock Buoy off Marblehead, a beat to the red can on the outer breakers east of Baker's Island, and a reach home. Flashlight came over from Marblehead under whole sail, and Outlook came out in tow of her launch as usual, and hoisted whole sail. At 10:10 the preparatory gun was fired, and at 10:11 the gooseneck on Outlook broke. She at once lowered her sails and was taken by her tender to Fenton's yard. Flashlight sailed a solitary race. One hour before she finished Outlook was out again with a new gooseneck kindly loaned by Mr. Boardman, manager of Hades. As Flashlight approached the finish line the wind backed to the northeast, making a beat in. Half a mile from the line Outlook was tacked under Flashlight's stern, and in the half-mile beat to the line she beat her over a minute. Later in the day Mr. Faxon came forward in a most sportsmanlike spirit and refused to take the race, he saying that Outlook had not started and that if Flashlight couldn't beat her, he didn't want the cup. Therefore the second race was sailed on Wednesday at 10 o'clock.

In the afternoon Outlook defeated a fleet of thirty boats, including four 25-footers, for the Crowhurst cup. Flashlight started, but parted her jib halliards on the last leg, two miles from the finish. At the time Outlook was five minutes ahead of her. Outlook had two reefs in her mainsail, carried a No. 2 jib, and set No. 8 sails.

Postponed Second Race, Wednesday, Aug 6.

Early Wednesday morning it was quite discouraging. A thick fog enveloped most of the course and a light southerly breeze only made the weather more damp and

HADES—BUILT FOR THE DEFENSE OF THE QUINCY CUP. Photo by W. B. Jackson, Marblehead.

raw. However, as the day wore on and the time for the start drew near the wind increased in strength, till at 9:30 o'clock, when Outlook came out of the harbor in tow of the club's launch, it was blowing a strong whole-sail breeze. Flashlight came over from Marblehead under whole sail, while Outlook lying at her moorings hoisted a two-reef mainsail. At 9:55, however, the breeze became less strong, and the whole mainsail and No. 4 jib was hoisted on Outlook, while Flashlight set her club topsail. At 10 o'clock the signal for course 7 was hoisted on the judges' boat, which meant a reach to a mark off Hospital Point, a beat to Gooseberry Ledge and a reach back inshore to the finish line, a distance of nine and a half miles. At 10:10 the preparatory gun was fired, and the boats began maneuvering for the start. Flashlight took up a position east and to windward of the line, while Outlook reached up from the leeward end. The two boats approached the judges' boat, Flashlight running almost dead before it and Outlook close hauled. Mr. Higginson on Outlook called for room, and Mr. Faxon luffed Flashlight a bit, but not enough. Had Outlook chosen she could have forced Flashlight to windward of the judges' boat and the line, but not wishing to make the trouble, Mr. Boardman swung Outlook off sharply and allowed Flashlight to go between him and the judges' boat. She thus crossed on Outlook's quarter, a position which she had no right to hold. Outlook, however, had a clear wind, and inside of a minute she had two lengths to the good. The two boats reached off at a fair pace, and Flashlight sent two men forward of the mast to set her balloon jib. Outlook was satisfied with her working jib, and it seemed to do the work as well or better than Flashlight's sails, as she drew away steadily from the Quincy boat. When off the northern end of Misery Island Mr. Faxon took in his balloon jib, and used his working jib the rest of the way to the first mark. Off Pride's Rock Outlook set her spinnaker to port, and with it eased away forward she went very fast. Flashlight did not follow her example. At 10:45 Outlook took in her spinnaker and luffed around the mark at 10:49:50. Flashlight followed at 10:52:00. This showed a gain of two minutes and ten seconds on the first leg for Outlook. Once around the mark Outlook was held inshore on the port tack for a few minutes, and then sent about on the starboard hitch for a long tack to the eastward. Flashlight followed suit, and taking in her topsail went far better than in any of the earlier races; she stood up to her sail and footed very fast, although she did not point as high as her Manchester rival, she dropped behind very slowly. As the boats got further out, the wind increased very much and the sea slapped the flat bilges with great force, sending the water in showers. Both boats staggered under their great sail spread, but both were kept steadily at it, and made great speed. After standing on the starboard tack for about half an hour, Flashlight was stayed to port again and was held far over under the Cat Island shore to get smoother water. Outlook followed. Both boats received an awful pounding on the way out, and the way the lee bow of Outlook came up with each sea that she struck was appalling. Had it not been for the fact that Outlook has a steel truss running from bow to stern, she would never have reached the windward mark, and how Flashlight did it is beyond the writer's comprehension. It speaks volumes for the work of W. B. Smith, who built her. From Cat Island both boats were sent out to sea on the starboard tack again, and held there till they could nearly fetch the weather mark, when both were tacked to port again. The sea on this tack was the worst that the boats encountered during the day, and while on this reach Outlook broke two hard pine stringers in her starboard bilge forward of the mast, allowing it to give badly. She was accordingly eased off a little and this cost her some of her lead over Flashlight. At 11:34:00 she tacked to starboard, and at 11:38:30 she was eased off around the mark for the reach home. Flashlight followed at 11:42:00, showing a gain of one minute and ten seconds for Outlook on the windward work. With booms to port, and with preventer backstays far aft, the two boats raced off at a most terrific rate. Flashlight came a shade the faster of the two, but Outlook had a long lead, and it was too much to cut down. At Pope's Head Buoy the two boats were hauled a little more on the wind and the speed became terrific. The fast speed launch Helma, acting as patrol boat, was unable to catch the boats, although she was running at over twelve knots an hour. Both crews were sitting to leeward to give the boats the desired list, and both reached along with a smother of foam under their lee bows. At this rate Outlook raced over the line at 11:57:30, with Flashlight at 12:00:11, two minutes and forty-one seconds astern. This showed a gain of forty-nine seconds for Flashlight on the last leg of the course. Outlook was greeted by cannon, whistles and cheers as she crossed the line, and Flashlight received as warm a reception when she flew across, beaten, but having sailed a very game race, by far the best of the series. A look at the figures shows that Outlook is faster to windward than her rival in any breeze, but that on a reach in strong breezes it is a very even thing, with the odds rather in favor of Flashlight. After the race Outlook was towed up the harbor to be overhauled for the next race, while Flashlight was reefed and sent for Marblehead.

That the rigging and gear on both boats held through the race speaks well for the judgment of those in charge, but the pounding and straining that the boats received from the sea while beating to windward inclines one to the view that they are by far too lightly constructed. What those on Flashlight felt I cannot say, but I know that Outlook's crew breathed a sigh of relief when the weather mark was reached. The summary:

Start, 10:15.	1st. Mark.	2d Mark.	Finish.
Outlook	10 49 50	11 38 30	11 57 30
Flashlight	10 52 00	11 42 00	12 00 11

Third Race, Thursday, Aug. 7.

The first Quincy cup race was sailed in a light wind; the second in a strong whole-sail breeze, and the third in a wind that came in heavy puffs off the shore and forced both boats to tie in several reefs. Luckily it was an offshore northwest breeze that did not kick up a heavy sea as on the preceding day, when both boats received such hard punishment in the southeast slop. At 8:30 it was already coming in fresh from the northwest, and the little white wind clouds, rising fast on the northern horizon, gave evidence of more breeze. Outlook was towed out of the harbor at 9:15 with her No. 2 jib on the bowsprit and two reefs tied in her mainsail. After looking at the weather, however, her manager put two more reefs in, making four in all, and when Mr. Boardman, who sailed her, came aboard at 9:25, he quite agreed in the matter. Flashlight had come over under whole sail, but seeing the tactics of her rival, Mr. Faxon promptly lowered his sail and tied in three reefs. Even then Outlook carried the larger sail of the two. At 10 o'clock the judges displayed the signal for course O, a beat to buoy 11 on Little Haste, a run back, and repeat, a distance of eleven miles. The preparatory gun went at 10:05, and both boats began maneuvering for position at the start. As in the previous races Mr. Boardman proved himself the best at this game, and Outlook crossed the line on the starboard tack eight seconds behind the gun, with Flashlight thirty-two seconds astern. Shortly after crossing Flashlight was tacked to port, and Outlook quickly followed the move, both boats working up close under the Manchester shore. Hard puffs came off the shore, and at times both took on a very great angle of heel. The No. 3 jib on Outlook did not draw well, and must have made quite a difference in her windward work during the race. She did not go to windward as well as usual, and seemed not as fast in stays. Flashlight, on the other hand, carried her sail well and went to windward far better than in any previous race. The race to the first windward mark was as close as could be imagined, and it was nip and tuck as to which boat would first round it. Just off Misery Island both boats came together, Flashlight on the starboard tack; Mr. Boardman was not quite quick enough in coming about, and had Mr. Faxon chosen he could have fouled Outlook and had her ruled out, as it was clearly her fault. Mindful, however, of the courtesy shown him at the start on the previous day, Mr. Faxon luffed his boat and avoided an accident. His action was appreciated by those on Outlook, and when some minutes later Flashlight was in a similar position, Outlook was kept off under her stern.

The two boats were not five seconds apart at any time during the beat to the buoy, and it was with a lead of only five seconds that Outlook was kept off round the mark at 10:54:45. With booms to starboard both boats were headed for the mark boat off West Manchester. On rounding Outlook's spinnaker boom was dropped to port and the No. 1 spinnaker was run up in stops. The stops seemed to be too strong, and it was some minutes before it drew well. During this time Flashlight, which had set a balloon jib, had luffed out on the weather quarter of Outlook, and it looked for a few minutes as if she might get by. But as soon as Outlook's spinnaker began to pull she drew out from under her rival's lee and began to pull slowly but steadily ahead. Flashlight's crew did not set a spinnaker, but merely poled out her balloon jib. Outlook took in her spinnaker at 11:15:02, and at 11:16:26 she was gybed around the mark and with flattened sheets sent to windward on the starboard tack. Flashlight gybed at 11:17:32, one minute and six seconds behind the leader. Outlook had gained sixty-one seconds in the run down from Haste. Once down to windward work again, Outlook seemed to travel better than before. The wind had become much steadier, though it had increased somewhat in force, and both boats made better time. Outlook gained but little, and the boats were timed as follows at the mark:

Outlook .....11 52 12 Flashlight 11 53 55

As Outlook rounded the mark her spinnaker pole went out to port, and her spinnaker was broken out. So hard was it blowing that the sail and boom went high in the air, and for a minute it looked as if there was going to be trouble. It was finally steadied, however, and one of the crew sent out on the main boom, which was far off to starboard, to cut out the reefs in the mainsail. When he came in all hands went forward of the mast to sway up the great 1,400ft. mainsail. When this was up and drawing Outlook fairly flew through the water. Every one except Mr. Boardman was forward of the mast to keep the boat down, and she went through a long lane of steam yachts and launches, which she passed with seeming ease. Half a mile from the finish a new broom was sent up to her masthead, and a club burgee hoisted at each of her spreaders. Thus attired she crossed the line, and was greeted by guns, whistles, and cheers from the assembled fleet. Astern, but sailing gamely, came Flashlight. She had set no spinnaker for some reason which I cannot understand, but she came fast under her whole mainsail and balloon jib. She, too, was given a warm reception when she crossed the line. The summary:

Start, 10:10.	1st Mark.	2d Mark.	3d Mark.	Finish.
Outlook	10 54 45	11 16 26	11 52 12	12 11 34
Flashlight	10 54 50	11 17 32	11 53 53	12 15 58

So the Quincy cup will stay in Manchester till such time as some boat can lower the colors of victorious Outlook. The Quincy men went away badly disappointed, but fully satisfied that the best boat had won. All credit to Mr. W. Starling Burgess for his design and construction which stood the strains so well. Credit, too, to Mr. Boardman who sailed her in her races, and who proved himself without equal in the steering of big scows. The crew should not be omitted, nor yet the builder, David Fenton, who, with his head rigger, John Brown, were in constant attendance, and worked night and day to make Outlook a success. And yet perfection in all this without the sails to drive it is useless, and Messrs. Cousens & Pratt, of Boston, produced a most perfect jib and mainsail. The light sails were made by Messrs. Wilson & Silsby, and were all that could be desired. All these little things went to make up the perfect whole, and without them Outlook would not have been such a perfect tool with which to weld another link in the chain which holds the Quincy cup in Manchester.

A. Henry Higginson.

Capt. Newman and his son Edward, who left New York on July 9 on the kerosene launch Abiel Abbot Low, arrived at Falmouth, England, on Thursday, Aug. 14. In the voyage of 3,103 miles, they were only spoken twice. The launch made most of the trip under power, sail being only occasionally used. Bad weather and heavy gales were experienced, and Capt. Newman and his son suffered considerably from exposure.

Seawanhaka-Corinthian Y. C. vs. Beverly Y. C.

A match was recently made between the Seawanhaka-Corinthian Y. C. and the Beverly Y. C. for a cup subscribed for by both clubs and to be sailed for by yachts of the 21ft. restricted class or raceabouts. The terms of the match are briefly: Each club is to be represented by three yachts. There shall be three races in each of three successive years, the club winning two out of three races of any year to be the winner of that series and hold the cup till the next year, and the club winning two out of the three series of races to hold the cup permanently. The winner of each race is to be determined by the system of scoring and tables in use by the Beverly Y. C. in its championship races, the races to be sailed under the rules of the Seawanhaka-Corinthian Y. C., the first and third races of each year or series to be to windward and leeward, the second triangular, and with one gun starts.

The first series was sailed at Newport Aug. 4, 5 and 6, and won by the Beverly Y. C., and the subsequent series are to be sailed in the home waters of the club winning the next preceding series.

First Series, 1902.

The Seawanhaka-Corinthian Y. C. was represented by the Jolly Roger, Indian and Whistle Wing, all open keel yachts, and the Beverly Y. C. by the Quakeress, Terrapin and Sylvia, the last a keel, the other two centerboards and all three having cabins and houses, as required by the rules of the club. Jolly Roger and Indian were designed by Crowninshield, Whistle Wing by Crane, Quakeress and Terrapin by Herreshoff, and Sylvia by Purdon.

First Race, Monday, Aug. 4.

The weather was fine with a moderate southwesterly breeze. The course was from the compass buoys to the buoy off Dyer's Island and return, twice round, about 11 miles. A good start was made before the wind. The run was very even and all rounded the first mark within thirty-two seconds of each other. In the windward work Sylvia secured a good lead, which she held till halfway home on the second round, when her bobstay parted and she lost her bowsprit. After clearing away the wreckage she lashed a storm jib to her stem and worked her way to the finish line. The summary, start 2:10 P. M:

	1st Mark.	2d Mark.	3d Mark.	Finish:	Elapsed.
Whistlewing	2 38 38	3 26 17	3 53 56	4 39 09	2 29 09
Quakeress	2 38 46	3 27 09	3 53 58	4 36 50	2 26 50
Terrapin	2 39 10	3 27 00	3 54 02	4 40 13	2 30 13
Indian	2 39 02	3 29 49	3 56 26	4 40 58	2 30 58
Jolly Roger	2 38 42	3 26 29	3 53 33	4 41 00	2 31 00
Sylvia	2 38 50	3 24 50	3 52 55	4 58-48	2 48 48

Points.—Seawanhaka C. Y. C.—Whistlewing .833, Indian .500, Jolly Roger .333; total 1.666. Beverly Y. C.—Quakeress 1.000, Terrapin .667, Sylvia .167; total 1.834. Won by the Beverly Y. C.

Second Race, Tuesday, Aug. 5.

The wind was light from the north northeast. Course triangular, from the compass buoys to the buoy off Dyer's Island, thence to a mark boat half a mile east of North Point Light, thence to the compass buoys, once round, a little over 8 miles. It was windwork to the first mark, a run with spinnakers to the second and a reach home. In taking it in at the second mark, Sylvia's spinnaker caught in one of the snaphooks of the jib, and in the confusion resulting she fouled the mark boat. No protest was made, and as it made no difference in the result of the race, the judges took no notice of it. The Seawanhaka yachts showed their superiority in light airs. The summary, start 2:30 P. M:

	1st Mark.	2d Mark.	Finish.	Elapsed.
Jolly Roger	3 11 36	3 42 09	4 13 43	1 43 43
Quakeress	3 12 11	3 43 03	4 14 31	1 44 31
Indian	3 14 31	3 44 26	4 15 58	1 45 58
Terrapin	3 13 28	3 44 52	4 16 07	1 46 07
Whistlewing	3 16 29	3 45 28	4 16 28	1 46 28
Sylvia	3 15 02	3 45 03	4 24 34	1 54 34

Points.—Seawanhaka C. Y. C.—Jolly Roger 1.000, Indian .667, Whistlewing .333; total 2.000. Beverly Y. C.—Quakeress .833, Terrapin .500, Sylvia .167; total 1.500. Won by the Seawanhaka C. Y. C.

Third Race, Wednesday, Aug. 6.

There was rain in the morning and a fierce southeast wind, but before the time for the race the weather cleared and a strong southwesterly wind gave assurance of a good race. The course was from the buoy off Dyer's Island to the compass buoys and return, twice around. Most of the yachts had tied in reefs, but nearly all shook them out before the start. As in the other races, all crossed the starting line within a very few seconds of each other. Sylvia was again unfortunate and parted her jib sheets four times in the race. Quakeress obtained a long lead in the windward work and fairly outclassed all the others. Her performance throughout the series proved her easily the best of the competing yachts. The summary, start 3:10 P. M:

	1st Mark.	2d Mark.	3d Mark.	Finish.	Elapsed.
Quakeress	3 48 36	4 12 03	4 52 46	5 17 34	2 07 34
Jolly Roger	3 52 20	4 16 42	4 55 44	5 20 51	2 10 51
Indian	3 53 30	4 17 22	4 56 15	5 21 02	2 11 02
Terrapin	3 52 27	4 17 08	4 55 51	5 21 10	2 11 10
Sylvia	3 50 50	4 15 00	4 57 38	5 22 51	2 12 51
Whistlewing	3 52 00	4 15 41	4 59 03	5 24 06	2 14 06

Points.—Seawanhaka C. Y. C.—Jolly Roger .833, Indian .667, Whistlewing .167; total 1.667. Beverly Y. C.—Quakeress 1.000, Terrapin .500, Sylvia, .333; total 1.833. Won by the Beverly Y. C.

G. H. Richards.

Moriches Y. C.

MORICHES, LONG ISLAND.

Saturday, Aug. 16.

Melody continued her successful season and won handily in the one-class cat regatta of the Moriches Y. C., Aug. 16. Wind was northeast and northwest, shifting continually during the race. Melody took the lead soon after the start and finished one minute and fifty-three seconds ahead of Dodo. The summary:

	Elapsed.	Corrected.
Renelche, Dr. Carr	2 07 50	2 07 50
Esther, C. J. Keily	2 00 50	1 52 43
Dodo, John McAleenem	2 00 32	1 52 15
Melody, Harry Growtage	1 59 10	1 50 22
Julia, T. B. Sayre	Withdrew.	
Lady Margaret, C. M. Marvin, Jr.	Withdrew.	
Starboard Light, F. N. Evanhoe	2 05 30	1 54 53

Huntington Y. C. Annual Regatta.

HUNTINGTON, LONG ISLAND SOUND.

Saturday, Aug. 16.

TWENTY boats started in the annual race of the Huntington Y. C., held on Saturday, Aug. 16. The boats sailed over two courses. The one for the 36 and 30 foot sloops was from West Beach in Huntington Bay to a stakeboat off Eaton's Neck to a stakeboat off Lloyd's Neck, to the starting line, to the red and black striped buoy off Eaton's Neck, to the bell buoy off Lloyd's Point, to the starting line, a double triangle, distance of sixteen miles. The course for all other classes was from the starting line to the stakeboat off Eaton's Point, to the stakeboat off Lloyd's Point, to the starting line, a distance of five miles. All the boats but the dories sailed twice over the course.

In the 36ft. class three boats started, but Cymbra and Windora broke down and Empress finished alone.

In the 30ft. class Mimosa won. She had only one competitor, Marguerite, which boat she outsailed on every leg of the course, and won by over 2m.

The race in the raceabout class lay between three boats, Whistlewing, Jolly Roger and Hobo. After a well-contested race, Whistlewing won by over a minute.

Trouble and Ojibway had a close race in their class, and the former won by 23s.

In the 25ft. catboat class Vagabond had no competitor and she sailed over the course alone.

There were three starters in the 18ft. sloop class. Viper II. did not finish, and Chipmunk beat Vim by over 2m.

Six of the Northport dories started, and the boat sailed by Mr. W. Donohue won.

The wind throughout the race was strong from the N.W., and the smaller craft had rather more breeze than they wanted.

The Regatta Committee was made up of H. H. Gordon, chairman; O. W. Ingersoll and F. K. Lord. The summary follows:

Sloops—36ft. Class—Start, 1:35.

	Finish.	Elapsed.
Empress, G. M. Hecksher	4 27 13	2 52 13
Cymbra, F. C. Henderson	Withdrew.	
Windover, John Green	Withdrew.	

Sloops—30ft. Class—Start, 1:40.

Marguerite, J. F. Dingee	4 25 08	2 45 08
Mimosa, T. L. Park	4 23 36	2 46 36

Raceabouts—Start, 1:45.

Jolly Roger, T. B. Bleecker	3 31 25	1 46 25
Hobo, T. L. Park	3 32 46	1 47 46
Whistlewing, H. M. Crane	3 30 21	1 45 21

Sloops—25ft. Class—Start, 1:50.

Ojibway, D. P. Morse	3 39 47	1 49 47
Trouble, W. H. Childs	3 40 10	1 50 10

Catboats—25ft. Class—Start, 1:50.

Vagabond, C. H. Fancher	3 49 00	1 59 00

Sloops—18ft. Class—Start, 2:00.

Chipmunk, J. S. Young, Jr.	4 10 06	2 10 06
Viper II., W. D. Henmen	Withdrew.	
Vim	4 31 10	2 31 10

Northport Dories—Start, 2:05.

No. 3, F. L. Acherly	3 42 45	1 37 45
No. 4, H. D. Acherly	3 30 13	1 25 13
No. 5, W. Donohue	3 28 25	1 23 25
No. 6, Morse Brothers	3 36 17	1 31 17
No. 8, A. Quackinbush	3 34 40	1 29 40
No. 9, C. A. Van Iderstine	3 34 04	1 29 04

The winners were Empress, Marguerite, Ojibway, Whistlewing, Chipmunk, No. 5 dory and Vagabond (sailover).

Horseshoe Harbor Y. C. Annual Regatta.

LARCHMONT, LONG ISLAND SOUND.

Saturday, Aug. 16.

THE annual regatta of the Horseshoe Harbor Y. C. was held on Saturday, Aug. 16, and forty-five boats started. The day was an ideal one for small-boat racing, as the weather was clear, the sea smooth and the breeze fresh from the N. by E. The course was a five-mile triangle, the turning points of which were the home mark off the Horseshoe Harbor club house, the easterly buoy on Execution Reef, and the striped channel buoy north of Whortleberry Island. The 36 and 30 footers sailed three times around the triangle, fifteen miles in all. The 25, 21 and 18ft. classes and the New Rochelle and Manhasset Bay raceabouts sailed twice around, ten miles in all, and the smaller boats went once around. The first leg was a run, the second a reach and the last a beat to windward.

In the 36ft. class Possum was the only starter, and her owner went over the course and took a sailover.

Two boats started in the 30ft. class, Zaza and Leavita, the former broke the jaws of her gaff just after the start. Her owner kept the boat going and covered the fifteen-mile course and won by the narrow margin of 6s.

In the 30ft. catboat class Nymph and Oconee started. The former proved to be superior on windward work and won by nearly 3m.

Only two raceabouts started, Mavis and Scamp. Mavis won by over 2m.

In the Larchmont Y. C. 21ft. class Celia fouled a stakeboat and was disqualified. Dorothy won in this class by a small margin.

Four of the New Rochelle one-design boats started. Deuce was disqualified for an accidental foul and Knave won.

In the Manhasset Bay one-design class there were also four starters. Bab won by a small margin from Lambkin.

Messrs. Thomas J. McCahill and G. C. Allen were the Regatta Committee. The summary follows:

Sloops—Class M—36ft. Racing Length—Start, 1:05.

	Finish.	Elapsed.
Possum, E. S. Ballou	3 43 39	2 38 39

Sloops—Class N—30ft. Racing Length—Start, 1:00.

Zaza, H. P. Granbery	3 17 26	2 07 26
Leanita, H. Leroy	3 17 32	2 07 32

Catboats—Class S—30ft. Racing Length—Start, 1:10.

Nymph, W. A. Marble	4 07 22	2 57 22
Oconee, C. G. Gaubert	4 10 16	3 00 16

Raceabouts—Class P—25ft. Racing Length—Start, 1:15.

Mavis, H. L. Pirie	3 03 24	1 48 24
Scamp, J. T. Pirie	3 05 37	1 50 37

Sloops—Class P—25ft. Racing Length—Start, 1:20.

Pristis, Iselin & Law	3 13 24	1 53 24
Chicken Coop, O. Adams	3 17 21	1 57 21

Catboats—Class T—25ft. Racing Length—Start, 1:20.

Adeline, C. W. Trippe	3 43 57	2 23 57
Ripple, Bloom-Downey	3 43 39	2 23 39
Arrow, A. C. Miller	3 43 31	2 23 31

Sloops—Class J—21ft. Racing Length—Start, 1:25.

Montauk, J. S. Appleby	3 11 17	1 46 17
Gazabo, N. P. Vulte	3 14 37	1 49 37
Eos, E. B. Mead	Withdrew.	
Neola, J. Johnson, Jr	3 12 10	1 47 10

Catherine, R. E. Robinson	2 49 21	1 09 21
Joan, W. Hammett	2 51 22	1 11 22
Jessie, F. Blauvelt	2 54 32	1 04 32

Catboats—Special Class—15ft. and Under—Start, 1:40.

Bouncer, A. S. Tappan	2 50 27	1 10 27
Sneaker, F. W. Vulte	3 19 48	1 39 48
Kid, R. Kitching	3 17 05	1 37 05
Champion, T. Dee	3 35 22	1 55 22
Scout, A. Zerega	Withdrew.	
Scud, D. Abbott	2 48 58	1 08 58

Indian Harbor Sail Boats—15ft. and Under—Start, 1:40.

Cero, R. D. Mallory	2 57 23	2 17 23

Dories—Special Class—Start, 1:40.

Prize, R. N. Kitching, Jr.	3 37 04	1 57 04
Marguerite, W. F. Johnson	3 31 57	1 51 57

The winners were Possum, Zaza, Nymph, Mavis, Pristis, Arrow, Montauk, Dorothy, Flim Flam, Erma, Knave, Bab, India, Scud, Marguerite. Possum, Erma and Cero won sailover prizes.

Corinthian Y. C.

MARBLEHEAD, MASS.

Friday, Aug. 15.

A POSTPONED race of the Corinthian Y. C. was sailed off Marblehead on Friday, Aug. 15, in a strong westerly breeze. Calypso and Seboomook had a hot scrap, in which Seboomook was victorious. Little Haste took an easy win in the 21-footers, and in the 18ft. knockabouts Rattler, Scrapper and Savage sailed a great race, Rattler winning. Tunipoo and Yarico took sailovers, while Ruth took a clean win from Scapegoat. The summary:

25ft. Cabin Class.

	Elapsed.
Seboomook, B. A. Smith	1 45 30
Calypso, A. W. Chesterton	1 46 26

21ft. Cabin Class.

Little Haste, T. K. Lothrop, Jr.	1 44 20
Micmac, R. A. Hutchinson	1 50 13
Pilot, R. Boardman	1 51 10
Porcupine, C. H. W. Foster	1 51 26
Tabasco III., H. H. Wiggin	1 52 08
Thelma, L. Davis	1 53 43

Raceabout Class.

Tunipoo, J. T. Humphrys	1 54 58

Class A—Handicap.

Yerico, W. H. Rothwell	Withdrew.

Class B.

Ruth, H. S. Wheelock	1 31 56
Scapegoat, C. Foster	1 36 11

18ft. Knockabouts.

Rattler, A. D. Irving	1 21 07
Scrapper, A. C. Loring	1 22 05
Savage, John Lawrence	1 22 31

Saturday, Aug. 16.

Another postponed race was sailed Saturday morning, Aug. 16, in a strong breeze from the north. Chewink II. was the first 25-footer to cross the line, but Calypso went ahead at the first mark and led all through. She lost on protest of Seboomook for forcing at the first mark. In the 21-footers Little Haste was the first boat to cross the line, and she had things all her own way all over the course. Tunipoo sailed a walkover. Ruth won in the handicap class and Savage in the 18ft. knockabouts, Savage being disabled. The summary:

25ft. Cabin Class.

	Elapsed.
Calypso, A. W. Chesterton	1 19 21
*Seeboomook, B. A. Smith	1 22 50
Sally VI., L. F. Percival	1 22 54
†Chewink II., F. G. Macomber, Jr.	1 23 06

* Awarded the race on a protest against the Calypso.
† Disqualified.

21ft. Cabin Class.

Little Haste, T. K. Lothrop, Jr.	1 27 57
Tabasco III., H. H. Wiggin	1 32 21
Pilot, R. Boardman	1 34 00
Porcupine, C. H. W. Foster	1 35 06
Micmac, R. A. Hutchinson	1 38 36

Raceabout Class.

Tunipoo, J. T. Humphreys	1 39 37

Class B—Handicap.

Ruth, H. S. Wheelock	1 54 29
Scapegoat, C. Foster	1 57 50

18ft. Restricted Class.

Savage, John Lawrence	1 47 22
Rattler, A. D. Irving	Disabled.

In the afternoon the fourth regular championship race was sailed. The wind at this time had shifted to southwest and was still strong. Chewink II. was the first 25-footer to cross the starting line, and she was never headed. Little Haste again had things all her own way in the 21-footers. Darthea beat Tunipoo in the raceabout class. In the first handicap class Chasca won easily. In the second handicap class Ruth scored another win, and in the 18ft. knockabout class Rattler won a good race. The summary:

25ft. Cabin Class.

	Elapsed.
Chewink II., F. G. Macomber, Jr.	1 41 06
Sally VI., L. F. Percival	1 43 23
Seeboomook, B. A. Smith	1 47 27
Calypso, A. W. Chesterton	1 47 48

21ft. Cabin Class.

Little Haste, T. K. Lothrop, Jr.	1 43 14
Tabasco III., H. H. Wiggin	1 49 50
Porcupine, C. H. W. Foster	1 50 43
Pilot, R. Boardman	1 50 55
Thelma, L. Davis	1 51 37
Opitsah IV., S. H. Foster	1 55 19

American Y. C.

MILTON POINT, LONG ISLAND SOUND.

Saturday, Aug. 9.

THE 21 and 18ft. one-design classes of the American Y. C. sailed a regular race over one of the club courses on Saturday, Aug. 9. The wind was very light from the S.S.W. and the times were taken at the end of the first round, as the race was called off before the second round was completed. The summary:

21ft. Class—Start, 3:05.

	Finish.	Elapsed.
Howdy, S. Wainwright	5 46 26	2 41 26
Jolly Tar, S. Howland	5 54 18	2 49 18
Cricket, H. Willetts	5 55 06	2 50 06
Kid, O. Harriman, Jr.	5 59 41	2 54 41
Rascal, S. C. Hopkins	6 07 02	3 02 02
Ping Pong, W. H. Browning	6 11 49	3 06 49

18ft. Class—Start, 3:10.

Mongoose III., S. Ford	6 14 53	3 04 13
Hustler, J. T. Downing	6 17 55	3 07 55
Rattler, J. E. Bowles	6 21 20	3 11 20
Zuleika III., H. S. Sherman	Withdrew.	

The winners were Howdy and Mongoose III.

Saturday, Aug. 16.

Ten of the American Y. C. 21 and 18 footers sailed a regular Saturday race on Aug. 16. There was a fresh northerly wind blowing all through the race, and the boats sailed over a ten-mile triangular course. In the 21ft. class Rascal won by 12s. The summary:

21ft. Class—Start, 2:50.

	Finish.	Elapsed.
Rascal, S. C. Hopkins	2 54 14	2 04 14
Cricket, H. Willetts	2 54 26	2 04 26
Jolly Tar, S. Howland	2 54 46	2 04 46
Howdy, S. Wainwright	2 55 40	2 05 40
Kid, D. Harriman, Jr.	2 55 56	2 05 53
Ping Pong, W. H. Browning	3 07 21	2 17 21

18ft. Class—Start, 2:55.

Mongoose III., S. Ford	5 19 03	2 24 03
Zuleika III., H. S. Sherman	5 25 11	2 30 11
Rattler, J. E. Bowles	5 27 04	2 32 04
Hustler, J. T. Downing	Not timed.	

The winners were Rascal and Mongoose III.

Beverly Y. C.

WING'S NECK, BUZZARD'S BAY, MASS.

Saturday, Aug. 16.

A CORINTHIAN race of the Beverly Y. C. was sailed off the club house at Wing's Neck, Saturday, Aug. 16, in a light northeast breeze. The one-design 30-footers went over the starting line in a bunch, and they kept well bunched all over the course. Praxilla kept a little ahead on the run, and she bettered her lead slightly on the windward work. In the 21-footers Terrapin and Arethusa sailed almost side by side all over the course, Terrapin winning. Krieker had an easy win in the fourth class, and Spider won a good race in the 15-footers. The summary:

30-footers.

	Elapsed.
Praxilla, J. Parkinson, Jr.	3 09 15
Pontiac, J. A. Beebe	3 11 05
Quakeress II., W. F. Harrison	3 11 48

Nautilus	Withdrew.	

Shelter Island Y. C.

SHELTER ISLAND HEIGHTS.

Saturday, Aug. 16.

THE annual open regatta of the Shelter Island Y. C. was sailed on Saturday, Aug. 16, over courses in Gardiner's Bay. Twenty-four craft entered the contest. The winners were Scapha, Leda, Flosshilde, Indian, Psi, Eelskin and Bother Effort and Syce scored sailovers.

Flosshilde won the cup presented by Mortimer Fuller, of Scranton, Pa., for the sloop making the best corrected time, all sailing together in one class. The yawl Scapha won the Weber cup, offered for yawls under like conditions.

The races for class R boats were sailed in the morning to avoid confusion. Psi, owned by Andrew Bancker, was fifty-two seconds ahead of J. N. Lunning's Harp. The other boats finished in the following order: San Toy, Snook, Arrow. Arva did not finish. In sub-class R, J. L. Hutcheson's Eelskin carried off the honors.

When the first of the larger boats were sent away at 2:10 in the afternoon, there was hardly a breath of air stirring. These conditions lasted until the craft reached Crow Shoal Buoy, marking the end of the first leg of the course. At this stage of the contest a breeze from the north sprang up. The boats astern were the first to get the new wind, which aided them materially in picking up the leaders.

Effort was the first to gybe around the buoy. She immediately squared away for the mark off Cedar Island Point, at the end of the second leg. Syce was the second craft to round the first mark, followed by Indian, Pompilia and Scapha well bunched. At the second mark Effort led Syce by a good margin, while Scapha, Indian and Pompilia were over a minute astern. Effort was the first of the fleet to finish.

Flosshilde, winner of the sloop class N competition, sailed a fine race. Beside capturing the Fuller cup for the best corrected time, she defeated her nearest class competitor, Helen, by over three minutes. Alerion was third boat of this class to finish. She crossed the line about 200ft. astern of Helen. Kalmia, George Trowbridge Hollister's new Gardner & Cox boat, was about the same distance away.

Frank C. Swan's sloop Heron and William Fallert's yawl Scapha sailed in one class on special time allowance. The yawl won.

The family of the noted yachtsman, J. Rogers Maxwell, was well represented in the contest, no less than three craft sailed by boys of the family entering. In sloop class P, Indian, with J. Rogers Maxwell, Jr., at the tiller, beat his brother, Howard L., in Pompilia. In class M Leda, another of the Maxwell fleet, defeated E. D. King's Spasm by two minutes and seven seconds.

In the class for catboats, Bother, belonging to W. M. Simmons, carried off first honors. The summaries follow:

	Finish.	Elapsed.	Corrected.
Sloops—Class K—Start, 2:10.			
Syce, C. F. Judson	5 44 08	3 34 08	3 34 08

Kennebec Y. C.

BATH, ME.

COM. EDWARD W. HYDE presented a $100 cup to the Kennebec Y. C. to be sailed for by the club boats of 20 to 25ft. waterline length. The cup is to be sailed for in a series of three races each season, and the boat winning the cup three years in succession becomes the owner.

First Race, Thursday, July 31.

The first series race for the Commodore's cup was sailed on Thursday, July 31. The day was bright and clear, and the wind was strong from the south. The boats sailed over a seven-mile triangular course. It was a run to the upper stake at Winslow's Ledge, the boats turning in the order they started, Aspenet, Dewey, Swift, Dewey being reefed, as it was too strong for her. After turning to windward Swift crossed Dewey's bow, going into second position, which she held to the lower stake, Aspenet turning first, folowed by Swift and Dewey, for the run to the finish, all setting spinnakers. Shortly after setting them Swift caried away her spinnaker boom near the inner end, which lost her the race. As Dewey passed her she got it reset, but Swift took second on corrected time. The summary:

	Start.	Finish.	Elapsed	Corrected.
Aspenet, ex-Com. F. Cook	2 36 31	3 50 08	1 13 31	1 13 31
Dewey, Bonney & Farrar	2 36 58	3 51 44	1 14 46	1 13 57
Swift, O. J. Ledyard	2 37 08	3 52 31	1 15 23	1 13 41

Second Race, Saturday, Aug. 2.

The second series race for the Commodore's cup was sailed on Saturday, Aug. 2. The wind was light from the east, and the weather was cloudy. The boats covered a seven-mile triangular course. It was a reaching race all over the course, with the light breeze just Dewey's day. Dewey and Aspenet sailed a close race, leaving the smaller boat, Swift, far behind, Dewey winning by one second elapsed and fifty seconds corrected time. Dewey is a jib-and-mainsail, Aspenet a cat with a jib, and Swift a cat without jib. On the reach on the last leg Aspenet carried her spinnaker as a balloon jib, and Dewey carried her balloon jib, thus leaving Swift still further behind. The summary:

	Start.	Finish.	Elapsed.	Corrected.
Dewey, Bonney & Farrar	9 41 16	11 07 13	1 25 57	1 25 08
Aspenet, ex-Com. F. Cook	9 40 38	11 06 36	1 25 58	1 25 58
Swift, O. J. Ledyard	9 40 54	11 34 15	1 53 21	1 52 39

Third Race, Saturday, Aug. 9.

The third race for the Commodore's cup was sailed on Saturday, Aug. 9. The day was clear and the breeze fresh from the south. The yachts sailed over the same course as in the two previous races. Dewey had just her breeze, full sail, while both Aspenet and Swift could have stood it decidedly stronger. Aspenet met with an accident at the upper turn, which delayed her somewhat. Dewey wins series for a leg for the cup with a total percentage of 225, average 75 per cent.; Aspenet, total percentage, 185, average 61 2-3 per cent., and Swift, total, 145, with average 48 1-3 per cent. The summary:

	Start.	Finish.	Elapsed.	Corrected.
Aspenet, ex-Com. F. Cook	2 35 25	4 20 58	1 45 33	1 45 33
Dewey, Bonney & Farrar	2 35 12	4 09 27	1 34 15	1 33 26
Swift, O. J. Ledyard	2 35 22	4 15 51	1 40 29	1 38 47

The races were well managed by Messrs. S. Cuyler Greene, Owen J. Ledyard and Wm. F. Stevens, who made up the Regatta Committee.

Marine and Field Club.

BATH BEACH, L. I.

Saturday, Aug. 16.

A SPECIAL sweepstakes race was held on Saturday, Aug. 16, for the one-design class of the Marine and Field Club, in which Jig-a-Jig, belonging to W. A. Hutcheson, evolved victorious, beating Stinger, her nearest rival, by twelve seconds.

The event was arranged in place of the sixth contest for the Snedeker trophy, in which series Kelpie, owned by W. K. Brown, had a great enough lead to win first honors without sailing the last scheduled contest. The final standing in the struggle of five races for the trophy follows: Kelpie, 15; Stinger, 10; Quinque, 9; Vixen, 6; Flying Fox, 5; Jig-a-Jig. 4.

The tie between Stinger and Kelpie for the cup presented by President Theodore L. Cuyler, each having won a race, was recently decided. After leading for the first part of the struggle, the throat halyards on Kelpie broke, forcing her to withdraw, thus giving the race and trophy to Stinger.

Next Saturday, in the seventh regatta of the Yacht Racing Association of Gravesend Bay, under the auspices of the Marine and Field Club, these one-design boats will sail the first race for a cup presented by F. L. Dauchy, to be won by the craft capturing the best two out of three races. The summaries of the sweepstakes race follows:

	Finish.	Elapsed.
Marine and Field Class—Start, 3:05.		
Jig-a-Jig, W. A. Hutcheson	5 07 00	2 02 00
Stinger, A. P. Clapp	5 07 12	2 02 12
Quinque, L. H. Smith	5 07 22	2 02 22
Kelpie, W. K. Brown	5 07 33	2 02 33
Flying Fox, Cone & Buckman	5 07 53	2 02 53
Vixen, Mahoney & Chandler	5 09 06	2 04 06

Sachem's Head Y. C.

GUILFORD, LONG ISLAND SOUND.

Tuesday, Aug. 12.

THE fourth club race of the Sachem's Head Y. C. was sailed on Tuesday, Aug. 12, in a heavy south wind and a lumpy sea. The Seawanhaka knockabouts sailed over a windward and leeward course of eight miles, while the Sachem's Head one-design class sailed over a triangular course of five miles. Senta beat Gloria by two minutes, and Possum beat Chipmunk two seconds. The summary follows:

	Finish.	Elapsed.
Seawanhaka Knockabouts—Start, 11:02.		
Senta, R. C. Mitchell	12 24 24	1 22 24
Gloria, E. C. & R. B. Seward	12 26 24	1 24 24
Frances, R. C. Lincoln	12 30 21	1 28 21
Ariel, Dr. Forbes Hawkes	12 31 13	1 29 13
Kittywink, J. J. Phelps	12 31 58	1 29 58
Midge, W. E. Peck	12 32 04	1 30 04
Sachem's Head One-Design Class—Start, 10:46.		
Possum, S. W. Sharpe	11 47 58	1 01 58
Chipmunk, J. E. Wayland	11 48 00	1 02 00
Ghoorka, J. P. Elton	11 50 05	1 04 05
Mosquito, A. Goodfellow	11 53 33	1 07 33

The present standing of the yachts in the series in which they are competing is as follows:

Seawanhaka Knockabouts—Senta, 24 points; Gloria, 21; Frances, 19; Midge, 17; Kittywink, 16; Ariel, 10; Thelga, 4.

Sachem's Head One-Design Class—Chipmunk, 18; Possum, 16; Ghoorka, 13; Mosquito, 3; Minnie C., 3.

Seawanhaka-Corinthian Y. C.

OYSTER BAY, LONG ISLAND SOUND.

Saturday, Aug. 16.

Two races were held by the Seawanhaka Corinthian Y. C. on Saturday, Aug. 16. The one in the morning was for club knockabouts, which sailed a series race for the Leland Corinthian Challenge cup. Gowan won by 22s.

In the afternoon six of the club knockabouts sailed in the sixth series race for the Centre Island cup. The boats covered knockabout course No. 3. Wyntje was dismasted during the race. Lucille, Bobs and Vagrant were disqualified for fouling the outer mark. The race went to Heron. The summary:

	Finish.	Elapsed.
Leland Corinthian Challenge Cup—Start, 10:45.		
Gowan, F. G. Stewart	1 33 26	2 48 26
Lucille, H. H. Landon	1 33 48	2 48 48
Center Island Cup—Sixth Race—Start, 3:20.		
Heron, T. R. Coudert, Jr	5 44 26	2 24 26
Nakodo, J. T. Sherman	5 46 12	2 26 12
Wyntje, C. S. Hoyt	Disabled.	
Lucille, H. H. Landon	Disqualified.	
Vagrant, Brown & Low	Disqualified.	
Bobs, W. A. W. Stewart	Disqualified.	

YACHTING NEWS NOTES.

We have received from Thomson & Co., publishers, a copy of the Yachting Record, a valuable little book compiled by Mr. A. F. Aldridge, which contains the summaries of all races sailed on New York Harbor, Long Island Sound and off Newport during the season of 1901.

* * *

We have received the following announcement from Mr. Bryce Metcalf, Secretary of the South Side Y. C., of Bayport, L. I.:

We beg to advise you that with a view of encouraging yachting and yacht racing in this locality, a club has been duly organized and incorporated under the name of the South Side Y. C. The annual dues of the club are $5, and it is intended to devote the major part thereof toward prizes. The club burgee adopted is a cross composed of twelve five-pointed stars in white on a red field, eight stars lengthwise and four crosswise at the third star from the luff.

All persons joining the club will be entitled to receive a number in accordance with the time of their acceptance, and before the first of September will be without initiation fee and will rank as original members.

Trapshooting.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for iblication in these columns, also any news notes they ay care to have published. Mail all such matter to orest and Stream Publishing Company, 346 Broadway, ew York. FOREST AND STREAM *goes to press on* TUES-AY OF EACH WEEK.

Two days of target shooting and one of live-bird shooting are ovided by the programme of the West Branch Rod and Gun ub for its second annual fall tournament at Williamsport, Pa., pt. 16-18. The target programme each day has ten events, 10, 20 and 25 targets; handicaps 14 to 20yds. Shooting com-ences at 9 o'clock. Targets 2 cents. Magautrap will throw rgets. Rose system will govern moneys. Manufacturers' agents ay shoot for targets only. From each target shot at one-larter cent will be deducted for high guns. Refreshments and ded shells can be obtained on the grounds. Guns and shells nt by express to Mr. B. S. Piatt will be delivered on the ounds free. Handicaps changed at the discretion of the man-ement. The live-bird programme has six events, 7 birds, $5 trance; 10 birds, $6; 15 birds, $10; 10 birds, $5, and two miss-d-outs, $2 entrance. Moneys governed by the Rose system, tios 7, 5, 3 and 2. Handicaps, 26 to 32yds. The secretary is r. H. A. Dimick, 344 Pine street.

There are eleven events on the programme of the Dover, N. H., ortsmen's Association's tournament, to be held on Sept. 1. ght are at 15 and three at 20 targets. Shooting commences at o'clock. Fifteen dollars subdivided in sums of $5, $4, $3, $2, to four highest scores; handicap, at 100 targets, to be the limit l shot for in actual contest in a squad of five shooters. This ntest to begin with event No. 1. Five dollars to him who makes highest score shooting the entire programme, namely, 180 targets. booby prize to the shooter making the lowest score. The club l furnish free to contestants a good lunch—coffee, lemonade, . Targets, 1½ cents each. Shells for sale on the grounds. A rdial invitation is extended to every one, here and elsewhere. e officers of the Association are: President, Mr. N. C. Went-rth; Vice-President, C. E. Mitchell; Treasurer, Eugene Smart; cretary, D. W. Hallam.

Elsewhere in our trap columns this week Mr. C. F. Lambert, ncerning the Haverhill Gun Club and the Interstate tournament Aug. 27-28, with an added third day, Aug. 29, gives some final ormation. The medal to be given to any one expressing dis-isfaction is sure to be won by some one or other, for, though erything be ever so perfect, there are always people who have certain misfortune of character which distorts externals and kes the good seem bad to themselves. The idea of such a medal good, and we further make bold to suggest that a standard dal be made for use at all tournaments. In our opinion, an cellent material for such standard medal would be a piece of skin of the Mephitis mephitica, with a cochon rampant roughly wn thereon. There are three or four men who would make lose contest for the ownership of a medal of this kind.

The Magic City Gun Club, of Muncie, Ind., has issued the pro-mme for its annual fall tournament, Sept. 1. It provides twelve nts at 10, 15, 20 and 25 targets, entrance based on 10 cents per get. There is a total of 190 targets for $19. The shoot is ctly for amateurs. All known 90 per cent. men will be barred m the purses. Manufacturers' agents will be permitted to dis-y their wares. Targets 2 cents. Shooting commences at 9 lock. Dinner served. Guns and shells shipped care of the ptain, Mr. Claude Stevens, will be delivered on the grounds e. The programme, beside the information it contains, is asing to gaze upon, it being artistic both from a mechanical l pictorial point of view.

For its second annual amateur tournament, Sept. 2 and 3, Tiffin, O., Gun Club has twelve events on the programme ch day, eight at 15 and four at 20 targets, $1.50 and $2 entrance. ere are five cash prizes to the first five high guns shooting ough the programme, to wit: First, $20; second, $15; third, ; fourth, $10; fifth, $8. To low gun, $5; and $5 to high gun of per cent. contestants and manufacturers' agents. Targets ents. Rose system, ratios 7, 5, 3, and 2, will govern. All 90 cent. shooters and manufacturers' agents are barred from the ses. Shoot rain or shine. Competition begins at 9 o'clock. unds open for practice on Sept. 1. Bluerocks and magautrap. nch served on grounds. The secretary, Mr. L. D. Arndt will nish all necessary information on application.

Mr. Paul Franke, of Kansas City, Mo., as secretary of the ssouri State Game and Fish Protective Association, has issued rd, on which is set forth the main features of the programme the twenty-fifth annual tournament, Sept. 17 to 20. There will $1,100 in guaranteed purses, and $700 added in cash and valu-prizes. Sept. 17 and 18, live birds only, the main events of ch will be the Missouri team shoot, Missouri State champion-shoot, Interstate championship shoot, and Hazard Powder mpany trophy event. Sept. 19 and 20, targets; ten 15 and five arget events each day. Distance handicap and Rose system. birds from two sets of traps. Targets from two sets of traps. grammes wil. be ready for distribution on Sept. 1.

n Wednesday of last week the Cape May Gun Club team de-ed a team of Philadelphia shooters by a score of 73 to 67. The nbers and their scores were: Cape May—Bar 16, Dando 17, ning 22, Harvey 18; total 73. Philadelphia—Allison 14, Park Stevenson 19, Mrs. Park 18; total 67. The programme provided ral 10-bird sweepstakes and a 50-bird club handicap. R. J. ning, of Pittsburg, won the club handicap with a score of R. Wister Harvey, of Philadelphia, was second, and Mrs. Will-Park took the third prize.

sewhere in our trap columns this week Mr. W. B. Darton, of land, Me., has accepted Mr. C. M. Stark's challenge, as pub-d in FOREST AND STREAM of Aug. 2, under the caption "To Maine Trapshooters." The conditions were 100 bluerock tar-per man, 16yds. rise, magautrap, American rules, both men up, a side; the match to take place on the grounds of the Con-, N. P., Gun Club. A further condition was that the acceptor t have been a legal resident of Maine during six months prior he match, and that paid experts were barred.

n events, alternately 15 and 20 targets, $1.30 and $2.40 entrance, on the programme of the Bristol, Conn., Gun Club for its nament, to be held on Sept. 10. To the two high guns, $3 $2 respectively. A Bristol sheepbake, served on the grounds, special event. Traps ready at 9:30. Rose system, 5, 4, 3 and Targets, 2 cents. Any one may enter for targets only. Guns shells shipped to Mr. H. J. Mills, Bristol, will be delivered he grounds free. Loaded shells will be obtainable on the nds. Mr. E. M. Dailey is the secretary.

the Interstate tournament, given for the Brunswick, Me., Club, last week, Messrs. E. C. Griffith and Mr. Neaf Apgar, men of mighty fame in shotgun annals, tied for high average an exceedingly close race. Mr. Griffith was one target ahead r. Apgar on the first day, Aug. 13, with a total of 180 to 179 of 200, while on the second day Mr. Apgar led Mr. Grif-by one target, 191 to 190. The totals for the two days there-were 370 out of 400, .925 per cent.

Mr. Elmer E. Shaner, manager of the Interstate Association, was a visitor in New York on Friday and Saturday of last week. He was en route to Pittsburg from Brunswick, Me., where he had been managing an Interstate tournament. His outing at Slippery Rock, Pa., ended just before his departure for Brunswick, and the benefits derived from it were pleasingly in evidence in the way of elastic step, clear eyes and glorious tan. Mr. Shaner has recently taken up fishing as an art, over which he is enthusiastic.

The team races held at the shoot of the Auburn, Me., Gun Club were of more than usual interest. In the five-man race between teams from New Hampshire, Massachusetts, Rhode Island and Maine, 100 targets per man, Massachusetts won with a score of 447. Maine was next with 436. In the ten-man race between Massachusetts and Maine, the latter team won with a score of 839 to 822. The two latter are thus leg and leg.

The shooters who have personally been within the immediate zone of influence of the Haverhill Gun Club management, are earnest in their praise of the good preliminary work done for the forthcoming Interstate tournament. Everything indicates perfect success. The energy, skill and methods are exemplars for others to copy.

The Sistersville, W. Va., Gun Club announces a fall amateur target tournament, to be held on Oct. 21 and 22. There will be added money and prizes. Mr. Jos. Y. McNaught is president. Mr. Ed. O. Bower is the secretary.

At the tournament of the Olean, N. Y., Gun Club, Aug. 12 and 13, Mr. B. D. Nobles, of Olean, won the Olean challenge trophy, with the excellent score of 94 out of 100 targets.

Mr. E. O. Bower, of Sistersville, W. Va., won the club medal at the shoot of the Sistersville Gun Club, Aug. 16, with a score of 22, from the 18yd. mark.

BERNARD WATERS.

IN NEW JERSEY.

Jackson Gun Club.

Paterson, N. J., Aug. 17.—At the shoot of the Jackson Gun Club, given in honor of those gentlemen calling themselves the Wanderers, they brought with them as their guest Mr. Peter P. Van Vleet, of Memphis, Tenn., who shot in two events with a strange gun, which seemed to handicap him, but otherwise he enjoyed himself during the afternoon conversing with the different members and watching the shooting, which was continuous all the afternoon, upward of 3,000 targets being shot at from about 2 o'clock until quitting time.

The Wanderers did not arrive until about 2:30 o'clock, and everything was in readiness for them except getting their names on the score pad.

Every one of the Paterson shooters constituted himself a committee of entertainment, and everything began to move along nicely. Mr. George Hopper took charge of the squad hustling, and he did his work in great shape, keeping one event ahead all the afternoon. Alderman Chris. Wright did the refereeing; ex-Game Warden Wm. Stalter did the scoring; Wm. Dutcher looked after the cash and paid off in record time. Mr. Arthur Crooks looked after the magautrap, which he always does, and he kept the machine at its best work all the afternoon. Mr. Crooks is our ground keeper, and he has a pride in keeping it in first-class shape. He is an expert in handling live birds.

There will be many good birds produced at our grounds this fall for those who wish to come this way for a day's shooting. We hope that we will have the pleasure of again entertaining those pleasant gentlemen, the Wanderers, who strive to see who can furnish the most pleasure for his fellow shooter. Our entertainment committee was headed by Garry Hopper, and he was backed up by Ed W. Morgan and Capt. John Powers—a committee hard to beat when it comes to look after the comfort of its visitors.

Everybody was well pleased at the reception he got here, and the way things were run, and thanked the Paterson boys for doing all the work. It was the first time since organization that some of them did not have to do something, and at this shoot all they had to do was keep shooting and enjoying themselves.

There were several straight scores and plenty close up during the afternoon. Banks, Reeves and Brigham had straight scores. The Paterson boys' scores suffered on account of other work which they undertook for the pleasure of their visitors. Event 9 each of the shooters shot a strange gun. Some of them dropped down quite some below their average.

The Jackson Park Club expect to make some improvements around the grounds by cutting down some small trees about 100yds. away and otherwise fix up everything around the grounds as soon as possible. Garry Hopper left last Tuesday for Bryant's Pond, in Maine for a three weeks' vacation.

DUTCHER.

Middletown Tournament.

Middletown, N. J., Aug. 12.—There was a good attendance of shooters at the tournament of the Middletown Gun Club, held here to-day. In the sweepstake event there was one money for every three entries.

In the five-man team contest for the Wallkill trophy, the Warwick Gun Club was victor, with a score of 91. The scores follow:

The Westwood Gun Club.

Westwood, N. J., Aug. 17.—Don't forget the clam bake and all-day shoot of the Westwood Gun Club, Aug. 23.

Don't forget that Westwood is on the line of the NewJersey & New York Railroad, only twenty miles from New York, and that you can get a train from the foot of Chamber street, Erie Depot, at 8 A. M., 9:50 A. M. 11 A. M., 12:30 P. M., 1:15 P. M., 1:30 P. M., 3:20 P. M.

Don't forget that it only takes fifty minutes to get there.

Don't forget that the fare is only 90 cents for the round trip—excursion ticket

Don't forget that every day adds new attractions to the occasion.

And above all, don't forget to set aside this date for your own personal enjoyment.

E. L. GREENIN, Sec'y.

Erie Gun Club.

Carlstadt, N. J., Aug. 13.—Members of the Erie Gun Club met at Outwater's place to-day. In the club event, Plate killed straight. Following are the scores:

C Plate, 28.....1002122—5 R Mohrman, 28.....2110100—4
F Greff, 28.....1202020—4 W Meader, 27.....0201210—4

Luhissen	*00—0	200—1	00*—0

North River Gun Club.

Edgewater, N. J., Aug. 16.—There was a rallying of shooters to the grounds of the North River Gun Club, the like of which is not a common occurrence about New York. About 40 shooters participated. Shooting continued till dark. A feature of the event was a visit from the Wanderers, which evolved into a friendly visit, the monetary features having been abandoned. The scores follow:

Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6

Team match, nine men on a side, 25 targets per man:

Team No. 1—Gardiner 22, Skelly 23, Keystone 24, Dudley 25, Welles 20, Reeves 19, Hyland 19, Eickhoff 10, Merrill 17—total 179.

Team No. 2—Morrison 21, Stevens 22, Money 23, Glover 21, F. Truax 19, Engle 22, Schneider 17, Harrington 17, C. Truax 13; total 175.

Baltimore Shooting Association.

BALTIMORE, Md., Aug. 16.—To-day at the third weekly August shoot of the Baltimore Shooting Association G. E. Edwards, Edward Jones, J. H. Roberts and Dr. H. E. Lupus, with their allowances in handicap, made clean scores. The race has now become a very pretty one, as the leaders are all bunched so closely that the winners will be uncertain until the very last.

Out of the 150 targets shot at this month Lupus, Malone, Bibbie and Edwards have each made 146, Chew and Jones each have 144, and Roberts has 139. This showing speaks well for the average system of handicapping which is now being used.

The directors of the Association have decided to give an open shoot on Thursday, Aug. 28, in which a number of prizes will be donated by the club in a 100-bird race, handicapping to be the average system. The scores:

Targets:	10	15	10	15	25	*	50
Chew	8	14	9	11	..	7	48
Edwards	8	10	8	11	..	19	50
Roberts	6	13	6	..	..	19	50
Thomas	6	9	5	8	18	..	..
Jones	6	9	6	..	..	17	50
Dix	7	8	6	10	15	..	..
Henry	5	8	5	..	..	..	..
Schultz	8	9	7	10	20	..	..
Biddle	5	11	..	..	18	9	46
Lupus	9	..	..	..	..	4	50
Malone	..	..	..	..	..	5	49

By the new average handicap system every shooter handicaps himself, and all are placed on an equal footing. The committee takes the scores of each member who has shot in at least three club events during the season. If A has an average of 93 per cent., which is high, he will be scratch, and the basis of the others' handicap.

Now, B has an average of 84, C, 78, and D, 70. The object is to place B, C and D in a position by extra bird allowance so that if they break their average per cent. of their allowance they will all score 93 per cent., so as to tie the scratch man.

In other words B's average is 84; by allowing his 11 extra birds he will maintain his club average (84 out of his 100), and with 84 per cent. of the 11 extra birds he will score 93 per cent. C, with 78 per cent., would get an allowance of 20, so if he will break 78 per cent. of his 120 targets he will score 93 per cent. D, with 70 per cent., will get 33 extra birds, and by breaking 70 per cent. of his 133 he will score 93 per cent.

Every shooter can score a possible 100 and no more in a 100-bird race, or 50 in a 50-bird race, and if there are any ties they will be shot off at 25 targets with a proportionate handicap allowance. It will thus be seen that every shooter, by simply holding his average, can tie the scratch man.

Birch Brook Gun Club.

THE regular shoot of the Birch Brook Gun Club was held Aug. 16, with but nine shooters present. The day seemed a good one for shooting, but the scores were low. Dudley led in merchandise and medal events. There was quite a little amusement created in a race between Emery and Riley. Emery was the challenger. Riley is just getting over a spell of sickness, and during the shooting his left barrel became useless, and he thought that a good reason for his defeat. Emery used a pump gun, and as that kind does not give out, especially a Winchester, he was only handicapped by having to run occasionally for a rod to push out an empty shell, as his shells were reloaded. New ones do not act that way.

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13
Targets:	30	50	10	10	25	10	10	10	10	20	10	10	10
Hebbard	21	33	8	8	..	8	6	8	6	12	10	9	8
Riley	16	..	..	..	10	7	6	8	6	..	..	..	..
Emery	..	..	7	9	15	5	7	8	7	12	5	9	7
Rowe	18	33	7	8	..	8	8	4	5	17	..	..	..
Rand	17	28	6	6	..	..	..	..	..	..	..	..	..
Dudley	23	37	..	..	..	..	..	..	..	..	..	..	..
Straw	22	32	7	6	..	8	..	..	8	10	8	..	..
Barry	..	..	..	8	..	..	..	..	..	9	8	6	6
Derry	..	..	..	..	..	..	3	4	5	..	6	6	6

No. 1 was merchandise event; No. 2, medal; No. 5 was a match.

HENRY ROOD, Sec'y.

Sistersville Gun Club.

SISTERSVILLE, W. Va., Aug. 16.—The following scores were made on the grounds of the Sistersville Gun Club this afternoon, event No. 2, at 25 targets, being for the club medal, handicap by distance. Mr. Ed. O. Bower, at 18yds., carried off the honors by breaking 22. Other scores follow:

Events:	1	2	3	4	Total
Targets:	25	25	25	25	Broke.
Ed O Bower	20	22	22	22	87
J G Wolfe	13	18	..	..	...
A B Hunt	21	19	17	17	74
C I Hull	19	18	21	22	80
Reynolds	8	13	16	..	...

"Disappearing Bird" Try-Gun Target.

At the invitation of Messrs. Manton & Co., the eminent and pioneer gun-makers of India, we journeyed down a few mornings ago to their private rifle and shotgun range, to inspect their new "Disappearing Bird Target," which has recently been erected. We were agreeably surprised on arrival to see this large structure and our surprise gave place to admiration when we were shown the ingenious method of working it. There are many devices of this sort, such as running rabbits, composite birds thrown from traps, etc., which appear useless, except for the purpose of seeing whether the object is hit or not, for they do not afford the means in a case of a miss of telling exactly where the charge has gone; and this, from the view of a gun-fitter, is the chief consideration. These defects do not exist in this thoroughly practical target, which shows exactly after each shot where the charge was placed.

With this number of The Indian Field we issue as a supplement a photograph of the target under review. We will now endeavor to describe it.

The target is constructed of sheet steel, 18 feet long by 9 feet high, and in several places on its face are punched out representations of snipe. Behind each of these openings a white-washed plate is suspended, the lower half of which (not visible) is painted black. The entire surface of the target is white-washed so, when the plate is at rest, the birds are very faintly indicated, but when the plate is drawn up the birds show up black and in bold relief. Any of these plates, by an ingenious arrangement of wires and pulleys behind the target, can be pulled up by the operator behind the target, singly or two or three at a time.

The shooter now takes his stand at a suitable distance (about 20 yards in front of the target) and on the word being given the operator exposes one of the five birds. The shooter must fire at once as the plate is dropped again almost immediately, and having fired the pattern will be registered on the white-washed surface of the target, covering the bird or wide of it. The advantage of this idea is that the shooter does not know at which of the five birds he will be called upon to shoot. Another great advantage to our minds is that two birds can be exposed at the same time; this calls for quick sighting, as the birds at top and bottom corners are about 15 feet apart. Consequently, a larger area has to be covered, corresponding or we may say indentical with shots which occur constantly when out after the wily long-bill. While we were shooting an exposure of two seconds was given, and we found that we had no time to dawdle.

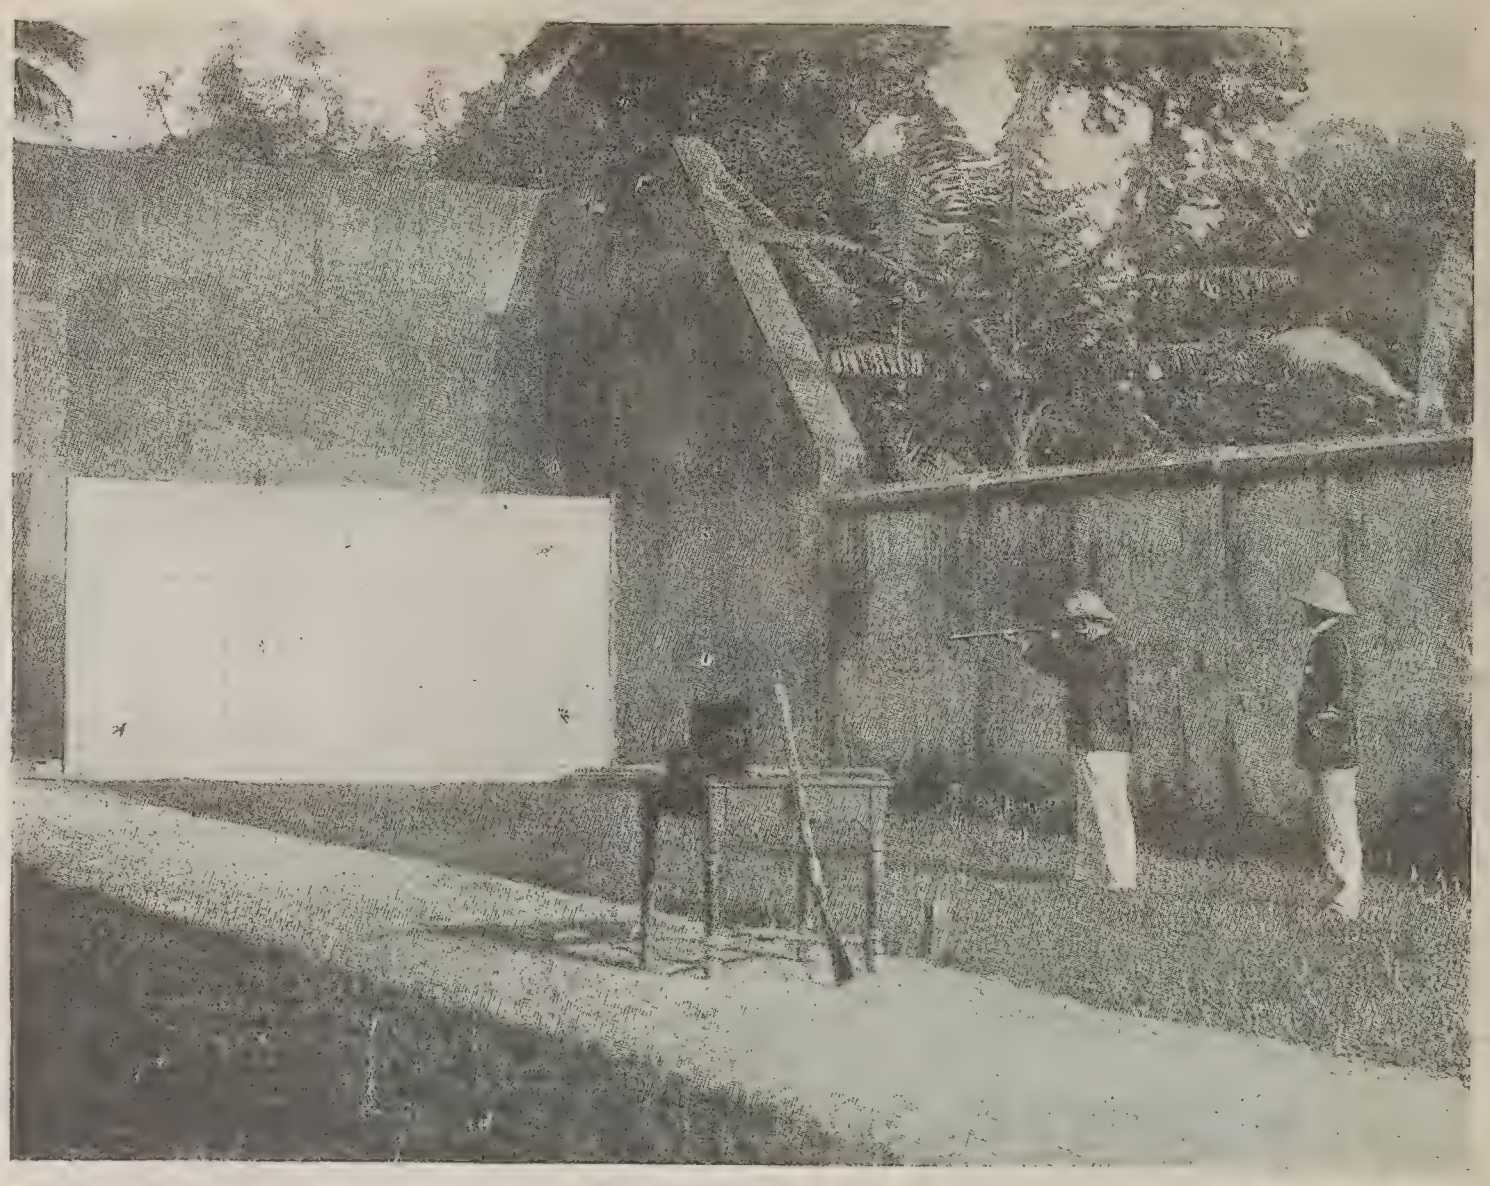
Having to shoot immediately on a bird being exposed greatly enhances the value of the system. With every shot it is possible to see exactly where the shooter has placed the charge, and after firing a score or so of shots it is easy enough to see whether the shooter's general tendency is to shoot high or low, or to the right or left.

Besides the disappearing birds on the screen a vertical moving bird, shown on the middle half of the target, has been added, which works rapidly upwards; this greatly assists the "fitter" to arrive at the amount of "cast off" necessary.

We are informed that Messrs. Manton & Co. have already been very successful in finding out and correcting faulty shooting on the part of those who have placed themselves in their hands. It must be obvious to all who shoot that of late years the number of sportsmen in Calcutta and the Bengal Presidency has largely increased. To these—old hands and recruits—the Try-Gun Target must be of special interest, for though it cannot be claimed for it that it is of much use in teaching the shooting of live game, it is invaluable to the gunmaker in testing for bend, cast-off, and length of stock. While the shooter, by snap-shooting, is "killing" his birds (or failing to do so), on the target, the gunmaker or gunfitter is all the while taking notes as to the former's manner of throwing up the gun, where the shot has gone, and the other points necessary for stock-fitting, with the try-gun. When he has observed the peculiarities of the shooter—and every shooter, young or old, has his own particular peculiarities—he adjusts the try-gun as he thinks it likely to suit him. The stock is lengthened or shortened, as the case may be; the bend is increased or diminished, as is the cast-off; while some gunmakers are very particular in adjusting the heel or the toe of the stock to meet the physical shape of the shooter's figure, with as much precision as a first-class tailor observes in the fitting of a coat.

Besides the shot gun target under notice, Manton & Co.'s range has a revolving screen target for placing shot guns, a six-foot square target for testing duck guns, and a mound at which all rifles are tested. The firm makes a specialty of gun-fitting and rifle-sighting.

We congratulate our old friends on the complete success of this costly experiment; they have undoubtedly placed local sportsmen and their own clientele under obligations. It is evident that progress in the gun trade need not be confined to houses in the Western hemisphere. We strongly recommend sportsmen in doubt as to the fit of their guns to pay a visit to the range, where they will soon ascertain if their weapons fit them correctly or not. We wish our "Pioneer" gunmakers success in this new departure, and feel confident that sportsmen will be well served should they place themselves in their hands.—The Indian Field.



MANTON'S "DISAPPEARING BIRD" TRY-GUN TARGET.

Fitchburg Rifle and Gun Club.

Fitchburg, Mass., Aug. 16.—The Fitchburg Rifle and Gun Club held a very successful invitation prize shoot on their grounds Friday, Aug. 15. The programme consisted of twelve events, all unknown angles, alternating between magautrap and expert traps Sergeant system.

The shoot was largely attended, shooters being present from Boston, Bellows Falls, Winchester, Winchendon, Greenfield, Leominster, Worcester and West Fitchburg. The trade was represented by Neaf Apgar and B. Leroy Woodard, whose presence gave tone to the occasion. The weather conditions were perfect, as well as the excellent system of traps, which made a good combination for high scores.

Event No. 9, 25 targets, was a five-man team race, for which the club offered a $25 silver cup. Five teams entered for this event, and it proved to be a very close and exciting race, the Fitchburg team winning by 2 birds.

Event No. 12, 25 targets, was a two-man team race, for which a pair of $15 silver loving cups were offered. Thirteen teams entered for this event, which proved as close and exciting as the other. It was won by Herbert and Leroy, of the Boston Shooting Association with a straight score.

A $10 folding pocket kodak was offered for the high gun shooting the entire programme, which was won by M. A. Cutler, of the home club, who gained a lead of one bird at the end of the fourth event and maintained it during the entire twelve events, winning out over Leroy by 2 birds.

A $5 gun case was offered for the second high gun, and this was won by Leroy, who donated the same to the Winchester, N. H., Gun Club, to be shot for as an individual prize. Leroy also donated the silver cup won by him in event No. 12 to the Bellows Falls, Vt., Gun Club, under the same conditions.

Wilder tied Apgar for third place. It was anybody's race up to the last, as both of these shooters were bunched with Cutler and Leroy from the start.

Straight scores were made by seventeen different shooters during the day. The following completed the entire programme of 175 birds: Apgar 159, Leroy 160, Wilder 159, Converse 134, Cutler 162, Ray 150, Norwood 150, Gibson 151, Knight 137, Capron 134, Russell 142, Morrison 136, Newton 83.

Between 6,000 and 7,000 targets were thrown during the day. Below are the complete scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12

Mr. C. M. Stark's Challenge Accepted.

Portland, Aug. 15.—*Editor Forest and Stream:* I have this day accepted the challenge of C. M. Stark, Dunbarton, N. H., issued in Forest and Stream Aug. 2, 1902 (page 99), and have notified him of my acceptance. I have to-day forwarded to Frank W. Sanborn, secretary of Concord Gun Club, Concord, N. H., check for $25 to cover amount deposited by Mr. Stark.

All communications should be addressed to me at Portland, Me.

W. B. Darton.

Concord, N. H., Aug. 18.—*Editor Forest and Stream:* Mr. W. B. Darton, of Portland, Me., has accepted Mr. Stark's challenge, published in your paper Aug. 2. Match to take place Aug. 29.

F. W. Sanborn, Sec'y Concord G. C.

Raleigh Gun Club.

Raleigh, N. C., Aug. 14.—We did not hold our weekly shoot last Thursday, so many of our members being away, and the attendance remains small yet. We will have to get up some amusement to get a better attendance. The following scores were made to-day: Gowan shot at 50, broke 37; Johnson shot at 50, broke 35; Pearce shot at 50, broke 32; Gray shot at 50, broke 28; Parker shot at 35, broke 26; Whitaker shot at 25, broke 14; Fellows shot at 15, broke 5.

R. T. Gowan, Sec'y.

WESTERN TRAPS.

National Gun Club.

Chicago, Ill., Aug. 10.—Mr. John M. Lilly, the originator of the National Gun Club, with headquarters at Indianapolis, Ind., writes that after consultation with the leading sportsmen of the country it has been decided to make the price for admission to charter membership, including initiation and dues up to Dec. 31, 1903, $2, with annual dues thereafter of $1. This surely is a very low charge upon any shooter, and in view of the representative character of the organization, it is fair to suppose that the shooters of the United States will respond very generally to the invitation. Come forward.

E. Hough.

Hartford Building, Chicago, Ill.

Garfield Gun Club.

Chicago, Aug. 16.—The appended scores were made on our grounds to-day on the occasion of the second trophy and second cup shoots of the third series. Pollard won Class A trophy on 24, Tom Jones won Class B on 21. Wilson won Class C on 15.

The trophy shoot was immediately followed by the cup shoot at 15 singles and 5 pairs. It was won by Al. Hellman on a score of 19.

The day was a fine one for target shooting, and the attendance was good, twenty-four shooters taking part in the various events of the day.

Owing to our trap house being broken into and the magautrap badly damaged by some contemptible, destructive curs, we were compelled to resurrect our old set of ground traps for the day, and as they did not work very well, our scores were not quite as good as usual.

Dr. J. W. Meek.

Cheapeake Gun Club.

Newport News, Va.—The most remarkable shooting ever seen on the Chesapeake Gun Club's grounds was done Aug. 14 by Mr. Thomas F. Stearnes. Out of 100 targets Mr. Stearnes broke 98, breaking 25 straight in two events. It was certainly the best ever made by amateur or professional on the local grounds. Mr. E. S. Robinson, who shot second, broke 88 targets out of 100, and as this is a good score, it will be seen that Mr. Stearnes went far ahead of the average.

Several years ago, Mr. G. B. James broke 96 targets out of 100, and until yesterday this record has never been broken.

Mr. Stearnes' shooting was really better than the records show it to be, as the 2 birds which did not break were "dusted."

The shoot yesterday was the regular weekly meeting of the club. The scores follow:

Events:	1	2	3	4
Targets:	25	25	25	25
T F Stearnes	25	24	25	24
E S Robinson	21	22	23	22
Dr Jos Charles	19	17	20	..
F Palmer	14	14	12	17

Events:	1	2	3	4
Targets:	25	25	25	25
J De Pass	13	15	17	13
Saunders	17	13	..	..
G B James	21	..	..	..

G. B. J.

Auburn Gun Club.

Auburn, Me., Aug. 14.—I send you herewith programme of a tournament held on grounds of the Auburn Gun Club on Monday and Tuesday, Aug. 11 and 12; I also inclose the detail of scores made at this tournament, and newspaper clipping, giving some data relative to the contest between the New England trapshooters.

The first day of our tournament was extremely unfavorable, rain descending in torrents all day. But by having a covered blind, we were able to pull off part of the programme. The second day was all that could be desired, and we had a very successful shoot. Had both days been pleasant, we have no doubt we should have thrown as many as 20,000 targets.

The New England team race summary of the four shoots, possible 400; team possible 2,000:

Massachusetts.		Maine.	
Le Roy	358	Green	363
Wheeler	362	Darton	345
Herbert	359	Hunnewell	367
Climax	359	Preble	354
Dickey	344—1782	Randall	353—1782

Summary of Tuesday's New England team race, fourth of the series:

Massachusetts.		Rhode Island.	
Le Roy	89	Griffith	93
Climax	91	Inman	86
Wheeler	92	Coffin	72
Herbert	92	Cate	71
Dickey	83—447	Bain	80—402
Maine.		**New Hampshire.**	
Green	83	Gerrish	73
Preble	83	Langley	87
Hunnewell	96	Frizzell	80
Foster	80	Carlisle	80
Randall	84—436	Robinson	81—401

Massachusetts thus beat Maine 11 targets and tied the score on the four shoots.

Summary of ten-mean shoot, Maine vs. Massachusetts:

Massachusetts. Events:	1	2	3	4	Shot at.	Broke.
Le Roy	21	23	24	24	100	92
Climax	23	20	23	23	100	89
Wheeler	22	20	23	22	100	87
Herbert	23	21	16	20	100	80
Dickey	22	21	22	20	100	85
Coffin	17	17	20	20	100	74
Rule	20	19	20	23	100	82
Chapin	20	23	24	20	100	87
Puck	17	15	18	18	100	68
Bullard	22	18	19	19	100	78
					1000	822
Maine.						
Green	22	21	21	24	100	88
Randall	20	21	23	23	100	87
G Darton	25	24	20	24	100	93
Davison	21	23	18	17	100	79
Preble	22	23	22	19	100	86
Reid	17	20	17	20	100	74
Foster	15	21	25	22	100	83
Stobie	20	22	23	19	100	84
Hunnewell	22	21	22	21	100	86
Ashley	22	17	21	19	100	79
					1000	839

Maine thus won this event by 17 targets. The previous shoot at Boston, the Massachusetts team won by 4 targets, but as this contest was to be decided by best two out of three contests instead of by total targets shot at, the race is thus tied on this event.

Aug. 11, First Day.

Interstate Tournament at Brunswick.

Brunswick, Me., Aug. 16.—For a number of years past the Interstate Association when arranging its circuit has invariably included the State of Maine in its list of States for holding tournaments. This year was no exception. Brunswick was the point selected, the dates being Aug. 13 and 14.

Brunswick is a progressive little place of about 6,000 inhabitants. It is made very attractive by the stately elms which adorn the roadsides and private estates. It is also the home of Bowdoin College, one of the oldest colleges in the country, having just celebrated its centennial. On Federal street may still be seen the house where Mrs. Stowe wrote "Uncle Tom's Cabin," and where Longfellow began his career as poet and professor.

The Brunswick Gun Club, under whose auspices the tournament was given, was organized on April 19, 1901, largely through the efforts of Mr. G. M. Wheeler, who was the first president of the club, and Mr. G. B. Webber, the present president. The club has steadily gained in membership since being formed, until today it has about one hundred members, making it one of the largest gun clubs in the State. Several towns are represented in the club, members belonging in Brunswick, Bath, and Topsham. Every pleasant afternoon a shoot is held by the club at its grounds at Merrymeeting Park, and at these shoots some very good scores are made.

The officers of the club at present are as follows: G. B. Webber, President; D. W. Scribner, Vice-President; L. Cecil Whitmore, Secretary-Treasurer; G. B. Webber, O. B. Nason, J. D. Foster, Samuel Whitmore and G. M. Wheeler, Executive Committee.

Through the courtesy of the street railway, the club has been allowed the use of a part of Merrymeeting Park as its shooting grounds. The club erected a splendid trap house, with buildings for the scorers, cashier, etc., making a cozy home.

Thirty-three shooters were present the first day, quite a number of them being visitors, and fine sport was enjoyed. The scores did not rank high, but one contestant, Mr. E. C. Griffith, making 90 per cent. The shooting could not be classed as hard, and numerous straight scores were recorded. However, a nasty wind blowing across the traps made the targets take some queer flights and wrecked the aspirations of several of the contestants.

Griffith was high man with a score of 180 out of 200 shot at; Apgar was second with 179; Wheeler, third with 178, and Dickey fourth with 177.

The second day of the tournament there were thirty-eight shooters present, and the tournament was brought to a very successful conclusion early in the afternoon. The weather conditions were nearly perfect, a slight wind being the only drawback.

In addition to the regular programme, a merchandise shoot for some thirty prizes kept the boys busy during their spare moments. It was a side issue, and but one trap was used; yet it afforded an immense amount of enjoyment to all. Out of several hundred trials but two straight scores of 15 were recorded.

Some of the local club members claim that there would have been ten or a dozen more shooters present at this tournament were it not for the concluding tournament between Maine and Massachusetts being held at Auburn, Me., on Monday and Tuesday, Aug. 11 and 12, of this week. They stated that it was too much to ask a man to put in four consecutive days at a tournament, to say nothing of his neglecting business for that length of time. As Auburn is only nineteen miles from Brunswick, and both places would naturally draw from about the same shooters, it would seem that Brunswick's claim is well founded.

Apgar was high man on the second day with a score of 191 out of 200 shot at. Griffith was second with 190, and Darton was third with 185.

Griffith and Apgar were a tie for general average, and they divided first and second moneys, and Wheeler finished in third place.

The trade was represented by the following: Messrs. T. H. Keller, Neaf Apgar, S. M. Van Allen, T. W. Morfey, E. B. Thompson, B. Leroy Woodard, B. H. Norton, O. R. Dickey and T. F. Doremus.

Monticello Tournament.

Monticello, Ill.—Something out of the usual order of shooting tournaments was pulled off here during the progress of the Emery tournament, Aug. 11 and 12, a regular scheduled 50-target race, $5 entrance. Though the entries were not large, the scores were good. Rupert lined out 47, Keister 45 and Kinney 43.

For some time past the sporting fraternity has heralded the information abroad that Monticello would give a tournament, as a large attendance was expected, but the all-day shooters were not so plentiful as had been anticipated. During the summer and harvest time—especially when it rains a large part of the season—is not the best time to hold a tournament in this, the center, of the best part of the great agricultural State of Illinois; yet there were twenty-five shooters on the ground during the day.

The day was very favorable, slight wind and clear sky. The grounds are ample and well situated. The traps were not in the best working order. There was a variety that kept the boys guessing; targets went high and low, fast and slow, and many a low score may be attributed to this variation. The score of Mr. Rupert was very creditable, while McKinney was second and Farmer Jones third.

Those present were Lewis Meyers, DeLand, Ill.; L. J. Standish, Bridgeport, Conn.; B. F. Garver, Farmer City, Ill.; S. T. Kinney, Rodgers Park, Ill.; T. L. Perry, Toulon, Ill.; Dr. H. B. Maxfield, Fairmont, Ill.; H. B. Harris, Monticello, Ill.; Geo. Rupert, Decatur, Ill.; Farmer Jones, Farmer City, Ill.; Robert Emery, Solomon, Ill.; W. J. Bryden, Monticello, Ill.; W. N. Gray, Lane, Ill.; Ezra Smith, Cerrogordo, Ill.; Ed. Miller, Lane, Ill.

Then Monticello was represented by Chas. Doss, T. M. Plum, E. A. Thorp, O. Lubbers, Philip Widderheim, Ed. Williams and C. E. Emery.

Mr. Emery was the manager and general hustler, and had a good bookkeeper in the cashier in the office. The scores:

Interstate at Haverhill.

Haverhill, Mass., Aug. 16.—*Editor Forest and Stream:* This being the last opportunity of reaching the shooters through the medium of your entertaining journal ere the Interstate Association tournament at Haverhill becomes a matter of history, would say that the committee have, so far as their facilities would allow, spared no effort looking to a successful tournament. They are most anxious that all who participate shall have a pleasant visit, and also carry away something substantial.

The hotels of Haverhill are fully up to the standard in comparison with cities of corresponding size when the location of such is near a large city, and they will be found to prove very satisfactory.

With two sets of traps, an adequate supply of the standard loads, barrels of targets, money and prizes to struggle for, an abundance of good food at very reasonable prices, conditions of competition that are as nearly equitable as can be devised, and with energetic Manager Shaner to make the wheels go round, don't the prospect look good?

The committee are designing a medal, the composition of which is peculiar, to say the least; same to be presented the first one expressing dissatisfaction as to conditions of this tournament.

A word regarding the committee who have done the hard work preparing for this shoot—Messrs. Miller, Tozier, and George. To any who have not the pleasure of a close acquaintance with these three, they are true sportsmen, good fellows, and all colors of a darker shade than pure white was left out of their composition. Should casual readers of the above imagine it to be an obituary notice, by making Haverhill, Mass., their headquarters Aug. 27, 28 and 29 the mistake will become apparent. C. F. Lambert.

Bristol Gun Club.

Bristol, Conn., Aug. 14.—The Bristol Gun Club went to Hartford Saturday and participated in a match shoot with the Colt Gun Club, of that city. The previous Saturday members of the Colt Club visited Bristol and won the match by 5 birds. Bristol won in Hartford by a score of 104 to 103.

The following are the best individual scores made at 25 birds, unknown angles: Mills 25, Hermann 25, Hubbell 23, Hollister 23, Bassett 23, Bolton 22, Colt 21, McFetridge 21, Fairbanks 20, Simmons 19, Porter 19, Casey 19, Large 19, Stone 18, Burwell 18, Jones 18, Hyde 17, Hart 16, Bullock 16, F. Stone 16, Pelmas 15, Wilcox 15, Cleveland 15, Barbour 13, Jones 12, Daniels 11, Wilson 11, Thompson 10, Edgerton 10, T. McFetridge 10, Adams 10, Watson 8.

The Bristol Club will conduct the State shoot here Sept. 10, and preparations are under way by the members to make it an event that will leave pleasant impressions of Bristol in the minds of visitors. Improvements will be inaugurated at the grounds. Two new traps will be added to the present equipment and everything placed in first-class condition. One of Bristol's famous old-fashioned sheep bakes will be a feature. It is expected that seventy-five men will participate in the shooting that day, including several cracks. Duke.

Fisher—Miller.

Philadelphia, Aug. 13.—To-day on the grounds of the Keystone Shooting League two interesting and close matches were shot between Messrs. H. B. Fisher and F. W. Miller. The conditions of the first match were 100 targets per man, 50 Sergeant system and a like number over the magautrap. Each man duplicated each of his scores on both styles of shooting.

The second match was at 50 targets, Sergeant system. Miller gained 2 targets in the first string, each man breaking 22 in the second string. The scores:

Harry B Fisher......1111101011011111110111111—21

Ossining Gun Club.

Ossining, N. Y.—The scores herewith were made at the regular Saturday afternoon shoot of the Ossining Gun Club, Aug. 16. The turnout was not very large, as the boys are holding off for Wednesday and Thursday of this week.

Event No. 4 was for a Winchester rifle, presented by H. W. Bissing, to be shot for by members who have never won prizes. Some of those who entered were in for the sweep only. The conditions were 25 bluerocks; to be won twice. R. Kromer, Jr., and H. W. Bissing made 23, which at the last moment was topped by M. H. Dykman with the excellent score of 24, which included a run of 22 straight:

Events:	1	2	3	4	5	6

C. G. B.

Tecumseh Tournament.

Despite the fact that "shoots" in this section have been as thick as flies on tanglefoot fly-paper for the past sixty days, the "biggest little shoot on earth," which is the annual fixture, and which was pulled off by the Tecumseh Gun Club on their grounds at Tecumseh, Mich., Aug. 8, was more largely attended than any previous event in Michigan.

Cleveland, Toledo and Detroit, as well as all the minor towns for an hundred miles about were well represented by expert marksmen.

Fifty-five men faced the traps, and including the scores of those who shot only for birds, and the extra events, 12,000 targets were thrown. The large attendance was handled with nicety, and there was practically no delay at the traps.

The brethren Stanley, of Northville, carried off the honors of the day for high averages, G. Stanley averaging 87, while M. Stanley averaged 85 per cent. Some one suggested that "G" stands for Goodshot and "M" for Marksman.

Ad. Collum, of Ann Arbor, won low average for the day with 72 per cent., and was presented with a handsomely engrossed order on a local dentist to have two teeth extracted,

Scotty, of Grass Lake, was third high man, and had to content himself with a silver cake dish, an article which pleased him more than the $90 medal which he won at Kansas City.

Perhaps the most interest centered in the Finletter cup event. Pontius Pilate Wood, of Detroit, won the cup originally at Adrian with a straight score of 25, but here he tied with seven others on 22. It looked as if there might be an exciting shoot-off, but Sayers, of Leslie, quenched the ardor of the other aspirants by breaking 23. The decisive score will be made by Mr. Wood and Mr. Sayers, at Battle Creek.

Appended is a tabulated list of scores and percentages. It is unfortunate that the train schedule compelled Mr. Wood and the balance of the Detroit contingent to leave before the last event; otherwise Wood might have made it interesting for high average.

Nos. 1, 2, 4, 5, 9, 10 12, 13 and 14 were sweeps. Nos. 3, 6, 8 and 11, merchandise events. No. 7 was the trophy.

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	Total	Per

New Haven Gun Club.

New Haven, Conn., Aug. 14.—I inclose you the conditions governing a shoot held here yesterday, as follows:

"The New Haven Gun Club will donate $8 per month, to be shot for the second Wednesday afternoon of the following months: Aug. 13, Sept. 10, Oct. 8, Nov. 12, Dec. 10, and Jan. 14, in a 50-target handicap race. Handicap will be changed each month; $5 cash for first prize; $3 cash for second prize. All ties shot off. Entries close 3 P. M."

I append the scores made at this shoot, and respectfully ask you who should have received first and second moneys? The scores and handicaps were as follows:

	Shot at.	Broke.	Handicap.	Total.
Clark	50	40	7	47
Claridge	50	46	5	51
Whitney	50	47	5	52
Merwin	50	29	12	41
F Bassett	50	45	10	55
Bristol	50	40	10	50
Orty	50	41	6	47
Brown	50	18	14	32
Bates	50	46	8	54
Potter	50	47	6	53
Treat	50	28	12	40
Savage	50	43	5	48
J Bassett	50	39	10	49
Dr Ross	50	16	15	31
Robertson	50	35	10	45

Frank A. Bassett.

[The competition is unfinished. Messrs. Claridge, Whitney, F. Bassett, Bristol, Bates and Potter tied on the possible, 50, and as one condition enjoins "all ties shot off," the competition is not finished till that condition is fulfilled. Handicap allowances do not permit of a score greater than the possible, which is the number of targets in the event.]

Woonsocket Gun Club.

Woonsocket, R. I., Aug. 11.—Appended are the scores made at the tournament of the Woonsocket Gun Club, Aug. 9. Events 4, 5, 6 and 7 were for the State cup:

Events:	1	2	3	4	5	6	7		Total.
Targets:	15	20	15	25	25	25	25		Broke.
Griffith	15	19	15	22	21	22	20	85	134
Cate	12	16	11	19	20	19	20	78	117
Coffin	10	11	10	17	19	20	14	70	101
Mead	7	15	7	17	17	20	..	..	83
Getchell	14	16	13	23	24	24	24	95	138
Campbell	12	17	13	17	19	19	19	74	116
Inman	15	19	13	21	23	19	19	82	129
Le Roy	13	17	14	21	24	23	24	92	136
Mills	12	14	13	17	20	20	17	74	101

At the tournament of the Alabama State Association at Birmingham, last week, there was a protracted struggle for high average between the two renowned shotgun artists, Messrs. R. O. Heikes and W. R. Crosby. Heikes was in the lead on the first day, but on the second day Crosby caught up, and the tie continued to the last event, which was at 25 targets. Near the finish, Crosby lost 2, leaving Heikes in the lead. The percentages were: Heikes .968, Crosby .962.

Olean Tournament.

Olean, N. Y., Aug. 14.—The two days' tournament held in this city under the auspices of the Olean Gun Club, Aug. 12 and 13, was a decided success in every particular. Shooters were present from Fredonia, Dunkirk, Rochester, Randolph, Conewango, East Aurora, Bolivar, Allegany, Indian Creek, and other places. The weather was fine, but a strong wind made the shooting difficult.

Sen Sen won high average for the entire programme, and $20 in gold, breaking 313 out of 370 targets. Nobles won second average, $10 in gold, breaking 311 out of 370. Mason won third average, $5 in gold, breaking 306 out of 370. Wayne won low average, $5 in gold, breaking 255 out of 370.

The trophy donated by H. D. Kirkover, Jr., for the championship of Cattaraugus county was won by B. D. Nobles, of Olean, N. Y.

The great feature of the shoot was the contest for the Olean challenge trophy, held by H. D. Kirkover, Jr., of Fredonia, N. Y., representing the championship of western New York and northwestern Pennsylvania. The contestants were H. D. Kirkover, Jr., J. R. Hull, F. F. Mason and B. D. Nobles. Frank E. Butler acted as master of ceremonies, and George R. Ginn as referee. There was a large crowd present, and every one took a great amount of interest in the match. The conditions were 100 targets per man at 16yds., and Mr. Nobles proved to be an easy winner, being always in the lead from the first crack of the gun.

The crowd present went wild with enthusiasm, and it was with difficulty that Mr. Nobles succeeded in getting into the club house without being carried on the shoulders of his club mates. This decisive victory of Mr. Nobles over such a renowned shooter as Mr. Kirkover puts him in the front ranks, and we hope he will be present at the big handicap shoots, and there is no doubt he will make all the top-notchers hustle. Following are the scores:

Targets:	25	25	25	25	Total.
Kirkover	22	23	22	24	91
Nobles	25	21	24	24	94
Hull	24	23	22	23	92
Mason	22	23	22	22	89

We herewith append you scores made each day, the programme of which called for 185 targets:

Aug. 12, First Day.

Peters Gun Club of New Paris, O.

New Paris, O., Aug. 9.—The Peters Gun Club, of New Paris, was organized here to-day with sixteen members, and the Peters trophy was contested for in a 25-target event. The day was dark and rainy, and many shooters who had intended to come were on that account not here. However, the onlookers were numerous, and a lot of enthusiasm was stirred up during the medal event. L. H. Reid, the Peters Cartridge Company's agent, and Snakes Clark, a local crack shot with a very enviable record, undoubtedly started in with the intention of one or the other of them winning the trophy easily, but the expression on their faces bore evidence of undeniable sadness and disgust, when it was discovered that Reid's little brother Jim had slipped up on them and won the coveted trophy with a score of 25. And the way Jim "swelled up" over his success was wonderful. In fact, the town would hardly hold him, and his wife says that she is very proud of him now.

Jim says that the targets looked as big as barrels to him, and he couldn't miss them.

The trophy event scores, with allowances added, are as follows: L. H. Reid (0) 22, H. Brown (5) 17, Snakes Clark (0) 19, S. J. Dunlap (0) 16, E. O'Neill (3) 14, C. C. Hawley (9) 15, Geo. Arnold (5) 23, G. L. Lyne (3) 24, Harry Smith (7) 23, J. S. Cole (2) 17, C. Kirkpatrick (11) 23, E. Clements (5) 19, Jim Reid (5) 25, E. Sherer (9) 23, E. French (0) 19, J. Tillman (5) 15, J. Addleman (10) 20.

The Richmond (Ind.) Gun Club has challenged New Paris for a five-man team shoot, to take place at the Richmond Shooting Park, Friday, Aug. 15, and the event bids fair to be of a very interesting nature. There are some good shots at both places, and each team will put forth special efforts to win the contest.

G. L. Lyne, Sec'y.

Mt. Kisco Rod and Gun Club.

Mt. Kisco, N. Y., Aug. 14.—The scores herewith appended were made at the regular Thursday afternoon shoot of the Mt. Kisco Rod and Gun Club, Aug. 7 and 14. Handicap sweepstakes were shot to-day for a little preliminary practice for the Ossining shoot, Aug. 20 and 21, which equalized matters to a certain extent. The scores made Aug. 7 follow:

Events:	1	2	3	4	5	6	7	8
Targets:	10	10	15	15	15	15	15	10
G E Sutton	8	9	11	11	12	11	12	10

A. Betti, Manager.

Rifle Range and Gallery.

Cincinnati Rifle Association.

Cincinnati, O.—The following scores were made in regular competition by members of the Cincinnati Rifle Association, at Four-Mile House, Reading Road, Aug. 3. Conditions: 200yds., off-hand, at the German ring target. Hasenzahl was declared champion for the day with the fine score of 230. Weather clear and very warm. Thermometer 100. Wind from 3 to 7 o'clock:

Hasenzahl	230	215	214	213	209	25	24	24—73
Payne	227	220	220	218	218	24	23	21—68
Gindele	223	210	210	208	207	21	19	20—60
Strickmeier	222	210	206	206	205	22	20	13—55
Speth	220	201	199	196	...	21	24	20—65
Bruns	215	212	194	177	...	15	20	21—56
Nestler	213	213	211	208	204	24	24	25—71
Roberts	212	209	206	206	199	24	19	21—64
Odell	212	205	196	186	183	15	8	20—43
Lux	208	199	195	195	194	24	20	17—61
Drube	203	185	183	182	158	13	21	20—54
Trounstine	199	175	174	130	...	18	7	16—41
Hoffman	197	195	195	192	191	16	22	16—54
Hofer	195	191	184	179	177	19	4	21—44
Uckotter	190	188	187	182	181	16	21	20—57
Jonscher	189	185	182	181	174	19	24	22—65
Freitag	185	168	168	160	160	..	..	..
Weinheimer	184	179	172	168	167	21	23	21—65
Topf	164	160	154	151	150	21	6	12—39

Mr. V. K. Dodge, of Lexington, Ky., was present and fired 100 shots, making an average of 202. He being a young shooter, this can be considered a fair average. He used his new Stevens-Pope-Ballard.

In the Interclub team shoot the Cincinnati teams made the following scores, 20 shots per man:

First team—Payne 438, Gindele 433, Strickmeier 418, Hasenzahl 416, Nestler 414, Speth 397; total 2516.

Second team—Odell 398, Roberts 394, Bruns 392, Drube 368, Lux 366, Jonscher 353; total 2271.

Columbia Pistol and Rifle Club.

San Francisco, Aug. 3.—The Columbia Pistol and Rifle Club scores, made to-day on the Columbia target, off-hand shooting, follow:

Rifle, 200yd. range: Ed Hovey, .32-20 Winchester repeater, 73, 76, 80, 87, 90; Capt. Fred Kuhnle, 77, 83, 89; Dr. Twist, .22 rifle, 142.

Three-shot match: F. O. Young, 12, 25.

Military and repeating rifle match, Creedmoor count: Ed Hovey, consecutive shooting, 46, 47, 47, 47, 46; Dr. Hunsaker, 40.

Pistol match, 50yd. range: F. O. Young, 37, 41, 45, 46, 54; G. M. Barley, 40, 45, 45, 45, 51, 55; A. H. Pape, 41, 51, 55, 57, 63; A. J. Brannagan, 42, 43, 51, 52, 52; H. Baker 51, 54, 62; Dr. Hunsaker 52, 53, 65, 67, 68, 70; H. Hinkel, 78; J. R. Trego, 85, 97; H. Kroeckel 86.

Revolver match: L. C. Hinkel 43, 45, 46, 50, 65, 68.

.22 and 25cal. rifle match: A. H. Pape 16, 20, 21, 21, 22; H. Kroeckel 18, 19, 21, 21, 22, 24, 23; Capt. Kuhnle 22, 22; Dr. Twist 22, 24, 23; Mrs. C. F. Waltham, 25, 33, 43; C. F. Merrill, 25, 27, 34; A. H. Cady 28, 31, 32.

Mr. C. F. Merrill, of the Stockton Pistol and Rifle Club, was present, with Mr. Kroeckel, and participated in the sport.

The light and wind were unfavorable for finest scores.

Fred. O. Young, Sec'y.

Answers to Correspondents.

No notice taken of anonymous communications.

D. P. M., Olney, Ill.—A farmer brought to town this morning (Aug. 9) a bird that is a stranger here. Its description is as follows: Weight 5¼lbs., legs 22in., bill 8½in., neck 10in., wings 5ft. from tip to tip. Color.—Head gray, body white, primary and secondary feathers black, legs black, tail feathers black. The farmer that shot it says it was in a tree and was accompanied by nearly a hundred others like it. Can you tell us what it is? Ans. The description in many respects fits the wood ibis, so-called *(Tantalus loculator)*, which is really a stork and not an ibis. In some respects your description does not agree with the wood ibis. It is hard to identify birds from these general descriptions. If a wood ibis, the bird was a young one.

PUBLISHERS' DEPARTMENT.

The new .33 caliber rifle now being sold by the Winchester Company will no doubt prove popular with big-game hunters. It is a powerful arm, using a specially designed cartridge, which is said to furnish "terrific killing power." Its appearance at this date, when big-game hunters are making their preparations for the autumn hunt, is especially timely. A full description of the new arm may be had on application to the Winchester Repeating Arms Company, New Haven, Conn.

There are few things about a boat more important than the covering which protects it from the ravages of the water, and the yacht or boat builder needs the very best paint that is made. Needing this excellence, he will do well to write for information to the Chilton Paint Company, whose advertisement is found in another column.

The name of Park & Tilford has been famous to those who buy fine groceries in New York for more than a generation, and there are now plenty of middle-aged men who can remember, as small boys, how their fathers used to depend on Park & Tilford. The camper needs goods of the best quality, and these he can obtain from this firm.

1278 Broadway, New York City.—Inclosed find my check for bill rendered. I now have an extensive trade with Australia, New Zealand, Canada, Hawaii, Morocco, and have distributed over 600,000 of my pamphlets "Diseases of the Dog" as advertised in the Forest and Stream.—H. K. Glover.

Those of us who have been handling the gun for a long time find that we do not see as well as we used to, and at last we have to come to glasses. There are various sorts of glasses, but those made by the Spencer Optical Company are worth investigating. They seem to be just about right.

At the tournament of the Olean, N. Y., Gun Club, Aug. 12 and 13, the following trade representatives were present: Mr. George R. Ginn, of the Winchester Repeating Arms Co.; Mr. Frank E. Butler, of the U. M. C. Co., and Mr. J. R. Hull, of Parker Bros.

The rubber sole of the Barber Hunting Shoe is noiseless, and yet sticks to the ground, two important points for the still-hunter, who must travel silently and must never slip. A circular of this shoe will be sent on application by the manufacturer.

All sportsmen wear shirts—the rule has no exception. Fullincamp & McGonigal make shirts. Hence some—or all—sportsmen wear Fullincamp & McGonigal's shirts, or would if they knew of them.

At the shoot of the Chesapeake Bay Gun Club, Newport News, Va., Mr. Thos. F. Stearnes broke 98 out of 100 targets. He used 24grs. of Ballistite, 1⅛oz. of shot and Leader shells.

SPRATTS PATENT DOG SOAP

Is of the greatest value to dog owners, as it is entirely FREE FROM POISON, and at the same time most effective in the destruction of lice and fleas. Moreover, it keeps the skin free from scurf, prevents Mange and other skin diseases. No other soap should ever be used in preparing dogs for exhibition; it leaves the coat smooth and glossy.

Spratts Patent Dog Soap contains no Carbolic Acid or Coal Tar, but is nicely perfumed and produces a fine lather. Recommended by kennel owners throughout the world. Once tried, always used.

It is the greatest

FLEA SOAP

in the universe. **Price 20 cents per Tablet by mail.**

DOG BREAKING.

With Odds and Ends for Those Who Love the Dog and Gun. By Gen'l W. H. Hutchinson; 42 illustrations; tenth edition. Cloth, 359 pages. Price, $3.00

FOREST AND STREAM PUB. CO.

HITTING VS. MISSING.

By S. T. HAMMOND ("Shadow"). Cloth. 170 pages. Price, $1.00.

Mr. Hammond enjoys among his field companions the repute of being an unusually good shot, and one who is particularly successful in that most difficult branch of upland shooting, the pursuit of the ruffed grouse, or partridge. This prompted the suggestion that he should write down for others an exposition of the methods by which his skill was acquired. The result is this original manual of "Hitting vs. Missing." We term it original, because, as the chapters will show, the author was self-taught; the expedients and devices adopted and the forms of practice followed were his own. This then may be termed the Hammond system of shooting; and, as it was successful in his own experience, the publishers are confident that, being here set forth simply and intelligibly, it will prove not less effective with others.

Haunts of Salmon and Trout.

SALMON IN CANADA. TROUT IN MAINE.

WHEN, WHERE AND HOW TO CATCH THEM.

In his handsome work "With Fly-Rod and Camera" Mr. Edward A. Samuels gives spirited accounts of **salmon fishing in Canada** and **trout fishing in Maine.** It is much more than a mere fishing story, for the chapters are filled with angling lore. The illustrations picture the charming scenery which contributes so much to the pleasure of the American salmon angler in Canada, and in the Maine fishing country. The volume of 480 pages has 147 full-page half-tones from photographs by the author. Sent postpaid on receipt of price, $5, by

FOREST AND STREAM PUBLISHING CO.

A Charming Nature Book.

Neighbors of Field, Wood and Stream.

By MORTON GRINNELL.

This is a book of country life, but it deals not with people, but with the wild creatures which, though for the most part unseen, live their lives all about us in Field, Swamp and Forest. Its natural history is accurate and its facts are given most entertainingly. It is copiously illustrated from the author's own specimens and from life. 12mo, cloth. Illustrated. Price $1.30 net, $1.45 postpaid.

FOREST AND STREAM PUBLISHING CO., 346 Broadway N. Y.

Hotels for Sportsmen.

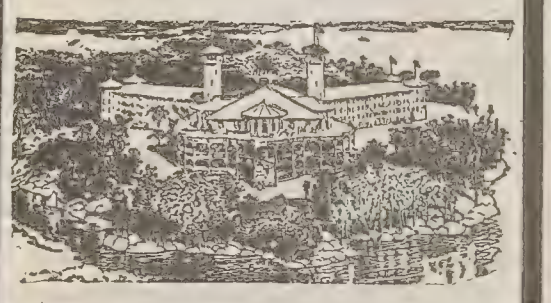
Proprietors of shooting resorts will find it profitable to have their houses advertised under this head.

MORLEY'S.

The best TROUT FISHING in the Adirondacks. Twenty different lakes and streams well stocked with Brook Trout, Lake Trout, Landlocked Salmon and Rainbow Trout; 2,000 feet above the sea. Excellent Deer hunting; the finest open Woodcock and Grouse shooting. We are in the heart of the game preserve, and there isn't a human habitation for thirty miles north of us. In addition to being one of the finest sporting resorts, it is one of the best summer resorts in the mountains. Hotel is first class; sanitary plumbing; modern in every respect; an excellent table. No pulmonary invalids. Send for artistic catalogue. Rates from $7.50 to $15.00 per week; lower June and September rates.

MORLEY'S,
Lake Pleasant, Hamilton County, N. Y.

Royal Muskoka Hotel.



This new modern, up-to-date hotel was opened for the reception of guests in 1901. It is situated in the centre of the finest summer resort region in America, known as the Muskoka Lakes, within easy reach of the principal points in Canada and the United States. The interior of the hotel is planned to the best advantage for comfort and convenience, special attention being given to ventilation and sanitary arrangements. Its spacious suites, with handsome bathrooms attached, are especially adapted to either large or small families. Cuisine and service are the best. Open for guests June 15th. For further particulars descriptive matter and all information write

ROWLAND E. ROBINSON'S

Danvis Books.

These books have taken their place as classics in the literature of New England village and woods life. Mr. Robinson's characters are peculiar, quaint and lovable; one reads of them now with smiles and now with tears (and need not be ashamed to own to the tears). Mr. Robinson writes of nature with marvelous insight; his is the ready word, the phrase, to make a bit of landscape, a scene of outdoors, stand out clear and vivid, like a startling flashing out from the reader's own memory.

The Leaping Ouananiche.

What It Is, Where and How to Catch It. By Eugene McCarthy. Paper, 66 pages. Price 50 cents.

The ouananiche is rapidly coming into prominence. This book tells where, when and how to catch this gamiest of all game fish. Seven years' experience in catching and studying the ouananiche has thoroughly fitted the author to speak with authority on his subject. The book contains a large number of half-tone cuts from photographs and a correct portrait of the fish itself. This work is the recognized authority.

SHOOTING on the DELAWARE, LACKAWANNA & WESTERN R. R.

Season opens in New York State Sept. 15 (except some counties); Pennsylvania, Oct. 15; New Jersey, November 10.

For Anglers and Big Game Hunters.

A Big Game and Fish Map of New Brunswick.

We have just had prepared by the official draftsman of New Brunswick a map of that province, giving the localities where big game—moose and caribou—are most abundant, and also the streams in which salmon are found and the rivers and lakes which abound in trout.

The resources of New Brunswick in the way of game and fish are only just beginning to be appreciated, and we are glad to offer to FOREST AND STREAM readers the first authentic information as to localities where sports may be had. The map is printed in colors, on a tough paper, and is enclosed in a stout manila envelope for protection in carrying. Price $1.

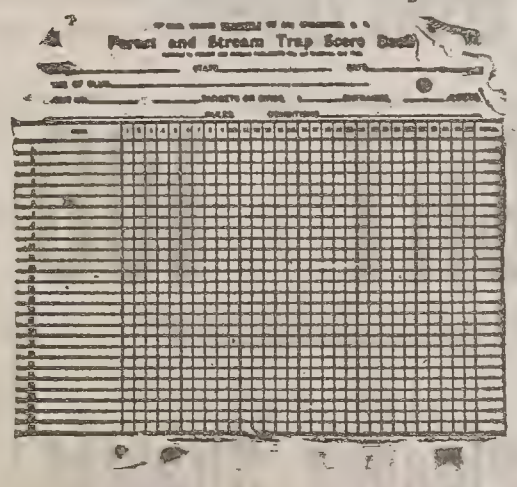
FOREST AND STREAM

Trap Score Book.

The only one containing the new (1902 revision) Shooting Rules of the Interstate Association, for targets and live birds; The American Shooting Association Rules; and the revised Hurlingham Rules. And a detailed description of all the shooting systems in practice for the divisions of money.



FOREST AND STREAM'S new Trap Score Book will admirably fill the needs of clubs and contestants in affording a means of keeping a faithful record of contests. Each book contains a generous number of sheets, so ruled as to make all the chief divisions of the shoot plain at a glance. For instance, the horizontal spaces are numbered from 1 to 27, every sixth line being distinctly heavier than its fe lows; hence the squads are distinguishable at a glance. The perpendicular spaces are numbered from 1 to 30, ample space first being left for the contestants' names and their handicap allowance. Heavy dark lines are between each five spaces, and the numerals 5, 10, 15, 20, 25 and 30 are in heavy-faced type, so that the number of targets or birds to be shot at are apparent at a glance. The heavy ruling also is an advantage in bad lights. However dark a nook the scorer may be in, no straining of the eyes or incorrect entering of scores is possible on account of inability to distinguish the lines of the score sheet. At the head are the usual spaces for current data. Each sheet is perforated, so that it can be readily torn out when manifold copies are made, and yet each sheet is strong enough to hold firmly in place if the book is desired for permanent club records. A neat pocket on the inside of the back cover holds carbon sheets for manifolding. The book is neatly and substantially bound in cloth, and contains 150 score sheets. The price is $1

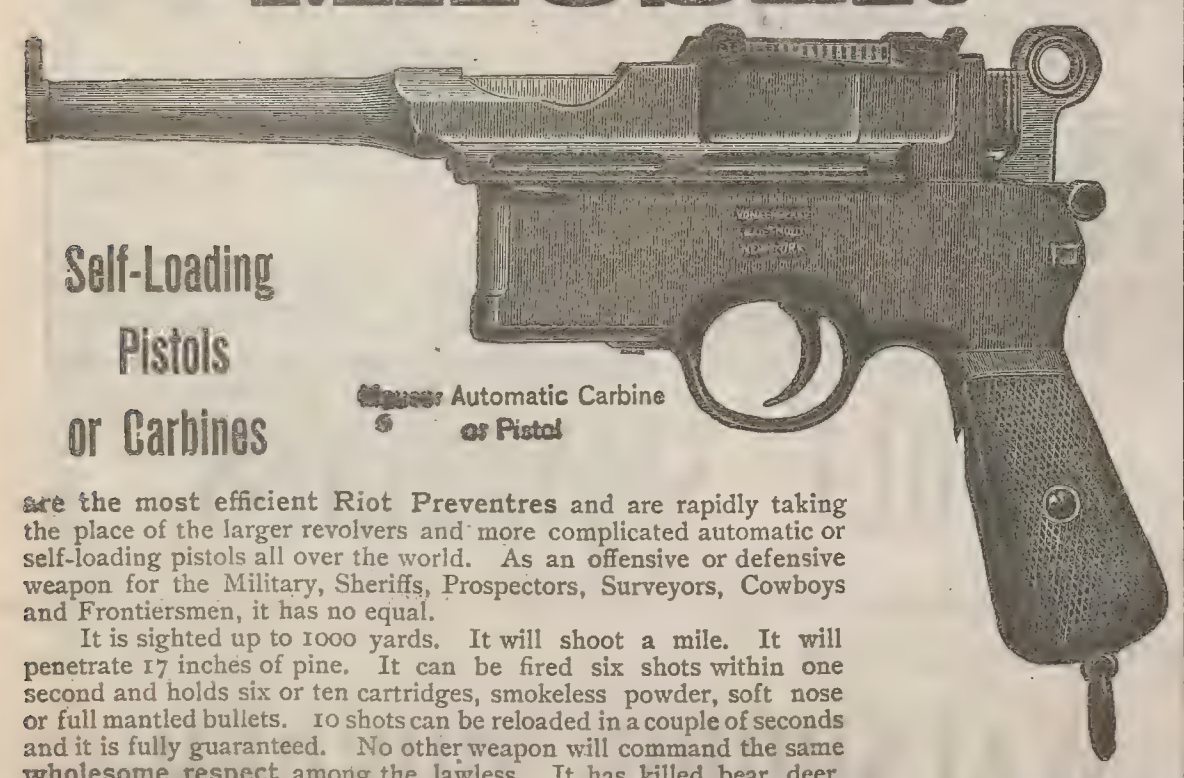
"MAUSER"



Self-Loading Pistols or Carbines

Mauser Automatic Carbine or Pistol

are the most efficient Riot Preventres and are rapidly taking the place of the larger revolvers and more complicated automatic or self-loading pistols all over the world. As an offensive or defensive weapon for the Military, Sheriffs, Prospectors, Surveyors, Cowboys and Frontiersmen, it has no equal.

It is sighted up to 1000 yards. It will shoot a mile. It will penetrate 17 inches of pine. It can be fired six shots within one second and holds six or ten cartridges, smokeless powder, soft nose or full mantled bullets. 10 shots can be reloaded in a couple of seconds and it is fully guaranteed. No other weapon will command the same wholesome respect among the lawless. It has killed bear, deer, and nearly all big game and little game to be found on this continent, and its small size and light weight make it a most desirable auxiliary.

A New English Gun.

"Great Value for Little Money."

THE REGENT. PRICE $65 NET

We have just received the first few cases of a new English gun which we have named "The Regent". They are made for us by the best gunmaker in England and bored on the same principle that has won world wide honors for English guns. The barrels are best Siemens Martin steel, and the shooting is unexcelled. The stocks are selected English walnut, half pistol grip, latest model Anson & Deeley action, nicely engraved, and the finish and workmanship throughout are up to the English standard. English guns have long been the standard of the world, and this new product will mark a new era in price as well as quality. We have never before been able to offer so fine and good a gun for so little money. They can be supplied in weights from 6¼ lbs. to 8 lbs., in 12 bores, and from full choke to true cylinder.

We carry a large line of guns and rifles from $6.00 to $600.00, and are sole U. S. Agents for the celebrated guns of W. W. GREENER.

WINCHESTER

High Velocity Low Pressure Cartridges.

.45-70, .45-90 and .50-110 Calibers, Loaded with Smokeless Powder and Soft Point Metal Patched Bullets.

FOR BIG GAME SHOOTING AT DISTANCES UP TO 200 YARDS.

We are now able to furnish, through the regular trade channels, the above new Winchester High Velocity, large bore, cartridges for Winchester Model 1886, .45-70, .45-90 and .50-110 caliber rifles. These cartridges, although they give high velocity and great muzzle energy, develop only slightly increased initial pressure. By their use, owners of Winchester Model 1886 rifles of the calibers mentioned can greatly increase the power of their guns. For fine shooting, a slight alteration of sights may be necessary when these cartridges are used. When ordering new rifles in which it is intended to use these cartridges, it should be so stated in the order, so that the proper sights may be fitted.

The following table shows the muzzle velocity, penetration and trajectory of these High Velocity Low Pressure Cartridges:

Name of Cartridge.	Weight of Bullet, grains.	Velocity at Muzzle, Feet per second.	Penetration in ⅞ inch dry pine boards at 15ft. from muzzle. Soft point bullet.	Trajectory. 100 Yds. Height at 50 yds. Inches.	Trajectory. 200 yds. Height at 100 yds. Inches.
.45-70	300	1875	13	1.47	7.40
.45-90 Winchester	300	1980	14	1.41	6.63
.50-110 Express	300	2225	12	1.07	5.82

With the great increase in velocity which these cartridges have, their trajectory is proportionately flatter, and, at 200 yards, their remaining energies are practically the same as those of the small caliber high-power cartridges. It is a desirable feature of these cartridges that they can be used by persons who fear to use the high-power small caliber cartridges on account of their great range. These points considered, and the fact that the results are obtained with bullets of large cross section, make these cartridges unsurpassed for striking and killing power at the distances at which most big game is killed.

CANOE CRUISING AND CAMPING.

By Perry D. Frazer. Illustrated. 95 pages, cloth. Price $1.

This interesting little volume is a practical guide for the cruising canoeist, the man who wishes to start away from the city and for a short time to make his canoe his home. With this in view, Mr. Frazer, who regards canoeing as a healthful and economical method of passing away leisure hours, has written briefly but attractively of canoes, camping outfits, clothing, firearms and ammunition; fishing tackle, photography, and in general of cruising, camping and all that pertains to this phase of outdoor life. While the volume has been written chiefly for the younger men, it is yet full of practical information and suggestion that appeals to those who have had a wider experience.

Such a book as this should be in the library of every man who is interested in outdoor life or the things which pertain to it. It is one of the manuals which should stand on the shelf alongside of "Woodcraft," of which, in fact, it is a part.

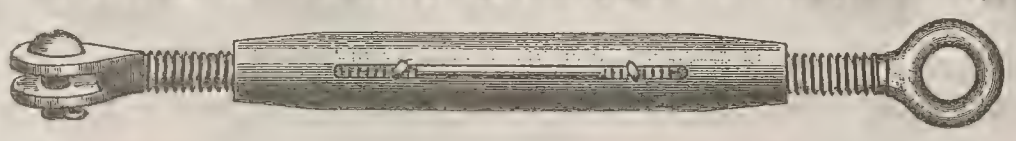
FORGED TOBIN BRONZE TURNBUCKLES.



With Cast Manganese Bronze Sleeve.

Our Turnbuckles, the style of which is shown above, are made of the very finest quality of manganese bronze centers and forged tobin bronze ends. They have been subjected to most severe tests by several of the largest and most practical Yacht Builders for the past two years. Made with great care and beautifully polished, they are a delight to the eye, as well as being the strongest Turnbuckle made. These Turnbuckles are nearer perfection than any yet placed on the market, and being non-corrosive, they really do the work expected of a Turnbuckle. Notice device used to prevent center from unscrewing and being lost as had always been the case with old style goods.

YACHT ARCHITECTURE.

By DIXON KEMP, Associate of the Institute of Naval Architects, and Member of Council. Second edition. Super-royal 8vo. Price, $16.80.

This work enters into the whole subject of the laws which govern the resistance of bodies moving in water, and the influence a wave form of body and wave lines have upon such resistance. It also deals comprehensively with the subject of steam propulsion as applied to yachts. An easy system for designing is provided, and every necessary calculation is explained in detail. The latter part of the work is devoted to yacht building, and engravings are given of every detail of construction and fitting, including laying-off, taking bevels, etc. The list of plates (exclusive of over thirty devoted to the elucidation of the text, and nearly 200 wood cuts) exceeds fifty, and comprises the lines of some of the most celebrated yachts afloat by the most successful builders and designers.

FOREST AND STREAM PUBLISHING COMPANY, NEW YORK.

STEAM YACHTS AND LAUNCHES.

Their Machinery and Management. By C. P. Kunhardt. With plates and many illustrations. 267 pages. Price, $3.00.

A complete veview of the development and present status of the marine engine and boiler as applied to steam yachting. The theory of the engine is set forth and its parts fully described. The functions of the boiler and its mountings are explained. Simple and compound engines are compared, and the latest results in high expansion and high steam are detailed. Numerous examples of modern practice are introduced, including all the patent forms of pipe boilers and special machinery. Also kerosene and naphtha motors for launches, with many tables and rules, specifying their construction. The U. S. Government laws of inspection and Rules of the Road are given, and also rules for racing steam yachts, and complete directions for the care and running of machinery. CONTENTS: Theory of the Steam Engine. Boiler Efficiency. Boiler Mountings. The Engine and Its Parts. The Screw. Laws Applicable to Steam Yachts. Lloyds Rules. Racing and Steam Yachts. Management and Care of Machinery. Principal Types of Yacht Machinery. The Design of Hulls. Practical Construction. Small Cruising Steam Yachts. Lights on Steam Yachts and Useful Tables.

VOL. LIX.—No. 9. No. 346 BROADWAY, NEW YORK.

A SUMMER SHOWER.

THE hot August sun shines brilliantly on shorn meadow, weed-grown pasture, and dusty yellow road, but the fleecy clouds which drift across the sky make cool shadows, and a fresh breeze tosses the branches of the trees in the wood lot. It is hot in the sun, not with the moist heat commonly felt at the end of the summer; rather with the dry warmth of the arid country, such as one feels among the mountains in Wyoming or New Mexico. Since it is August, and the hottest part of the day, the birds are quiet. Yet the pair of wood ducks hidden beneath the shade of the alders at the head of the pond have energy enough to feed among the weeds and to sift the mud of the bottom through their bills. Not far from them in the shoal water of the margin stalks a little green heron, intent on the insects playing on the water's surface, or clinging to the stems of the grass.

In the field above the pond, fall plowing is being done, and the bright share turns over a sod as dry and dusty below as it is parched on top. With loud monotonous shouts the farmer calls to the patient oxen, which toil along with slow sidewise motions, their tongues hanging from their mouths.

Up from the western horizon drifts slowly a thin veil of cloud, which at last overshadows the whole heavens. The sun obscured, the breeze takes on an added coolness. Birds which have been hiding in the shade, emerge from their concealment and begin to move hither and thither. Robins and kingbirds fly to the wild cherry tree and pluck its fruit, their efforts shaking other berries from their stems, which other robins gather from the ground. Little yellow birds, brilliant still in spring plumage, show themselves on the trees, hunt for food along the branches or fly to the crowns of the thistles, from which the bird takes one of its names. The loud croaking call of the rain crow sounds from a great elm, chimney swifts and swallows begin to fly lower as the insect hordes they have been pursuing lower their flight, and long-winged nighthawks, which in loose companies have begun their migration, fly nearer to earth, so that the white spots on their wings are plainly seen.

The little wood ducks in the pond feel the coming change. They dive and bathe, and go over their feathers, straightening and oiling each one; the heron stops feeding, stands erect, ruffles up his plumage and then smooths it out again, and stands motionless, looking like a stick projecting a foot above the water's surface. The farmer stops his oxen and gazes shrewdly at the sky, wondering whether this is to be a mere thunder shower which will pass, or a hard, continuous rain that will drive him from his work.

Now the surface of the pond is dotted with a few circles where the rain drops are falling, and soon they come thickly. Immediately the whole aspect of the landscape changes. When wet, the leaves of trees and brush change color, and so does the grass, whether it be the closely shaven lawn by the house, or the meadow beyond from which the harvest has been taken, or one still further away, where grass and clover stand eight or ten inches high in a crop of rowen.

By this time the farmer has driven his team under a spreading oak which shelters him from the rain. The birds delight in the shower, and hop about in tree and over grass as though they imagined that the moisture would instantly bring food to the surface. The rain patters noisily on the broad leaves of the trees or on the shingles of the house, and tiny rivulets run down from the roof, and gather in little pools about the house corners.

Suddenly, without warning, the rain ceases, and a moment later the sun comes out, flooding the landscape with yellow light, and casting long shadows over a world gleaming and glistening with moisture. The brilliancy lasts but for a few moments. Then again the clouds roll up, obscuring the sun and the rain begins to fall from a sky now darker than before. Slowly clambering up from the west are thunder heads, dull white and gray on their upper edges, but blacker below, and as these rise higher and higher and overspread the sky, mutterings of thunder are heard, at first low and distant, but gradually coming near and nearer, and flashes of lightning, too distant to be seen distinctly, are visible from time to time. As the moments pass, the blackness grows deeper, the rain falls more heavily, the thunder grows louder, the lightning more vivid. Soon the storm is immediately above us, and all around sounds the deep crashing of the heavenly artillery, while vivid flashes of lightning play in every direction. A few moments more and the storm has passed; the lightning grows fainter, the thunder more distant. Toward the west the clouds break away, and once more the sun shines through and lightens up the refreshed earth. The farmer drives back his team to the furrow and recommences his plowing, while the birds and the animals resume their search for food.

FROM FINGERLING TO GIANT.

THE direct and practical participation in sport afield and afloat is not necessarily the beginning and the end of its enjoyment. Indeed, there are many self-conscious philosophers, of marvelous acuteness of mind, who have learnedly and plausibly debated whether there is not more pleasure in the anticipation than in the realization of pleasure, with, however, the usual result in matters of speculative discursiveness; namely, that each disagreed entirely, or presented some nice distinctions opposed to his fellows, and that each one considered his own arguments and conclusions as sound and final.

Anticipation and realization are interdependent. They cannot be sharply differentiated, but in any case they do not constitute all the pleasures of the mind. There is another important phase of it in this connection, the pleasures of remembrance. Anticipation, realization and remembrance may be considered as making in sport the sum total of a complete whole.

Anticipation has its place in the fairy land of the imagination, but remembrance is based on the actual experiences of the objective world.

Nevertheless, in the exercise of their memories, men have an exceedingly variable capacity. Some have past events set in fields of flowers and song birds, while others have all events set in a bald desert of facts.

In the pleasures of memory, he who has the most nimble imagination will have the greatest groupings of detail stretching away from the clear present into the hazy past. Descending from the general to the particular, let us consider, for instance, the vivacious angler, whose mind is so accommodatingly elastic that it can compass both what will happen and what should have happened. Let us further consider that, about ten years ago, our angler friend, after an all-day whipping of a stream whose rugged banks were a teasing tangle of brush, boulder and forest, humbly plodded homeward in the evening shadows with a fingerling trout in his creel, the net result of fishy anticipation and reality. As he nears home, his heart grows heavier, his visage more somber, his feet more weary. He skulks betimes, as he shamefacedly anticipates an empty-handed meeting of friends from whom he had so cheerily and boastfully parted in the glories of the morning. Note now the compensations of remembrance. Failure was only of the moment; for as time passed, failure was mellowed and transformed into success. The fingerling grew progressively apace. At the end of the first year it as a large fish justly bore first position in a fish story worthy of the telling and the hearing. At the end of five years, by a thousand recountals, the fingerling had grown to be a veritable demon of a fish in pugnacity, resourcefulness and endurance as a fighter; a veritable leviathan among great fellows; a veritable event in the realism of memory, overtopping and overshadowing all others. How the water swirled! How fiercely the fish jumped, circled, plunged, sulked, ran, glared! The fight was long, uncertain, exhausting. At last victory! The fish was caught. Anticipation was ended. Memory began.

In the thousand tellings, the fingerling that was, is caught and caught again, progressively growing larger and larger, so that the one catching in fact gave birth to a thousand catchings in memory, each successively better and more exciting than its predecessors. The angler, if his imagination be of the proper order, does not merely tell his story, he lives it. The fingerling of the past is a really great fish of the present, as it would have been had it actually lived and grown with the passage of the years. But all anglers are not blessed with such memories.

If we concede the pleasures of anticipation, an imaginary phase of the mind, why shall we not also concede the pleasures of retrospection which refers to actual fish as a beginning, with the same fish grown larger and larger as an ending?

May not the long shots at game; the hair-breadth escapes from death in a thousand fierce forms, the enormous bags of game, etc., all have a useful place in memory for the recurrent happiness they bring in the realism of telling and acting the part; or by making success of a failure; or by exalting one's self innocently among one's fellows, and thus have a life-long pleasure for a few moments' disappointment?

Nevertheless there are men who derive much pleasure from the actual occurrences of life, leaving anticipation and imagination to those who derive most pleasure from them, choosing the world of fact in preference to the world of fancy.

THE CARP.

THE carp has been widely introduced into American waters, and for good or for evil it is here to stay. There is no necessity of saying that in numerous localities the complaints have been made that the fish is for one reason or another an unwelcomed factor in the fish supply. That it destroys the eggs of other fish, that it roots up the bottom and keeps the water muddy, destroys the vegetation and ruins ducking grounds, that it has no qualities as a game fish, nor any merits as a food fish; that it is a spoil-sport, and a nuisance—these are some of the counts in the indictment. A typical complaint is that contained in the last report of the Ontario Department of Fisheries, in which it is said:

> Carp is making great headway, and is becoming established almost everywhere, being no longer confined to international waters. It is increasing to an alarming extent in Lake Simcoe, and already hundreds of acres of rice fields in the vicinity of Holland River have been destroyed. All legitimate means of capture have been approved and encouraged by the department, but there seems to be no feasible means of exterminating it, or even checking its inroads.

That there is another side of the question has been maintained strenuously, and it must be conceded convincingly by those who have made the economic value of the carp a study. We print as pertinent, because of renewed recent interest in the subject, a debate on the carp, which formed part of the proceedings of the American Fisheries Society meeting of 1901; and a reading of the facts and figures there contained is urged upon those who have believed nothing but ill of the carp.

The suggestive report comes from the Adirondacks that Mr. William G. Rockefeller has purchased for $85,000 6,000 acres of land comprising Meacham Lake, with the intention of adding the territory to his other holdings, to be converted into a private park. The transaction is quite in line with the Vanderbilt buying of Lake Success on Long Island, to which we made allusion last week. The two incidents illustrate the growing tendency toward the acquirement for individual holdings of mountain and water resorts which formerly have been accessible to the public. In the Long Island case the project involves the surrender of a public right of way which gives access to the lake for fishing and boating; in the Adirondack transfer the transaction was wholly between private owners, but nevertheless it means that a portion of the Adirondacks which has hitherto been open to visitors will now be closed. Fortunately there is a legal prohibition of the transfer of the Lake Success public right of way, and if the people of North Hempstead are wise in their day and generation they will not consent to any removal of the condition which assures to them their present rights. There is on the other hand nothing in the law to prevent the acquirement of private territory like the Meacham Lake tract; but in this case as in the other, the principle involved is contrary to public policy. The lakes and the woodlands should not all be closed to the people. Some way should be found for securing to the public the freedom of what now are free, both for the present time and much more for the future.

The note which Kelpie sends of the cloud which has come over the 1902 Camp of the Kingfishers, will be read with extreme regret by all who have in years past followed the ever-entertaining chronicles which Mr. Hickman has contributed to our columns. And all of course must cherish the trust that there may yet be other camps in store for Kingfisher, or Old Hickory, as his comrades affectionately call him, and Kelpie and the others of the band.

The Sportsman Tourist.

Tales of the Frontier.

I.—The Stolen Horse.

In the settlement of any portion of the American continent many occurrences entirely out of the line of everyday experience served to break the monotony of pioneer life; and now, after most of the actors in the drama of olden times have passed away, some of the happenings of long ago may prove of passing interest to the readers of Forest and Stream, whose lives are passed in more quiet times.

In these days of bench shows of hunting dogs, and tournaments of the shotgun men for the breaking of "mud saucers"; when the people who eat the flesh of thousands of cattle, sheep and hogs, daily slaughtered for their food, are grown so tender-hearted that pigeon shooting for sport is becoming a dangerous pastime; and when the wave of immigration from the East is fast filling every nook and cranny of our mountains, and a fresh deer track has become something to cause one to stop and look twice at; my thoughts wander back to the old days when the keeping of one's scalp in proper place was often a matter of serious question. Among the trappers of my acquaintance on the old Minnesota frontier were Bill Humphrey and Jude Phillips, who, in the year 1859—if I recollect aright—undertook a somewhat risky trip to the head of the Des Moines River to trap the country around Lake Shetek and the Great Oasis, a few miles to the westward.

The Sioux were known to be already inclined to hostility, and not at all disposed to welcome any intrusion upon their hunting and trapping grounds, and constant vigilance and carefulness on their part became imperative with the white trappers from the time they left the outer line of the settlements.

With a two-horse wagon and driver to convey their traps and supplies, they journeyed up the left bank of the river until near Lake Shetek, when a camp was made upon the bank of the river near the mouth of a small creek.

On their journeying up the river a small party of Sioux was met upon the prairie, and Bill Humphrey—from whom, by the way, I obtained this tale—walking at some little distance from the others, was met by the largest Indian in the party, who, stalking up squarely in front of him, and looking, as Bill said, "savage as a meat ax," stared for an instant straight into Bill's eyes and muttered an imprecation—evidently the only English he knew.

Bill said he wanted to knock him flat, just where he stood, but their numbers were too great for any foolishness, and just then discretion was manifestly at a big premium.

After the driver had returned to the settlements the trappers were annoyed to find that quite a party of Sioux was camped on the shore of Shetek, but a short distance above their camp. However, as they did not then appear disposed to make trouble, the boys proceeded to string out a long line of traps, and as furred animals were very plentiful, they were kept busily employed.

A very few days passed before the white men began missing their traps. No matter how carefully set and concealed, on their next visit to the place the trap was missing. Not only the trap, but the furred animal evidently caught in it was nowhere to be found.

And now the Indians began taking great pains to make a show of innocence. Time after time an Indian riding past their camp would stop near by and readjust his saddle or its blanket—often unsaddling and shaking out and refolding the blanket—to show that he carried nothing contraband; and yet in spite of all the watchfulness of the trappers their traps kept vanishing.

Finally when it became manifest that the thieves would soon leave them empty-handed, and no chance for righting their wrongs appearing, one of them returned to the settlements and again brought out the wagon to move them back to safer ground.

The return journey to the settlements was begun at early morning in the hope to cover over half the distance before night.

During all the forenoon's march the trappers brooded over the loss of more than half their traps; and as the noon halt for dinner was made they agreed to send the driver forward as rapidly as possible, while they turned back upon their trail in pursuit of revenge.

It was at the time of the full moon, and they planned to reach the Indian camp soon after dark, when by the help of the moonlight they hoped to find some of the ponies of the savages.

Halting on the prairie until nightfall at a distance from the Indian camp, they then hurried on, and after some careful maneuvering succeeded in securing a good pony.

But they wanted another; and having led the captured horse down to the creek and fastened him to a small tree, they again approached the camp, and finding a teepee pitched at quite a long distance from the others, they crept near it and there found what Bill declared was the prettiest pony he had ever seen—and which they had noticed among the Indians before they had thought of going horse stealing. It was a coal black stallion, fat and sleek; but, as they now discovered, as savage as a wolf! It was picketed a few hundred yards from the teepee, and as they crept near it the horse, with open mouth and ears laid flat, charged furiously to the extreme length of his picket line, and it appeared impossible to capture the savage brute.

"What we ought to have done," said Bill, "was to have gone down to the creek and cut a couple of long willow poles, leaving a fork at the end, and when he charged us twist these into his mane, and one of us could then have held him while the other bridled him with his picket line. But we didn't think of it in time; and finally we had to give him up."

For now the disturbance had roused the dog of the Indian, and he began barking furiously. Soon the tent door opened, and as the boys sank into the grass, and the pony again stood quiet, an Indian stepped forth into the moonlight, and took a long careful look around; and as peace evidently reigned over the now silent prairie, went back again into the teepee.

After waiting for nearly an hour the trappers concluded to make a final effort to capture the coveted pony.

Again the savage stallion raved and charged; again the dog barked and tore around the teepee; and again the Indian stepped forth into the moonlight.

After another long and critical survey of the scene the Sioux turned and kicked his dog, and muttering an imprecation at this disturbal of his rest, again disappeared within the teepee. But the moon was climbing rapidly toward the zenith, the night was swiftly passing, and reluctantly turning their backs upon the wished-for pony the two men started for home.

While one rode the captured pony the other ran alongside holding on to his mane, and taking turns in the riding as the footman grew fatigued, the rapid march continued steadily during the remainder of the night, and morning found them so far on their journey that all fear of successful pursuit vanished.

Reaching the settlements about the same time as did the driver of their wagon, they promptly sold the pony for just about sufficient to pay for the stolen traps—but without stating how they had obtained it—and the next day two Indians appeared at the upper end of the settlement in search of the missing horse.

Here the Indians were promptly discouraged from further prosecution of their search, and they turned back again.

Soon the rumor reached the new owner of the pony that the Indians were in search of his horse, and the tired brute was hurried on to Estherville, Ia., and sold; and again the rumor reached him, frightening the man who had purchased him, so that he immediately took him down to Ft. Dodge and disposed of him.

Again the proceeding was repeated, the pony taken to Ft. Des Moines and sold; and still once again was the Scripture verified which declares that "The wicked flee when no man pursueth," and the last word that reached the frontier starting point of this famous race was that this much-traveled animal was being hurried on toward the Missouri River in the vain hope of outrunning a flying rumor. "And," added Bill, at the end of the story, "fer all I know, that durned hoss is a-runnin' yit!"

Orin Belknap.

Old Gabe Acquin, the Milicete Guide.

Did you ever meet, in your tramps through New Brunswick, the Indian Sagamore, Gabriel Acquin? He was the best hunter, trapper and guide in New Brunswick and Nova Scotia in his time. He died last year at the age of ninety, and a good Indian has gone to the happy hunting grounds, if there is any such place in God's universe for a dead Indian.

In the '40's, '50's and '60's Gabe was in his prime. He was the "guide, philosopher and friend" of all the officers attached to the various regiments which, in those days, were stationed in Halifax, St. John and Fredericton. He was so interesting a character, his sayings so quaint and pithy, his manners so self-respecting and dignified, that the officers treated him as an equal and had him to mess whenever he would condescend to accept their invitations.

When I first met him he was nearing his sixtieth year, but was as lithe and sinewy as in his younger years, and could handle a birch canoe better than any white canoe man I ever saw, and this is saying a great deal. With my Fredericton Overseer of Fisheries for the County of York, I took rail from that town to the mouth of the Shiktahawk, crossed a portage of fourteen miles and came out on the extreme headwaters of the Southwest Branch of the Miramichi (where it was a mere brook), once the most wonderful river in the Province for salmon and trout. There we were met by Sachem Gabe in a fine birch canoe, and proceeded at once on our voyage of inspection down stream to Boiestown. I need not dwell on that delightful trip. You have been on the river and know its charms.

In 1883, when the Department of Fisheries was getting up its exhibit to send to the great Fisheries Exhibition held in London that year, it occurred to me that if a live Indian in his wigwam, surrounded by the various things common to nomadic life, his squaw making moccasins, baskets, etc., the Indian himself making fish spears, paddles, miniature toy canoes, etc., while he paddled a real canoe on the ponds of South Kensington, where the Canadian Court was to be erected, the Canadian exhibit would "take the cake." So, having in due course obtained the assent of the Department of Marine and Fisheries, I secured Gabe's services for $2 per day and expenses paid, and he agreed to be ready within two weeks' time to meet the steamer at Halifax, which was to take the various exhibits across the Atlantic. * * * As I foresaw would be the case, Gabe's camp in the Canadian Court was really the greatest attraction of the whole show, for perhaps no one of that generation had ever seen a real live Indian before. Young officers who, thirty years previous, had hunted and fished with Gabe as guide, now grown into old men, were simply wild to see Gabe again. Not a single living man who had known him in Canada failed to call on him; and many took him to their clubs and to their homes, as the greatest lion in London. After the show was over several of these officers, now majors and colonels, and generals, took him to their country homes, and did all they could to show their real pleasure in again meeting their companion and guide in the best sport they had ever enjoyed. The presents Gabe got in England were far more valuable than his salary, and as these were chiefly in British sovereigns, except for watches and valuable gems, they and his salary made Gabe comfortable for the rest of his life.

Gabe knew every caribou barren in New Brunswick—north, south, east and west. No white man or Indian could equal him in calling moose, and he could perfectly imitate the voice and call of both beasts and birds. I myself saw him calling a mink. He imitated the squeak so perfectly that the mink actually crossed the stream and approached Gabe's hiding place behind a rock on the shore. He was an admirable cook, and had always some appetizing comestible when in the woods,

Perhaps I am the only one now living, except Bob Or (whom you knew as my host of the Barker House i Fredericton), who could tell of the man as he was in hi prime.

All the fisheries officials connected with that show o 1883 are now dead—the Minister, the Deputy Minister, th Commissioner of Fisheries, the Superintendent, Wilmot the Overseer, John Mowat—all except myself, my son i Ottawa, and some others, who, like him, were junio clerks in 1883. Huxley, Tyndall, Cunliffe Owen, Fathe Francis, Frank Buckland, Lord Dufferin, James Russel Lowell, and, indeed, most of the men who took part in th speaking at the several meetings and discussions, hav gone the way of all flesh, and I feel that in my own case "superfluous lags the veteran on the stage."

My memory of past events is vivid. Of John Mowa (whom you knew), of Sammy Wilmot, of Walte Brackett, with whom I have several times fished; of Tha Norris, with whom I have fished the Ristigouche and th Nepissiquit; of Ned Sothern, Johnny Raymond an Charles Couldock, with whom I have fished, my memor is very clear, and as you knew all these good fellows, n doubt my recollections of them would interest you. I you care to have me do so, I will put my recollections i writing, and thus while away an idle hour or two whe in the mood.

Wm. H. Venning.

Sussex, N. B.

Note.—Mr. Venning, who has so happily favored ou readers, is now in his 81st year. For forty years he wa Inspector of Fisheries for New Brunswick and Nov Scotia. We shall certainly be glad to have more of hi reminiscences, as he suggests.

Through the Parsonage Window

Retrospect.

Again at the window looking out. It is idle time monotonous time that hangs and drags. In other year when time was long one might have taken a rifle an wandered off into the hills there after antelope. What great treat it would be to take a far-shooting Spencer far-shooting for those days, but wonderful with its arch ing trajectory, and chase antelope over those sun-crowne slopes again. Real live antelope on their native heath, fre and untrammeled! What illusive things they were i those days, too, more especially when hunted for pastime

Pastime hunting usually resulted in no bloodshed. In difference to the game led to taking long chances, an long chances, with the guns of half-moon trajectory, onl netted a splendid jet of dust, thrown up from the sun baked sod, ten feet beyond or ten feet below. It wa only when the demand for meat was imperative that w got down on our marrow bones and wormed along, or la for an hour watching for a chance to make another move that any blood was likely to be shed. Then we worke until we got within such range that trajectory cut bu little figure and brought back our saddle of venison, o more often the whole antelope.

No, we did not do any wonderful shooting in the ol times. That was done by word of mouth or with pen an ink in after years. More phenomenal shooting can be see any day at a circus or even among a lot of boys with .22 caliber rifles than could be seen in ten years of plain life of ye olden time. The guns used were not sighted no intended for fine shooting. Few plainsmen fired mor than a hundred shots in a year, hence might be said t be always out of practice. How could you expect them t compete with the small boy who, with a finely sighted, ac curate target rifle, often shoots two or three hundre shots in a day. Leaving out accidents, all stories of ex traordinary long-range shooting are pure fabrications. O course there are greater or less degrees of skill, but th real wonder is why we cannot do better than we do.

The real feat was in getting an easy shot at an ante lope in the middle of a flat stretch of table land with n cover even for a rabbit, and the antelope shifting the searchlight of his keen eye in all directions. One ex pedient by which I got a needed antelope was using a bleached buffalo skull as a flag, and tolling the antelop within reach through its own curiosity. The antelop were on a wide stretch of table, and I followed up a shallow ravine until it ran out and afforded no further cover. For some time I lay speculating and had about given up, for there seemed no possible way to reach them, when I thought of the bleaching skull that lay near. It was very large and snow white. Picking it up and stooping low, I carried it in front of me until i was discovered, and then lay down. There was a ram rod with the gun I was carrying—though it was a breech loader—and thrusting that into the ground I hung the skull upon it, and while the antelope were engaged with the skull I crept away unobserved. The antelope charged on the skull and retreated a number of times, and at last started on a circle round it. When they got round on my side they came within easy range and I got one.

It was seldom though that flagging antelope was a success.

How different is the big-game hunting of to-day to what it was then! Think of the man in New York or Chicago receiving a telegram in the morning from his guide in the Rocky Mountains, saying he had the bear or elk, as the case might be, located. The sportsman in palace sleeping car thunders away to the scene of action. Arrived there he is led up to the game and gives it the fatal shot with the demeanor of a Leatherstocking; then the photographer is summoned and takes views from various points of vantage, which are hurried to the magazine office, together with an article by the press agent, giving all the harrowing details. What would Boone or Crockett have thought of such hunting? It cannot be claimed that a love of nature incited it. It may be the *fin de siecle* sportsmanship, but for my part I would prefer to be a genuine hunter, and kill one head of game that I needed for food, or could trade for needed gear, rather than to spatter the whole range of the Rocky Mountains with such gore.

It has been claimed, and diligently urged, that game should be protected by law in the interests of sports afield. Let us put it in less offensive words. Protect the game and fish as an incentive to more general exercise and recreation in the open air to the betterment of the

general health. Nature made man to live and exercise in the open air during a greater part of his time. To enforce attention to this provision of law she made it necessary for him to gather most of the gear required for his well-being by means of the chase. The arts of man have largely done away with the necessity of the chase as a means of livelihood, but the needs of a healthy body are unchanged. Then if game is preserved by statute law to the end that man may observe nature's law and continue the chase, let whoever goes in pursuit of such game not evade the exercise and recreation by shifting it upon a guide. The guide should not carry the pack. Neither should he paddle the canoe or pitch the camp. The guide should be the professor who should teach the beginner how to do these things for himself. When he is competent to take care of himself alone in the woods, then he may be instructed in the art of stalking game and so forth. When such a course is pursued and the sportsman brings in his moose, then we may know that the claim of the sportsman has been lived up to. So long, however, as the angler in search of healthy outdoor exercise requires an attendant to row his boat, bait his hook and take off the fish, so long will the falsehood of his claim be made apparent and he, with many deserving a better fate, together with the laws they advocate, be held in more or less contempt.

All mankind and most animals have the hunting instinct. Exercised, it is a safe element. Dormant, it is dangerous, and accounts for much of the wantonness in war, riot and revolution. Only a few days ago on the outskirts of a small town I saw this. A butcher was preparing to kill a beef. He had the animal tied by means of a rather long rope, giving it considerable play. A rifle was to be used to kill it. The village schoolmaster was present, and asked the privilege of doing the shooting. He had no use for hunting or hunters, and was unskilled in the use of a rifle. The consequence was that it took four shots before the poor brute was finally murdered, and for five minutes it was bellowing, straining at the rope and charging its tormentor in helpless agony. No such brutal scene could have been enacted had the man been in the habit of exercising his hunting instinct.

There is no reason why the man who does not need game should be debarred from shooting it, provided he sees that none of the game he shoots goes to waste, and provided, of course, the shooting is done by rule as laid down by law. The rich man is as apt to have a relic of the barbarism (?) of his ancestors, who got their living by the chase, in his nature as is the poor man. Neither should the poor man be debarred from shooting the game he needs in the interest of any one except in the interest of the game supply which should not be allowed to become extinct or dangerously near it. But one thing is certain, whoever kills any game for heads or skins and leaves the meat to waste is guilty of a crime against nature and of wanton destruction, and is a disgrace to the very name of hunter.

Where one shoots for sport he should make it the occasion of a grand outing, as prolonged as possible, and limit his kill to the circumstances. As wild game and fish is the connecting link that leads men back to nature, they should let it lead them to its very heart and make them better thereby. If a man is unfortunate in not having a long time to spare, he should not be debarred from his share of field sports, however.

It is the strenuous life of the cities that drives men insane, and, no matter how long that strenuous life may be continued, when release from it does come the healthy mind turns back to green fields, woods and waters, and all things that are fresh from the hand of their Creator.

Primeval man was a hunter; he was nearer to his Creator than man is to-day. The last man will be a hunter, for no matter how far removed from it we may be, at some period we always turn back to nature. Then let us not weigh too seriously the claim of the ultra good that all hunting is cruel and vicious. Let us not be wiser than our Creator; and above all, let us not hunt too assiduously our fellow man while crying aloud against the hunter of beasts.

Of course there are low degrees among hunters. Under the guise of sportsmen, men wantonly destroy that which should be held in trust, but there are those who violate manhood in every other line that is followed by men. I once knew a man who had a supreme contempt for "gun loafers," as he called them. He was perfectly vicious at the mere mention of hunting. Said he could not understand how man could be so cruel as to kill the birds. He was, however, a great consumer of yellow-legged chickens, which had to be killed before they could be eaten. One day riding along a road far from timber, he noticed a large fox squirrel running in the road; as there were no trees near for it to climb, he thought he might catch it, and after it he went, whip in hand. Well, he ran till he was completely exhausted, and finally, by accident, he struck it with the whip and stunned it, and then and there whipped it to death with the carriage whip. The hunting instinct of his nature had been pent up and when it broke out it was a fury that would disgust any one who hunted squirrels for sport and incidentally for the pot. I have noticed, too, that those who have a general contempt for habitual sportsman, but who occasionally go out with a gun themselves, are the ones that shoot into every flock of harmless birds that comes along. Too lazy or indifferent to find game, they take it out in shooting song birds.

If societies for the prevention of cruelty to animals will turn their attention to the cruelties that are practiced on men, women and children in every community, and especially in large cities, until they have done away with that I will think more of their efforts; but so long as they go round neglecting people to prevent cruelty to wild beasts or even preventing the shooting of pigeons at the trap, which seems a far less abhorrent way of killing them than that practiced in poultry houses, where they are hung up by the feet and bled to death, I shall think they are only playing to the grand stand and are frivolous in their motives.

But let us turn to the green fields again. We of the old times have lived too long to understand the rules laid down for our guidance in the new. We only grope blindly on hoping we may not stray too far to one side or the other. Running to extremes is bad. Zigzagging back and forth has kept the old world crossing and recrossing the right path of equal and exact justice to all, but never following it long. I would dispossess the farmer I see plowing in the field over there and have the antelope back on the hills beyond. Then I would go out there and hurl vengeful lead at them, ripping great trails in the sod and hurling handfuls of loosened earth into the air, and the poor frightened beasts would bound away and disappear over the hills as of old. But what a thrill it would give to do it all once more and even follow on to the top of the next rise and hurl other vengeful lead at them as they pause to look back a thousand yards away.

Perhaps I should have the satisfaction of seeing the dust fly fifty, sixty or even a hundred yards to the rear as they sped away again. But more often, at such extreme range, I should only have the satisfaction of knowing I had sent a bullet over that way somewhere. But it is no use, I can see from where I sit that my progress would be barred by at least two tall hedges before I got half a mile, and if I succeeded in breaking through them I would be stopped by the farmer on the other side, who would tell me he did not allow hunting on his farm. And that too in the face of the fact that I trod those hills when he was still a subject of Germany. Well, well! Have things come to such a pass? We must give way our dearest rights to ameliorate the condition of crowded humanity. I doubt if we would, though, if we could help ourselves. With the human societies who devote their efforts to bettering the conditions of beasts, we would say "Never mind humanity, we must protect the antelope"—in the interest of the antelope, of course.

After the antelope come the wild geese to feed on the first few scattered fields. How many there were, and how they swarmed upon the green wheat fields and around the scattered corn shacks. What a fine thing it was, too, to go out in the early morning and watch for the first gray line against the breaking day. The pinnated grouse came, too, and boomed out a thunderous welcome to the spring. What a soothing sound it was, muffled by distance, through which it penetrated for miles, it was one of the most impressive sounds that ever swept a western landscape. But that made no difference when they thundered from the sedge at our feet, we bowled them down right and left—and fried grouse was a common thing. Too many people came, though, and there was no room for geese or grouse, and they followed the antelope. Could we have stayed the march of progress at that point I could have been content.

I remember the first mockingbird I ever saw in Kansas, or anywhere else for that matter. There had been a lot of peach trees planted close together, so that when they got eight or ten feet tall they made quite a thicket. One night a bird commenced to sing there, which I took to be a brown thrush, but the song continued incessantly all night long. The next night it was the same. On the third morning I was out before daybreak trying to get close to the singer, so that I might see it when light came. But wherever I went the song came from some other part of the grove. I would creep cautiously upon the sound, but before I could get very close it would break out again in some more distance place. At last, just at daylight, I saw the bird leave a tree I was approaching, but one glimpse was the best I could do. The same year they became quite numerous and sang all day and night, and might also be seen anywhere, on top of chimneys, imitating the song and dance of a bluejay, and later, after the quail came, on fence posts imitating the whistle of a quail. Their song was the song of any bird that chanced to be neighbors with themselves. I suppose mockingbirds were in the wooded districts of Kansas from earliest times, but only moved out on the prairies when timber culture made it possible.

After the grouse and geese came the quail and the rabbits; poor substitutes. These remain with us still, being plenty where in early days there were none. One cannot hunt them, though, without trespassing, and that kills sport, and so as the evening is far spent and it is too late to wander into far fields, we will obey the admonition in the old song, and "pull down the blinds."

THE PARSON.

The Adirondack Forests.

THE Association for the Protection of the Adirondacks has issued a statement in which it says:

In November, 1896, 702,802 votes were cast in this State against a proposed amendment designed to lessen the protection thrown around the State forests by the present constitution which guarantees the inviolability of the State Forest Preserve.

That overwhelming expression of public opinion, taken together with other abundant evidence, goes to show that any measure which tends to protect this great park, so vital to the material interests of the State and so valuable as a pleasure resort to thousands of its citizens, will be most heartily approved by a large majority of the people.

Convinced of this fact, the Association for the Protection of the Adirondacks has requested George W. Dunn, Esq., of Binghamton, N. Y., chairman of the Republican State Committee, and Frank Campbell, Esq., of Bath, N. Y., chairman of the Democratic State Committee, to have inserted in their respective party platforms this fall, a plank substantially as follows:

"We regard the Adirondack Park, with its forests, waters and fauna, as one of nature's priceless legacies to our imperial State, which the dictates of prudence, wise public policy and foresight require should be carefully safeguarded and protected, not only as a pleasure ground for the people, but as a conservator of the water supply for our rivers and canals which are so necessary for the continued commercial supremacy of the State. We therefore favor the resumption by the State of the purchase of lands within the limits of the Adirondack Park."

The policy of the State in relation to its forests, from the time of Governor Hill's administration and through the successive adiministrations of Governors Flower, Morton, Black and Roosevelt, looked to their protection and conservation, and the effort made in the last Legislature to change that policy, has occasioned widespread surprise and alarm.

The State of New York was the first to create a forestry commission, the first to grant money for the management of its forests, and the first by legislative action to appropriate money for purchasing and enlarging its holdings of forest land. The wisdom of thus making provision for protecting its water-sheds has been so manifest, that its example has been followed by almost every State of the Union. What is more, the general government some time ago set the stamp of its approval upon the policy of forest conservation by the passage of laws creating those great preserves or parks, the safeguarding of which has now become one of the marked features of our national economy. Any hesitation, therefore, on the part of New York Legislatures in regard to preserving the State's forests cannot fail to be a matter for deep concern and apprehension throughout the commonwealth.

Woods-Loafing Near Manhattan.

THE average New Yorker knows little of the grand sport of canoeing as it is followed by a large number of enthusiastic lovers of healthful outdoor recreation, and sees less of it than of other sports, for the reasons that canoes are small craft, and their owners are not given to parading for the benefit of the public. All they ask is a fair wind or favorable tide, for Saturday afternoons and Sundays are their own; and a quiet spot where they can rest until the lengthening shadows of Sunday evening warn them, it is time to start homeward and again take up the cares of business on Monday.

Passengers on the Albany boats on Saturday afternoons no doubt wonder what becomes at nightfall of all the canoes they see sailing or being paddled along the river between the city and the Tappan Zee; but the main channel is near the New York shore of the Hudson, and only the canoeists themselves and persons who cruise along the New Jersey shore in small yachts and launches know how these Nomads pass their day of rest.

Canoeing on the Hudson is somewhat different in many respects from that in other parts of the country, as one must be prepared for storms and boisterous seas, for cold north winds following a sultry day, and for sudden squalls or rain when least expected. Strong tents that will stand up against a blow; heavy woolen blankets when there is every indication of 90 degrees of weather, and seaworthy canoes that will float with all on board though swamped or capsized—in fact, one must be prepared for anything that may come along. It is not like the inland cruising, where open canoes and summer outfits are efficient.

The feature of this sport so many New Yorkers now follow from choice is the short distance from town it is necessary to go to find pleasant camp sites and peace. Of course there are no spots this side of Croton Point on the New York side of the river where one may camp, for the railway follows the river's shore too closely for that; but on Croton Point, in the Croton River, and all along the western shore below Piermont, there are many beautiful little spots where there is shade near some cold spring, and which places are not near houses and are seldom visited save by canoeists and small boaters. Some of these spots are near quaint old relics of the one-time shipbuilding villages of the '20s and '30s, with their equally quaint folk, who fish a little when a run of shad is on, work a little at odd jobs, and gossip with every stranger they can hold up for that purpose. But they are honest and feel kindly disposed toward canoeists, whom they have learned are quiet persons, who merely wish to be let alone that they may get a bit of rest after their week of toil in the hot offices of Broadway. Other camp sites are far from any houses, and have come to be regarded as the property, for two days each week, of the canoeists. It is not difficult, while sitting there by the camp fire, for one to fancy himself in the depths of the wildwood, so quiet and peaceful are the surroundings, while there is only the faint roar of the trains on the New York side, and a glimpse of some steamboat or yacht passing far out in the channel, to remind one that he is in a camp within three or four miles of Grant's Tomb.

Nearly all of these canoeists are young men who are hard workers during five days and one-half of the seven in the various lines of business and professional life, and who have come to a realization of the benefits they may derive from these short but healthful cruises near home. One need but look at them to understand that they enjoy good health. They are manly men in these days of gilded youths and effeminate persons of the male persuasion. While any young fellow in possession of a fair salary can canoe in the most approved style, still there are many wealthy men who prefer it to other pastimes they can as well afford, for they like the independence and the self-reliance that are part and parcel of it. And although some deny it, human beings must have recreation, some change, to act as a safety valve for the precious health that will otherwise be undermined and ruined. There are business men who prefer to die "in the harness," as they call it, otherwise at their desks, of some disease that healthful recration might prevent or cure. But the day of the men who prefer to work seven days and some nights every week is passing, and Americans are better for the change.

The canoes that are seen along this great river are modern in every way. Of course some open canoes are used, but they are not in the majority. The average canoe is 16ft. in length, and has a beam of 30in. It is decked completely, save for a cockpit 5 to 6ft. in length. There are two water-tight bulkheads, which separate the compartments from the midship section, and these compartments are provided with round hatches carrying pneumatic rings, which, when the thumbscrews are turned down, fill the space between deck and hatch completely, keeping out all water. Even when the decks are under water—as they sometimes are in heavy seas—only a drop now and then finds its way into these large dry compartments, and being water-tight they must be almost air-tight, too. To be sure, some of the skippers carry their duffle in water-proof bags, but these are for use in camp as well as while afloat, and are provided against all emergencies. A majority of the canoeists sail to and from camp, but others paddle. Again, it is a general thing to see one man in each canoe, although several go and come in company, but experience has taught that each man should carry his own complete outfit. A number of men now cruise and camp every week with their wives, to whom the little vacation is a source of much pleasure, so agreeable are the natural surroundings along the Palisades.

It is worthy of mention that all of the men who sail

cling to the sliding seat, and nearly all of them to the small cockpit, with its canvas bag. Those canoes which have long cockpits are provided with cockpit hatches, the open space holding the bag being merely large enough for the skipper's feet. The average sail area carried on these cruises is about 65sq.ft. The favorite sails are the old and new Bailey, rigged to be reefed from the cockpit. These canoes are cruising canoes in one sense, but strictly speaking, they are either converted racing machines or converted cruisers, the result being alike in all cases, for they are serviceable and safe. When a canoe of this class is ballasted with 100lbs. or more of duffle, it is a steady craft, and capsizes under these conditions are rare. One of these canoes and its skipper then represent Independence with a big I. The skipper cruises leisurely along, safe in the knowledge that he can handle his craft under all conditions without assistance. His blankets, spare clothing, provisions, shelter, cooking outfit, and perhaps a camera or rifle, are safe and dry in the compartments. If the wind is at all favorable, he sails; if it and the tide are against him he paddles; if the opportunity presents itself he takes a line from some good-natured schooner captain and gets a tow to his destination; if rain comes on, he pulls out a waterproof jacket, cap and blanket, dons these, turns his pipe bottom up and smiles in a "let-'er-rain" fashion. It is great fun, and it is a pity more young men do not go into it. The first cost of the outfit is the only item that need be considered, for the cost of maintaining it and providing supplies is a very small item indeed.

In other days these Hudsonian canoeists slept in cockpit tents or on the ground, and passed half their time in camp in searching for driftwood with which to build their fires. Much of the remaining time was devoted to attempting to clean the soot off their cooking utensils and persons, for with this watersoaked wood the smoke and soot were truly awful. But they now use kerosene vapor stoves, which make no soot or dirt; and they sleep on comfortable folding cots or on pneumatic mattresses, saving time, space and their peace of mind as well.

The active season begins in April and camping in May. Its end is decided by the weather, but generally camping is kept up until late October or early November by the enthusiasts, and late November sees a few of them out for the day if the Sundays are mild. At one of the clubs there are a few members who boast having camped over night Christmas, New Years, Washington's Birthday, and on other wintry occasions. But, while they certainly did not enjoy the cold nights, it is a fact that they suffered no ill effects, and they enjoyed the novelty of the thing.

Two o'clock on Saturday afternoon at one of the large canoe clubs finds confusion where order is the rule. Canoes are on the floor instead of in their proper berths; duffle, tent poles, paddles, sails and groceries litter the floor, the gangway and the float; members are constantly arriving from their homes or places of business down town, laden with supplies or new wrinkles picked up during the week. They disappear in the locker room and soon return, dressed in old comfortable knickerbockers and flannel shirts, or in bathing suits. Then they hustle, turn out the contents of their lockers and add to the accumulating stacks of odds and ends. But in a surprisingly short time the racks are cleared of canoes, the floor of duffle, and the float becomes the scene of confusion for a time, until each craft is loaded and gets away to give room to newer arrivals. It seems impossible that the ten to thirty canoes which are involved can carry away such a raft of bags and packages and boxes, but they do, and in two hours only the members who remain over Sunday at the club are left behind.

The favorite camping places are from three to seven miles distant, and the time required to reach them is from one to three hours, depending on the wind and tide. For a while, then, the river is dotted with white buterfly-like sails and paddle blades that flash in the sunlight, all making for some favorite spot at the foot of the Palisades. One by one the canoes disappear on shore and tents appear to mark the place. Often the members of one club camp together, but generally they scatter somewhat, while on days life the Fourth of July and Labor Day some of the camps assume large proportions and are composed of members of a number of clubs. Fifteen, twenty and even forty tents are not uncommonly seen on these occasions, with perhaps five persons to every three tents. Last Fourth there were at one place sixteen palmetto tents of similar design and a number of others.

After one reaches the place where he intends to camp, a few minutes suffice to pitch the tent, blow up the air mattresses or rig up the cots and make everything snug. Then, if the tide is well up, a swim is in order, and a long rest in the shade while other friends are arriving or passing by to other places. Some sail along wing-and-wing before the prevailing southerly breeze; others paddle indolently, as though they had no destination nor a care, while some of the truly lazy ones get a tow behind some creeping schooner or wheezing naphtha launch, often called a headache machine. All as they pass hail those in camp cheerily with their club war cries or some outlandish yawp of their own invention, and by which they are identified at a distance. Sometimes one or two swing in and stop at the beach before the tents for a chat; others conclude that they will not go any further anyway, and come ashore; but all are happy, for have they not a night and a day in which to breathe pure air, drink crystal spring water and rest their weary bodies and brains?

Dinner time comes and the vapor stoves are put into commission, while the legs are attached to the grub box, its hinged lid is braced back, and there is the table. A piping hot meal puts all hands in rare good humor, and with the pipes comes the daily procession of night boats en route to Albany. Some of these boats are seen to the best advantage after their lights have been lighted, for they are ricketty old hulks that creep along like huge beetles. One wonders how they manage to keep afloat. A few are trim enough, however, but after their searchlights are turned on they all present a magnificent sight until the haze of the Tappan Zee swallows them up.

Sometimes there are camp-fires, and all hands sit around and spin yarns of other days. Often friends camping at other places come along for a visit, and now and then one of them brings a mandolin or guitar, with which to enliven the gathering. Generally, however, all hands turn in early for a long and refreshing sleep. Any person who wakes the camp before 7 o'clock finds himself in trouble, and often it is 8 before all hands turn out for the morning swim and a substantial breakfast. There are many paths along the hills and cliffs, and often a number of persons make up a party for a climb and a walk in the woods on the summit of the Palisades. In season there are wild flowers, raspberries, blackberries, apples, grapes and other wild and tame fruit to be found here and there. The cherries, apples and other fruits are all that is left to mark the one-time homes of persons who lived there when villages were numerous all along the Palisades.

Luncheon is a serious meal in these camps, for it is not difficult, after swiming or climbing, to feel hungry as a bear. And afterward, if the sun is out, the shade is sought while one watches the fleets of river craft which enliven the view. They are of all sorts, from the great sound steamers to the trim bay boats, with here and there a catboat, a sloop, a working schooner carrying brick and the numerous steam yachts en route to and from the homes of their owners in the Highlands and on the New York shore near Sleepy Hollow.

The day wanes and breaking up time comes all too soon. Down comes the tent, duffle is stowed in the canoe, and all hands push off together and loaf along the shady shore, where the air is laden with the perfume of flowers and trees. But one must cross at last and return to the club, where members are constantly arriving and packing their duffle away in the lockers until the next Saturday, and get into the stiff armor-plate of civilization before returning home.

PERRY D. FRAZER.

Lake Manawa.

BEHOLD a tiny inland sea!
Pale beryl set in paler gold:
King's ransom does this jewel hold,
The price to set the spirit free.

With zest the trackless path we seek,
To speed us on the waters sing,
The sail sighs like a living thing
And to the north wind leans her cheek.

'Neath screening fingers soon we spy
A feathered fleet that lures each gun,
Little live boats a-bob in the sun,
Rocking at anchor under gray sky.

The rustling silks of ladies fair
Who trail in grace o'er ballroom floor,
Charm less than when the wild ducks soar
And music tingles all the air.

In spite of weeds that would restrain
We near the beckoning bevied teal,
The sting of sport our pulses feel,
Our guns are mad and mercy vain.

At length, deep-laden with our spoil,
We seek the boat house on the shore,
Exultant count our treasures o'er
And are well paid for pleasant toil.

"Belle" greets us with her melting eyes
And "Dan" gives praise with eager tail—
Reflects his aid was no avail
And sniffs disdainfully each prize.

Sleek teal with wings barred green or blue,
And lordly mallard emerald-trimmed
Who erst the lake's thick fringes skinned
Or shrilled the air with wild haloo!

Soon cosy in the upper room
We bar the weather from the door,
And from the stove rich odors pour,
Announcing rice-hen's juicy doom.

We little heed the knocking blast,
We care naught for the world outside,
To frolic feast our hearts are wide
We only pray this joy may last!

Potatoes shaking in their skins
Shall lend fresh mirth to every jest,
And canvasback on buttered nest
Will set a-quiver all our chins.

And what rare wine to ruby nose
That sniffs ere sated mouth sips up,
Like fragrance that a huge tin cup
Brimful of steaming coffee shows?

We seek the stove and slight the storm
And sing old songs and tell old tales,
And lapped in blankets mock the gales,
When all within is snug and warm.

Until in dreams strange fish we take
And shoot a curious monster duck—
We wake to bid the world "Good luck!"
With hope fresh-gathered from the lake!

Natural History.

Wild Animals of the North.

From Richardson's "Fauna Boreali-Americana; or the Zoology of the Northern Parts of British America."

Some Smaller Mammals.

THE white-footed mouse is one of the commonest and most widely distributed of our Eastern mammals; and it is quick to take advantage of the comforts which civilization offers it. Indeed, Dr. Richardson says that, no sooner is a fur post established than this little animal becomes an inmate of the dwelling houses. In the same way, as soon as a cabin is built on plain or mountain, by ranchman or miner, the white-footed mice move in and—especially at night—make themselves very much at home. Dr. Richardson says: "We observed it as far north as Great Bear Lake; and if the synonyms prefixed to this article are correctly applied, it is not uncommon in the United States. It also extends from Hudson's Bay across the continent to the mouth of the Columbia River. The gait and prying actions of this little creature, when it ventures from its hole in the dusk of the evening, are so much like those of the English domestic mouse, that most of the European residents at Hudson's Bay have considered it to be the same animal, altogether overlooking the obvious differences of their tails and other peculiarities. The American field mouse, however, has a habit of making hoards of grain or little pieces of fat, which, I believe, is unknown of the European domestic mouse; and what is more singular, these hoards are not formed in the animal's retreats, but generally in a shoe left at the bedside, the pocket of a coat, a nightcap, a bag hung against the wall, or some similar place. It not unfrequently happened that we found barley, which had been brought from a distant apartment, and introduced into a drawer, through so small a chink, that it was impossible for the mouse to gain access to its store. The quantity laid up in a single night nearly equalling the bulk of a mouse, renders it probable that several individuals unite their efforts to form it. This mouse does considerable mischief in the gardens, and in a very few nights will almost destroy a plantation of maize, by tracing the rows for the purpose of collecting the seeds, and depositing them in small heaps under the loose mould, generally by the side of a stone, or piece of wood. From the facility with which it seems to transport the substances it preys upon, I suspected that it had cheek pouches, but none were found on examination. The ermine is a most inveterate enemy of this species, and pursues it into the sleeping apartments."

The curious animal known as the sewellel, or mountain beaver, after having been two or three times described with more or less vagueness, was at last fully characterized by Richardson under the name *Aplodontia leporina*. Although quite a large animal—fourteen or fifteen inches long—it is very seldom seen, as it spends all the daylight in its burrow. It bears a fine fur, and robes made of the skins of a number of the animals sewed together were formerly used by the Indians of Washington and British Columbia. Of its habits, Richardson knew little or nothing, and not very much more is known today, although some notes on this species have been furnished by members of the United States Biological Survey. It is now known that there are two or more species of *Aplodontia*, described in recent years by Dr. C. Hart Merriam.

Richardson tells us that the Canada porcupine "is found on the banks of the Mackenzie, as high as latitude 67 degrees, and, according to American writers, it ranges as far south as latitude 37 degrees. It is said to be very rare in Virginia, but to be numerous in some parts of Kentucky. * * * In the fur countries, it is most numerous in sandy districts covered with the *Pinus banksiana*, on the bark of which it delights to feed. It also eats the bark of the larch and spruce firs, and the buds of various kinds of willow. In the more southern districts it is said to feed chiefly on the bark and leaves of the *Pinus canadensis* and *Tilia glabra*, and to be fond of sweet apples and young maize, which it eats in a sitting posture, holding them to its mouth with the forepaws. It travels slowly, and Hearne remarks, that 'the Indians, going with packets from fort to fort, often see them in the trees, but not having occasion for them at the time, leave them until their return, and should their absence be a week or ten days, they are sure to find them within a mile of the place where they had seen them before.' Mr. Hutchins observes that 'in walking, the tail is drawn along the snow, making a deep track, which is often the means of betraying the animal; but its haunts are most readily discovered by the barked trees on which it has fed; which, if done the same winter, is a sure sign that the porcupine is near the spot. They are usually found on the branches, and on approaching them, they make a crying noise, like a child. The tree, being cut down, the animal is dispatched by only striking it on the nose.' It is readily attacked by the Indian dogs, and soon killed, but not without injury to its assailants, for its quills, which it erects when attacked, are rough, with minute teeth directed backward, that have the effect of rendering this seemingly weak and flexible weapon a very dangerous one. Their points, which are pretty sharp, have no sooner insinuated themselves into the skin of an assailant than they gradually bury themselves, and travel onward, until they cause death, by wounding some vital organ. These spines, which are detached from the porcupine by the slightest touch, and probably by the will of the animal, soon fill the mouths of the dogs, which worry it, and unless the Indian women carefully pick them out, seldom fail to kill them. Wolves occasionally die from the same cause. The Canada porcupine makes its retreat among the roots of an old tree, and is said to pass much of its time in sleeping. When disturbed, it makes a whining or mewing noise. It pairs in the latter end of September, and brings forth two young ones in April or May. Its flesh, which tastes like flabby pork, is relished by the Indians, but is soon nauseated by Europeans. The bones are often deeply tinged with a greenish yellow color. Like other animals which feed on coarse vegetable substances, it is much infested by intestinal worms. The quills or spines are dyed

of various bright colors by the native women, and worked into shot pouches, belts, shoes and other ornamental articles of dress."

The Detroit Aquarium.

THE new aquarium of the city of Detroit, now under construction by the Commissioner of Parks and Boulevards, is rapidly nearing completion. The building is a very substantial and attractive one, and the work thus far has been carefully done. When I visited the park, Aug. 8, the workmen were placing the angle-iron fronts of the tanks in position.

The tanks will be a new departure in aquarium construction, composed as they are of enameled steel, with a slightly roughened surface, for attachment of spores of aquatic plants. In a general way the plan of the aquarium includes two grotto-like halls, interrupted at the center by a great pool. The lighting of the halls is slight and can be reduced to nothing. The tanks are well lighted from above, and the light will pass into the water, and thus illuminate the contents of the tanks. The arrangements for heating the building, and for the heating, refrigeration and aeration of the water are of the best modern type.

One section of the aquarium will be devoted to salt-water animals and plants, and the remainder to fresh water. It will be practicable to flow either fresh water or salt water, or both, into each of the tanks. The storage reservoir for salt water is a brick and cement cistern outside of the building. This will be so arranged that a portion of the supply of salt water can be resting while the other portion is in circulation.

The aquarium is a distinct building, but it is connected by a corridor with the horticultural building, which is somewhat larger in size.

Belle Isle Park contains 700 acres, and is an ideal pleasure ground for the citizens of Detroit. It is well timbered, and the presence of many species of birds, adds great interest to the resort. Jus at this time the hickory trees are suffering grievously from the attacks of the black hickory borer, a small beetle which penetrates at the base of the foot stalk of the leaf to deposit its eggs, the process causing a wound so severe that the cluster of leaves soon falls to the ground, carrying with it the burden of useless eggs.

The Detroit Boat Club has just finished a new club house on this island, a beautiful structure, principally of steel and cement, richly finished inside, the whole establishment having been completed during the last nine months, to replace a total loss by fire of the former club house. This is one of the most astonishing feats of construction that has recently come within my knowledge.

Detroit is exceedingly rich in public parks, having about twenty-eight of these pleasure resorts. The old city is a charming one, but it is doubtful if many of its residents appreciate the wonderful advantages conferred upon it by the noble river which sweeps along its front, carrying freights of almost unequalled value.

TARLETON H. BEAN.

Why Do Crows Shun This County?

LLANO, Texas, Aug. 20.—*Editor Forest and Stream:* As every one knows who has hunted in Texas, crows are plentiful. When I came to the town of Llano everybody told me that a crow had never been seen in the county. This I did not believe, so set about to investigate. I have been here now five years, and I have hunted crows as hard as any man could hunt game of any sort. Not that I counted crows game, but I was trying to find out why the crows shunned this county. Not a one have been seen in the county. The Colorado River is the dividing line between Llano and Burnet county, and one of the natives told me the following story, and I have every reason to believe it true. He stated that he had a large melon crop on the west bank of the Colorado River, and the crows would fly as if they intended to cross, but as soon as they reached the middle of the river they would turn and go back.

I would like the man who talks "crow" to explain this. No doubt he has heard some of his Northern crow friends talking of this forbidden land and may also have heard why they shunned it.

I am not writing this as a yarn, but it is a true story, and any one can write to any responsible man in Llano county and he will tell you the same as I have.

You will find crows on the north, east, west and south of us, but not a crow feather in the county.

The deer season will begin on Sept. 1, and all of the boys are cleaning their guns. The dove season is now at its height, and such bombarding as you never heard takes place along the river each afternoon.

J. H. CARTER.

He Had to Take Time at Last.

From the Chicago News.

He was "chilly old business," he used to say,
And early and late he worked;
Each day in the week was his busy day;
He hated a man who shirked.
Dollar to dollar and dime to dime,
But for anything else he had never the time.

He hardly could spare enough time to sleep,
Nor time for his meals by half.
He boasted he never had time to weep,
We knew he'd no time to laugh.
Golf, he maintained, was a cardinal crime—
The very worst method of murdering time.

He wouldn't take time for a friendly chat;
He wouldn't take time to read,
Excepting, of course, in his ledger—that
Was enough to supply his need.
His family knew him but slightly, for he
Had no time at all for society.

A time came at last when he rushed no more
To his office with breathless haste;
He took time at last, though he must have felt sore,
At having the time to waste.
This necessity may make some other men sigh;
He's had to take time to fall sick and die!

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

Elk Tooth Charms.

THE Elks are now in conclave at Salt Lake City. Nothing further would be needed to indicate the lusty and prosperous growth of the order than the successful meeting now being held.

And yet one who stops to think must readily conclude that in the ratio to the prosperity and increase of the Elks must the furred and hoofed inhabitant of the hills decrease, until the time comes when the elk will stand alongside the buffalo in our museums.

That this prophecy will come true no one can doubt, unless something is done to make the wearing of the elk's tooth by the members of the fraternity unpopular.

The hunting of the elk for his tooth's sake becomes an industry per se of a unique nature. The very nature of the quest makes it a comparatively safe one for the law breaker to follow.

To hunt a moose or deer one does so for a purpose, for meat and the trophy of the head and antlers. Following these animals during the closed season becomes, even in a thinly game warden-covered country, a hazardous occupation, the disposition of the bag being somewhat difficult. It may be a matter of safety to the poacher to kill a moose in the depths of the forest, but to get the head out and realize upon it and escape arrest is entirely another proposition. It is the hazard of disposing of one's plunder that keeps the head hunter in check in both closed and open season.

This same fear of detection extends down even to the quail hunter, the vigilance of the game wardens making the industry of market-hunting in some States more than precarious.

But against such barriers the elk tooth hunter is immune. He carries away neither hide, meat nor horns. He does not even go to the trouble of bleeding the freshly slain animal. Meat, hide and horns cut no figure with him, what he is after is teeth, just two eye teeth in the upper jaw, that's all. A blow from a hammer or a pry or two and the coveted tooth is secured, and this done, the noble animal is left to feed the wolves and bears.

An elk's tooth is a small object, much smaller than a set of spreading antlers or a massive head. A pocket in a hunting shirt might carry a score or two, yes a hundred dental trophies, and yet give out no warning sign to the vigilant warden.

And this being so, the tooth hunter can work with comparative immunity. Unless caught red-handed in the act of running down the wounded beast, there is no practical way of detecting him. As a market-hunter he becomes, perhaps, the most dangerous one of the tribe. He can have the "goods on him" and yet escape detection. There really is no way to prevent his working at his nefarious calling except to people the hills and valleys with scores of wardens; of course, impracticable.

A perusal of the hunting publications frequently discloses letters upon the subject of elk slaughter by the tooth hunters, but to what good if the members of the Order of the Elks will continue to demand the elk tooth for a watch charm. Make a demand for an article and the supply will be forthcoming, if the article can be had. There is a demand for elks' teeth. The jeweler who mounts them must fill his orders, and whence comes his supply matters not to him—so long as he gets it.

It is stated that the demand for elks' teeth incites the slaughter of more animals than are secured for their meat and heads. It is agreed that there is no practical way of killing the industry of tooth hunting because of the comparative secrecy with which it can be carried on in the matter of handling the spoils. Yet the principle stands that man will not exert himself and assume risks without the hope of returns for his industry. Remove the market for elks' teeth and the elk-tooth hunters' occupation will be gone. The tooth of the elk will be no more sought after than that of the butchered cow—if no one stands ready to buy it.

That this tooth hunting in and out of season is going on industriously can be readily proven. That it can mean but the speedy extermination of the elk no one will question. That the fashion of wearing an elk's tooth for a watch charm is the impetus behind the hunter cannot be doubted. It is, therefore, up to the Order of the Elks. Our elk will remain or disappear dependent upon the abolition or retention of the fashion of members of the order wearing the elk's tooth as an emblem of membership.

CHARLES CRISTADORO.

CHICAGO AND THE WEST.

Western Game Points.

CHICAGO, Ill., Aug. 22.—I am just in from Minnesota, and they tell me out there that this is going to be a rattling good year for prairie chickens, and that there will be more birds than have been known for fifteen years. The impression is that Minnesota has been better protected than the Dakotas, and that this will be a good place to keep in mind during this season. I would suggest points north of Fergus Falls, and indeed along the railroads north up to Thief River Falls country one is not apt to go very much astray. Mr. L. F. Kennedy, of Minneapolis, tells me that last fall he and his friends shot at Elbow Lake, and had all the sport they cared for at chickens and ducks. The shooting at ducks was on perfectly dry ground, and there was enough of it to satisfy the most exacting of the party. Although I have never shot at Elbow Lake myself, I infer that this would be a good place to remember. All this Minnesota country from Fergus Falls up to Ottertail county, what is known as the park region of Minnesota, was once well known by Chicago shooters. Now again it seems to be flourishing, and as it is naturally a beautiful region, it is sure to commend itself to those who want a Western trip the first of September. I consider upper Minnesota one of the best of our sporting regions at this time. It is also especially to be borne in mind that the quail shooting of lower Minnesota is now as good as it is in almost any of the Western States. A trip to these high and breezy uplands in the early fall is something which would not be regretted by any Eastern sportsman who found opportunity to make it.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Connecticut Rail.

ESSEX, Conn., Aug. 15.—*Editor Forest and Stream:* A friend of mine, who being a farmer, spends much of his time at this season of the year on the meadows "haying it," informs me that rail are unusually plentiful. I do not doubt that his statement is correct, for never, to my knowledge, were the wild oats thicker in the coves, and we sportsmen have always averred that a big crop of oats likewise meant a big crop of rail, and plump ones, too.

Of course, one cannot state positively that there will be more rail than usual this fall simply because the birds reared in this locality are plentiful, for we have to wait till the flight birds arrive before we get the cream of the shooting. Still, with all conditions favorable, it is safe to assume that the sport will be as good if not above the average.

When one considers the number of rail killed here annually, it seems a wonder that there are any left at all, and yet I do not see that they are any less scarce now than they were eight years ago when I did my first shooting. Last year several large bags were made, many of the shooters getting more than once the legal number, fifty birds.

GEORGE W. COMSTOCK.

Calling Moose.

ST. AUGUSTINE, Fla.—*Editor Forest and Stream:* As the smoke of the big-game battle has cleared away, and as one of your correspondents like Oliver, calls for more, your humble servant will put up another question for the other fellows to settle while he sits a-straddle of the fence. These little friendly fights give even greater zest to FOREST AND STREAM for a majority of its readers than a page of trapshooting reports.

There are questions of honor still unsettled; though the world would probably jog on in its old accustomed way if they were never settled by debate—such as luring ducks to their destruction by dishonorable decoys, etc., and although I know what dangerous ground I am treading on, I may mention the luring of a moose to his death while intent on answering the love call of his mate; which any honorable man (I don't mean myself) might look upon as a "low down" trick.

But setting aside all other points, I submit this question—Is it fair and honorable to lure the noble moose to his death by "tricks that are vain?"

I pause for replies.

DIDYMUS.

A Chance to Cut the Chain.

SOME of the most pleasant memories I can recall in my hunting life was when the other fellow did the killing. The work of the dog in trailing over difficult ground in pursuit of either coon or fox, or a piece of good headwork by pointer or setter has many times been sufficient reward for the day's outing. I own four hunting dogs, a pointer, coon dog and fox hound, all broken by myself. The pointer dog will be started Sept. 1. To any sportsman who is a subscriber of FOREST AND STREAM who feels that his duties have too closely drawn him to business, and thinks that a few days among the green hills of Vermont in pursuit of ruffed grouse would do him good, I extend the following invitation: I will furnish gratis, board, lodging, team, dog, and will act as guide for one week commencing Sept. 8. The following conditions must be agreed to: No protest shall be made as to crankiness of guide or dog, and the one rule of field etiquette shall strictly be adhered to, viz.: The gun shall not at any time be pointed at the guide; he is already carrying around a load of No. 6s. It shall be further agreed that at the expiration of his outing he shall put in readable form the result of his trip and forward to FOREST AND STREAM for publication for the benefit of his brother who is "chained" at home.

Write, stating occupation.

B. A. EASTMAN.

BARRE, Vt.

Elk for the Adirondacks.

WILLIAM C. WHITNEY has shipped from Lenox, Mass., twenty elk to the Adirondacks, to be released in the State Reservation. This makes a total of fifty elk shipped from Lenox to the Adirondacks by Mr. Whitney. He has ninety more full-grown elk in the October Mountain preserve, near Lenox.

Interstate Commerce in Birds and Game.

Biological Survey Circular No. 38, United States Department of Agriculture.

U. S. Department of Agriculture, Office of the Secretary, Washington, D. C., Aug. 23, 1902.—In order to secure a more general observance of the Act of May 25, 1900, entitled "An Act to enlarge the powers of the Department of Agriculture, prohibit the transportation by interstate commerce of game killed in violation of local laws, and for other purposes," the Department invites attention to the provisions of the Federal and State laws relating to shipment of birds and game. These laws are intended to preserve for the common good certain animals and birds that are valuable as food, for sport, or as destroyers of pests. They are generally supported by public sentiment, but are frequently violated through ignorance, as comparatively few persons realize the rapid increase in protective legislation or the numerous restrictions which have been imposed on the trade in game. Sportsmen, market hunters, game dealers, commission merchants, railroad and express agents, and all other persons concerned, should familiarize themselves, so far as possible, with the regulations now in force. Copies of State laws may be obtained from fish and game wardens or Secretaries of State and a summary of the Federal, State, and County laws (published as Farmers' Bulletin No. 160) may be had on application to this Department. The most important provisions of the various laws may be briefly stated as follows:

1. Shipment.—It is unlawful for any person to deliver to any common carrier for transportation from one State or Territory to another, or for any common carrier or consignee knowingly to re-

ceive any wild animals or birds killed in violation of local laws. This prohibition applies not only to game killed out of season, but to that captured in an illegal manner (by traps, nets, etc.), or for illegal purposes, as, in some States, for sale or shipment.

2. Packages Must be Marked.—Every package containing game or birds, or any parts thereof, when shipped by interstate commerce, must bear a statement of the contents and the shipper's name plainly marked on the outside. Inattention to these details renders the shipper liable not only to loss of his game, but also to heavy penalties for evasions of the law.

3. Evasions.—Shipping game in trunks, butter boxes, or egg cases; concealing it among other goods; marking it "butter," "dressed poultry," or "household goods"; addressing it with a tag made specially to hide the shipper's name and statement of contents; or resorting to any other device to conceal the nature of the shipment—are all evasions of the law and subject the shipper to the same penalties as for its direct violation. False marking of packages is treated as a serious offense under some State laws, and is punishable by special penalties.

4. Special Restrictions.—Four-fifths of all the States and Territories prohibit export of deer at any season; all those in which quail occur, except three in the South, prohibit export of these birds at all seasons; and practically every State where prairie chickens are found prohibits their export. As a result of these restrictions, it is almost impossible in the West to ship quail or prairie chieckens to market outside of the State without violating some law.

5. Western Game.—All the States and Territories west of the Mississippi River except seven prohibit export of game protected by local laws. Of the seven exceptions, Louisiana and Texas prohibit export of all game except a few birds; Minnesota prohibits export of all birds, while Arkansas, Missouri, Montana and Wyoming either prohibit export of certain species or practically cut off export trade in game by means of other restrictions. Eastern dealers in ordering or receiving such game from these States encourage direct violations of local laws and may render themselves liable to the penalties provided for violating the Federal law.

6. Alaska Game.—Under the Act of June 7, 1902, the shipment from Alaska of any hides or carcasses of deer, moose, mountain sheep, mountain goats, or parts thereof, or any wild birds, or parts thereof, is prohibited at all times. Trophies, specimens for scientific purposes, and live game may, however, be shipped under permit from the Secretary of Agriculture.

7. Game for Propagation.—States which prohibit export of dead game frequently allow shipment of live birds intended solely for propagation, in some cases under permit from State authorities. Persons contemplating shipment of live birds should inform themselves fully as to all local regulations. No permits for the shipment of game from one State to another are issued by this Department.

8. Game for Private Use.—Some States, especially those which issue non-resident hunting licenses, permit sportsmen to carry a limited amount of game out of the State for private use. In some cases this game must be tagged, carried openly, and accompanied by the owner. To insure safe transit of game, careful attention should be paid to such local regulations.

9. Insectivorous Birds.—Robins, swallows, cedar birds, meadow larks, flickers, night hawks or bull bats, and a few other insectivorous species, as well as such birds as longspurs, snow buntings, and shore larks, which are useful in destroying seeds of weeds, are occasionally killed as game. They are, however, generally protected, and under no circumstances should they be sent to market or shipped out of the State.

10. Birds for Millinery Purposes.—Statutes even more stringent than those protecting game birds have recently been enacted by many States for the preservation of birds which are not included in the game list. Under these statutes birds which are in demand for millinery purposes are protected throughout the year, and sale and possession, as well as killing, are prohibited. It should be remembered that the principal centers for millinery supplies are nearly all located in States which have such laws, and the purchase of native song birds, as well as of herons, pelicans, gulls, terns or sea swallows, grebes, or other plume birds, should be avoided. The shipment of these birds or any part of their plumage is prohibited by the provisions of the Federal law. Ostrich feathers are not subject to these restrictions and their use should be encouraged.

JAMES WILSON, Secretary.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

Random Notes of an Angler.

Concerning the Black Sea Bass.

THERE are not many anglers, comparatively, who have had much experience in fishing with rod and reel for the black sea bass. If by chance you happen to mention the fish you are shut off with the hasty reply, "Oh, yes, that's a great fish. I've caught hundreds of them with the hand line off at the Banks, and it is the best chowder fish that swims, far and away ahead of the cod; in fact, it is also an elegant fish to boil—one of the best." And that seems about the extent of information that you can obtain from the ordinary run of fishermen.

Now, although it is a bottom-feeding species and is not generally classed among game fish, it affords a degree of sport that is by no means despicable if you use rod and proper tackle with it. Of course you must use bait, and you will be obliged to sink it down to near the bottom, but there are hundreds of reefs and ledges all along the coast over which there is not too great depth of water to prohibit the use of the rod, and when a school of these fish are found in such desirable locations one can have as exciting sport as he wishes.

The sea bass is a prodigiously strong fish; examine one and note the depth and thickness of the body and you will see that its lines are exceedingly robust; in fact, it is one of the most powerful fish for its size that we have, and when you find that you have hooked a ten-pounder you will acknowledge when you get him in your boat that you conquered him only after a good fight. It is true he does not dart away like a bluefish or squeteague, but he makes fairly good runs, and his strength is such that you will be obliged to humor him somewhat before you attempt to "give him the butt."

His resistance is of a most dogged character, and, hugging the bottom, nose down, he holds out until thoroughly exhausted.

It is a most ravenous biter, and its mouth is so tough and leathery that if the hook is once imbedded in it there is no chance for its springing out, as it often does from the mouth of the tautog.

Meagre Literature on the Sea Bass.

I have examined quite a number of books on fishing and find that the literature relating to this species is rather meager—much more so than the value of the fish ought to call for.

Genio C. Scott, in his "Fishing in American Waters," gives more prominence to the sea bass than others have given. He says in part:

"It is eminently a coast fish, and seldom ventures far above the estuaries, bays and back waters or bayous. The sea bass, porgie and tautog banks along the coast of New Jersey form one of the attractions of Long Branch, and they are a real blessing to the members of the hand-line committee, who realize in them a cheap relaxation from business and the lassitude caused by too constant work in a city during the heat of summer.

"In a commercial point of view the sea bass ranks with the tautog, and next to the cod, being consumed annually to the number of millions. For capture with rod and reel, the common striped bass tackle is used. I have taken hundreds of small ones in a day while angling for sheepshead. They take with equal voracity shrimp, clam and shedder crab. A shoal of a single pair of fish number probably five thousand which attain to the weight of half a pound and over; not more, because ground sharks and other marine carnivora thin their ranks when fingerlings. Their feeding time is during the lull of the waters, between the turn of the tides, when they yield themselves willing victims to the angler's captivating art. They weigh from half a pound to five pounds, and some shoals run from eight to fifteen pounds."

The geographical range of this fish is very wide, it being found more or less abundantly along the entire coast from Cape Cod, Mass., to Florida. It is now rarely found above the Cape, the entire number taken in all the nets, pounds and weirs north of Provincetown having been for the six years, 1895-1900, only 355, while along the shore south of the Cape and in Vineyard Sound and Buzzard's Bay, etc., there were taken in the same years about 252,500, the principal portion being annually captured at Gosnold and Cuttyhunk. What the cause of their stopping in their northern movement is I am unable to say, but Cape Cod, stretching away as it does for many miles, seems to be to them an effectual barrier, Provincetown at the extreme end of the Cape being the point at which they pause; in fact, the proportion which reach even that locality is quite small, the entire catch in the six years I have named having been only 356 fish, and this notwithstanding that the number and extent of the pounds, etc., were as large as were those at almost any other point on the coast.

Tackle.

For sea bass I have found that a rod, line and reel such as I have mentioned in a previous article as being suitable for tautog fishing are heavy enough for these fish. The tautog hook is also the better one for this fishing.

The favorite haunts of the sea bass are reefs which are covered with marine plants and upon which there are beds of mussels and numbers of crustaceans. I have found these reefs scattered about in Buzzard's Bay and in the neighborhood of Martha's Vineyard, to which I readily rowed my boat, where, dropping anchor, I have often obtained very fine sport.

Of course it was just simply bait-fishing, and the bass were not very gamy, but in the absence of a more satisfactory recreation it answered my purpose very well.

Sharks a Great Nuisance.

The monotony of my fishing was occasionally broken by a heavy tug of a large fish at my line, which on my reeling up refused to come. I could feel by the dragging motion that a fish was hooked, but it was too strong for my tackle, and finally I was obliged to pull up the line hand over hand, breaking off the hook, of course, in order to release the line. Sometimes the head and shoulders of a bass came up with my hook, the body having been bitten off by sharks or dogfish; and, more than once, have had these vermin follow my mutilated fish to the surface of the water, and even seize it and carry it down to the bottom again.

It is rather startling to have a big blue maneater come up alongside one's boat and seize his fish, throwing the water around him in its splashing descent. I cannot recall anything more wicked looking than these marauders are; their eyes are perfectly typical of a horrible malevolence, and their mouths with their serried rows of sharp, pointed teeth are as savage looking as any object that I know of.

The brown shark, which also abides in the same localities, is as predatory as are others, but it does not come to the surface in pursuit of prey; at any rate, I have never seen one do so.

Where sharks abound, bottom-feeding fish are preyed upon very heavily, and it is probably owing to their onslaughts that scup (porgies), tautog and sea bass have in many localities become almost extinct. These rapacious fish are much more numerous than is generally known. I have often been out "sharking" in the neighborhood of Nantucket, and our party has taken as high as eight or ten in a few hours' fishing; the brown sand sharks were perhaps more numerous than the blue maneaters, but there was not much difference. I have seen the deck of a good-sized yacht covered with these brutes which we had captured, and among them were specimens eight or ten feet in length.

The black sea bass is not a free swimming species like the striped bass and squeteague, and therefore, like the tautog, it makes its winter home in the deep water not far from its summer haunts. It is, therefore, not migratory in the way that some writers describe, but is rather of a "home body," and does not wander. Like the tautog, it is very susceptible to the cold, and instances are on record of its having been frozen, even in deep water, in very severe weather, and the fish have come ashore in great numbers. The sea bass deposits its spawn in the sea weeds which cover the reefs and banks, and fishermen have accused the parent fish of cannibalism, they devouring their young as soon as they are hatched and until they are large enough to take care of themselves.

This is not impossible, although I have never of my own knowledge proved that they pouch their progeny, and I have examined the stomachs of a great many specimens.

But even if it is true they are no worse in this respect than are many other species. The salmon does not devour its young, simply because it is not feeding while it is in fresh water, in which the young are reared; but I have no doubt that if by any chance a number of parr or smolts were to find their way to the ocean in which the salmon naturally feed, they would be seized and swallowed as quickly as so many smelts would be; they would not be spared on account of relationship.

The trout is one of the worst cannibals among fishes. It will devour its own offspring with as much avidity as it will eat anything else that swims; in fact, it seems to prefer small ones of its own race to any others, and they need not be so very small, either, for we have all seen them with others nearly as large as themselves protruding from their mouths. If they get their prey ended around head foremost they will continue gorging and digesting until the tail of the unfortunate victim disappears from sight.

Many a trout culturist has had cause for loud lamentations when by chance a two-year-old trout found its way into a preserve or rearing pond in which fry or fingerlings were confined.

As for the pickerel, no one doubts its cannibalism, and instances are on record of these gluttonous fish having been found choked in endeavoring to swallow members of their own family which were as large as themselves.

The fresh-water black bass protects its young, and so does the perch and bullhead and sunfish (*Pomotis*), and a number of other species; but the bluefish will eat its own offspring, and so will the striped bass and squeteague.

As for out and out cannibals, I think the common frog is entitled to the medal. I dare say that almost every one who has fished in fresh water has noticed a couple of frogs jumping about, one in pursuit of the other, and uttering now and then a playful yelp, and apparently having a jolly game of "tag" or some other innocent recreation.

Such, however, is not the case, for instead of indulging in sport they are attending strictly to business; the leader in the game does his best to escape from the other, for if he is overtaken he is swallowed at a gulp.

An acquaintance of mine had been out collecting frogs for the purpose of using them in a college lecture in the way of illustrating the circulation of blood, etc. He had caught fourteen, three of which were large bullfrogs, and the others were smaller, some being but wee things.

He had a covered basket in which he brought them from the country where he had caught them to the city, and when he arrived home and put his captives in a wire cage, he found that three were missing. Supposing that they had in some way escaped, he did not pay much attention to the others, but during the evening he missed three more, and when he went to the cage on the following morning to show me his captives, he exclaimed: "They're all gone but five! The big ones have eaten all the others."

So that if the sea bass does devour its progeny it is not the only transgressor that swims. Now, I agree with you perfectly that this fish is not a game fish par excellence, but that it is a bottom feeder only, and it must be taken with bait at still-fishing; but, and this is often an important word, you can obtain a lot of sport in fishing for it which you may at some time be very glad to get.

I can fancy you domiciled at the shore for a few weeks in summer, say at Martha's Vineyard or some other place near which there are reefs and seaweed-covered banks upon which the wild mussels grow, and ennui has marked you for its own. You are in desperate straits for some recreation which will prove more exciting than the "lawn sports" in which you have perchance been participating, and when a friend proposes that you rig up your bait-rod and tackle and go out with him upon the briny deep and fish for sea bass, something you have probably never done before, you embrace him, not exactly à la Gaston and Alphonse, but metaphorically speaking, and away you go as "chipper as a two-year-old."

You discover when you have hooked an eight-pound fish that you have something worth living for, and after a good fight with it, deep in the water—for the sea bass never breaks water until it is ready for the landing net—and it comes into the boat, you will feel like kicking yourself that you have not before had an opportunity for making the acquaintance of such a sturdy and persistent fighter.

The sea bass makes its first appearance at Martha's Vineyard early in May and remains among its favorite haunts until late in the autumn.

All along the New Jersey shore it is quite a favorite species, both with rod and hand line fishermen, and all sorts of crafts are utilized to carry the fishermen out to the "banks," where the bass abound. In the height of the season it is not an uncommon occurrence to see fifty or more yachts or other boats lying at anchor at some favorite locality, and even steamers are run from New York and Philadelphia for the accommodation of those who wish to participate in the recreation of "bassing."

This is a standard market fish in New York and Philadelphia, but is not so commonly sold in Boston, although if its good qualities were better known it would undoubtedly become as great a favorite as it is in other localities.

EDWARD A. SAMUELS.

Rangeley Trout and the Smelts.

BOSTON, Aug. 23.—Mr. Henry W. Clarke, of Boston, a veteran angler in the Rangeley waters, has just returned from a stay of seven weeks at the Mountain View, foot of Rangeley Lake. This was Mr. Clarke's twenty-eighth successive annual trip to those waters, and his opinions naturally carry a good deal of weight on angling subjects. He says that of all the seasons he has ever spent there the past has shown the poorest fishing. His idea is that the poor fishing is largely due to the putting of smelts into the Rangeleys. He says that the smelts are in deep water the most of the season; only going up into the streams to spawn in spring. The trout have found them better eating than the old-time minnows, for which the Rangeleys have always been noted, and like the salmon, they follow the smelts into deep water. Mr. Clarke says that he caught one trout, hardly three pounds' weight, which had in its throat and maw 53 smelt. He adds: "It must have taken my hook out of idle curiosity. There could have been no other reason for its biting." Mr. Clarke regards the stocking of the Rangeleys with smelt as a dangerous experiment at the best. He believes that the trout fishing has been greatly injured thereby. Mr. C. P. Stevens, another veteran angler at the Rangeleys, has the same idea. He says that never has the trout fishing been so poor in the vicinity of his cottage, in the Narrows, Richardson Lake. It is the opinion of other "old timers" at the Rangeleys that the big trout of that region are done for, and it is certain that not half the usual number have been caught the past season, while the catch of salmon has been greater.

Mr. G. S. Wright, of Boston, has returned from a trip to the home of the Inglewood Club. He is pleased with the location and the fishing. Ex-Mayor Cobb, of Newton, family and guests, have been at the clubhouse since July 1. W. J. Follett, one of Boston's most devoted lovers of the angle and the woods, started yesterday for the Inglewood, with Mrs. Follett. His two sons have been there for a month and report much fishing and a good time.

Aug. 25.—The correspondent of the daily press is still anxious to make it appear that fishing is good at the various New England resorts, but he well understands that but little fishing is being done, with summer gaieties the rule. He carefully chronicles all the successes, but never mentions the thousand failures. The season on trout fishing closes in the streams of Grafton, Carroll and Coos counties, N. H., Sept. 1, and the fishermen are improving the last opportunity. But the season remains open on the lakes in that State till Sept. 15. Good bass fishing is being had at Asquam lakes, with some large catches made last week. Dr. Fernald, of Boston, caught a good string of trout last week from the Pemigewasset River, near the famous Starr King View. Ward O. Perkins, of the same city, also caught a rainbow trout from about the same location, that weighed 1½ pounds. Dr. Fernald's largest trout weighed 2 pounds. Herbert M. Worcester, of Dorchester, Mass., caught a fine basket of pickerel Thursday from Ellsworth ponds. Conductor E. B. Lane, of Boston, took a handsome string of trout from the streams of Randolph last week, one weighing 1¾ pounds. Fishing has continued good in all Coos County, the cool, wet weather being favorable. At Haines Landing, Mooselucmaguntic Lake, Maine, they are still taking trout and salmon. One little fellow, Master Randolph Bartlett, son of C. J. Bartlett, of Boston, only a little over eight years of age, has taken several good strings of fish lately. He has succeeded in landing, unaided, a salmon of 3¼ pounds. Miss Anna Norcross, the little daughter of W. J. Norcross, of Brookline, Mass., has landed recently five trout and a salmon, her largest fish weighing 4½ pounds. The big fish fought an hour and a half before successfully landed, one landing net being broken in the attempt. Mrs. A. M. Williams, of Boston, has made a good record there recently, getting a string of 25 fish that weighed from 2 to 4 pounds. Good strings of bass are being taken from the Belgrad lakes and Maranacook and the other Winthrop and Monmouth, Me., ponds. Mr. G. S. Wright, of Boston, speaks in high terms of the pleasures of camp life at the Inglewood Club, New Brunswick. He occupied a log cabin with his wife, son and daughter. They think such a vacation is worth having. They had one or two days of good fishing, although midsummer, with the weather delightfully cool all the time. Inglewood people do not desire all the golf, tennis, ping pong and dress suits that are being brought to other fishing resorts, and hope that such innovations will stay away. SPECIAL.

Fish and Fishing.

Salmo salar in Ontario Waters.

SOME days ago my attention was directed to a newspaper paragraph alleging that a specimen of the true Atlantic salmon had been captured in the St. Lawrence River at Brockville. The matter seemed to me to warrant investigation and I forwarded the paragraph to my friend, Mr. S. T. Bastedo, Deputy Commissioner of Fisheries for the Province of Ontario, who has undertaken to inquire into the facts of the case. Though the alleged capture has not been reported to the Department of Fisheries by its overseers at Brockville, Mr. Bastedo says that he has no doubt that the present paragraph is correct, and that a real salmon was taken last year at Cornwall. It will probably be a surprise to many anglers to learn that any salmon at all remain in Ontario waters, though it is a well-known fact that almost every tributary of the St. Lawrence as far as the head of Lake Ontario contained large quantities of this fish in the early part of the last century. A writer in one of the Ontario reports quoted a well-known authority as stating that its final disappearance from Lake Ontario had occurred subsequent to 1875. He mentioned the fact that the streams and creeks flowing into this lake used to be crowded at spawning time with salmon, and added that their disappearance is unquestionably due to the drying up of these streams consequent on the altered conditions of the land drained by them, to obstacles like mill-dams preventing the ascent of the fish toward the headwaters, and to the pollution of the streams by sawdust and other refuse." It would seem, from the fact that solitary specimens of the fish still ascend to Ontario waters, that there is no reason why the planting of salmon in suitable Ontario tributaries of the St. Lawrence, with a proper system of protection should not prove successful in restocking western streams in which they were formerly so plentiful. At all events, there are many westerly Quebec rivers flowing into the St. Lawrence, such as the St. Charles, the St. Francis, the Ste. Anne, the Portneuf and the St. Maurice, in which the experiment could certainly be made to succeed. It is only because of the careful protection accorded to the fish which frequent its waters, that there are salmon still to be had in the Jacques Cartier River, which is nearly thirty miles west of Quebec.

"The Compleat Angler."

Can anybody tell me how many copies of the first edition of Izaak Walton's "Compleat Angler" are now known to be in existence, and how many of them are in America? I am under the impression that not more than twenty copies, and perhaps not more than fifteen copies of this much prized little volume are known to have been preserved. I have been already told of eight copies which are owned in America, and it is not unlikely that this is even more than are now owned in the land of its origin, for it has long been a cause for regret on the part of English collectors of angling literature that the rarest books upon the sport which they love, find their way to America.

Rapid Growth of Anadromous Fish.

The recent results of certain fish-marking experiments which have been carried on in English waters, furnish interesting illustrations of the rapid growth of those species of the salmonidæ which run down to salt water. A sea trout, which weighed three pounds when it was captured and marked on July 8, 1901, was re-caught in the Deveron in July, 1902, and then weighed six pounds, having thus doubled its avoirdupois in one year. A kelt of 13 pounds, which was labeled in January, 1901, weighed 21 pounds when recaptured in July, 1902, and a salmon of 16 pounds weighed in August, 1901, had attained to 22 pounds when again taken and weighed in July, 1902.

Fish Breeding at Lake St. John.

Within the last few days salmon have been caught in the Lake St. John waters weighing over a pound and a half, and showing that so far the young fish planted there three years ago are doing well. Mr. Marcoux, who has charge of the fish hatchery at Roberval, writes me that he has over five hundred parent ouananiche inclosed in a pond for stripping as soon as their eggs are ripe. He expects to have over a million eggs for hatching this autumn.

Anglers may be interested in learning that the ouananiche in the Grand Discharge are now moving up the stream, and are at present plentiful in the vicinity.

E. T. D. CHAMBERS.

Retriever and Dynamite Stick.

From the New York Times Saturday Review.

SINCE the days when Mark Twain proved to the satisfaction of his friends, if not to his enemies, that he did not steal his story of "The Jumping Frog" from a Hellenic source, there has been nothing more remarkable than the varied interpretations given by Frank Norris, Jack London, and Charles Forrest McLean to what was once, in all probability, an actual occurrence. Somewhere in the mining section of the great West a dog, which had been trained to retrieve, chased a stick of dynamite to which a lighted fuse had been attached and brought it unwelcomed to his master. The expected happened and both master and dog suddenly disappeared.

S. T. Clover, the editor of The Los Angeles Express, with considerable patience and without malice, shows how this episode figures as the principal incident in Frank Norris's "The Passing of Cock-eye Blacklock," published in the July Century; in Jack London's "Moon Face; a Story of a Mortal Antipathy," which appeared in the San Farncisco Argonaut of July 21, and in Charles Forrest McLean's "An Exploded Theory," which appeared in The Black Cat of November, 1901. In spite of the fact that names and localities are changed, as well as the motive improving the thrower of the stick of dynamite, and the extent of mortality following its explosion—still the circumstances attending the tragic death of the three dogs remain conspicuous in each.

As a literary study it seems worth while giving the synopses of the stories as they emanated from the pen of the editor of The Los Angeles Express:

He (Cock-eye Blacklock) was a "short-card" artist, whose business had been shamefully curtailed by the Marshal of Ophir Camp, Placer County, Cal. This puts Cock-eye out of touch with his fellows and he retires to a dilapidated cabin to become a terror of the settlement. But with all his killings and maraudings he is cunning enough to evade the law. One of his devilish delights is to dynamite a favorite trout stream, gather in the dead fish, and sell them "down Sacramento way" to the market. It is determined to catch Cock-eye redhanded; many attempts are made by the Marshal and his posse, but they prove fruitless.

It is a yellow, worthless fool pup named Sloppy Weather that finally brings Cock-eye to grief. Sloppy has been trained to retrieve in the water, and thereby hangs the tale. He goes out chasing jack-rabbits one day and doesn't return to camp, for, as is afterward discovered, he "meets up" with Cock-eye and visits with that outlaw to his everlasting undoing.

It is the day following that the Marshal and his assistants again lay for Cocke-eye. They hear him dynamiting up creek, but cannot catch him in the act. After a while they hear a dog yarp, and soon Sloppy comes in sight of the men lying concealed, followed by Blacklock. The latter looks cautiously around; all is quiet. Taking a stick of dynamite out of his hip pocket, he ties two stones to the stick and "heaves it into the drink." But the rocks slip off and the dynamite floats with the lighted fuse still burning.

Meanwhile the fool pup, unnoticed by Cock-eye, has plunged into the stream at the moment the stick leaves Blacklock's hand. The man sees the dog's head almost within touch of the burning fuse and tries to call him back. Useless, the pup is too well trained. He gets the stick of dynamite in his jaws and turns for shore with the fuse sputtering like hot grease. Blacklock heaves a rock at the brute, yells, capers, dances. Sloppy comes right on. Then Cock-eye lights out, but the dog is after him; he thinks that is part of the game.

No use, Cock-eye cannot evade his fate! The dog catches up, cavorts around, jumps up and down on Cock-eye, having lots of fun. Then all at once "something big happens," and when the watchers look again there is a hole in the side of the cañon. When the smoke clears away they find many fragments of Blacklock, but nor hide nor hair of Sloppy Weather.

Well, that is the story told by Frank Norris, author of "The Octopus" and other stories. Now for the second. In The San Francisco Argonaut of the current week (dated July 21) is a weird yarn by Jack London called "Moon Face; a Story of a Mortal Antipathy." It purports to have been written in San Francisco, July, 1902, and it is so much worse than anything that Jack London has written heretofore that, but for the denouement, one might fancy it was one of his earliest juvenile efforts in the literary line.

There is a morbid person in this story of Mr. London's, who entertains an intense aversion to the irrepressibly good-natured John Claverhouse. The reader cannot doubt this, for John is harassed and plagued by his bête noir until anybody but a glutton would have been satisfied. Not so this revengeful chap; only John's life will appease him, and he proceeds to plan for it.

How? That is the question. Ah, he buys a water spaniel, a young one, teaches it retrieving, and when Bellona is well trained, with devilish intent he presents the dog to John Claverhouse. He knows John is fond of trout fishing, and is cognizant of his private and civic sinful methods of catching fish. A week later John takes his dog, his dip net, and gunnysack and starts off. His Nemesis follows swiftly and stealthily after. From the top of a bluff he sees John arrive at his favorite pool, throw down his dip net and sack and draw from his hip pocket what appears to be a large, fat candle.

Reader, you have guessed it. Yes, it was a stick of dynamite. He attached the fuse by wrapping the "giant" tightly in a piece of cotton. Then he ignited the fuse and tossed the explosive into the pool.

But why continue? Mr. Norris already has told the sequel. Of course Bellona plunges in after it, retrieves the "stick," pays no attention to the yells of Claverhouse, nor the rocks he pelts at the well-trained spaniel. When John realizes his danger and runs, the dog takes after him hot-footed.

"And then, just as she caught up, he in full stride, and she leaping with nose at his knee, there was a sudden flash, a burst of smoke and terrific detonation, and where man and dog had been the instant before there was naught to be seen but a big hole in the ground."

But the queerest phase of these literary coincidences remains to be told. In The Black Cat of November, 1901, appeared a story by Charles Forrest McLean, entitled "An Exploded Theory." This also is credited to the Pacific Coast, Howe's Pool, half a day's ride from Seattle, being the locale of the story.

Same idea as before, or, perhaps, as this one saw light six months in advance of either the Norris or London effort, it is only fair to say—after. "Fishing" party, illegal dynamiting of stream, retriever dog, denouement! But in this instance the water spaniel is the only victim.

Really, this begins to be funny. Listen to the finale: The cartridge has been tossed into the pool and the "fishermen" are awaiting the result. But they suddenly hear another and a louder splash. Of course, it is the dog, faithful to his instincts, intent on retrieving the "stick." As with the others, his master alternately calls, raves, and swears. No use! The dog makes for the shore with the "long-timed" cartridge between his teeth. All the men take to the woods. The spaniel follows his owner, a fat man, who is in a panic of fear. He stumbles over a log just as the loaded spaniel is upon him. He shouts and drops behind the prostrate tree trunk. The next instant the cartridge explodes; the man is safe, but Tips, oh, where is he?

Of course, the only fair explanation of this extraordinary literary verisimilitude is that the fishing incident was told to Frank Norris, Jack London and Charles Forrest McLean about the same time. Each saw in it possible "copy," and clothed it in his own form. It must be confessed that The Century story is by far the most pretentious of the three versions. One can understand that it may have been written by Mr. Norris long before The Black Cat yarn was in manuscript even, for every one knows the length of time it takes for an accepted story to see daylight in the big magazines.

But how about The Argonaut infliction? Granting that Mr. London had overlooked The Black Cat production of last November and had let the July Century pass his eye unnoticed, what has the publisher of this usually carefully edited literary weekly to say of his remissness? He owed a double duty; first to his readers, next to his contributor, for Mr. London has achieved deserved fame as an original, virile writer, and he should have been spared this.

Curious, isn't it?—New York Saturday.

Orange County Bass Waters.

ORANGE COUNTY, N. Y., August.—I am spending the summer up in Orange County and I thought perhaps some information about the fishing in this locality might be of use to you. I have fished in several of the lakes here and with very good success.

One week ago last Sunday with two friends I fished Watton Lake, near Monroe (on the main line of the Erie) and we took six large-mouth bass averaging two pounds each. This lake contains small-mouths, too, but of recent years few of them have been taken. However, you sometimes get a good one. John Proctor, of Greycourt, took one there last week which weighed 5 pounds.

Mon Basha Lake is another lake which is reached from Monroe and it is a famous one for large-mouth bass. Last week two friends of mine from Warwick fished there and took eight bass and two of them weighed 4 pounds each. I can recommend a good guide in the person of Peter Fitzgerald, of Monroe. He is a good, faithful fisherman, will meet one at the station with bait at any time, can keep a party over night, is very reasonable in his charges, and the fellow that employs Pete will come pretty close to getting some fish.

A very humorous and interesting event occurred at Warwick last week. The town reservoir lies on the mountain side and has been stocked with brown trout.

The recent rains so filled this reservoir that some fear was felt that the dam would not stand the strain, and so last Thursday the gate was raised to relieve the pressure, and one Pete Eager surmised that some trout had escaped to the stream below and investigated the matter on Friday with the result that he took twelve trout, three of which weighed 2 pounds each and the others were by no means small. On his return to the village and while exhibiting his catch to an admiring audience, he remarked to one "Gore" Smith, also a follower of old Izaak, that one fish that he hooked but had lost, would put anything in the present collection in the shade. Smith suggested to Eager that they go out together the next morning and try for the big fellow, but Eager, realizing the mistake of his hasty remark and considering that fish his own private property, said he couldn't go, and they decided to postpone the trip until the following Monday. Daylight Saturday morning, however, found Smith on the stream, and he hooked

and after a time landed the famous trout just as Eager appeared on the scene, rod in hand. Mr. Eager's remarks were forcible but scarcely edifying. This fish was a brown trout 24 inches long and weighed 4½ pounds, which I can vouch for, as I saw it that morning before leaving for New York. Another lake is Wickham's or Clark's. It is situated on the Lehigh & Hudson R. R., four miles this side of Warwick. Last Monday afternoon my brother-in-law, F. H. Sheppard, took two large-mouth bass, three of which weighed 4 pounds each. Frog casting is the most successful method of fishing in this lake.

This season so far has been the best one for bass in some years, and as September is my favorite month for this sport, I am anticipating some great fun.

H. C. Kelsey Morford.

CHICAGO AND THE WEST.

Work of Iowa Fish Commission.

Chicago, Ill., Aug. 22.—The U. S. Fish Commission, Department of Iowa, has finished the building of a boat known as the Curlew, which will be devoted to the work of fish propagation and preservation in the State of Iowa. Superintendent R. S. Johnson, of the U. S. hatchery at Manchester, Ia., is much delighted over this addition to his resources. The work of the Iowa Commission is practically on the line struck out years ago by Superintendent Bartlett of the Illinois State Fish Commission, and includes the seining out of the cut-off sloughs and bayous of the thousands of young fish which would otherwise be left to perish from the drying up of the waters. Superintendent Johnson has been practicing this in a somewhat restricted fashion since 1899, the base of his operations being at Bellevue Station. Last year the State Commission took out 100,000 bass, 50,000 croppies and 150,000 mixed fishes, beside about 1,500,000 fish seined out of bayous and restored to the main river (the Mississippi), and not taken to Bellevue Station. The U. S. Commission appropriated $5,000 for the building of the Curlew, which is a stern wheeler 80 feet long, provided with eight tanks, which are capable of carrying about 1,000 fish each.

As to the extent of this reclamation industry, it may be stated that last year Mr. Johnson's crews seined out about one-half million of young sunfish which would have been left to die, and which were restored to the Mississippi. This work of reclamation is particularly useful along the bayous lining the Mississippi, and it can be followed to advantage along the valley of the Father of Waters clear up to the neighborhood of St. Paul and Minneapolis. There is no more valuable form of fish propagation than this, and it is surely of much greater value than the importation and attempted acclimatization of fancy and foreign species of fish. These latter experiments have been most disastrous in the West.

Drowned on the Nepigon.

Erskine Andrews, aged seventeen yars, and son of Marvin A. Andrews, of Chicago, was drowned on a river emptying into Lake Nepigon, near Fort Williams, Canada, this week. His father was in the boat with him at the time of the accident, as were also two guides. The boat was caught in a bit of fast water and overturned. The young man had been on similar trips with his father in previous years, and in this same locality.

Sad News for Chicago Angler.

I was called up by 'phone to-day by Mr. H. C. Hascall, one of the members of the Chicago Fly-Casting Club, who attended the tournament at San Francisco early in this month. Mr. Hascall said that he had news of the death of a brother-in-law of Mr. F. N. Peet, another of the Chicago party. Mr. Peet asked me some time ago about fishing in the Puget Sound country, and I gave him the address of Mr. W. S. Phillips, of Seattle, as a man who would be able to give him some instructions about that country. At last accounts Mr. Peet had left San Francisco for Puget Sound, intending to have a little trout fishing. Numerous telegrams have failed to reach him, and it is to be hoped that he can be found in care of Mr. Phillips at Seattle. Reports of the tournament at San Francisco are given elsewhere.

Fly Dope.

Mr. J. W. Barney, of Southboro, Mass., writes as follows in regard to fly-dope:

"I have been so much interested in your queries about fly-dope that I take the liberty to forward to you by this mail a medicine I have used for years. It is dear old Nessmuk's formula, only I have substituted white vaseline for his castor oil, because I could fill the tubes with the mixture warmed and when it solidified I could close the end better than with a liquid. It is a simple mixture, and I have always found it effective. The base is vaseline, add tar and pennyroyal to suit. I believe in a very pungent odor. I have put it up this way for years because you avoid breakage, and it is handier than a box. I never put it upon the market, but have always labeled it as you see. I wish you would try it."

The tube of mixture sent by Mr. Barney seems to be admirable for the purpose intended. I have found it desirable in the winter time, when the thermometer is about 20 degrees below zero, to occasionally get out my bottle of fly-dope and have a smell at it. This is just as good as going fishing and much cheaper, and I think this last addition to my fly-dope repertoire will prove itself good either in winter or summer. It is a very fetching smell—for humans. I shall try it on the streams later.

Terrapins.

Mr. P. B. Plummer, of Chattanooga, Tenn., wants some information about a certain brand of live stock which he owns and does not fully understand. He writes:

"I have a species of terrapin in my lake that I will try to describe. Its under shell is a bright yellow, top shell black with a slight yellow streak and both look like they were 'blocked out,' as it were. Its claws are about one-quarter inch in length, and the skin on tail, legs and neck a very decided black and yellow stripe. Tail very short and head small. The average weight about four to five pounds. Occasionally I get one red in place of yellow. Can you tell me what it is by this description? The restaurants here claim it is the best to be had in this market, and I can dispose of them very readily when I desire. I will appreciate very much any information you can give me, and would not think of taking up your valuable time did I not know how you feel toward a brother lover of the rod and gun and Forest and Stream.

It would seem that the only things needed by Mr. Plummer in order to enjoy life are a lake full of canvasback ducks and another lake of good Burgundy. These terrapins, as nearly as I can tell from the description, closely resemble those which are, or were, found along the sea marsh of Texas, and market-hunters of that country told me that these Texas terrapins were considered as good as those of the Chesapeake Bay, and brought fine prices. What a real terrapin is doing in this fresh-water country, however, is something which I myself leave to those better posted, and I hope that some reader of Forest and Stream will come forward with the desired information.

San Francisco Fly-Casting Tournament

Mr. H. C. Hascall, of this city, furnishes an interesting story of the memorable meet of the San Francisco Fly-Casting Club, Aug. 8 and 9. The occasion was one of record smashing, in all particulars, and the Chicago attendants are literally delighted with the treatment they received from the big-hearted coast men. Mr. Hascall writes as below:

Totals.

I have just returned from San Francisco, Cal., where I attended the fly-casting tournament given by the San Francisco Fly-Casting Club at Golden Gate Park on Aug. 8 and 9, sharing the honor with Mr. F. N. Peet in representing the Chicago Fly-Casting Club in that affair. The Grand Rapids Consolidated Sportsmen's Club was also represented by Mr. John Waddell and Col. E. Crofton Fox, who unfortunately was called away on business the next day after his arrival. Consequently there were only two clubs represented in the team events.

This undoubtedly was the finest and most extensive fly-casting tournament ever held in the history of the world.

The San Francisco Club is most fortunate in having an ideal spot for this sport. Golden Gate Park as a whole is the most beautiful park I have ever set my eyes on, and Stow Lake, situated in the western edge of this park, could not be exceeded in location for fly-casting.

On the western shore of this lake are two platforms facing east. Looking to the west from these platforms and over a deep valley can be seen, one-quarter of a mile away, the mighty Pacific, from which a steady breeze is ever blowing.

The distance and accuracy fly and the accuracy and delicacy fly are cast from the north platform, the buoys being placed along the shore so that the casting is done across the wind and parallel to the shore. They have, however, a wind break in the shape of a twenty-foot fence, which does its duty as a rule, but which we found at times, and much to our sorrow, slips a cog and allows enough wind to sweep through and around to swing your fly, accurately started, six, eight or ten feet away from its mark. Nevertheless this is a most pleasing arrangement, as the tiers of benches provided along the shore enable the spectators to see the event distinctly at all times.

The south platform from which the long-distance fly and the bait contests are cast, is unprotected from the wind, and right here is where the Eastern contingent had most of their troubles.

We have always maintained that the back cast in the East should be at an angle of 45 degrees, but such a cast there is almost an impossibility, owing to the strength of the wind. We Easteners therefore had to begin anew and learn to make a back cast just as low as possible and yet clear the ground behind, and owing to the limited time we had for practice we did not succeed very well.

The tournament started Friday morning at 10 o'clock with the distance and accuracy fly, followed in the afternoon with the bait contest at 1:30 and the long-distance fly with five-ounce rod about 4 o'clock. Taking everything into consideration the work done in these contests was most remarkable. The bait contest was a very warm affair, and we found at least one Westerner who could take our measure, although the margin was rather small. Mr. Mansfield's cast of 129½ feet with the five-ounce rod, breaking the record of 95 feet made by Mr. R. C. Leonard, of New York, in 1888, was a wonderful exhibition of skill. There were also eleven other contestants who cast over 100 feet in this event.

On Saturday morning the accuracy and delicacy fly was pulled off, and in the afternoon the long-distance fly with heavy rod was started at 1:30, and was not finished until 7 o'clock, and in a heavy fog and drizzle. Here again Mr. Mansfield did himself great credit, breaking his own record of 133 feet with a cast of 134 feet. This cast was made in the team contest, and as their rules provide that feet shall score as points against percentage in the other events, we thought we had little chance to win the team contest, as the Chicago team had only about 4 per cent. the best of it up to this event. However, we made a lucky fluke and pulled the cup out of the fire, and were contented to return home with this trophy alone had we won no other.

I inclose you a memo of the scores and trust you may find space in your paper to publish same.

I found the gentlemen of the San Francisco Fly-Casting Club a most loyal and sportsmanlike body of men with hearts and pocketbooks open to their visitors. The one aim of each and all seemed to be the entertainment of their guests. Nothing was left undone to make our visit an enjoyable one, and none could have done it as well as they. It was with regret that I had to take myself away from these fine fellows at Truckee, Cal., after spending three or four most delightful days fishing that beautiful stream bearing the same name, and I assure you this visit to the Golden Gate will be forever the brightest spot in my memory. The scores:

List of Winners.

Accuracy Fly—J. B. Kenniff; second, F. N. Peet; third, T. W. Brotherton; fourth, H. G. Hascall; fifth, C. Huyck; sixth, W. D. Mansfield; seventh, E. Everett; eighth, E. A. Mocker; ninth, J. Waddell; tenth, H. C. Golcher.

Lure-Casting—C. R. Keniff; second, H. G. Hascall; third, W. T. Church; fourth, F. N. Peet; fifth, P. J. Tormey; sixth, W. D. Mansfield; seventh, J. B. Kenniff; eighth, T. W. Brotherton; ninth, G. C. Edwards; tenth, H. C. Golcher.

Distance Fly (With Light Rod)—W. D. Mansfield; second, H. C. Golcher; third, T. W. Brotherton; fourth, E. Everett; fifth, H. G. Hascall; sixth, F. N. Peet; seventh, J. Waddell; eighth, C. R. Kenniff.

Fly-Casting, Delicacy and Accuracy—W. D. Mansfield; second, F. H. Reed; third, F. N. Peet; fourth, G. C. Edwards; fifth, H. G. Hascall; sixth, H. Battu; seventh, J. B. Kenniff; eighth, T. W. Brotherton; ninth, E. A. Mocker, tied by J. Waddell; tenth, C. G. Young; eleventh, H. F. Muller.

Long-Distance Fly—W. D. Mansfield; second, J. B. Kenniff; third, H. C. Golcher; fourth, F. N. Peet; fifth, T. W. Brotherton; sixth, H. G. Hascall; seventh, C. R. Kenniff; eighth, E. Everett; ninth, W. E. Brooks; tenth, Alex T. Vogelsang.

Bass Biting.

We are having cold weather for August in this part of the country, and the drop in the thermometer seems to have improved the fishing all over lower Minnesota and Wisconsin and Upper Illinois. Mr. Jesse Sherwood of this city starts to-day for Pistakee Bay in the Fox Lake chain, and says that he has reports that the bass are biting there in fine shape. About 100 Chicago anglers left to-day for points in Illinois and Wisconsin, mostly along the Wisconsin Central R. R. The Fox Lake chain, hard hammered as it is, nevertheless appears to be the favorite sporting ground of the Chicago angling contingent.

Going West.

Mr. W. H. Mullins, of Salem, Ohio, maker of the famous, and justly famous, Mullins metal boats, will to-morrow pass through the city on his way to Black Lake, Colorado, where he goes with his family to hunt and fish for a while.

Correction.

Mr. W. B. Mershon writes me as below: "I have just sent a correction to Forest and Stream in regard to a statement in your grayling article of this week. When you said the Manistee is not as good a grayling stream as it is a trout stream, I know you meant just the reverse, and I have so written." Mr. Mershon is quite

right, of course, and I do not understand how the inversion occurred. The Manistee offers the sandy reaches which the grayling specially loves. It certainly ought to be made a grayling preserve by the State of Michigan.

E. Hough.

Hartford Building, Chicago, Ill.

The Carp.

From the Proceedings of the American Fisheries Society for 1901.

Dr. Bartlett: From a practical standpoint I want to say to you that the United States Fish Commission builded a great deal wiser than it knew when it introduced carp in the waters of Illinois. I am here as representative of the United States Fish Commission, and I want to say to you that the waters of Illinois have proven more acceptable to carp than many of the other waters. I want to speak of that of which I know. The work of the Fish Commission depends entirely of course upon the money they have to run their business. It is getting to be practically a matter of dollars and cents, this Fish Commission business, and ought to be in the various States, but that is particularly true in Illinois. There is, perhaps, no one here that has been a stronger advocate in years gone by of protection than myself. I early made up my mind that any law the enforcement of which would kill a fisherman was next to gospel. I have changed my mind as to that considerably and believe now in propagation rather than protection. The last Legislature of Illinois enacted laws which prohibit the taking of black bass, wall-eyed pike, etc., except with hook and line during the whole season. The carp on the other hand have been subject to a little more of the open season and are permitted to be caught more months in the year. I want to say to you briefly, however, and without giving you any reasons for it, because you all know what my reasons are, that the carp have produced in the State of Illinois more money than all other fish put together. That seems like a pretty hard statement to make, but it can be verified, and I want to say to you that there are more carp eaten on the hotel tables in the State of Illinois than any other fish. I have been served with "red snapper" which turned out to be carp. This cry against the carp is a great big humbug—it is an outrage—they are a good fish if you know how to cook them, but not so good if you don't know how. Most of you are men of leisure and like your black bass and whitefish, but what about the one dollar and ten cent a day man? He has got to take carp. Illinois produced three-quarters of a million of dollars in coarse fish last year. It would be as much as your life is worth to take a trip down to the Illinois River and tell the men there that carp is not a good thing. They would take you out and duck you gracefully into the river. More than one-half the towns on the Illinois River depend mostly for their existence on the fish industry, and considerably over two-thirds of the fish taken are carp. They grow anywhere and everywhere; they grow with the black bass, and the black bass are as plentiful as ever. Illinois can furnish one-half the black bass for stock in the United States, and yet there will be no diminution in quantity. We take just as many black bass with the hook and line this year as ever, while the carp are steadily on the increase. I have no patience with the newspaper talk that says that the carp are an enemy of the game fish. I do not believe anybody can prove it. I would like to hear it if it is so.

The carp in this State are accused of eating up all of the water plants—in fact, they have been accused of destroying the duck hunting in the State of Illinois and Indiana; they have been accused of almost every crime that fish can be accused of, but I do not believe any one can prove that the carp has ever been an enemy of the game fish or destroys its young or spawn. That is a pretty bold statement to make, but we have representatives here from all over the country, and I would like to hear what they have got to say on the subject. I hold the position that the United States Government made the most practical plant of any of its plants when it planted carp in the muddy waters of such States as Illinois and Indiana. Twenty-five years of experience with people in the State of Illinois in the fish business has been up-hill work. I took the Commission there when there was not a line on the statute books for the protection of fish, and I have followed it up until now, and previous to the introduction of the carp the muddy waters of Illinois were almost depleted of coarse fish, and to-day it is shipping to the East more and better fish than any other Western State.

Mr. Peabody: I am very glad that Dr. Bartlett, the friend of the carp, has introduced the subject, because we want to get some information in that line. I have run up against a number of very strong statements regarding the injury that carp do the fishing and shooting interests of Wisconsin. Only a day before this meeting began I attended a meeting of the directors of the Diana Shooting Club, and some of the directors stated emphatically that the carp were ruining our shooting, that they were eating up the wild rice and wild celery. One of the gentlemen said that the introduction of carp in Lake Koshkonong had destroyed the fishing of black bass and pike; that they roiled the waters and kept them in that state all the time, and that therefore the black bass and pike were driven out and did not propagate. I was in hopes that Mr. Ravenel would be here, because he has been the one defender of the carp at all these meetings, and I have always relied on him as to the value of the carp. He stated last year that the highest priced fish sold in New York during November and December was carp; that they came in with the turkey and were considered edible and valuable. Now some of the fishculturists here undoubtedly can give information that will be of value to us in this State especially as to just how much injury carp are and do, and if there are any gentlemen here who can answer the question, do they destroy the wild celery and the wild rice on such marshy ponds as are frequented by ducks, to the injury of the duck shooting, and do they roil the water so as to prevent the propagation of such game fish as bass and pike, and do they destroy the spawn, and do they go on the spawning beds of the black bass and destroy them, the information they give us will be very acceptable. Those are questions that I wish might be opened up here and discussed freely, so that those of us who are not thoroughly posted on the subject may become so.

Mr. Townsend: It may be that the carp has been introduced in some places where it was not needed, where other kinds of fish were more important; it might not be advantageous to introduce the carp into the beautiful little lakes of Mr. Peabody's State; but there are many waters in this country teeming with carp, and people are finding out in many places that carp is a food fish. There is a market for carp in the big Eastern cities and carp will sell there. They sometimes sell even for a higher price; generally they sell for a low price and are bought by poor people. There are many foreigners in our Eastern cities that are steady consumers of carp, and take all that come to market. Carp go to market generally in good shape; they can be packed in ice in Illinois and will reach New York alive. If they are properly cooked they are very good fish. Now we have in our waters a pretty good supply of coarse fishes. There is a tendency on the part of Legislatures to cut off the commercial fisheries, to reserve more and more waters for hook and line fishing. This harvest of coarse fishes still remains. If the crop is not harvested it is lost. In the Illinois River they catch over 14,000,000 pounds of fish a year, chiefly carp and buffalo. That affords employment to 1,000 fishermen, who incidentally catch other fishes. It can be shown by statistics in the Fish Commission office that the yield of black bass in this great carp river, the Illinois River, has increased along with the carp. They now catch more bass than ever, and the chances are that the young carp are food for the bass and the more predatory fishes.

The work of the net and seine fishermen in the Illinois River results in the capture of these coarse fishes, carp, buffalo, catfish and dogfish, and the other fishes taken do not count for much. At the same time there are plenty of game fishes for those who want them for sport—such fishing is better than ever. So there are undoubtedly many waters in this country that will support the coarse food fishes and the fine game fishes without the one being an injury to the other. That may also be the case in Lake Erie, where the carp catch is already important and marketable.

The dealers of Sandusky and Port Clinton are shipping all the carp they can get, not only to the Eastern markets, but to St. Louis, Cincinnati and Louisville.

On the Pacific coast the carp is abused just as much as it is elsewhere, and yet the Chinese of California are consuming carp and catfish more than any other kind of fishes.

In New Jersey the carp have taken to living in the slightly brackish water, and most of the catch comes from those waters which lie between the more salty bay waters and the fresh waters. The carp there are in places where they appear to hurt nothing, and they are beginning to find their way to market. If I had a big lake I should not hesitate to stock it with carp, and I should expect it to pay before very long.

Mr. Clark: Mr. Townsend said that he did not think that the fishermen were yet catching many carp in Lake Erie, but last year in Maumee Bay, according to reports, carp were being caught by the ton, and I understand from Mr. J. N. Dewey that they are establishing there a system of keeping the carp when the market is low and putting them on the New York and Philadelphia markets when prices are high, also that they are making ponds along Maumee Bay and they catch the carp and hold them in the ponds until they wish to send them to market.

Mr. Townsend: It should be 3,000,000 pounds for Lake Erie—the figures were put too low.

Mr. Clark: I understand they do not catch so very many carp down in the lake along the islands, but the carp are there. In Detroit River during the last two years but few carp were caught; but it is possible that the carp will remain in great numbers in Lake Erie and will stay in such places as Maumee and Sandusky bays. They have some up about the flats. There is some kicking about the carp.

The President: I can tell you about the Flats. I go up on the boat to the Flats twice a week, and every time I come down on the boat I get a damning from some bass fisher that claims the carp are destroying the bass fishing. But notwithstanding their claims the bass fishing on St. Clair Flats has been better during the last three years than at any time during fifteen years previous, and we have not planted any bass either. I cannot account for it in any other way except that the environments of the carp and black bass are absolutely different. Black bass likes a clean, pure, sandy bottom, and the carp lives on a muddy, weedy bottom. I believe that the carp is a good thing in many waters where black bass thrive. I believe that the bass fishing at the Flats has increased by reason of the food that young carp make for the bass, though he was not planted there. Millions of them are up there and you will see their backs sticking up out of the bullrushes. The only injurious thing that I believe they do is to destroy the food for the perch. Our perch fishing is not what it used to be, and the carp living up among the weeds and rushes cleans out the weeds at the bottom so that there is not as much vegetation there for food for the perch as there otherwise would be; so it is my judgment that the carp has injured our perch fishing but improved our bass fishing.

Mr. Titcomb: We all know that Mr. Bartlett is an authority on the carp; we also have here an authority on the bass. The question which I was going to ask and which Mr. Peabody did ask, was whether carp destroyed the spawn of bass. I say no, but I am not an authority. Now in Buffalo there is a strong fish and game association which obtained permission of the New York Fish Commission to seine the carp out of the river for the alleged reason that they destroyed the spawn of the bass, and when I passed through there they asked me to bring that question up at this meeting. Now, I should like to hear from Mr. Bartlett in answer to those questions which Mr. Peabody fired out so rapidly, he answering them as direct questions and as an authority, and I should like the views of others who have had experience with either the carp or bass, on that question, so that we can have a direct record on our minutes of these questions which have been asked directly and answered directly, in addition to the valuable information which we have been getting through the remarks of Mr. Townsend and yourself.

The President: Do the carp destroy the spawn of black bass?

Dr. Bartlett: You are placing upon my shoulders rather more honor than belongs to me. I am not an authority on the carp further than an intimate association with them during a number of years has given me the privilege of a good deal of observation.

Our Illinois River is really a series of lakes from one end to the other. The river itself is anywhere from seven to fifteen miles wide, and there is a considerable chain of lakes, or low places, on either side of the river, extending the whole length of the river; and making an immense body of sluggish water. Interspersed are a large number of spring lakes. In order that I might know positively what amount of injury had been done by the introduction of the carp in the waters of the Illinois, I took occasion when carp were first brought upon the market and the hue and cry raised as to their destructive qualities, to open and be present while hundreds of carps were opened, to see if I could find in their stomachs anything that would indicate that they took the fry of other fish or spawn of other fish. I can not say that I have never found the spawn of other fish in their stomachs, but when I have found such spawn it has been of such a nature as led me to believe that it was such spawn as floated on the surface of the water, and that the carp took them in, in that sucking motion that he has, going around on the surface of the water.

So far as their eating up the growth in the water and destroying that is concerned, that is to some extent true, but I do not think that it is extensive enough to drive away the black bass from their breeding grounds or in any way interfere with them; and I think, Mr. President, you struck the key note exactly when you spoke of the increase of bass being due very largely to the immense supply of young fish for food. My work on the Illinois River is of a very peculiar nature, and I say this to show you why I gave you the figures that I did. Our work is simply saving these fish out of the overflow. There are thousands of acres of land planted to corn to-day where the land was water a few months ago, and thousands and thousands of acres more will dry up before the season is over. Into those places we go and take out the young fish, and a very careful estimate made after years of investigation, shows that not over fifteen per cent. of fine fish are taken out of those places under natural conditions. That is, go into a place that is not disturbed and eighty-five per cent. of the fish will be the coarser varieties and fifteen per cent. perhaps of the gamey varieties of fish, and not over one per cent. of black bass. When we take into consideration the fact that is so well known of the voracious habits of the black bass, it shows an all-wise provision of nature to supply a very large quantity of coarse fish to feed the other fishes, and I believe as firmly as I am standing here that if the carp had not been introduced in the State of Illinois, the buffalo having become almost extinct in our waters, although it was once the great commercial fish that the bass would have been gradually taken out entirely from the list. As it is now, I want to repeat the statement that we have more black bass than ever, and our carp certainly have increased in a greater ratio than ever before.

Mr. Townsend: The figures prove that you have more black bass than you ever had.

Dr. Bartlett: Yes, sir. In our work for the United States Fish Commission we took this year from Barlow Lake, which would cover perhaps a mile in length and five hundred feet to a quarter of a mile in width, low and shallow, 51,000 black bass for distribution. Now that is in a mud hole, and there is no estimate as to the amount of carp that were removed at the same time and put into the rivers—they have been simply beyond computation.

As I said before, I have worked faithfully for carp all these years. For the first few years, fishermen would take the carp, open them up and dress them for sale the same as buffalo, and I had free access to the stomachs of the carp and failed to find to any considerable extent evidences that the carp has interfered with the spawn of other fishes. That is true at least for the muddy waters of Illinois that abound with plenty of other food for the carp. What might be the result in some of your cold water lakes in Wisconsin I can not say. The carp have a very peculiar value in that it is not necessary to dress them for shipment. The buffalo fish you might ice down as carefully as possible and within a very few hours he becomes soft, and therefore you have to dress the fish before shipment, and I believe about two-fifths is allowed for dressing. But the carp is shipped so to speak, with guts, feathers and all; he is taken right out of the water, covered with ice and frequently shows signs of life after being in a refrigerator car forty-eight to sixty hours, and every pound that is taken from the water by the fisherman is utilized to bring back so much per pound from the market.

It is only justice, however, to state that these carp are used in the East by a class of people who will not eat anything unless it is pretty nearly alive—Russian Jews, Poles, etc.

If there is any direct question that I can answer from personal observation I shall be very glad to do it.

Mr. Peabody: What do you know about the roiling of the water?

Dr. Bartlett: At certain seasons of the year they do make the water very roily. But we are to consider that our black bass are taken from waters that frequently have six or seven inches of mud at the bottom, and so it makes no difference.

Mr. Peabody: You do not think that that is important?

Dr. Bartlett: Yes, sir. There are a great many places in Illinois where the introduction of carp has proved a disadvantage. I know that to be a fact, in small spring lakes, take a lake of four or five acres, something of that kind.

Mr. Peabody: You would not think that a lake of one to three miles in size would be affected at all?

Dr. Bartlett: No, sir. My observation has been that the very best fly-fishing in the United States can be had upon the Illinois River to-day.

Mr. Titcomb: Is it not a base slander upon the bass to intimate that it would allow a carp to touch its spawn?

Dr. Bartlett: I should think so.

Mr. Bower: I think that where bass and carp inhabit

the same water it is natural that the bass should increase. We have been hatching black bass for a number of seasons in ponds where we have an opportunity to observe their spawning operations from the time the male fish begins to prepare the bed until a good many days after the hatching is completed, and we know that the male bass guards the bed against all intruders. He will put up the stiffest kind of a fight against any animal that approaches the bed with a view of preying upon the spawn. There is no danger of a carp ever looting the spawn from a black bass bed. On the other hand I do not think the carp can retaliate against the bass in any way, shape or form. While the bass is preying on the carp, the carp can not come back at them in any way. In other words, in the interchange of hostilities between the two species, the bass gets the better of it at every stage of the proceedings, and I think it is a perfectly natural result that the bass should increase in waters where there is an abundance of carp.

MR. PEABODY: I would like to have Mr. Lydell's opinion on this subject.

MR. LYDELL: I never have known but a single instance where the carp has destroyed the spawn of the black bass, and I never knew of their destroying any other spawn. I have handled and opened what few carp were caught at the Detroit River, Belle Isle, Fisheries, during the last ten years, but never found any spawn in them.

Every one here seems to be friendly toward the carp, but a gentleman a while ago said he did not know how to cook them. I think it would be a good idea for this Society to educate the people how to cook these carp. The only experience I have ever had in cooking carp I got from a German friend of mine at Mill Creek. He was a saloon keeper and had been at me for a number of years to get him some carp. Last spring I procured him two that weighed about four pounds apiece. They were cooked by his wife and I was invited down to dinner. I enjoyed the carp very much and I asked him how he cooked them. He said they were stuffed with sauerkraut and boiled in beer. (Great laughter.)

MR. TOWNSEND: Just another point in this connection that may save discussion: We hear a great deal from sportsmen's clubs and from other sources as to how the carp can be exterminated. It can not be exterminated. It is like the English sparrow, it is here to stay. At a meeting of the American Ornithologists' Union a while ago, one of our foremost ornithologists stated that the European sparrow could not be exterminated in this country. I think it is the same with the carp. It is here to stay, and we can not exterminate it any more than we can exterminate the green grass of the fields. I do not wish to pose as an advocate of the carp—I prefer other fish for myself—but I maintain that the carp has a place in good and regular standing in our big Eastern markets, and I do not think that our great republic with its rapidly increasing population can afford to sneer at even so cheap a source of food.

DR. PARKER: I wish to say just a little bit in regard to this matter. The carp is the most omnivorous of all fishes. He is a hog and will eat everything. He will eat spawn if he gets it, but I do not think he will search it out. I believe, as the President here has said, that the black bass will increase as a result of the presence of the carp, but we will see a depletion of the perch. As I said in my paper, you must go back to the vegetable for the rehabilitation of waters. If you destroy vegetation and the larvæ, you destroy the minnows, and the perch have no minnows to feed on, unless they can eat the young of the carp, which they do not appear to do, but the black bass will eat the young of the carp and will thrive. Therefore you may look for an increase of the black bass, a decrease of the minnows, and also of those fish that feed upon the smaller minnows. I shall look for that in the balance of life that would naturally occur in a stream like the one described. That the carp do make the water roily goes without question. The old German (Hessel) who brought the first carp to this country told me in Washington that a clear carp pond would be an anomaly. They stir up the mud at the bottom of the stream, and live on the larval and vegetable life they find there. I believe then that the black bass will certainly increase with the carp unless the carp gets so numerous as to feed on the bass beds. Of course with a carp weighing twelve or fifteen pounds, an ordinary black bass weighing four or five pounds will not have much show.

MR. CLARK: Yes, he would.

DR. PARKER: He might whack away at him—they are not a very scary fish. I think that the carp has got more brains in his head than any other fish that swims. When I was on the commission over at Glenwood where they had the beds I tried time and again watching the carp that would be feeding on the edge of the pond there, by starting the slash-board, and every one of them would put right for the center of the stream, knowing at once where they were safe. I experimented a good deal with them and they are certainly the most wily fish I ever met.

MR. TITCOMB: I just want to make a statement about the bass, because this talk will be read not only with interest by absent members, but by sportsmen everywhere. The Doctor intimated that a bass would not keep a twelve or fifteen pound carp off from the spawning bed. I want to make the statement, and if I am not correct, I want to be corrected here, that the bass uses his dorsal fin as a weapon of attack and defense, and when a two or three pound bass runs his dorsal fin against a fifteen or twenty pound carp, Mr. Carp will move off, if he is not dead.

GENERAL BRYANT: I wish to make a friend of some of these friends of the carp, and get them to tell me their methods of catching, shipping and cooking him, and I would suggest that a paper be prepared next year upon that subject. The greatest trouble we have in some of our lakes in Wisconsin is that the carp have got in there. I do not know of a fisherman in Wisconsin that would catch one if he could, and I never heard of one being eaten either by anybody in the circle of my acquaintance. They were originally put into the muddy ponds, but in the high water they washed into the streams and have found their way into our lakes and are there by millions. They occupy the shallow sedge and muddy bottomed portions of the lakes, and I have often wished that somebody that knew how would start a method of catching them and shipping them, because I have heard so much said about it, and I always believe what the Illinois people say about the carp, and I do not question their veracity or their judgment at all, but the people in our section of the country are not educated up to the idea of appreciating the gospel according to St. Bartlett (applause and laughter) and other disciples and brethren of that faith. I am not questioning the truth of the gospel, but I am lamenting that it is not spread in our section. Within a radius of five miles of Madison there are billions of carp. Every fisherman sees them, curses them, and refuses to catch them. They seem to thrive there in the clear Wisconsin lake waters. There are many springs in part of these lakes, there are bars where the bass hatch and propagate and little sedgy inlets, indentations, bays, and sloughs, or whatever you may call them, where the sedge grows and vegetation springs up through the water, and there the carp are to be found in vast multitudes. Of course they can not be seined out from that kind of water. Now, what is the best way to catch them under such conditions in large enough quantities to ship? When you get them, what is the best way of cooking them? You tell us they are served in the restaurants in New York as a luxury, how can they be made so? If you can convince our brewers that to boil them in beer is the true way to prepare them, we will certainly have a strong auxiliary right hand to help us. (Applause.)

DR. BARTLETT: While I am a strong advocate of the carp and their increase and value and all of that, yet a note of warning ought to be sounded in every State of the Union as to legislation on the subject of carp, and it should be of such a nature as to keep them down. If the people of the State of Illinois had had their way two years ago, the Illinois River and all the waters of the State would have been so full of carp as to have crowded out all of the other gamier varieties of fish. Carp increase so rapidly that legislation in all States ought to be had to allow them to take these coarse fish. We have thrown open the State of Illinois to the seining of these coarser fish.

To answer my friend's query as to cooking them, permit me to say that a carp taken out of the very muddiest of water, killed and bled as soon as taken out, laid in salt water over night, parboiled and baked with proper sauce, can not be distinguished from the finest red snapper.

DR. PARKER: Another mode of preparation of carp is by smoking and curing them, as is done with halibut and sturgeon. A gentleman who had eaten them said to me he liked them better than halibut, though not quite so well as sturgeon, which he considered the finest smoked fish in the world.

MR. DUNLAP: In the line of General Bryant's suggestion, I would like to move that Dr. Bartlett be requested to prepare a paper on the subject of carp, covering the subject as fully as possible, to be read at the meeting of the Society a year from now, and I would say that the Fish Commission would be very glad to publish that paper in the Bulletin, as we all know there is very little literature on that subject; and I think from what we have heard that Dr. Bartlett is prepared to discuss the subject in all its phases.

(An inquiry was made as to the value of the carp as a game fish, that is as to there being any sport in getting him with hook and line.)

THE PRESIDENT: Yes. If you can get him, it is great sport. But the only way to do it is to take a piece of potato or dough and sink it to the bottom, and when you have got him on your hook there is no fish in the world equal to him for sport.

DR. PARKER: A kernel of corn will do very well for bait.

DR. BARTLETT: A man who has been many years in my employ tells me that the best bait for a carp is a dough ball incorporated with cotton to make it firm, and that a potato fried, but not too crisply, is the next best bait. I have seen three hundred and fifty people fishing at one time for carp with hook and line. These fish make a big fight because you cannot drown them.

MR. TOWNSEND: I brought with me a bundle of statistical sheets of the Mississippi region and the Great Lakes region, and if any members want them, they can have them.

MR. TITCOMB: I wish to suggest some topics for consideration at our next meeting. We get our calls for these meetings a short time beforehand and are busy and do not think just what we want to talk about. Now, on a recent trip I met a friend who joined the Society at this meeting, Mr. Parker, of the Province of Quebec, and we traveled over thirty lakes in a canoe and caught trout in every one of them. One of those lakes was eight miles long and just teeming with trout. There seemed to be an abundance of food and the conditions were just the same as in the other lakes, and yet none of those trout that we caught there would weigh over one-third of a pound, and the average would be about a fourth of a pound. The next lake might give you trout which would average a pound, some of them going as high as four pounds. Passing on to another lake you would get trout the average of which as taken with the fly would be half a pound, and another lake three-quarters. You could pass on to the last lake and pick up trout at every cast in six to ten inches of water with the waves a foot high, so that the fish would jump right out of the water and land on the sand if they did not happen to catch your fly, and the fish would run about three to a pound. Now the question which I have raised and put in the form of a topic is given here this way:

"Given the same kind of water, food, etc., the same environment so far as appears from a superficial examination, why such a great variation in the growth and average size of adult trout in various lakes?"

There is one other question which comes up very often and which I think has never been answered, and I would like to see a paper on it if any one has an opportunity to study into the subject, namely:

"The cause of variation in color of flesh of speckled trout from any given body of water."

Of course the general variation relates to different bodies of water, but frequently you can take fish right out of the same pool, or without moving your boat from a certain spot, which have a distinctly white meat, a light pink meat, and a rich salmon colored flesh. The general answer ordinarily given to that question is "food and environment," but it does not answer the question when you can take these fish with three colors of flesh out of a space ten feet in diameter.

MR. PEABODY: Mr. Lydell is a specialist in bass culture and I have had the question asked me and the statement made boldly that the large-mouthed bass cast their spawn in the weeds and against the weeds, and do not make a bed like the small-mouthed bass; and if that question can be answered authoritatively, I think it would be a source of satisfaction to a great many who are interested in bass culture and in bass fishing.

MR. LYDELL: This last season our big-mouth bass spawned on several different kinds of beds, but in no instance have I known them to spawn without first cleaning away the vegetation and getting to the roots of the weeds. Some of their eggs were found on the weeds adjoining the beds cleaned off. This year they also spawned on prepared gravel beds, and on other artificial beds having various materials on the surface and imbedded in the cement mixture of which the beds were made, such as Spanish moss, cocoanut shreds, sea grass and excelsior.

THE PRESIDENT: But where is the natural spawning bed of the wild big-mouthed bass?

MR. LYDELL: It seems to be on roots of the different weeds that grow in the lakes around the shores. The bass there also spawned on roots and bark that were in the bottom of the pond, and also on lily roots in the pond that is prepared at that station for large-mouthed bass. This pond had been set out to pond lilies, and they cleaned the roots off under the lilies and spawned on them. So I say I think the large-mouthed bass will spawn on most anything, but they prefer the grass roots.

Whitefish on the Fly.

Editor Forest and Stream:

Mr. Chambers' comments on the subject of catching whitefish (*Coregonus albus*) on the fly in FOREST AND STREAM for Aug. 23 indicate that those of us who are fond of the sport have not written enough about it. I never think of going into a whitefish country without having a lot of flies for this particular sort of fishing, and it is no trouble at all to teach a tractable man how the thing is done. The only difficulty is in finding the tractable man. The way to get whitefish is to go out in the morning or evening when the school of back fins is rippling the water in quiet bays, and the fish are "on the feed." Put about six No. 14 flies on the leader; no matter what color or form of fly, so long as the number is 14. Cast the collection among the circling fins, and do not move the cast. Let it sink for a little below the surface if necessary, but keep it still. When the cast is really near the bottom, draw it back gently and make another cast.

I have often had two or three whitefish on at one time, and of an aggregate weight that no trout rod would stand, excepting for the fact that all two or three of the fish usually get off promptly. It is almost impossible for the average angler to resist the temptation to move his cast, and to evolve out of his inner consciousness a kind of whitefish that likes to chase after a fly. I have even found it difficult to persuade a fisherman in my own canoe to do the thing right, even when the fish were after my flies like ducks after a panful of corn. I bought a lot of No. 14 flies yesterday, and at about the time that this is being read there will be some fat whitefish sizzling over the camp fire.

Mr. Hough kindly gave me the names of some guides in the muskellunge country in Wisconsin, and when I wrote to them they asked me to come right on, and said that they had comfortable houses, good roads, and telephones. I shied at that worse than a colt at sight of an automobile, and planned a trip from northern Minnesota into Manitoba, and out at Rat Portage, where I can get wet and cold and hungry, and not hear anything like a telephone nearer than the howl of a wolf at night.

ROBERT T. MORRIS.

NEW YORK, Aug. 21.

The Grayling of the Manistee.

SAGINAW, Mich., Aug. 22.—*Editor Forest and Stream:* In Mr. Hough's article in your issue of Aug. 23, headed "Successful Grayling Trip in Michigan," he is made to say as follows in speaking of the Manistee River: "This stream is not so much a grayling stream as a trout stream." I am sure my friend Hough did not mean to say this, and what he did intend to say, and what he knows as well as I do, is that the upper portion of the Manistee is not a natural trout stream, but is good grayling water. It never will be a good trout stream, but grayling can be kept in it indefinitely, with proper protection. Nearly all of the Southern Peninsula streams were originally grayling streams, and the trout are artificial. Many of the streams, however, were just as good for trout as for grayling as far as the nature has gone in building the stream. But it is different with the Manistee River, the upper portion of it, at least. It lacks those deep, dark holes that trout love so well, and abounds in sunny shallows with a shifting sand bottom that old-time grayling anglers know so well.

It is to be hoped that public sentiment will be sufficiently strong to get the Michigan Legislature to get out of its narrow rut of indifference and really improve the opportunity to do a decent thing for once; that is, protect Michigan grayling in the Manistee River in a practical, scientific and thorough manner.

W. B. MERSHON.

Camps of the Kingfishers.

CAMP HICKMAN, Glen Lake, Leelanau County, Mich., Aug. 19.—*Editor Forest and Stream:* We had a very pleasant camp at this place last summer, and hoped to repeat it this season, but a shadow, deep and dreary, has settled over us, for Old Hickory, my long-time companion in many delightful outings, was taken seriously ill last Saturday, and left us this morning with Dr. Wiseman in charge, for his home in Cincinnati. We all hope for the best, but the head of the old Kingfisher is whitened with the snows of many winters, and it may well be that this shall prove the last "camp of the Kingfishers." Sorrowfully,

KELPIE.

The Trouser-Leg System.

ORIENT, La., August.—I have been reading FOREST AND STREAM for some time, and reading it with pleasure as well as profit in a great many ways.

I have a little incident to relate that differs from anything that I have noticed in your columns.

The fishing in this neighborhood is not very good, the streams being all small, and there are no lakes at all. However, as in most places, there are a few that will angle if they have to use the proverbial "mother's pail." Such an one is Santford Haxton, a veteran of the Civil War and a veteran angler as well. A short time ago he invited me to accompany him to Grand River. We got an early start, and were soon enjoying ourselves along the river banks. As the water was very muddy we had no success fishing in the stream, so as a last resort tried a bayou that looked invitingly full of fish. The water was shallow at the edge, and we could not reach the deep water from the bank, so Santford removed his shoes and waded out. It was not long until he was "slinging" catfish out on to the bank as fast as he could manipulate the "pole." On entering the water he had rolled up his trousers' leg, but in the excitement that followed they had rolled down to their regulation position. Soon after he shouted excitedly to me that he "had a catfish up his pants' leg." He grasped the trousers at the ankle to retain the fish and hobbled out on the bank and deposited the fish in the pail. This was repeated during the afternoon until he had added nine fish to his count, two being taken at one haul.

We think this scheme well worthy of the attention of readers of FOREST AND STREAM, and hope that they will all profit hereby.

Have you been fortunate enough to have experienced this system of trapping fish? If so, we would like to hear from you. WALT. W. SLOCUM.

Delaware River Fishing.

"You should have postponed your trip three weeks," said a friend of mine a few days ago in telling me what the anglers had been doing along the Delaware last week. It seems that at last clear skies have taken the place of the sodden clouds of July and early August, the river has been clear, and the bass have grown hungry again. And when this occurs they will take almost any sort of bait, especially grasshoppers. Otherwise they are somewhat particular in their feeding hours, and prefer lampreys and small bullheads, the latter three to four inches in length.

There may be better lures at other times and places on this stream, but during our party's recent three weeks' trip down the Delaware, No. 2 Skinner spinners and either live minnows or grasshoppers of goodly size seemed the best lures, although live frogs were at times taken in the rifts, and crickets sometimes on the few bright days we enjoyed. The advice of the natives was misleading in nearly every instance, and we caught nice bass in pools said to be good for eels and catfish only. I learned as late as Aug. 22 that the river was quite low again and clear. The fishing is good. PERRY D. FRAZER.

Fish Flour in Norway.

UNDER date of July 25, 1902, Consul V. E. Nelson writes from Bergen: "A great deal is done in Norway to improve and preserve the provisions produced in the country and to procure a market for them abroad. The fisheries represent one of Norway's chief industries, and quantities of fish are sold at very low rates, particularly during summer. One way in which these are utilized is by means of an invention which quickly dries and pulverizes the flesh of fresh fish. The resulting product called fish flour, is easy to transport from one place to another and has great nutritive value. A new and profitable branch of industry might be established in America by utilizing fish in this way."

Bass at Belgrade Lakes.

BELGRADE LAKES, Me., Aug. 24.—Bass fishing is at its zenith at Belgrade Lakes, and the big beauties, for which these waters are famed, are brought in every day and duly displayed on enormous platters on the office desk. Everybody fishes here, man, woman and child, and strange to say, the women are not a whit behind hand in landing big fish. Most skillful and fortunate among the ladies this year has been Mrs. Liskà Bürger, of New York, whose four-pounders have again and again ornamented the stand—for great is the sportsman's spirit at this place, that one and two pounders are simply thrown back again into the waters.

A Cathance Lake Salmon.

SPORTSMAN'S HOME, Cathance Lake, Cooper, Me., Aug. 11.—*Editor Forest and Stream:* On Aug. 8 in Cathance Lake we landed a landlocked salmon weighing 5¾ pounds. It took fifty minutes to land him. Our catch beside consisted of one trout, 3½ pounds; one, 2¾ pounds, and one 1 pounds. The woods are full of deer and moose, and you can see them any morning or evening feeding near the lake.

R. A. ROACH,
WM. LEYBURN.

Adirondack Lake Trout.

BLUE MOUNTAIN LAKE, N. Y., Aug. 23.—Mr. C. H. Downs, with his assistant, Byron Delano, captured a lake trout weighing 8½ pounds on the 21st. They were trolling in deep water.

Good catches of bass and of brook trout are still made. The hotels are full and obliged to refuse more guests. Rifle practice for the hunting season has begun.

Fixtures.

BENCH SHOWS.

Sept. 8-11.—Toronto, Can.—Twelfth annual show of the Toronto Industrial Exposition. Fred Jacobi, Sec'y.

Oct. 7-9.—Danbury, Conn.—Danbury Agricultural Society's show. John W. Bacon, Treas.

Oct. 21-24.—Frederick, Md.—Frederick County Agricultural Society's annual bench show. J. Roger McSherry, Supt.

Oct. 21-24.—New York.—Ladies' Kennel Association of America's show. Miss M. K. Bird, Westbury, L. I., Hon. Sec'y.

Nov. 26-29.—Philadelphia.—Philadelphia Dog Show Association's show. M. A. Viti, Sec'y.

FIELD TRIALS.

Sept. 2.—Inaugural trials of the Minnesota-North Dakota Field Trial Association. Dr. W. A. Moore, Sec'y, St. Paul, Minn.

Sept. 4.—Carman, Man.—Sixteenth annual trials of the Manitoba Field Trials Club. Eric Hamber, Sec'y, Winnipeg.

Sept. 11.——, Man.—Fifth annual trials of the Brandon Kennel Club. Dr. H. James Elliott, Sec'y, Brandon, Man.

Sept. 11.—O'Neill, Neb.—Nebraska Field Trial Association's inaugural chicken trials. M. H. McCarthy, Sec'y.

Oct. —.—Drakes Branch, Va.—Inaugural trials of the Virginia Field Trial Association. C. B. Cooke, Sec'y.

Oct. —.—Independence, Ia.—Eastern Iowa Field Trial Association's inaugural trials. J. G. Burk, Sec'y.

Oct. 20.——, ——.—Western Field Trial Association's second annual trials. C. W. Buttles, Sec'y, Kansas City.

Oct. 27.—Paris, Mo.—Missouri Field Trial Association's (member of the American Championship Club), sixth annual trials. L. S. Eddins, Sec'y, Sedalia, Mo.

Oct. 27.—Washington C. O., Ohio.—Monongahela Field Trial Club's field trials. A. C. Peterson, Sec'y.

Oct. 28.—Whitby Island, Wash.—Pacific Northwest Field Trials F. R. Atkins, Sec'y, Seattle, Wash.

Nov. 3.—Robinson, Ill.—Illinois Field Trial Association's (member of the American Championship Club) fourth annual trials. W. R. Green, Sec'y, Marshall, Ill.

Nov. 3.—Thirteenth annual field trials of the National Beagle Club of America. Charles R. Stevenson, Sec'y, 106 Market street, Camden, N. J.

Nov. 3.—Lake View, Mich.—Michigan Field Trial Association's (member of the American Championship Club) fifth annual trials. C. D. Stuart, Sec'y, Benton Harbor, Mich.

Nov. 4.—Washington C. H., Ohio.—Ohio Field Trial Association's (member of the American Championship Club) fifth annual trials. C. E. Baughn, Sec'y.

Nov. 7-8.—Robinson, Ill.—Western Irish Setter Club's inaugural trials. T. L. Fenn, Secy.

Nov. 17.—Glasgow, Ky.—Third annual trials of the Kentucky Field Trial Club. S. B. Hays, Sec'y.

Nov. 10.—Bicknell, Ind.—Independent Field Trial Club's (member of the American Championship Club) fourth annual trials. H. S. Humphrey, Sec'y, Indianapolis, Ind.

Nov. 11.—Hampton, Conn.—Connecticut Field Trial Club's trials. F. W. Smith, Sec'y, New Haven.

Nov. 10.—Ruthven, Ont.—North American Field Trial Association's (member of the American Championship Club) fourth annual trials. Richard Bangham, Sec'y, Windsor, Ont.

Nov. 11.—St. Joachim, Ont.—International Field Trial Club's fourteenth annual trials. W. B. Wells, Hon. Sec'y.

Nov. 17.—Glascow, Ky.—Kentucky Field Trial Club's (member of the American Championship Club) third annual trials. F. W. Samuel, Sec'y, Louisville, Ky

Nov. 18.—Ruthven, Ont.—Fourth annual trials of the North American Field Trial Club. Alfred Wigle, Sec'y, Windsor, Ont.

Nov. 20.—Manor, L. I.—Pointer Club of America's (member of the American Championship Club) second annual trials. R. E. Westlake, Sec'y, Scranton, Pa.

Dec. 1.—Washington C. H., Ohio.—American Championship Field Trial Club's second annual trials. Chas. B. Cooke, Sec'y, Richmond, Va.

Dec. 1.——, ——.—Interstate Championship Field Trial Association's second annual trials. C. D. Cooke, Sec'y.

Dec. 15.—Huntsville, Ala.—Alabama Field Trial Club's (member of the American Championship Club) third annual trials. John F. Fletcher, Sec'y, Birmingham, Ala.

National Beagle Club.

CAMDEN, N. J., Aug. 21.—The National Beagle Club of America desires to state for the benefit of those who may own beagles and who may not be familiar with beagle field trials, that the thirteenth annual trials of the club, which will commence on November 3, 1902, will be open to all owners of beagles, which are registered in the American Kennel Club Stud Book, whether they are members of the club or not.

Also, if any person will send his name and address to James W. Appleton, chairman of the field trial committee, 21 Maiden Lane, New York city, entry blanks and a premium list will be forwarded by mail as soon as prepared.

And also, if any person desires any information relative to the trials, and will communicate with the secretary, such information will be gladly furnished.

CHAS. R. STEVENSON, Secretary.

Philadelphia Dog Show.

PHILADELPHIA.—I take pleasure in announcing that the fourth annual International Show of the Philadelphia Dog Show Association will be held upon Nov 26, 27, 28, 29, 1902, at Horticultural Hall, as heretofore.

Specialist clubs and individuals who intend offering special prizes will confer a favor by communicating with the undersigned at an early date, so that they all may be properly announced in the schedule of prizes.

MARCEL A. VITI,
Honorary Secretary,
Philadelphia Dog Show Association.

National Foxhunters' Association.

LEXINGTON, Ky., Aug. 20.—At a meeting of the directors of the National Foxhunter's Association held in this city Aug. 17, it was decided to hold the next meeting at Bedford City, Va., Nov. 17.

All conditions are favorable and it promises to be the most successful meeting in our history.

ROGER D. WILLIAMS,
Secretary-Treasurer.

Spratts Patent (America), Limited, 450-456 Market street, Newark, have been officially notified that they have been chosen to feed the Wakefield-Reading Dog Show, to be held Sept. 23-26. Mrs. E. H. Seagrave is the secretary, and from her premium lists and all information concerning the show may be obtained.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., New York, and not to any individual connected with the paper.

Yachting.

Yachting Fixtures, 1902.

Secretaries and members of race committees will confer a favor by sending notice of errors or omissions in the following list and also changes which may be made in the future.

AUGUST.

28-30. Cape Cod, M. Y. R. A., open, Provincetown, Mass. Bay.
30. Winthrop, club, Winthrop, Boston Harbor.
30. Beverly, sixth Corinthian, Monument Beach, Buzzard's Bay.
30. Columbia, race to Waukegan, Lake Michigan.
30. Manhasset Bay, club, Port Washington, Long Island Sound
30. Larchmont, club, Larchmont, Long Island Sound.
30. Atlantic, club, Fire Island and return, New York Bay.
30. Hull-Massachusetts, club, Hull, Boston Harbor
30. Indian Harbor, Y. R. A. of L. I. S., open, Greenwich, Long Island Sound.
30. Royal Canadian, dinghy and 25ft. classes, Toronto.
30. Kennebec, club, Bath, Maine.
30. Hartford, Y. R. A. of L. I. S., open, Saybrook, L. I. Sound.
30-31. Corinthian, annual cruise, Marblehead, Massachusetts Bay.

SEPTEMBER.

1. Indian Harbor, club, Greenwich, L. I. Sound.
1. Quincy, club, Quincy Bay, Boston Harbor.
1. Corinthian, club, Essington, Delaware River.
1. Corinthian, annual cruise, Marblehead, Massachusetts Bay.
1. Larchmont, fall regatta, Larchmont, Long Island Sound.
1. Sachem's Head, Y. R. A. of L. I. S., open, Guilford, L. I. Sound.
1. Norwalk, Y. R. A. of L. I. S., open, So. Norwalk, L. I. Sound.
1. Lynn, M. Y. R. A., open, Nahant, Massachusetts Bay.
1. Beverly, open, Monument Beach, Buzzard's Bay.
1. Royal Canadian, first class, Lorne cup cruising race, Toronto.
1 Shelter Island, club race, Loehrke cup, Shelter Island Heights.
2. Penataquit-Corinthian, fall regatta, Bay Shore.
4-6. Seawanhaka Corinthian, Y. R. A. of L. I. S., open, Oyster Bay, Long Island Sound.
5-6. Eastern, open, Marblehead, Massachusetts Bay.
6. Corinthian, club championship, Marblehead, Massachusetts Bay.
6. Boston, club, City Point, Boston Harbor.
6. Hull-Massachusetts, club, Hull, Boston Harbor.
6. Beverly, open, Mattapoisett, Buzzard's Bay.
6. Wollaston, club, Quincy Bay, Boston Harbor.
6. Quincy, M. Y. R. A., open, Quincy, Boston Harbor.
6. South Boston, sailing tender race, City Point, Boston Harbor.
6. New York C. C., Y. R. A. of Gravesend Bay, Sea Gate, New York Bay.
6. Penataquit-Corinthian, Lighthouse cup, Bay shore.
8. Eastern, open, Marblehead, Massachusetts Bay.
11. New York, autumn regatta, New York, Lower Bay.
13. Knickerbocker, ladies' day race, College Point, L. I. Sound.
13. Kennebec, club, Bath, Maine.
13. Beverly, seventh Corinthian, Monument Beach, Buzzard's Bay.
13 Atlantic, fall regatta, Sea Gate, New York Bay.
13. Larchmont, club, Larchmont, Long Island Sound.
20. Manhasset, Y. R. A. of L. I. S., open, Port Washington, Long Island Sound.
20. Y. R. A. of Gravesend Bay, Sea Gate, New York Bay.
—. Seawanhaka Corinthian, club, Oyster Bay, Long Island Sound.
27. Riverside, Y. R. A. of L. I. S., open, Riverside, L. I. Sound.
27. Manhasset Bay, club raceabouts, Port Washington, L. I. Sound.

For Cruising Yachtsmen.

WITH the purpose of stimulating the interest in cruising, and the keeping of a detailed log by cruising yachtsmen during the season of 1902, the publishers of FOREST AND STREAM offer prizes for the best stories of cruises submitted to be published in FOREST AND STREAM. It is believed that these will form not only entertaining records of pleasant summer days spent afloat along our coasts and waterways, but will furnish information of practical value to other yachtsmen making subsequent cruises on the same waters.

Prizes will be awarded to the three best stories as follows:

First prize, $50.00.
Second prize, $30.00.
Third prize, $20.00.

Contributions are invited under the following conditions:

1. The cruise must be made in waters of the United States or Canada in the season of 1902.

2. The cruise must be made in a sailing yacht, power to be used only as an auxiliary, if at all.

3. The story must be prefaced by a description of the boat. Cruises should be treated in as interesting and readable a way as possible, but should be practical and contain all possible information and data that would be of value to men going over the same route. A description of the handling of the ship in all weathers will be regarded very favorably in making awards, and it is suggested to writers that an accurate account be kept of all incidents happening while under way.

4. An outline chart suitable for reproduction, showing the course taken, must accompany each article. When possible, articles should be accompanied by amateur photographs taken on the cruise, including one of the boat. Good photographs will be considered in making the awards.

5. The story should contain about seven thousand words, written on one side of the paper only, and must be received at the office of the Forest and Stream Publishing Company, 346 Broadway, New York city, on or before Nov. 15, 1902.

Mr. T. C. Zerega has very kindly consented to act as judge and to make the awards.

Winthrop Y. C.

WINTHROP, MASS.

Saturday, Aug. 23.

A club handicap race of the Winthrop Y. C. was sailed Saturday, Aug. 23, in a fresh northeast breeze. Five classes filled and the racing was good. The summary:

25ft. Class.

	Elapsed.	Corrected.
L'Aiglon, E. H. Hodgdon	1 32 30	1 32 30
Ariel, J. R. Hodder	1 35 50	1 32 50

Bubble, J. N. Leonard	1 18 25	1 17 25

Tarratine Y. C.

ISLESBORO, ME.

THE preliminary round of a tournament race for Dr. Daniel's cup was sailed in a heavy northwest gale on Wednesday, Aug. 13. Daydream II. drew Opitsah; Peterkin drew Persimmon; Pirate drew Idol, and Raider drew a bye. The course was two and one-half miles to windward and return, to be sailed over twice, but owing to the severe conditions, the course was only sailed once.

Opitsah—Daydream Match.

Daydream and Opitsah crossed the line at 3 P. M., Opitsah being slightly in the lead and to windward. Both boats had single reefs in their mainsails, but Opitsah carried her large jib, whereas Daydream carried her stormer. At first Opitsah appeared to be doing the better work. She pocketed Daydream and broke her wind badly. Daydream held too high, and did not foot with her rival. Later she was allowed to take a good full, and she showed a noticeable improvement, eating to weather of Opitsah and footing fully as fast. The wind was heavy and treacherous, coming down in vicious puffs from the Camden Mountains and knocking the boats over dangerously.

Just as Daydream was beginning to horse up on Opitsah a squall struck her and carried away her mast. This, of course, put her out of the race. Opitsah immediately hove to and put another reef in her mainsail. She rounded the windward mark at 4:09:55 and ran over the finish line at 4:28:15. The summary:

	Start.	Finish.	Elapsed.
Opitsah, R. H. Daniels	3 00 00	4 28 15	1 28 15
Daydream II., J. W. Minturn	3 00 00	Withdrew.	

Persimmon—Peterkin Match

Peterkin and Persimmon took their preliminary gun from the first pair's starter, and crossed the line, with Peterkin slightly to windward. She did not have the headway of Persimmon, and soon was forereached and passed. Persimmon was eating to windward fast and footing with Peterkin, who seemed to be slowed by the heavy chop. Persimmon gave her a bad beating to the windward mark, which she rounded at 3:56:35, followed by Peterkin at 4:00:10. Persimmon set her spinnaker to starboard and set a pace on the run which was hard to beat. Peterkin set her spinnaker on the wrong side and lost considerably. Persimmon crossed the line at 4:19:38, Peterkin at 4:24:39. The summary:

	Start.	Finish.	Elapsed.
Persimmon, E. Dodge	3 05 00	4 19 38	1 14 38
Peterkin, T. Kissel	3 05 00	4 24 39	1 19 39

Idol—Pirate Match.

Pirate got the start of Idol in the last pair, and was slightly to windward. Idol forereached her, however, and soon established a lead. Both boats were reefed down to the least amount of sail they could carry, and both were making poor weather of it. Idol forced Pirate twice and got her into a bad pocket. The wind freshened, however, and Pirate commenced to pick up considerably. She pointed higher than Idol, and soon put her in a pocket. Pirate rounded the windward mark at 4:01:15, Idol at 4:02:20.

On the run in Pirate unfortunately lost her spinnaker aloft and had difficulty in regaining it. Idol passed her about half way down, but not until then did Pirate regain her spinnaker. Idol crossed the finish line at 4:28:25, followed by Pirate at 4:28:40. The summary:

	Start.	Finish.	Elapsed.
Idol, F. Lyman	3 10 00	4 28 25	1 18 25
Pirate, P. Metcalf	3 10 00	4 28 40	1 18 40

Thursday, Aug. 14.

The semi-finals of the tournament race were sailed on Thursday, Aug. 14, at 2:35 P. M. The course was triangular, three miles to a leg, the first leg being to windward, the next a quartering run, and the third a broad reach. A fresh breeze blew from the northwest that gave promise of a fast race.

Opitsah—Persimmon Match.

Opitsah and Persimmon crossed the line at 2:35 in the order named. Persimmon soon began to work to windward, and about half way through the beat got the lead. Opitsah pushed her hard, and as they got into smooth water gained perceptibly. Persimmon, however, rounded the windward mark at 3:23:00, twenty seconds ahead of Opitsah, who rounded at 3:23:20.

Opitsah blanketed Persimmon on the run and managed to pass her. Both boats were sailing remarkably even, an dit was a toss up to tell who would win. Opitsah sailed well and rounded the second mark at 3:59:00, followed by Persimmon at 3:59:30. The reach home was a long luffing match. Persimmon gained, but could not pass her rival, who crossed the finish line at 4:29:00, thirty-five seconds in the lead. The summary:

	Start.	Finish.	Elapsed.
Opitsah, R. H. Daniels	2 35 00	4 29 00	1 54 00
Persimmon, E. Dodge	2 35 00	4 29 35	1 54 35

Idol—Raider Match.

At 2:40 Raider crossed the line to windward, but a little bit behind Idol. Seeing she was being backwinded, she tacked to port with Idol on top of her. Raider did good windward work, and not only forereached Idol, but worked to windward of her. Idol's wind was badly broken, and she lost steadily to Raider, who rounded the windward mark at 3:32:35, followed by Idol at 3:34:45.

Idol gained much on Raider on the run, partly owing to the fact that she luffed far to windward and came along with a better wind. Raider rounded the second mark at 4:06:00, Idol at 4:07:00.

The reach home was a Waterloo for Raider. Idol came along like a race horse and half way through the leg passed Raider and won in a walk. She crossed the line at 4:31:20, two minutes and ten seconds ahead. The summary:

	Start.	Finish.	Elapsed.
Idol, F. Lyman	2 40 00	4 31 20	1 51 20
Raider, R. Derby	2 40 00	4 33 30	1 53 30

Friday, Aug. 15.

The final heat of the tournament race was sailed between Idol and Opitsah on Aug. 15, at 2:50 P. M. A five-mile to windward and return course was logged out, and a strong southerly breeze was blowing up the bay. Idol thought it wise to put in a small reef, but Opitsah carried whole sail.

Opitsah crossed the line in the lead on the starboard tack, closely followed by Idol, who did not point as high, but certainly footed faster. Both held along very evenly, though it was hard to tell which was getting to windward fastest. When they tacked to port, Opitsah seemed to have gained, but both boats were close together. At 3:21:30 Opitsah tacked back to starboard, followed by Idol. Idol had gained considerably, as she shook out her reef, but Opitsah took to the conditions better. She rounded the windward mark at 4:01:12, Idol at 4:02:30.

A heavy squall that had been threatening for some time from the nor'ard broke out just as both boats squared away for the run. There was not much wind in it, but it meant another beat back. Opitsah got the wind first and began gaining fast on Idol. She crossed the finish line at 4:36:50, winning by two minutes and fifty-nine seconds, thereby getting the cup. The summary:

	Start.	Finish.	Elapsed.
Opitsah, R. H. Daniels	2 50 00	4 36 50	1 46 50
Idol, F. Lyman	2 50 00	4 39 49	1 49 49

Saturday, Aug. 16.

The last of the Saturday series races for Dr. Derby's cup was sailed on Aug. 16, at 2:35 P. M. A four-mile to windward and return course, to be sailed over twice, was logged out, the first leg being to windward in the teeth of a fresh northwesterly breeze.

The entries were Idol, Persimmon, Peterkin, Raider, Opitsah and Pirate. Raider crossed the line first, followed by Persimmon, Idol, Peterkin, Opitsah and Pirate in the order named. Raider stood off on the port tack, with Persimmon, Idol and Peterkin, whereas Opitsah and Pirate went off on the starboard tack. Raider did good work and walked out a considerable lead on the fleet. Persimmon tacked soon to starboard, and went over after Pirate and Opitsah. She soon ran out of the wind, that was light in the middle of the bay, but strong on the sides.

The boats were separated and, except in the case of Raider, it was hard to tell who was doing the best work. Raider rounded the windward mark at 3:49:20, followed by Pirate at 3:50:01, Idol at 3:51:02, Persimmon at 3:52:56, Opitsah at 3:54:01 and Peterkin at 3:55:14.

The wind canted much on the run, and the boats had to gybe their spinnakers considerably. Pirate blanketed Raider and passed her. Raider in turn blanketed Pirate, and making a long luff to windward ran well ahead. None of the other boats altered their positions, though Persimmon gained considerably. Raider rounded the leeward mark again in the lead at 4:35:06. Pirate came next, only fifty seconds behind her at 4:35:56. The other boats rounded in the same order as befor, Idol at 4:36:47, Persimmon at 4:37:00, Opitsah at 4:39:50, Peterkin at 4:42:00.

Raider hauled around on the port tack and held a good breeze. Pirate tacked immediately across the bay on the starboard tack, followed by Persimmon. Idol, Opitsah and Peterkin followed Raider. Raider soon also stood across the bay and forced Pirate crossing Persimmon's bows by a good margin. Pirate was sailing fast and forereached Raider, thus establishing a lead for the second time. Raider, however, began to improve her sailing, and again wrested the lead from Pirate. She rounded the windward mark at 5:36:35, Pirate at 5:37:53 and Persimmon at 5:39:01. Opitsah beat Idol around, passing the mark at 5:43:32, Idol at 5:46:09, and Peterkin at 5:48:17.

The run home was without doubt the most exciting ever sailed at Islesboro. Persimmon and Pirate both gained on Raider, and about the middle of the run drew up to even terms. Pirate and Persimmon were considerably out to windward, and both were blanketing each other. Raider had a clear wind, but even then could only hold her own. Just before the finish line all three were on exactly a dead line. First Persimmon gained a bit, but was blanketed by Pirate, who forged ahead too late, however, to catch Raider, who crossed the line at 6:33:16, one-half second in the lead. Pirate beat Persimmon also by half a second, thus making the first three boats' finish within a second of each other. Peterkin also gained fast on Idol, and beat her by one second. The summary:

	Start.	Finish.	Elapsed.
Raider, R. Derby	2 35 00	6 33 16	3 58 16
Pirate, P. Metcalf	2 35 00	6 33 16½	3 58 16½
Persimmon, E. Dodge	2 35 00	6 33 17	3 58 17
Opitsah, R. H. Daniels	2 35 00	6 37 08	4 02 08
Peterkin, T. Kissel	2 35 00	6 38 56	4 03 56
Idol, F. Lyman	2 35 00	6 38 57	4 03 57

Persimmon won the cup, securing in all 33 points; Opitsah came second, with 22; Pirate third, with 16; Raider fourth, with 14; Peterkin fifth, with 12; Daydream sixth, with 10, and Idol seventh, with 1.

Yacht Racing Association of Gravesend Bay.

Saturday, Aug. 23.

THE seventh regatta of the Yacht Racing Association of Gravesend Bay was sailed on the afternoon of Saturday, Aug. 23, under the auspices of the Marine and Field Club. Twenty-three craft started and all but one finished the contest. The winners in the different classes were Sunol, Song and Dance, Trouble, Kelpie and Martha M. Vivian and Caribou scored sailovers.

The season is drawing to a close. There remain but two more regattas, one at the New York C. C. on Sept. 6, and the other given by the Association itself, for special prizes, on Sept. 20, off the Atlantic Y. C. In the Association race of last year points for the series prize still continued. There is a question, however, whether this precedent will be followed in the schedule of 1902.

Opinion in the matter is divided according to the standing of the different contestants. Leaders naturally care for but one more race in which points for the series prize will count. In cases where the margin is a small one, two contests might make a material difference in the final standing.

The uncertainty of the point system is well illustrated by the race on Saturday among class P boats. Before the contest, Cockatoo appeared to have a safe lead over her worthy rival, Song and Dance. Points stood 52 to 42 in favor of the former. Yet when the race ended, Song and Dance had romped in a winner and Cockatoo finished no better than fourth. This unexpected outcome evened matters quite a bit in the standing for the series prize. Cockatoo still leads with 56 points, but Song and Dance, with 52, is only four behind.

The upset in calculations was caused by the terrific ebb tide running off the stake boat at Atlantic Y. C., the second mark of the quadrangular course.

The breeze was blowing northwesterly. This gave the boats a fine spinnaker run from the start at the Marine and Field Club to the first buoy off the Brooklyn Y. C. It was a reach from there to the troublesome turning point off the Sea Gate organization. The next long leg to the Government buoy off Fort Hamilton afforded the finest kind of windward hitches. From the Fort it was a reach home, and the whole journey covered twice constituted the usual Association course.

Promptly at 3 o'clock the preparatory signal was hoisted, and three minutes later class M was sent aawy for the journey to West Bank Light and return. Class N followed in three minutes more, and the same interval separated signals for the other classes. Sloop class R and the larger catboat class did not fill.

Vagabond, owned by T. Edward Vernon, of the Atlantic Y. C., was a newcomer in class P, and with Cockatoo soon after the start led the fleet. Song and Dance was minutes astern when the three boats had rounded the mark off the Atlantic Y. C., and stood in shore to avoid the tide. The first two, resembling each other closely, were sailing a fine race with Cockatoo leading and a bit to windward. In this order they passed the starting line at the end of the first round.

When Cockatoo and Vagabond again turned the mark off Atlantic Y. C., with a good lead on Song and Dance, they took a tack out into the full force of the tide and thereby lost all chances of winning. Song and Dance repeated her tactics of the first round and won out by two minutes and 5 seconds over Elsie, and was six minutes and thirteen seconds ahead of Cockatoo. On a long leg in shore some time after rounding the Atlantic Y. C. mark, Vagabond had an accident to her head stay and withdrew.

In class Q the Boston-built boat, Trouble, well handled by Mr. C. D. Mower, covered herself with honor. Beside winning in the class, she made the best elapsed time of any boat sailing the inside courses. The former class R craft, Opossum, finished second in excellent time. She was protested by Bronco, the third boat, on the starboard tack ground. In figuring points, however, this protest until settled, is disregarded.

Trouble now leads for the series prize with 46 points. Bronco has 40. Should the protest against Opossum be allowed, Bronco would be given second position for the race, with an additional 2 points. Trouble beat Opossum two minutes and headed Bronco by thirty-two seconds more.

Before the race, in the struggle for the series prize among the Marine and Field one-design class, Kelpie and Stinger were separated by only 4 points, the former in the lead. Stinger was another victim of the never-stopping tide of Sea Gate. Kelpie won, beating Quinque four minutes and thirty-six seconds. She also scored a leg on the Dauchy cup, for which the one-design boats were contesting. Stinger finished a bad last. The points now stand, Kelpie, 58; Stinger, 46.

Martha M. led the open catboats at the finish. She was forty-two seconds ahead of the East Bay creation, Boozie, sailed by her builder, Gill Smith, of Patchogue, Long Island.

The wind grew so light toward the latter part of the contest that the Regatta Committee decided to call off the race in classes M and N, after the end of the first round. The Herreshoff boat, Vivian, led the fleet in from West Bank Light, and with Caribou scored a sailover. Sunol beat Bonito by thirty-one seconds. The boats had a reach out and some windward work home.

A yacht in order to be eligible for an Association series prize must have entered a majority of the races given for her class, and have defeated a competitor. Barring unusual accidents and judging from the work thus far, it looks as if the winners of the series prizes of the year in the different classes would be: Sunol, Vivian, Caribou, Cockatoo, Trouble, Kelpie and Martha M. The summaries of the race of Aug. 23 follow:

	Finished.	Elapsed.
Class M—Special—Start, 3:03.		
Sunol, John Abbey	4 54 33	1 51 33
Bonito, Haviland Bros.	4 55 01	1 52 04
Sloops—Class N—Start, 3:06.		
Vivian, S. E. Vernon	4 48 45	1 42 45
Class N—Special—Start, 3:06.		
Caribou, J. E. Nicholson	5 00 20	1 54 20
Sloops—Class P—Start, 3:09.		
Song and Dance, E. F. Luckenbach	4 35 10	1 26 10
Elsie, C. P. Rosemon	4 37 15	1 28 15
Corona, J. E. Beggs	4 38 20	1 29 20
Cockatoo, Hendon Chubb	4 41 23	1 32 23
Streak, Speidel Bros.	4 56 50	1 47 50
Vagabond, T. Edward Vernon	Did not finish.	
Sloops—Class Q—Start, 3:12.		
Trouble, W. H. Childs	4 37 25	1 25 25
Opossum, R. P. Doremus	4 39 25	1 27 25
Bronco, F. C. Moore	4 39 57	1 27 57
Wraith, Calvin Tomkins	4 42 04	1 30 04
Flying Fish, I. M. Dean	4 50 30	1 38 30
Marine and Field Class—Start, 3:18.		
Kelpie, W. K. Brown	4 55 17	1 37 17
Quinque, L. H. Smith	4 59 55	1 41 55
Flying Fox, F. D. Anderson	5 02 20	1 44 20
Jig-a-Jig, W. A. Hutcheson	5 05 25	1 47 25
Stinger, A. P. Clapp	5 22 30	2 04 30
Catboats—Class V—Start, 3:24.		
Martha M., Richard Moore	4 54 48	1 30 48
Boozie, C. D. Durkee	4 55 30	1 31 30
Rascal, D. G. Whitlock	5 01 25	1 37 25

Points to date on N. Y. R. A. G. B. series: Mariquita, 5; Sunol, 54; Bonito, 46; Kangaroo, 12; Vivian, 35; Gwendolen, 16; Caribou, 55; Squaw, 24; Indian, 6; Cockatoo, 56; Song and Dance, 52; Streak, 24; Karma, 20; Corona, 20; Trouble, 46; Bronco, 40; Wraith, 34; Opossum, 32; Wink, 13; Flying Fish, 12; Spots, 2; Elsie, 9; Pickaninny, 5; Kelpie, 58; Stinger, 46; Quinque, 32; Flying Fox, 24; Jig-a-Jig, 12; Vixen, 10; Martha M., 50; Rascal, 44; Boozie, 32.

Huguenot Y. C.

NEW ROCHELLE, LONG ISLAND SOUND.

Saturday, Aug. 23.

THE eighth annual regatta of the Huguenot Y. C. was sailed on Saturday, Aug. 23. The event was marked by splendid weather and a good list of starters, some forty-seven boats entering.

The 30ft. class of sloops sailed twice over a triangular course, making a total distance of fifteen miles. The 25ft. and 21ft. sloops and raceabouts sailed three times over a triangular course, in all a distance of eleven and one-quarter miles. The first leg of the course was a spinnaker run, the second leg a beat and the third leg a close reach. The preparatory signal was given at 12:30, and five minutes later boats in the 30ft. class were sent away. There were four starters in this class, the old champion Alerion, Zaza, Mab III. and the Newport 30-footer Hera. Zaza withdrew and Alerion, well sailed by Mr. Edward M. MacLellan, won out, beating Hera, the second boat, by nearly two minutes. Five of the raceabouts started. All were on the line just at gunfire, except Snapper, which boat crossed too soon and had to return and recross. Whistlewing was pushed hard for first place during the early part of the race, but after a time she drew away from her competitors and established a comfortable lead and won by nearly three minutes. Adelaide and Houri had a close race in the Larchmont 21ft. class, the latter winning by thirty seconds.

Three boats started in the 25ft. sloop class, Ojibway sailed a good race and finished first, but Pristis gets the race on corrected time. In the Manhasset Bay one-design class there were five boats to start. The race was won by Bab, which boat is showing up to very much better advantage than she did in the early part of the season. Three of the New Rochelle one-design boats started, and Phil Howard's Caper won by forty-five seconds.

Cero and Microbe had no competitors in their respective classes, and they went over the course, taking sailover prizes.

Nine of the Pelham Country Club larks started, Echo, one of the boats in this class, capsized on the second leg of the course, and was towed into the harbor. In the dory class Ketch II. capsized just before reaching the starting line.

The day was an ideal one for small boat racing. The weather was bright and clear, and a fresh wind from the N. by W. blew throughout the race. This is an offshore breeze, and in consequence the water was quite smooth and the boats made good time over the courses.

Messrs. H. C. Ward, L. C. Ketchum and G. C. Allen made up the Regatta Committee. The summary follows:

Sloops—Class N—25 to 30ft. Racing Length—Start, 12:35—Course, 15 Miles.

	Finished.	Elapsed.
Alerion, A. H. Alker	3 06 42	2 31 42
Zaza, G. P. Granberry	Did not finish.	
Mab III., Bayard & Littlefield	3 11 46	2 36 46
Hera, R. N. Guinness	3 08 09	2 33 09
Raceabout Class—21ft. Racing Length—Start, 12:40.		
Jolly Roger, T. B. Bleecker	2 36 18	1 56 18
Scamp, J. L. Pirie	2 38 58	1 58 58
Mavis, G. L. Pirie	2 35 01	1 55 01
Snapper, A. B. Alley	2 38 37	1 58 37
Whistlewing, H. M. Crane	2 33 20	1 53 20
Sloops—Larchmont 21ft. Class—Start, 12:45.		
Dorothy, J. G. Spence	2 12 51	1 27 51
Adelaide, J. J. Dwyer	2 10 24	1 25 24
Houri, J. H. Esser	2 09 54	1 24 54
Sloops—Class P—25ft. Racing Length—Start, 12:50.		
Pristis, Iselin & Lane	3 04 38	2 14 38
Ojibway, D. P. Moore	3 03 40	2 13 40
Sloops—Class Q—18 to 21ft. Racing Length—Start, 12:50.		
Gazabo, N. P. Vulte	3 07 18	2 17 18
Montauk, J. S. Appleby	2 56 10	2 06 10
Sloops—Class R—under 18ft. Racing Length—Start, 12:50.		
Flim Flam, A. D. Prince	Did not finish.	
Neola, J. R. Johnson, Jr.	3 05 08	2 15 08
Pandora, H. B. Towle	3 09 56	2 19 56
Manhasset Bay One-design Class—Start, 12:55.		
Lambkin, S. W. Roach	2 31 32	1 36 32
Firefly, Guy Standing	Did not finish.	
Mist, J. W. Alker	2 30 38	1 35 38
Bab, J. R. Hoyt	2 25 12	1 30 12
Arizona, G. A. Corry	2 34 13	1 39 13
New Rochelle Yacht Club One-design Class—Start, 12:55.		
Caper, P. L. Howard	2 32 02	1 37 02
Knave, W. N. Bayier	2 24 32	1 29 32
Ace, L. D. Huntington	2 32 47	1 37 47
Indian Harbor Sailabouts—Start, 12:55.		
Cero, R. Mallory, Jr.	2 49 07	1 54 07
Sloops—18ft. Class—Start, 1 P. M.		
Microbe, M. Mitchell	3 15 15	2 11 15
Catboats—21ft. Class—Start, 1 P. M.		
Arrow, Thomas Miller, Jr.	2 37 20	1 37 20
Ripple, Bloom and Downing	2 40 19	1 40 19
Catboats—18ft. Class—Start, 1 P. M.		
Bantam, Francis Page	2 49 11	1 49 11
Scud, Donald Abbott	2 41 13	1 41 13
Pelham Lark Class—Start, 1:05—Course 3¾ Miles.		
Streak, E. Cunningham	1 59 14	0 54 14
Tom Boy, Frank Halpin	1 59 56	0 54 56
Skidoo, M. S. G. Davis	1 58 26	0 53 26
Halo, W. B. Short	1 57 36	0 52 36
Echo, T. A. Weatherby	Capsized.	
Gloria, G. B. Mott	Not timed.	
Flirt, David Carri	1 58 14	0 53 14
Distant Margue, T. K. Sturgis	Did not finish.	
Yellow Jacket, G. B. Robinson, Jr.	Did not finish.	
Catboats—15ft. Class—Start, 1:05—Course 3¾ Miles.		
Sneaker, T. V. Vulte	2 06 07	1 01 07
Kid, W. Kitching	2 14 08	1 09 08
Champion, T. J. Dee	2 16 50	1 11 50
Dories—Special Class—Start, 1:05—Course 3¾ Miles.		
Prize, H. H. Van Rensselaer	2 12 58	1 07 58
Ketch II., Edmond Devine	Capsized.	
Marguerite, W. T. Johnson	2 19 33	1 14 33

The winners were Alerion, Whistlewing, Houri, Pristis, Montauk, Bab, Knave, Cero (sailover), Microbe (sailover), Arrow, Scud, Sneaker, Halo and Prize.

The White Bear Y. C.

A Western Club with a Record.

BY L. P. ORDWAY.

The White Bear Y. C. was organized eleven years ago by a few young men, enthusiastic sailors, whose ambition was to develop an interest in races in the West. From this small beginning the growth has been steady and strong, until to-day the organization has a membership of 250, a substantial and well equipped club-house, with no financial obligations, and is a recognized factor in Western yachting.

The early boats of the club were of the skimming dish type, the successor of sand bagger, over-canvassed, slow and cumbersome; but the spirit of advancement was keen among the members, and very early in its history the club showed a positive desire for something better. It was fortunate in having among its members a few men of enthusiasm and persistence, who enjoyed the study of every possible improvement in design and rigging; winter evenings were given to working over "Linton Hope" and any other yachting authority obtainable, and this persistent effort resulted in a steady development of the better type. As was to be expected, most of the desirable ideas and many of the boats have come from the East, Herreshoff having built a number. But it was soon demonstrated that the boats designed and built on the local waters proved the faster under the prevailing conditions. In the desire to obtain faster and better boats, there has been an interchange of ideas, and no attempt at secrecy in the new work.

The club has been fortunate in having a number of progressive builders of Scandinavian origin, who were quick to grasp new ideas in design and construction, and when started in the right direction have shown great skill and originality. The spirit of rivalry and a desire to build boats that would win, combined with the interchange of ideas between the different designers, builders and sailors, has resulted in the rapid advancement of the club. The White Bear men were the first to develop the pronounced scow. In 1895 and 1896 several fast boats of the modified scow type were built, which easily defeated Eastern boats in the Inter-lake contest at Minnetonka and at Milwaukee on Lake Michigan. In 1897 five pronounced scows were built which proved to be faster than the old type of boat. About a year later experiments were made with the scow in the East, but it was at least two years before the superiority of the pronounced scow as a racing machine came to be appreciated on the coast. No radical improvement in the scow design has been made within the last few years, as Yankee, built and designed in '97, is much on the same lines as Tecumseh, the improvement having been largely in construction, rigging and a better understanding of handling and sailing.

The White Bear Y. C. has always appreciated that advancement required the construction of new boats each year. The old ones have been sold to other lakes, thus stimulating the sport in new localities, and as a consequence over one hundred and forty boats have been built for members of this club during the past ten years, and thus far with some improvement each year. Desiring to stimulate yachting interest throughout the country, this club has always been ready to take part in foreign regattas, and during the past eight years has sent sixteen boats to various parts of the West, to Montreal and to Long Island Sound, covering a distance of over 12,000 miles by rail.

The Inland Lake Yachting Association, the largest and most enthusiastic small boat organization in the country, composed of over twenty clubs from as many different lakes, hailing from five States, was organized and carried to completion by the White Bear Y. C.

The boats of this club are of two classes: Class A carrying 500 feet of sail, and similar to Seawanahaka, the International Class introduced to the West at the time of the adoption of the present rules by the Royal St. Lawrence Y. C. and the White Bear Y. C. for their races in 1899; and a smaller class called B, carrying 350 feet of sail, but similar in other ways. The rules under which the boats are built and sailed are eminently fitted for the Western lakes and have given general satisfaction. The White Bear Y. C. has won four out of eight events in the races of the Inland Lake Yachting Association—besides taking part during the same years in two races at Montreal with the Royal St. Lawrence Y. C. In addition to the outside races, the White Bear Y. C. holds a local regatta every Saturday in June, July and August and sails about twenty races from eight to ten knots each season; from fifteen to twenty boats taking part in each regatta. The club racing fleet at the present time is composed of seven A class boats, limited to 500 feet of standing sail, 38 feet over all; eight B class boats with 350 feet standing sail, 32 feet over all; seven C class boats built from a design of G. Herrick Duggan, with 200 feet of sail, 20 feet over all; eight open class boats, the same as the A class, composed of older boats too slow to race in the A class. All races are without time allowance. Courses are sailed triangular as well as windward and return, and are arranged to give as much windward work as possible. Although the lake is small the depth of water is good, and as a rule the winds are strong and true. The type of boat which has been developed in the West may not be thoroughly suited to Eastern waters, but it is eminently fitted for the Western lakes, where the winds are strong and there is never much sea. They are fast, safe and dry, beyond question faster than any other type of boat, and will live and make the best time where the old type will make no showing, notwithstanding the fear of the Bridgeport judges in the recent trial races—"That someone would get wet or drowned if allowed to sail in what the Western yachtsmen considered fine sailing winds." Many races have been sailed on the Western lakes in winds having a speed from thirty to thirty-five miles, and the Westerner feels that the stronger the wind the greater the sport and the faster the time.

The White Bear Y. C. allows no one to take part in its races whose livelihood depends upon designing, building or sailing of boats, and as a result each Saturday from sixty-five to seventy men and boys, strictly amateurs, take part in the weekly regattas.

English Letter.

The Cowes Week this year was mainly remarkable for its very disagreeable weather. It opened on Aug. 4 with the regatta of the Royal London Y. C., which has a house at Cowes. The day was fine, with a nice westerly breeze, but unfortunately Sybarita was the only starter in the first class match. Both Navahoe and Meteor III. were entered, but did not start, because by so doing they would have been rendered ineligible for racing in subsequent handicaps, a condition of which usually is that entrants must not have raced in an open match for a certain number of years. On the same day there were three handicaps, which were all productive of large entries. Indeed, to judge from the number and quality of the yachts under way, the regatta was quite up to the highest standard. And the same may be said of the Royal Yacht Squadron's regatta, which followed each day until Friday. The Squadron's first day was on Tuesday, when a big entry honored the match for the King's cup. This is only open to yachts belonging to the club, and is a handicap. Therefore Cicely was unable to enter. The wind was light and southeasterly, which gave a lot of turning to windward. This did not suit Meteor, and she was quite out of it, the cup falling to Sir James Pender's fine yawl Brynhild. This is her first King's cup, but, with the Squadron's conditions being such as they are, it ought not to be her last.

The next day, Wednesday, was very wet, with a good southerly breeze that held all day. This gave a reach all over the long course, and Meteor III beat Sybarita by over twelve minutes in fifty miles. I see that Sybarita is handsomely slated by one of our journals for getting beaten by so much, but to me it seemed quite natural. I wonder what other result could be looked for from Meteor's great length. It seems that a very large number of people have made up their minds that the Emperor's vessel is a mere slug. On what the opinion is based it is not easy to see. To my mind, she is a particularly fine vessel, but I never expect to see her at her best inside the Isle of Wight. I should like to look at her log after an hour of a 30-knot quarterly wind!

On Wednesday, when she was doing over twelve knots, there was a noticeable absence of fuss at her bows and her delivery was beautifully clean. She stood up to her canvas like a house. On the same day in a race between fifteen vessels for the German Emperor's cup, the famous old Irex carried off the prize. Cicely came home first, leading Navahoe by about a minute. As Navahoe must have traveled quite as fast as when she was a cutter, if not faster, you may be able to get a line through this for comparing her with your schooners. The course was the same as that sailed by Meteor—a strong reaching wind all the way. I think this was a very creditable win for the old Irex. She is one of our old plank-on-edge boats of about 80ft. waterline and hardly 15ft. beam. Her draft is about 14ft., and she has, I believe, just over 70 tons of lead on the keel. In fact, she is very much like Genesta, and most people think she would have won the America's cup had she gone out instead of that vessel. It is astonishing that Brynhild should have headed her home by some five minutes only, and that she should actually have beaten such boats as Leander, Namara and Cetonia.

On the next day Sybarita had her revenge on Meteor, giving her a sound beating in a smart breeze over a course that gave some windward work. But this race supplied the most notable feature of the whole week in the smart sailing of the 65-rater Tutty, which came within a minute and a half of saving her time from Sybarita This was a very remarkable performance in so strong a wind, for the race was sailed, not as a handicap, but under the ordinary Y. R. A. time scale. In order to prevent the possibility of a yacht of this size carrying off prizes in the large class, the Y. R. A. limit the class to yachts over 79 linear rating. But the Squadron refuses to be fettered by the Association, and an excellent result was achieved in this case at all events.

During the week Lucida was uniformly successful against Camellia, except on Thursday, when she split her hollow mast when leading. The fault of these spars seems to be that they split easily with a twisting strain. To obviate this there are now three distinct makes of hollow spars in this country, and so far as I can hear, they have answered well in all cases where they have been tried.

An unfortunate accident happened in a small cruiser's handicap at Southampton last week, when one of the hands of a 16-ton yawl was washed overboard and drowned. He could swim well, but the yacht—a new craft of modern type—would not bear up, and had to stay instead of gybing. This, too, although she was carrying a jibtopsail. I fancy very many people would be chary of racing in such a hard-mouthed boat. Everything was done to save the man, but in vain.

The postponed review of the fleet by the King is bringing a large number of vessels together again in the Solent. Lord Crawford's race for auxiliary yachts will be started immediately after. His full-rigged ship, Valhalla, will sail in the race—with very little hope of success unless it blows very hard indeed. This vessel used to be manned with a crew of 130 men, and everything was done in navy fashion aboard. She makes about eleven knots under steam, but under sail she is said to have made over seventeen knots. She is now painted white, and the change from black is not an improvement.

E. H. Hamilton.

American Y. C.

MILTON POINT, LONG ISLAND SOUND.

Saturday, Aug. 23.

The 21 and 18ft. one-design classes of the American Y. C. sailed a race on Saturday, Aug. 23. The boats sailed over a ten-mile triangular course in a fresh N. wind. The summary:

21-footers.

	Time.
Howdy, S. Wainwright	2 20 28
Cricket, Howard Willet	2 21 37
Ping Pong, W. F. Browning	2 22 12
Rascal, S. Hopkins	2 24 49
Kid, Oliver Harriman	Disabled

18-footers.

Driftwood, Oliver Townsend	2 33 33
Mongoose III., Simeon Ford	2 35 14
Rattler, J. E. Bowles	2 38 37
Zelita III., H. A. Sherman	2 42 30
The Hustler, J. J. Downey	Disqualified

The winners were Howdy and Driftwood.

The 51-footers Humma, Altair and Shark will meet at Newport on September 1 and will sail a series of six races.

Newport Special Thirties.

NEWPORT, R. I.

Monday, Aug. 18.

THE third series race for the cup offered by Mr. William L. Stow was sailed on Monday, Aug. 18. The wind was light from the W., and the boats sailed twice over a triangular course. Esperanza was first to start, and held her lead on the beat to the first mark. On rounding the mark she fouled it and withdrew. Barbara, which was then in second place, took the lead and finished a winner. The summary, start 3:20:

	Finished.	Elapsed.
Barbara, Winthrop Rutherford	5 40 37	2 20 27
Wa Wa, Reginald Brooks	5 45 04	2 25 04
Veda, William L. Stow	5 57 52	2 37 52
Asahi, W. Starr Miller and Lloyd Warren	Withdrew.	
Esperanza, Harry O. Havemeyer, Jr.	Withdrew.	

Tuesday, Aug. 19.

The 30-footers sailed a race to Dyer's Island and return on Tuesday, Aug. 19, a distance of eighteen miles. At the outer mark Esperanza fouled Barbara. The race was won by Wawa. This gives Wawa two points for the William L. Stow cup, and Barbara has the same number.

Wednesday, Aug. 20.

In a light S. breeze the 30-footers sailed twice over a triangular course on Wednesday, Aug. 20. At the end of the first round Esperanza was ahead, but on the second round Breeze worked into first place and won by nearly two minutes. This race gives Breeze one point in the William L. Stow cup. The summary, start 3:19:

	Finished.	Elapsed.
Breeze, William G. Roelker, Jr.	6 01 26	2 42 26
Asahi, L. Warren and W. S. Miller	6 03 19	2 44 19
Esperanza, H. O. Havemeyer, Jr.	6 04 31	2 45 31
Barbara, Winthrop Rutherford	6 04 40	2 45 40
Wa Wa, Reginald Brooks	6 05 39	2 46 39
Veda, William L. Stow	6 06 57	2 47 57

Thursday, Aug. 21.

The race for the William L. Stow cup, sailed on Thursday, Aug. 21, was won by Asahi. The course was six miles to leeward and return. The wind was very light from the S. Barbara got the best of the start, but was soon passed by Asahi, which held her lead up to the finish. Carolina fouled Esperanza and withdrew. The summaries, start 3:51:

	Finished.	Elapsed.
Asahi, Lloyd Warren and W. Starr Miller	5 16 01	1 28 01
Esperanza, H. O. Havemeyer, Jr.	5 21 04	1 30 04
Barbara, Winthrop Rutherford	5 21 08	1 30 08
Breeze, Willim G. Roelker, Jr.	5 21 51	1 30 51
Veda, William L. Stow	5 22 26	1 31 26
Wa Wa, Reginald Brooks	Withdrew.	
Carolina, Pembroke Jones	Withdrew.	

Friday, Aug. 22.

On Friday, Aug. 22, the 30-footers sailed a six-mile to windward and return race for the William L. Stow cup. The wind was light from the S., very much the same as it was on the two previous days. The race proved to be the deciding one, for it was won by Barbara, making the third race necessary to win the cup. Wawa had two points and Asahi and Breeze each had one. The summary, start 3:27:

	Finished.	Elapsed.
Barbara, Winthrop Rutherford	4 48 44	1 21 44
Carolina, Pembroke Jones	4 49 21	1 22 21
Breeze, William D. Roelker, Jr.	4 51 04	1 24 04
Asahi, Lloyd Warren and W. Starr Miller	4 51 38	1 24 38
Veda, William L. Stow	4 52 19	1 25 19
Esperanza, Harry O. Havemeyer, Jr.	4 52 48	1 25 48
Wa Wa, Reginald Brooks	4 55 17	1 28 17

Saturday, Aug. 23.

In the sweepstake race sailed by the 30-footers on Saturday, Aug. 23, Carolina beat Barbara, the second boat, by nearly four minutes. The wind was fresh from the N., and the boats sailed twice over a triangular course. The summary, start 3:33:

	Finished.	Elapsed.
Carolina, Pembroke Jones	5 31 58	1 53 58
Barbara, Winthrop Rutherford	5 35 49	1 57 49
Esperanza, H. O. Havemeyer, Jr.	5 36 26	1 58 26
Wa Wa, Reginald Brooks	5 37 03	1 59 03
Breeze, W. G. Roelker, Jr.	5 37 21	1 59 21
Asahi, Lloyd Warren and W. Starr Miller	Withdrew.	

Duxbury Y. C.

DUXBURY, MASS.

Friday, Aug. 22.

THE second Y. R. A. open race in the South Shore circuit was given by the Duxbury Y. C. on Friday, Aug. 22. The wind was light, E. to S.E. In the 25-footers Chewink II. came down from Marblehead to keep up the sport. Calypso led for the greater part of the course, with Areyto second. Chewink gained on the two on the last round, and when she and Calypso got into a luffing match, Areyto pulled out ahead and finished first. In the 21-footers Chloris led for about two-thirds of the course, when she was overhauled by Little Haste, which finished with a lead of three minutes. There was a good race among the 18ft. knockabouts, although they did not finish as closely as usual. Question won by more than a minute and a half. In the first handicap class Thordis made the fastest time, but lost to Rambler on handicap. In the second handicap class Rooster won on actual and corrected times. The summary:

Class D—25ft. Cabin Yachts.

	Time.
Areyto, L. D. Baker	2 06 35
Calypso, A. W. Chesterton	2 07 35
Chewink II., F. A. Macomber, Jr.	2 08 02

Class S—21ft. Cabin Yachts.

Little Haste, T. K. Lothrop, Jr.	2 08 40
Chloris, B. P. Cheney	2 11 40
Thecla, C. W. Chapin	2 13 28
Mildred II., S. P. Moses	2 13 29
Micmac, H. Hutchinson	2 26 19

Class I—18ft. Knockabouts.

Question, J. H. Hunt	2 27 52
Gertrude, H. E. Lynch	2 29 18
Domino, C. C. Clapp	2 33 50
Kittawake, H. M. Jones	2 37 03
Stroller, L. B. Goodspeed	2 38 10
Miladi II., F. R. Adams	2 38 26
Osprey, A. R. Train	2 38 27
Biza, A. Douglas	2 40 09
Tokalon, R. J. Randall, Jr.	2 42 12

Saturday, Aug. 23.

The second Y. R. A. open race of the Duxbury Y. C. was sailed Saturday, Aug. 23, in a fresh breeze from the N.E. In the 25-footers Areyto got the start, but was soon overhauled by Calypso, which led to the finish. Areyto left the judges' boat on the wrong side and was disqualified. In the 21-footers, Mildred II. led all over the course. Chloris, which was well up, made the same mistake as Areyto and was disqualified. In the 18ft. knockabouts the contest was again between Domino, Miladi II. and Kittawake. They finished in a bunch, with Domino in the lead. This gave Domino the Adams cup, offered for the season's races in the Duxbury Y. C. In the first handicap class Thordis led over the course, but lost on corrected time. Rambler, which would have won on corrected time, fouled Seconset and was disqualified. In the second handicap class Challenge won on both actual and corrected times. The summary:

Class D—25ft. Cabin.

	Time.
Calypso, A. W. Chesterton	1 29 48
Areyto, L. D. Baker	Disqualified

Class S—21ft. Cabin.

Mildred II., S. P. Moses	1 35 34
Theckla, C. W. Chapin	1 36 19
Micmac, R. H. Hutchinson	1 42 00
Chloris, Cheney and Lanning	Disqualified.

Class D—18ft. Knockabouts.

Domino, C. C. Clapp	1 43 55
Miladi, F. R. Adams	1 44 10
Kittawake, H. M. Jones	1 44 25
Osprey, A. R. Train	1 46 48
Biza, A. Douglass	1 47 47
Gertrude, H. E. Lynch	1 48 15
Aspinquid, C. M. Foster	1 49 23

Beverly Y. C.

WING'S NECK, BUZZARD'S BAY.

Saturday, July 12.

THE 324th Corinthian regatta of the Beverly Y. C. was held on July 12. The weather was clear and a strong S.W. breeze blew throughout the race. Three classes filled; the 30ft. one-design boats were racing at Newport. The summary:

Raceabouts—Start, 1:19.

	Finish.	Elapsed.
Barnacle, W. E. C. Eustis	4 02 02	2 43 02
Amanita, Joshua Crane, Jr.	4 14 25	2 55 25
Terrapin, L. S. Dabney	Disabled.	
Radiant, C. M. Baker	Distabled.	
Sylvia, S. D. Warren	Sailed wrong course.	

Fourth Class Cats—Start, 1:22.

Hod, H. B. Holmes	3 15 13	1 53 13
Allison, S. McLeod	3 18 14	1 56 14
Howard, H. O. Miller	Disabled.	

15ft. One Design—Start, 1:25.

Vim, F. W. Sargent	3 02 09	1 37 09
Warda, J. Parkinson, Jr.	3 04 13	1 39 13
Spider, H. M. Stone	3 04 29	1 39 29
Go Bye, H. Stockton	3 11 09	1 46 09
Ranzo, M. H. Richardson, Jr.	3 11 24	1 46 24

The winners were Barnacle, Hod and Vim. J. S. Palfrey acted as judge.

BUZZARD'S BAY, MASS.

Saturday, Aug. 23.

A Corinthian race of the Beverly Y. C. was sailed off the clubhouse at Wing's Neck on Saturday, Aug. 23, in a whole-sail northeast breeze. In the one-design class Quakeress II. got the start and led all over the course, closely followed by Pontiac and Pravilla. In the 25-footers Kalama got the start and led Thorana all over the course. It was just the weather for the 21-footer Barnacle and she won easily in her class. Allison II. won in the fourth class cats and Vim in the 15-footers. The summary:

30-Footers.

	Actual.
Quakeress II., W. F. Harrison	2 33 40
Pontiac, J. A. Beebe	2 35 45
Praxilla, J. Parkinson, Jr.	2 35 56

Vim, F. W. Sargent, Jr.	1 45 38
Spider, H. M. Stone	1 46 50
Go-Bye, H. Stockton	1 47 41
Teazer, Mrs. R. W. Emerson, 2d	1 48 49
Ranzo, M. H. Richardson	1 50 32
Uarda, John Parkinson, Jr.	1 51 30

Riverton Y. C.

RIVERTON, DELAWARE RIVER.

Saturday, Aug. 16.

FOURTEEN boats started in the Riverton Y. C. race sailed on Saturday, Aug. 16. The race was to have been a handicap, but was changed and the boats sailed on regular time allowance as usual. The wind was strong and puffy from the N. The course was from the starting line to and around Hen and Chickens Buoy and return. In the catboat class Sea Gull had things her own way and gave the other boats a good trimming. Katherine held second place for a time, but was passed by Priscilla. Isit gave the rest of the boats in her class a good beating, and among the mosquito fleet boats Albert G. Cook finished a winner for the fourth time this season. The summary:

Catboats—Start, 3:18.

	Finish.	Elapsed.	Corrected.
Sea Gull	5 24 22	2 06 22	2 02 06
Priscilla	5 26 28	2 10 28	2 06 02
Katherine	5 37 22	2 19 22	2 18 20
Titania	5 40 15	2 22 15	2 22 15
Leila	Withdrew.		
Gertrude	Withdrew.		

Sloops—Start, 3:23.

Corinthian Y. C.

MARBLEHEAD, MASS.

Saturday, Aug. 23.

The fifth championship race of the Corinthian Y. C. was sailed off Marblehead on Saturday, Aug. 23, in a strong breeze from the northeast. In the 25-footers Sally VI. took a sailover. Little Haste came over from Duxbury and won in her class. Savage won handily in the 18ft. knockabouts. Chasca finished first in class A, handicap, but lost to Yarico on allowance. Suzanne led in class B, handicap, but lost to Scapegoat on allowance. The summary:

25ft. Cabin Class.

	Time.
Sally VI., L. F. Percival	1 53 42

21ft. Cabin Class.

Little Haste, T. K. Lothrop, Jr.	1 34 47
Pilot, R. Boardman	1 37 45
Porcupine, C. H. W. Foster	1 37 52
Tabasco III., H. H. Wiggin	1 39 07

Raceabout Class.

Tunipoo, J. T. Humphrey	1 42 57

Major J. Fred Ackerman has sold his schooner Vesta to Mr. Howard Slade.

Plymouth Y. C.

PLYMOUTH, MASS.

Thursday, Aug. 21.

The South Shore circuit of Y. R. A. open races was opened on Thursday, Aug. 21, by the Plymouth Y. C. The race was sailed in a light to moderate breeze, from east to southeast. Only two of the 25-footers were on hand to start, Calypso and Areyto, both centerboard boats. Calypso got the start and held a lead over the course, although Areyto made a good showing and held her well. In the 21-footers Micmac got the start and then went into a luffing match with Little Haste. When this was finished Little Haste went after Mildred II. and Chloris, and won out by over 8 minutes. There was the usual good start and good race among the 18ft. knockabouts; Miladi, Kittawake and Domino made a close race throughout, Miladi finishing 15s. ahead of Kittawake and 25s. ahead of Domino. On protest Miladi was thrown out and the race went to Kittawake. A bronze cup is offered in this class by ex-Com. C. C. Clapp, of the Duxbury Y. C., for the whole circuit. The cup is made from one of the plates of Independence. In the handicap class Rooster got the start, and As You Like It led for the greater part of the course. She finished first, but on corrected time the race went to Challenge. The summary:

Class D—25ft. Cabin Yachts.

	Time.
Calypso, A. W. Chesterton	1 49 45
Aveyto, L. D. Baker	1 52 15

Class S—21ft. Cabin Yachts.

Little Haste, T. K. Lothrop, Jr.	1 50 45
Mildred II., S. P. Moses	1 59 00
Chloris, B. P. Cheney	1 59 35
Micmac, R. Hutchinson	2 01 28
Rambler, W. L. Learned	2 04 10

Class I—18ft. Knockabouts.

*Miladi, F. R. Adams	1 42 00
Kittawake, H. M. Jones	1 42 15
Domino, C. C. Clapp	1 42 25
*Question, J. H. Hunt	1 43 15
Biza, A. Douglass	1 44 50
Stroller, L. B. Goodspeed	1 45 15
Tokalon, R. J. Randall, Jr.	1 46 35

Seawanhaka-Corinthian Y. C.

OYSTER BAY, LONG ISLAND SOUND.

Saturday, Aug. 23.

THE annual Corinthian race of the Seawanhaka Y. C. was sailed on Saturday, Aug. 23. The boats were manned entirely by Corinthian crews, and they sailed over knockabout course No. 3. The breeze was light from the W. Gowan and Bobs had a fight for first place, but the former finally drew into the lead and won by over three minutes. The summary:

Start, 3:30.

	Finished.	Elapsed.
Gowan, F. G. Stewart	6 07 35	2 37 35
Bobs, W. A. W. Stewart	6 11 50	2 41 50
Vagrant, V. W. Brown	6 12 51	2 42 51
Heron, F. R. Coudert, Jr.	6 15 50	2 45 50
Lucille, H. H. Landon	6 18 10	2 48 10

YACHTING NEWS NOTES.

On Aug. 16 there was launched from the yard of the builders, the Gas Engine & Power Co. and Charles L. Seabury & Co., Consolidated, the steam yacht built from Gardner & Cox's designs for Mr. A. E. Austin, of Providence, R. I. The yacht is 155ft. long over all, 120ft. waterline, 20ft. breadth and 8ft. 6in. draft. She has a teak deck house seventy feet long and is schooner rigged and has a single funnel. In the after end of the deck house is a large lounging room, while in the forward end is the dining saloon and pantry. The owner's quarters are below aft of the boiler and machinery space and consist of four single and two double staterooms and two bathrooms. Forward of the machinery space is the galley, officers' staterooms and forecastle with accommodations for sixteen men. On the davits are carried four boats, one launch, one cutter, one dinghy and a sailboat for the owner. The yacht is lighted throughout by electricity. She is fitted with a triple expansion engine, with cylinders 11, 16 and 26 inches in diameter and with 15 inches stroke of piston, and a Seabury water tube boiler. The speed contract calls for fourteen knots, but she will undoubtedly exceed this requirement. The yacht will be finished about the middle of September.

Mr. August Belmont's 70-footer Mineola is now at the Jacob yard, City Island, where she is being dismantled preparatory to laying up. The sails and spars have been stored in the lofts and the yacht will be hauled out in a few days.

A new yacht club has recently been organized. It is to be known as the American Catboat Club, and a few days ago the organizers of the institution met and elected the following officers: Commodore, Arthur E. Rendle; Vice Commodore, Thornton Smith; Rear Commodore, James C. Summers; Secretary-Treasurer, A. P. Rascher. The headquarters of the club is to be at Port Washington, L. I. Races for the championship of Cow Bay will be sailed on Labor Day. The yachts will be divided into three classes. The first class will be open to cabin or or open catboats belonging to Cow Bay, Class 2 will include Cow Bay skiffs of the 16ft. class of the half-round type, and Class 3 will be open to Cow Bay skiffs of the 16ft. class of the flat bottom type. The winner of each race will be awarded a championship pennant and a cup emblematic of the championship. The latter he must defend for one year, but he need only sail against the challenging boat. If he loses the championship of his class he is to return the cup to the American Catboat Club, which will deliver it to the winner.

Rifle Range and Gallery.

Long Range Rifles.

EXPERIMENTS at rifle practice on the ranges at Creedmoor and Sea Girt have just shown to the satisfaction of many leading shooters of the country why the American riflemen were defeated last year by the Irish and Canadian teams. In their search for a reason for the triumph of the Irish and Canadian teams, those who have been pushing forward their experiments to this end seem to have come to the conclusion that the American army rifle and ammunition are all right up to 800yds., but beyond this distance the service bullet wabbles. This wabbling at 900 and 1,000yds. is due to the fact that the twist in the rifling is not quick enough to keep a bullet of the American standard length rotating with sufficient velocity.

Gen. Bird W. Spencer, Dr. W. G. Hudson, William Hayes, Col. Leslie C. Bruce and others have been unremitting in their efforts to find why the Americans suddenly began doing poor marksmanship after the 800yd. mark was passed. It was evident to many riflement that something was radically wrong when one contestant would make two or three good shots in succession, with the next one going not within 30 or 40ft. of the target. Some, however, ascribed it to a poor eye and lack of practice.

The result of the experiments is that the National Rifle Association and the New Jersey State Rifle Association, for the purpose of assisting if possible in perfecting the national arm and of giving an opportunity for a test as to the present rifling of the United States .30cal. rifle compared with the best obtainable, have just issued conditions which will admit to the individual matches, except the president's match, at Sea Girt, in September, service rifles that have been fitted with barrels by private makers. These conditions are as follows: (a) The barrel must be capable of using the standard Government ammunition; (b) the competitor must accurately describe, in writing, the details wherein his barrel differs from the Government barrel (c) no changes other than those in character and pitch of rifling will be permitted, and all outside dimensions, sights and prevailing weights must be retained.

Perhaps no member of the National Rifle Association has been more earnest or accomplished better results than Dr. Hudson, who last year was a member of one of the American teams. He is convinced by his experiments that if the bullet is reduced in length, even though some weight has to be sacrificed, its accuracy will be greatly improved at 900 and 1,000yds. The fact that the army rifle and ammunition are all right up to 800yds. and inaccurate beyond that distance, has led many riflemen to believe that representatives of the Ordnance Department who tested the rifles and cartridges evidently did not consider any range beyond 800yds.

"From the experiments I have made," said Dr. Hudson yesterday, "I think the following deduction may be drawn: (a) That a .30cal. barrel, with a 10in. twist, will shoot a 200-grain bullet far more accurately at 1,000yds., than a 220-grain bullet, unless the latter, as it issues from the muzzle, has become larger than the .307in. diameter heretofore in vogue, and therefore shorter; (b) the difference in accuracy is due to the greater gyrostatic stability of the shorter bullet at the same rate of rotation; (c) the shorter and lighter bullet must of necessity be more sensitive to wind than the 220-grain, therefore the proper way to rectify the trouble is rather to make a barrel with a quicker twist, unless other objections arise, which can only be developed by experiment; (d) but if barrels of quicker twist are not available, it is far better to shorten the bullet, whether by decreasing its weight or increasing its diameter, than to go on shooting a combination which is liable at the most inopportune time to throw a wind shot. I do not believe that the best way to attain this result is by shooting undersized bullets in oversized guns, and depending on the uncertain upsettage of a jacketed bullet."

Attention was first directed to this as the possible source of the trouble by measuring the barrels of those .30cal. rifles used by the United States Government, which appeared to be doing the best work at the long range with the service ammunition. Dr. Hudson found that they were not those approaching most nearly the standard diameter, .308in. to the bottom of the grooves. Instead, they were of a larger diameter, up to .3095in. The question then arose, Why should a .309in. barrel shoot a .307in. bullet better than a barrel of the correct size?

Repeated experiments, with frequent changes of ammunition, barrels and bullets, finally proved the whole matter, and gave Dr. Hudson at Creedmoor a few days ago the best shooting he had ever done with a high-power outfit of American production. He feels that the score would have been several points better had the rifle been shot by an experienced long-range rifleman, as his experience has been confined chiefly to short and middle range.

A standard United States rifle was used, which had previously in the experiments given very poor results, even at 800yds., when ammunition and gun appeared to be all right. This gun was selected because it accurately fitted the bullets which had caused so much trouble. The barrel used was fitted with large sights.

A few rounds at 800yds., with service load, gave, as usual, a miss every few shots in what appeared to Dr. Hudson a perfect hold. It was not due to irregularity of ammunition, for every charge of powder (34½ grains) had been weighed and perfect bullets (220 grains) selected. He then tried a charge of 36 grains of .30cal. powder and a 210-grain bullet. Immediately great improvement was noted, so great inded that he at once abandoned the 800yd. range and moved back to the 1,000yd. firing point. The good work continued, except that he got two misses in 15 shots, the score being 5, 5, 3, 5, 5, 5, 5, 5, 4, 0, 4, 5, 0, 5, 2, a total of 58.

Next he tried the 200-grain bullet, which seemed to remedy the trouble entirely. A few shots were fired with shells containing 36 grains of .30cal. powder, and others containing 28 grains of 7 mm. powder. The 28 grains gave almost equal accuracy, but unmistakably less velocity, and shot 7ft. lower than the 36 grains of .30cal. powder. At the lower velocity the wind seemed to affect the bullets much more, but with the 36-grain load he could not see that the bullet was any more affected than when the 220-grain bullet is used, although such, he thinks, must be the case.

The experiment was finished with a score of 70 at 15 shots with 36 grains of .30cal. powder and with a 200-grain bullet, and with a score of 67 at 15 shots with 28 grains of 7 mm. powder and a 200-grain bullet. The 30 shots were fired consecutively.

Since then even better work has been done with the 200-grain bullet, Lieut. Leizear making a score of 72 in 15 shots at 1,000yds. This is the highest score ever recorded with an American high power rifle, and it is all the more creditable because it was made with plain military sights.

The highest score at 1,000yds. made by the Canadians last year in the match against us was 64, by Capt. Davidson. In the other match one of the Irish team, Major Richardson, made 72 at 1,000yds., but that was with a fine match rifle, fitted with target sights. One other Irishman had 70, but aside from these two scores, none of our competitors on either team made over 68.

Gen. George W. Wingate, vice-president of the National Rifle Association, and one of the best rifle experts in the country, says in regard to this matter: "The Boer war has shown that battles are to be decided by sharpshooting at small marks on long distances. If the gun can be made accurate by changing the bullet the conditions would not be so difficult as if new barrels of a different twist should be supplied. With the object of doing all they can to advance the accuracy of the shooting of rifle experts, the National Rifle Association and the New Jersey State Rifle Association will this year admit to the majority of individual matches at Sea Girt service rifles that have been fitted with barrels by private makers under special conditions.

"In its action in this matter the National Rifle Association is assuming its proper place in assisting the Government to perfect the national arm. The members of the Association bring to their task much skill and knowledge. Being men of independent means, they are in a position not bound by precedent or swayed by prejudice, and in their search for the most accurate rifle they are able to disregard the question of cost.

"We believe that when once this matter of accurate rifle shooting is earnestly taken up by Americans they must go to the front and stay there. The great difference between Americans and foreigners is that the latter will accept what has been absolutely tested and proven, while the former are willing at all times to give new things a fair trial."—New York Tribune.

Western Rifles.

Chicago Inter-Club Shoot.

CHICAGO, Ill., Aug. 22.—Mr. Alfred Rieckhoff, shooting-master of the Willow Rifle and Gun Club, of Chicago, furnishes the following facts regarding the forthcoming inter-club shoot, small bore rifles, which will be held in this city on the last day of the month:

"On Aug. 31 the combined short range rifle clubs of Chicago will hold their third annual team and prize shoot at Schelle's Grove, Lawrence and Lincoln Avenues. The following clubs will participate for team prizes: The Willow Rifle and Gun Club, the Schuetzen Section of the Lincoln Turn Verein, the Wilhelm Tell Schuetzen Club, the Schuetzen Section of the Chicago Turngemeinde, the Brazilian Rifle Club.

The Peters Challenge Cup, presented by the Peters Cartridge Co., of Cincinnati, Ohio, for annual competition, with $18 cash added money, will be the prize for the winning team.

The rules to govern the team shoot are as follows: Each club to put up a team of five men, who are to fire 20 shots per man on the Standard ¼-inch ring German target with a 2-inch black at 75 feet. The highest team score to win. The name of the winning club and the names and scores of its team to be engraved upon the cup. The team shoot to commence at 9 A. M., after which the prize shooting—open to all—will start and continue until 11 P. M.

Three beautiful gold medals and fifteen valuable merchandise prizes will be put up for the open-to-all prize shooting.

All shooting to be off-hand at 75 feet, with .22 caiber rim-fire rifles. Palm rests and magnifying sights barred.

To reach the grove from downtown, take Lincoln Avenue cable cars or Northwestern Elevated Railroad to Wrightwood Avenue, then Bowmenville cars north to Lawrence Avenue, and you're there."

Willow Rifle and Gun Club.

The following scores were made Friday afternoon, Aug. 15, at the range of Willow Rifle and Gun Club, 760 North Halsted Street, Chicago, Ill:

All shooting offhand at 75 feet with .22 caliber rim-fire rifles, no palm rests or magnifying sights allowed. Two strings of 10 shots each on ¼-inch ring target. Possible in ten shots 250 points and 3 shots on ⅛-inch ring target, possible 75 points:

Class A.

Geo. Springsguth	234	220	52
Alf. Rieckhoff	226	210	65
S. Fischer	222	221	64
F. M. Garden	241	225	64
P. Hollstein	221	216	59
J. W. Grace	227	211	60

Class B.

E. Otto	218	201	57
H. Wehnert	190	188	47
A. Fleig	194	179	18
W. Schwabe	214	202	38
R. Theilenhaus	165	199	22
F. E. Halbert	218	211	55
Bergmann (Visitor)	218	222	47

Columbia Pistol and Rifle Club.

SAN FRANCISCO, Cal., Aug. 17.—Columbia Pistol and Rifle Club scores to-day on Columbia target, off-hand shooting:

Two hundred-yard range, rifle: Ed. Hovey, 50, 60, 66, 69, 73, 82, 83; F. O. Young, 59; Capt. Fred Kuhnle, 60, 67, 73, 79.

Three-shot match: Young, 13, 13, 16, 17, 22; Kuhnle, 20, 27.

Military and repeating rifle match, Creedmor count: Ed. Hovey, 49, 49, 48, 47, 46, 46; Miss C. Kreudner, 42.

Fifty-yard range, pistol: F. O. Young, 36, 44, 45, 51; A. H. Pape, 40, 41, 45, 45, 43, 48, 48, 50, 50; A. J. Brannagan, 41, 42, 42, 49, 50; G. M. Borley, 41, 41, 52; Otto Feudner, 49, 66; L. C. Hinkel, 59; R. Schneider, 56; H. Baker, 67, 70, 74; Dr. Twist, 61, 61, 67.

Revolver: L. C. Hinkel, 42, 52, 59.

Twenty-two and .25 caliber rifle match: A. H. Cady, 18, 24, 24, 26, 30, 25; E. A. Allen, 50; Mrs. Leach, 53; Mr. Leach, 79.

Ed. Hovey did splendid work with his .32-20 Winchester repeating rifle. He beat the fine rifle on ring count and his fine Creedmoor scores put him one point ahead of Young for 10 best scores of the season with a Creedmoor total of 472. Hinkel is within 10 points of the highest bar in the revolver expert class and expects to make it, and he is only a beginner. Many of our members have been on vacations and hunting the deer, venison being plenty in camp.

FRED O. YOUNG.

National Rifle Association.

THE tournament of the National Rifle Association of America, New Jersey State Rifle Association, and United States Revolver Association, at Sea Girt, N. J., commencing on Tuesday of this week, and ending on Sept. 6, will probably be one of the most interesting rifle competitions ever held in this country. Not only will this great event be interesting in itself, but it further will be interesting as foreshadowing more or less accurately the victors in the International Palma trophy match, between teams representing the United States, Great Britain and Ireland and Canada, fixed to take place on Sept. 13. The American team has made more earnest effort both in the way of theoretical study, experiment and practice than has obtained among the devotees of long-range rifle shooting in many years past.

The revolver competitions are also exciting much interest, and with the greater expertness in the use of this weapon, there is every likelihood that old records will be broken. The new revolver range, ten targets at each range, 25, 50 and 75yds., will afford every facility for active competition.

Trapshooting.

Fixtures.

Aug. 27-28.—Muscoda, Wis.—Target tournament of the Muscoda Gun Club.

Aug. 27-28.—Haverhill, Mass.—The Interstate Association's tournament, under the auspices of the Haverhill Gun Club. S. G. Miller, Sec'y.

Aug. 27-28.—Ruffsdale, Pa.—Ruffsdale Rod and Gun Club's first annual two-day target tournament. Added money, $30. Rose system. Lloyd H. Ruff, Sec'y.

Aug. 29.—Concord, N. H.—One-hundred target match between Messrs. H. B. Darton, of Portland, Me., and Mr. C. M. Stark, of Dunbarton, N. H., for $100 a side.

Aug. 30.—Watertown, Mass.—First all-day open tournament of the Watertown Gun Club. Chas. H. Philbrook, Acting Sec'y.

Aug. 29.—Pleasant Hill, Mo.—Sixth annual merchandise and sweepstake tourney. T. H. Cohron, Sec'y.

Aug. 29-30.—Menominee, Mich.—First annual tournament of the Menominee Gun Club. E. W. Nowack, Sec'y.

Aug. 30.—Watertown, Mass.—All-day tournament of the Watertown Gun Club.

Sept. 1.—Edgewater, N. J.—North River Gun Club's handicap at 100 targets, $6 entrance, for new piano.

Sept. 1.—Pleasantville, N. Y.—Shoot of the Westchester County Trapshooters' League.

Sept. 1.—Akron, O.—Shoot of the Akron Gun Club.

Sept. 1.—Lebanon, Ind.—Lebanon Gun Club Park Association's tournament.

Sept. 1.—Muncie, Ind.—Annual fall tournament of the Magic City Gun Club.

Sept. 1.—Dover, N. H.—Labor Day tournament of the Dover Sportsmen's Association. D. W. Hallam, Sec'y.

Sept. 1.—Battle Creek, Mich.—Amateur tournament of the Battle Creek Gun Club. M. E. Hensler, Sec'y.

Sept. 1-2.—Meriden, Conn.—Parker Gun Club's annual Labor Day Shoot and Sheep Bake. C. S. Howard, Sec'y.

Sept. 1-3.—Lynchburg, Va.—Third annual shoot of the Virginia Trapshooters' Association, on the grounds of the Lynchburg Gun Club in Rivermont; sparrow shoot on third day. J. A. Anderson, Sec'y.

Sept. 2-3.—Central City, Ia.—Wapsie Gun Club's handicap tournament.

Sept. 2-3.—Tiffin, O.—Second annual tournament of the Tiffin Gun Club; $75 added. L. D. Arndt, Sec'y.

Sept. 3-4.—Nappanee, Ind.—The Interstate Association's tournament, under the auspices of the Nappanee Gun Club. Ed. J. Bowers, Sec'y.

Sept. 3-5.—Richmond, Ind.—Handicap tournament of the Richmond, Ind., and College Corner, New Paris and Oxford, O., gun clubs.

Sept. 3-5.—Erie, Pa.—Erie City Rod and Gun Club's handicap tournament at targets. Open to all; $200 added. A. N. Aitken, Sec'y.

Sept. 4-5.—Grand Rapids, Mich.—Open tournament of the Consolidated Sportsman's Association. Eber Rice, Sec'y.

Sept. 9-11.—Du Bois, Pa.—Three days' target tournament of the Du Bois Rod and Gun Club; added money, $200. L. S. Munch, Sec'y.

Sept. 9-12.—Battle Creek, Mich.—Tournament of the Indians; open to the world; $1,000 added. John Parker, Mgr.

Sept. 10.—East Liverpool, O.—East Liverpool Gun Club's tournament. R. W. Sample, Sec'y.

Sept. 10.—Bristol, Conn.—All-day tournament and sheep bake of the Bristol Gun Club. E. M. Dailey, Sec'y.

Sept. 11-12.—Annual fall target and live-bird amateur shoot of the Harrisburg Shooting Association.

Sept. 15-20.—Blue River Park, Kansas City, Mo.—Twenty-fifth tournament of the Missouri State Fish and Game Protective Association. Targets and live birds. Paul Franke, Sec'y.

Sept. 16-17.—Nebraska City, Neb.—Tournament at Nebraska City.

Sept. 16-18.—Williamsport, Pa.—Tournament of the West Branch Rod and Gun Club.

Sept. 16-19.—Detroit, Mich.—John Parker's annual tournament.

Sept. 23-24.—Concordia, Kan.—Second annual tournament of the Concordia Blue Ribbon Gun Club.

Sept. 23-25.—Cincinnati, O.—Second annual handicap target tournament of the Cincinnati Gun Club. Charles F. Dreihs, Sec'y.

Sept. 26-27.—Matthews, Ind.—Second annual target and live-bird tournament.

Sept. 29-30.—Lewistown, Ill.—The Interstate Association's tournament, under the auspices of the Lewistown Gun Club. H. H. McComber, Sec'y.

Oct. 1-2.—Union City, Ind.—Fall tournament of the Parent Grove Gun Club. O. E. Fouts, Sec'y.

Oct. 1-2.—Austerlitz, Ky.—Hill Top Gun Club's live-bird tournament. Alfred Clay, Sec'y.

Oct. 1-2.—Union City, Ind.—Parent Grove Gun Club's fall tournament. O. E. Fouts, Sec'y.

Oct. 1-2.—Allegheny, Pa.—Two-day target tournament of the Northside Gun Club; $100 added money. I. W. Morrow, Sec'y.

Oct. 7-8.—Greenville, O.—Handicap tournament of the Greenville Gun Club. H. A. McCaughey, Sec'y.

Oct. 9-10.—Fort Wayne, Ind.—Annual target tournament of the East End Gun Club. F. W. Leidelf, Sec'y.

Oct. 15-16.—New London, Ia.—Sixth annual tournament of the New London Gun Club. Dr. C. E. Cook, Sec'y.

Oct. 15-16.—Springfield, O.—Springfield Gun Club's tournament. B. F. Downs, Capt.

Newark, N. J.—South Side Gun Club target shoot, every Saturday afternoon.

Chicago, Ill.—Garfield Gun Club's target shoot, every Saturday afternoon until October. Grounds, West Monroe street and Fifty-second avenue. Dr. J. W. Meek, Sec'y.

First Saturday of each month for a year, Burnside.—Contest for the Troisdorf live-bird and target medals; 10 live birds; 25 targets; open to all. First contest, March 1.

CONTESTS AT INTERSTATE PARK.

Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations.

DRIVERS AND TWISTERS..

The programme of the Dubois (Pa.) Rod and Gun Club, arranged for its tournament of Sept. 9, 10 and 11, has twelve events each day, of which nine are at 15, two at 20 and one at 25 targets; entrance, $1.50, $2 and $2.50; added moneys, $3.50 $4.50 and $6. Totals of each day, as follows: Targets, 200; entrance, $20; added moneys, $46.50 There also is a merchandise events each day, of which there are eleven or twelve prizes, with more to be added. Besides the regular events mentioned, there are special events as follows: Second day, Iroquois Cup, value $50, open to a squad of five members (bonafide) of any club in DuBois or vicinity, which the DuBois team can conveniently visit, hold shoot and return home on same day; emblematic of local championship; 25 targets, 25 cents entrance. On the third day there is a special event for members of the DuBois Gun Club for silver medal emblematic of club championship, 10 targets, 25 cents entrance; to be contested by members only at each weekly club shoot. Also four-man team contest for the Hibner Cup, valued at $100 and $20 in gold, open to any recognized gun club in Pennsylvania. For conditions in full apply to Mr. L. S. Munch, secretary. Shooting commences at 9 o'clock. Magautrap; blue rocks, 2 cents. High averages, first and second days, 1st $5; 2d, $3; 3d, $2.25. High averages, three days, 1st, $10; 2d, $6; 3d, $4. Guns and ammunition shipped to Mr. F. Guinzburg, DuBois, Pa., will be delivered on the grounds free. Rose system. Manufacturers' agents and paid shooters (other than for averages) for targets only.

The annual fall target and live-bird shoot of the Harrisburg (Pa.) Shooting Association, Sept. 11 and 12, is for amateurs only. There are on the first day twelve target events on its programme, at 10, 15, 20 and 25 targets, a total of 205 with a total entrance fee of $11. Three events are handicaps and one is merchandise. On the second day, beside the target programme of the first day, there are two events at live birds. No. 1 is at five birds, $2 entrance, birds extra, handicaps 28 and 30 yards. No. 2 is at 20 birds, $10 entrance, birds included, 28 yards. For both days at targets there are $3 for high average. Shooting commences at 8:30 o'clock. Shells and refreshments may be obtained on the grounds. Shooters may enter for targets only. Moneys divided 50, 30 and 20 per cent; over twelve entries, 40, 30, 20 and 10 per cent. Targets, two cents. The members of the committee are Messrs. Geo. L. Doehne, I. Ross Conway and H. B. Shoop.

The Erie City Rod and Gun Club has arranged a like programme for each day of its forthcoming handicap shooting tournament Sept. 3 to 5. Competition is open to all. There are ten events, five at 15, three at 20, one at 5 pairs and ten singles, $1.50, $2 and $3 entrance, $5, $10 and $15 added. Total entrance for each day, $18.50. Handicaps, 15 to 21 yards. Shooting commences at 9 o'clock. Magautrap will be used. Nos. 4 and 10 each day will be class shooting, 40, 30, 20 and 10. In other events the Rose system will govern in ratios, 8, 6, 4, and 2. Ship shells, etc., to Mr. Seth Clover, Erie, Pa., and they will be delivered on the grounds free of charge. Mr. A. N. Aitken is the secretary.

The Grand Hotel Cup, contested for at the tournament of the Limited Gun Club, Indianapolis, Ind., on Aug. 21, was won this year by Mr. H. M. Clark, of Wabash, Ind., by a score of 49 out of 50 targets. His oppenent was Mr. H. J. Sconce, of Sidell, who was the holder and who scored 47. Mr. Sconce and Mr. C. W. Phellis respectively killed 99 sparrows out of 100 in the sweepstake sparrow events.

Mr. F. M. Berkey, of Kansas City, Mo., lost his life by a shooting accident a few days ago while returning from a hunting trip. Riding in a wagon, he was leaning on his loaded gun, which from some unknown cause was discharged. Death was instantaneous. He shot in the G. A. H. at Kansas City this year and had charge of the check room at that tournament. His untimely death was a grievous shock to his many friends.

In the club event of the Baltimore Shooting Association, Messrs. Edwards and Lupus lead with a score of 196 each out of 200, their handicap allowance being added. Mr. Malone is one less. The allowances are based on the averages of the contestants. The average of the best shot is taken as scratch and standard, and the other contestnts are allowed enough extra to equal the average of scratch, if all shoot equal to their averages.

At Abbottsford Inn, Stone Harbor, N. J., commencing on Sept. 1 and continuing to Sept. 6, there will be a contest at 100 targets, with a handicap allowance. The prize will be a fine cup, and the only entrance fee will be the price of targets. Reentries will be allowed. The marshes thereabout abound in shore birds and mudhens. Mr. W. H. Wolstencroft is the manager.

Mr. Elmer E. Shaner passed through New York on Monday of this week en route to Haverhill, Mass., to manage the Interstate tournament, Aug. 27 and 28. After that he will have some busy moments hurrying to Nappanee, Ind., to manage the next Interstate, Sept. 3 and 4.

The Morris (Minn.) Tribune reports a trap shoot as follows: "A gun shoot at Cottonwood Lake attracted a large number from Morris last Sunday, and we understand they had a jolly time. Jim Pearce carried away the honors with two birds out of a possible ——ty."

On Sept. 1, Labor Day, the Westchester County Trapshooters' League will hold a shoot at Pleasantville, N. Y., under the auspices of the Pleasantville Rod and Gun Club. Mr. A. C. Hoyt is the secretary.

The Winchester Gun Cub, of Detroit, Mich., have installed a new magautrap and added other improvements to their grounds. They are now pleasingly and fully equipped for trap competition.

The enterprising captain of the Ossining Gun Club, C. G. Blandford, was high gun for the first day of the Ossining tournament, Aug. 20, with 147 out of a possible 160.

The Bristol (Conn.) Gun Club is actively preparing for a good attendance at its tournament and sheep bake, Sept. 10. Mr. E. M. Dailey is the secretary.

The official signs of the times seem to indicate quite reliably that there will not be another Grand American Live Bird Handicap.

The shoot of the North River Gun Club, of Edgewater, N. J., fixed to take place on Sept. 1, has been cancelled.

BERNARD WATERS.

TROPHIES AND PRIZES SHOT FOR AT THE DOMINION OF CANADA TRAP SHOOTING AND GAME PROTECTIVE ASSOCIATION SECOND ANNUAL TOURNAMENT HELD AT HAMILTON, ONT., AUG. 14, 15, 16, 1902.

Birch Brook Gun Club

LYNN, Mass.—The last but one of the series was shot by the Birch Brook Gun Club on Aug. 23. Straw was high man, and if he can do that again he will be high man in the series. There are now two men tied for first place, Hilliard and Hebbard, with 199 each out of a possible 240, and it now looks as though there might be some ties to be shot off Labor Day, as there are two other men tied.

In the 25-bird race between Riley and Emery, Emery again was victor, 17 to 16; but Riley thinks that is not conclusive that Emery is the best shot.

The following scores were made on the above date:

Events:	1	2	3	4	5	6	7	8	9	10
Targets:	30	50	25	10	10	10	10	10	10	5p
Straw	28	43	..	..	3	6	..	..	..	..
Hebbard	24	42	..	4	9	8	5	9	6	..
Rand	18	28	..	7	7	..	..	..	..	..
Hastings	18	29	..	7	6	6	6	5	5	..
Riley	19	33	16	..	6	4	6	..	..	..
Emery	..	..	17	..	..	..	6	..	..	..
Rowell	14	26	..	..	3	7	7	..	..	..
Rowe	20	32	..	6	9	7	..	5	..	6
Dudley	20	29	..	7	..	3	7	6	..	5
Mason	..	..	..	8	7	10	5	6	8	..

No. 1 was the merchandise event. No. 2 the medal. No. 3 the match.

HENRY ROOD, Sec'y.

Cheapeake Gun Club.

NEWPORT NEWS, Va., Aug. 20.—The Chesapeake Gun Club held one of the most successful shoots of the season at its park yesterday afternoon. Twelve shooters were on hand and some excellent scores were made.

Mr. G. B. James was high gun, breaking 90 out of 100 targets. Messrs. Stearnes and Butt each broke 88 targets and were second. The best score, however, was below that established by Mr. Stearnes last week by 8 targets. The results follow:

Thos F Stearnes	19 22 24 23—88	B B Semmes	16 21 24 21—82
J W S Butt	23 22 22 21—88	E S Robinson	21 19 20 21—81
Dr O F Bird	17 24 17 20—78	Fred Palmer	22 18 20 18—78
P J Gallagher	21 20 23 22—86	H Westacott	17 16 22 21—76
P A Agelasto	20 23 18 20—81	Dr Jos Charles	21 23 .. ..
G B James	22 24 22 22—90	F Saunders	17 13 .. ..

T. F. S.

Westchester County Trapshooters' Association.

PLEASANTVILLE, N. Y.—The fourth tournament of the Westchester County Trapshooters' Association will be held at this place Labor Day, Sept. 1, 1902, under the auspices of the Pleasantville Rod and Gun Club.

The programme calls for twelve events, and it is expected that about two hundred shooters will be in attendance. The members of this club are working hard to make this the banner shoot of the association, and neither time or expense will be spared to attain that end.

The magautrap will be used on that day. Loaded shells can be had on the grounds, and the local club will serve an enticing lunch to their guests. Any sportsman attending can be assured of a good day's sport and will be well satisfied that the Pleasantville Rod and Gun Club is a live, flourishing organization.

Shooting will commence at 10 A. M. There will be cash prizes offered for the two best general averages. For further information write to A. C. Hoyt, Secretary, Pleasantville, N. Y.

Dominion of Canada Tournament.

Aug. 14, First Day.

Trap at Omaha.

The South Omaha Gun Club, D. Morrill and F. Dworak, managers, gave a three days' tournament this week. The first two days had a uniform attendance of over thirty. On the last day interest lagged, and the programme was abbreviated. Targets were thrown from expert traps, and the shooting was difficult. W. H. Heer, D. D. Bray, F. C. Riehl and Wm. Veach finished with the three days' honors in the order named. Scores are appended:

First Day, Aug. 21.

Events:	1	2	3	4	5	6	7	8	9	10	Shot at.	Total Broke.

KILLMORE.

Weeping Water Tournament.

WEEPING WATER, Neb.—A two days' amateur tournament incidental to the annual Soldiers' Reunion was given at Weeping Water, Neb., Aug. 19-20. Rain the second day cut short the programme, but on the number shot Bray, Heer, Linderman and Riehl, all shooting from 18yds., won the first places. The shooting was very difficult, and scores averaged very low. Figures follow:

Aug. 19, First Day.

KILLMORE.

Raleigh Gun Club.

RALEIGH, N. C., Aug. 22.—We are still carrying a very poor attendance at our weekly shoots, but we expect better results from now on. Several regular shooters were absent to-day on account of pressing business engagements. A few good scores were made at 50 targets, as follows: Johnson 48, Parker 44, Dickson 43, Gray 41, Galloway 35, Whitaker 33, Crawford 30, Walters 19.

R. T. GOWAN, Sec'y.

Kane Gun Club.

KANE, Pa., Aug. 23.—Herewith find scores made at second annual tournament of Kane Gun Club, Kane, Pa. Weather conditions were good, and some fine scores were made. Trade was represented by Jack Fanning, Frank Lawrence, J. R. Hull, L. Squires and Charles Grubb. Charley Grubb could not talk fast enough, so he got a phonograph to do some talking for him, winding up the record with a little ragtime music.

Eight members of the Dubois Rod and Gun Club came up for the first day, some of them staying over the two days. They expressed themselves as being well pleased with the two days' sport. Although we did not have a large crowd, we had a pleasant time, and lots of fun.

Sizer won high average for both days, getting 190 the first day and 182 the second. Atkinson got second place at 20yds., for the two days, Squires third and Williams fourth place. Scores for the two days follow:

Aug. 2, First Day.

Winnebago Tournament.

FOREST CITY, Ia., Aug. 21.—There has been so much rain of late that farmers are getting discouraged at the prospects of the small grain being mostly ruined. The very heavy rain that fell Tuesday caused the County Fair Association to postpone the fair, and with it went the added money for the tournament that was to be held during the fair, and to be managed by the gun club.

There were a few shooters who came in on Wednesday, and to the end that they be not disappointed, the club arranged a shoot and carried out the programme, adding the same amount to the programme that the fair had agreed to give.

As there were only about eleven shooters present, the club will be a big loser; but as this club is alive and up-and-doing, it will not let this discourage the members, who will next time give a tournament without the aid of any other parties.

The 100-target race between Budd, Gilbert and Klein was postponed, as Budd could not be present on account of illness.

The day was fine, but the traps were set where the background was dark and poor as to light.

Those prosent from a distance were Messrs. H. C. Mortensen and E. H. Castle, of Britti; Russel Klein and Dude Gilbert, of Spirit Lake; J. M. Hughes, of Palmyra, Wis. The home boys were C. F. Bastian, E. O. Lockore, M. G. Green, T. H. Cole, I. H. Sharp, J. H. McKay, and C. H. Macomber.

Forest City is quite an enterprising city. Some of the business blocks would be a credit to a city of 50,000 inhabitants, while the hotels are the best in the State.

The club here holds weekly meetings, and being composed of business men mostly, be sure to keep to the front for many years to come. J. H. McKay is president and C. H. Macomber is secretary.

When they give a shoot next time, the writer hopes that a large crowd of enthusiastic shooters may find it convenient to be present.

Hughes was about right, and all targets looked like balloons, as he made the great score of 147 out of 150. Klein was second with 143, and Gilbert third with 140. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	Shot at.	Broke.
Targets:	15	15	15	15	15	15	15	15	15	15

SCRIBE.

Baltimore Shooting Association.

BALTIMORE, Md., Aug. 23.—At the shoot of the Baltimore Shooting Association to-day five men succeeded, with the extra bird allowance, in making clean scores, namely, H. E. Lupus, J. W. Chew, C. E. Peters, G. E. Edwards and Paul Jones. J. R. Malone scored 49 and J. H. Roberts 43.

This has now become a most interesting event. The leaders are all so close together that it looks as though there will be a number of ties to be shot off at the end of the month. At this time Edwards and Lupus lead with 196 out of 200, Malone has 195, Chew and Jones 194 and Roberts 182.

There will be an open shoot at the Baltimore Shooting Association on Thursday next, Aug. 28, at 1 P. M. The main event will be a 100-target race, handicap to be the average system; open to all. To-day's events resulted as follows:

Targets:	10	15	10	10			Targets:	10	15	10	10		
Events:	1	2	3	4	5	6	Events:	1	2	3	4	5	6
Lupus	9	..	8	..	4	50	Edwards	7	11	6	7	19	50
Chew	10	14	..	..	7	50	Roberts	7	8	..	..	19	43
Malone	..	..	9	..	5	49	Jones	6	8	6	6	17	50
Cox	9	..	9	..	..	..	Biddle	9	9	6	8	..	..
Peters	9	12	8	8	12	50							

No. 6 gives extra bird allowance in No. 7, the club event.

Bristol Gun Club.

BRISTOL, Conn., Aug. 23.—At the weekly shoot, Aug. 23, of the Bristol Gun Club the best individual scores above 10 were:

H J Mills	111111101110111011011111—21
G Richtmeyer	100111011111011111111111—21
S J Large	111011101001111111111110—20
H J Hart	101101001111111111101011—19
E Simmons	010111111101111101101101—19
G W Mitchell	010111101101111011011110—18
D Page	111111011010011100101111—18
R A Bolton	111111011111001101110100—17
C Edgerton	111111101001111010000101—16
W Neubauer	011011010001111101101011—16
F L Fairbanks	111001100011111001111010—16
A H Porter	001101110100011110011011—15
W Moran	001111111110011010000100—14
N Judd	110111101001000011011000—12

The club has added two new expert traps, making a five-trap system, and are equipping the same with the latest electric pull. Everything will be complete for their weekly shoot, Saturday afternoon, Aug. 30.

F. L. FAIRBANKS.

Championship of Gregory County, South Dakota.

BONESTEEL, S. D., Aug. 15.—On the grounds of the Fairfax Gun Club, at Fairfax, S. D., Carl Porter, holder, defeated T. J. Thompson, challenger, for the Peters Cartridge Co.'s trophy, emblematic of the target Individual Championship of Gregory County, by a score of 46 to 42.

The emblem is a challenge trophy, and was put up in open competition at the recent tournament of the Bonesteel Gun Club, on which occasion it was won by Mr. Porter, and was to-day ably defended by him. Both gentlemen are Fairfax men, who both had a large following of well-wishers who hoped their man would win. The winner was warmly congratulated by all the sportsmen present at the conclusion of the race, and was immediately challenged for the trophy by Mr. J. F. Spatz, of the Bonesteel Gun Club, and the match will be shot, weather permitting, on the Fairfax grounds on the 26th inst.

Porter started off at a heart-breaking clip and ran out the first string of 25 straight, while Thompson lost his 6th, 18th and 20th birds, going out with 22. A short rest was taken, during which a $1 sweep was run off, and then the principals took their positions for the second string of 25. Porter went on grinding them out until his 31st bird, which he lost, and then went on until his 41st, which escaped, as did his 42d and 47th, making the very pretty total of 46.

A half dozen 15-bird $1 sweeps were run off in connection with the trophy race, and Thompson easily did the best shooting, and was consequently the largest winner. The Fairfax boys are to be congratulated on the manner in which the shoot was pulled off, as everything worked as smoothly as if it was greased for the occasion. There was not a single incident to mar the sport. A neat tent was provided for the shooters and wire stretched around the shooters' score, and good wire pulls to the three expert traps made the birds quick and altogether satisfactory.

Much interest is being manifested in these contests, and the Bonesteel and Fairfax Gun Clubs boast an active membership of 30 shooters. Among those present we noticed Mr. C. A. Johnson, president of the Fairfax State Bank, and Mr. Porter, the gray-haired father of the winner, who watched with all a father's pride the victory of the son. Messrs. Lucas, Spatz, Jones and Leach were down from the Bonesteel Club, and among the locals were Carl Porter, Orion Porter, Beagle, Cantrell, Antles, Newsbaum and a large number of the Fairfax business men and merchants who came out to see their undefeated champion add another victory to his long list.

I must not forget to mention the shooting of Fred Lucas, who is president of the Bonesteel Gun Club, and a new hand at the target game. His shooting was an agreeable surprise to his friends as well as himself, and proves that what Fred needed was a little money put up to urge him to do his best. Twenty-five out of the first 30 and a good, consistent gait maintained thereafter through the entire shoot is not so bad for a right new hand. Fred is a comer and it will be well to make a note of it. Following are the scores of the trophy race:

Porter	1111111111111111111111111—25
	1111110111111110011111011—21—46
Thompson	1111101111111111101011111—22
	1101101111111111111001101—20—42

W. A. LEACH, Sec'y.,
Bonesteel Gun Club.

Sistersville Gun Club.

SISTERSVILLE, W. Va., Aug. 24.—At the regular weekly shoot of the Sistersville Gun Club yesterday afternoon, some very good scores were made. A. Bruce Hunt, Esq., walked off with the championship trophy, after a very exciting shoot-off with Curt I. and Willis Hall. Mr. Ed. O. Bower, the present holder of the State championship trophy, and who had just returned from a very pleasant two days' tournament at Maysville, Ky., did not enter the trophy event, but went in for the price of targets and broke 25 straight.

Event No. 1, 25 targets for practice, resulted as follows:

A. B. Hunt 21, Willis Hall 21, Ed. O. Bower 23, and Curt I. Hall 25.

Event No. 2, for trophy; handicap allowance:

Bower (scratch) 25, Hunt (5) 20-25, C. I. Hall (2) 23-25, Willis Hall (3) 22-25, and Frank Dunlap (8) 16-24.

Event No. 3, 25 targets, shoot-off, same conditions:

Hunt 20-25, C. I. Hall 22-24, Willis Hall 22-25. C. I. Hall and F. Dunlap, shooting for practice, broke 23 and 20 respectively.

As Mr. Hunt and Willis Hall were still tied for the trophy, they decided to shoot at another 25 targets without handicap allowance, and again tied on 21 each. Mr. C. I. Hall again broke 22, and Frank Dunlap 19. As the two trophy contestants were about out of shells, they agreed to settle their little difference, miss-and-out, which resulted in a victory for Mr. Hunt, Mr. Hall missing his first target. Mr. Hunt, who is one of our new shooters and had never held the trophy before, was warmly congratulated for his good work.

LERANZO.

Individual Provincial Championship.

SHERBROOKE, Que., Aug. 18.—I append clipping taken from the Montreal Gazette. It gives the result of the final match for the Individual Provincial Championship, as follows:

The last match for the championship of the Province of Quebec at clay birds took place at Sherbrooke, between Mr. T. M. Craig, of that place, and Mr. R. B. Hutcheson, of Montreal. The result was a win for Mr. Craig, with 47 out of a possible 50. There was a gusty wind blowing straight on the traps. Mr. Craig's score, which would be a good one at any time, was remarkable under existing circumstances. The scores follow:

	Known.	Unknown.	Doubles.	Totals.
Craig	20	18	9	47
Hutcheson	17	18	7	42

Before this match Hutcheson and Craig were equal, and this gives Mr. Craig the indivdual championship of the province and the trophy.

The competition was commenced on July 1, 1897, and has resulted as follows:

	Defences.
T. M. Craig, Sherbrooke G.C.	5
R. B. Hutcheson, Westmount G. C.	4
W. L. Cameron, Montreal G. C.	3
A. W. Westover, Sutton G. C.	3
J. B. Goodhue, Rock Island G. C.	2
W. G. Bray, Sherbrooke G. C.	1

There have been altogether thirty matches.

Winchester Gun Club.

DETROIT, Mich.—The club has just completed a new installation of their magautrap, new score and other improvements with so perfect a pulling arrangement that it is a pleasure to see it work.

The many absent members missed a fine afternoon's sport at the regular shoot, Aug. 23. Henry Guthard, Class B, shot in fine form, but he had to make 24 to win the medal. Shiell hardly felt entitled to the A medal on 18, but had to take it.

Ford had it easy in Class C and won with 20. Following are the scores, the last being the club event:

Events:	1	2	3	4	5	6	7	8
Targets:	10	15	10	15	15	10	25	25
Brodie	6	12	9	13	..	..	..	17
Shiell	6	..	9	12	..	4	..	18
Guthard	9	11	10	14	..	..	21	24

Brown	..	..	7	7	..	4	11	..

Olney Gun Club.

OLNEY, Ill., Aug. 21.—A new gun club has been organized here with fifty members. A magautrap has been leased, and one of the finest shooting grounds in the State equipped.

Officers were elected as follows: D. P. Moore, President; J. E. Phillips, Vice-President; R. R. Byers, Secretary and Treasurer; D. Z. Vernor, Referee and Manager.

The club is known as the Olney Gun Club. They will give their first annual tournament about the last week in September, when a number of good prizes will be contested for. The club meets every Tuesday afternoon at their shooting grounds. The scores at the last shoot follow, each man shooting at 25 targets:

H. C. Ferriman 12, D. P. Moore 20, Jim Kaley 18, John Marks 17, H. L. Mitchell 18, R. R. Byers 15, S. Butler 13, J. E. Phillips 19, W. Horrall 19, Harve Elliott 18, W. J. Cummings 18, William Mather 15.

D. P. MOORE.

The Wanderers.

The Wanderers is a body of shooters of New York and vicinity informally and theoretically organized for certain contingent advantages, as set forth in its prospectus, a copy of which is published herein. As Wanderers, they have been in existence but a few short weeks. In that brief time they have attained a conspicuous place in the shooting interests and also in the shooting gossip of New York and vicinity. Starting on a theory of insuring successful shoots each week by virtue of concerted action, the theory in practice was quickly eclipsed by a policy of profit.

Some of their doings have excited much public interest, and some have excited adverse criticism. Concerning them, the following is published chiefly for the information of the public. Thus clubs and others who are concerned may pass judgment intelligently on a new shooting policy which has within it all the inherent elements for universal adoption, if, as applied by the Wanderers, it wins public indorsement. It is a policy which any other body of men may adopt.

Stated in general terms, the purpose of insuring a successful shoot by going in numbers was, by the Wanderers, quickly subordinated to a purpose of stuffing the treasury. There were many directly and indirectly interested who disapproved of this organization being conducted for revenue under the peculiar circumstances of the case. A large percentage of the membership is professional. They are gentlemen who are employed professionally and who draw salaries and have expense accounts as professionals. Thus they gain a livelihood from the sales of their goods, and are hardly supposed to gain a further direct profit from the consumption of said goods. We are sure that this feature of the case escaped the Wanderers' attention.

We mentioned that there was some disapproval of the Wanderers' financial policy. As a case in point, some newspaper men interviewed Capt. J. A. H. Dressel on Friday of last week, and he authorized the following statement concerning the Wanderers:

"I am interested in the Wanderers to the extent that, so long as they continue their organization on the lines as first published in their prospectus, I will support them. I will allow U. M. C. representatives to attend their tournaments on the understanding that the Wanderers have adopted a change of base, getting away from the objectionable features heretofore exploited in different sportsmen's publications."

The foregoing refers to the extraction of a portion of club receipts as a rake-off by the Wanderers for purposes of revenue.

The prospectus adverted to by Capt. Dressel was sent to a number of shooters. It bore date of June 19, and was signed by Mr. Edward Banks, 318 Broadway, New York. It was as follows:

"Several years ago we formed a roving organization of local trapshooters, which was called the Wanderers' Club. The idea was to have the members of the club attend every Saturday in a body at a certain club's grounds, in order that there might always be a good shoot which we could attend every Saturday if we wished. The scheme was very successful, and was apparently dropped for no other reason than that nobody could be found who would 'do the work.' We arranged our shoots in the following manner:

"The first shoot would be decided upon by a vote of the members, or a name of a club would be suggested and the members asked as to whether it met with their approval. While attending the Saturday shoot at the club's grounds the members of the Wanderers' Club decided which club they should visit the following Saturday, etc. There were no dues, only a nominal fee being collected for the purpose of purchasing postals for sending out notices on. This year, however, we propose to fine every member who does not attend a shoot 25 cents, the 25 cents to go to a fund, which will be shot for the first Saturday in every month on the handicap basis, members of the club only be entitled to take part, the number of moneys being decided in accordance with the number of entries.

"The scheme promises well, and I have the assurance of the cooperation of several trapshooters in this section who will become members. May I ask you, therefore, to notify me by return mail if possible as to whether you will join? The first shoot of the club will be held on Saturday, July 12, and I offer as a suggestion that we decide whether the shoot on that date shall be held on the grounds of the Boiling Springs Gun Club, Rutherford, N. J., or the Jackson Gun Club, Paterson, N. J."

As above set forth in the prospectus, it will be noted that the sole purpose of the organization was "to have the members of the club attend every Saturday in a body at a certain club's grounds," etc. It, however, naively indicated that there were those already in power, as shown by the clause, "This year, however, we propose to fine every member who does not attend a shoot 25 cents," etc. As a matter of trifling incidental interest concerning the curious ante-feature of an organization which then existed only in idea, one might be pardoned for having a desire to know who was the autocratic "we" which had the assurance to arrange a financial policy, the date of the shoot, and what clubs were to be considered, all before the club was organized.

The movement in a general way was suggested and advocated by Capt. A. W. Money. Within certain necessary limitations, which will be touched upon in detail hereinafter, it was commendably sound and practical. If conducted on the lines of his original idea, it would have greatly and beneficially stimulated trapshooting activity in New York and vicinity.

The first membership of the Wanderers was largely professional, and indeed as to membership, the mainstay of the club is now professional. On the lines of the original idea, it is proper that it should be so. By going to a club's shoot in a body, shooting under the conditions imposed by the club and giving a general impetus to trapshooting thereby, they were following their professional occupation while coincidentally having a pleasant day. But, being so professional, there was every reason why as an organized body it should avoid the policy and practice of a rake off.

The Wanderers' purposes, as set forth in their prospectus, contemplated neither a treasury nor a treasurer. They had no grounds to maintain, no help to hire, no merchandise to purchase, no taxes to pay; in short, they had neither assets nor liabilities.

The purpose of the club, namely, "that there might always be a good shoot which we might attend every Saturday if we wished," worked as follows at its first attempt. On Saturday, July 12, at Rutherford, N. J., the Wanderers attended a shoot which the Boiling Springs Gun Club believed to be its own. On account of a simple misunderstanding concerning the shoot, no members of the Boiling Springs Gun Club were present. The Wanderers ran the shoot, and on that account at its close they appropriated one-half the receipts. Targets were two cents, the rate fixed by the home club.

In the absence of any specific agreement for a rake-off, the Wanderers had quite as good a right to take all the receipts as a part, for they had no right to either. As an organization, they had no need of the money, nor had they any use for it when in hand. But, aside from all that, by what right did they take it? Why did they take it? If they had no right to the money appropriated, why do they still hold it? The theory as set forth in the prospectus on the one hand, and on the other hand the immediate grasping for money on opportunity, are in violent contrast. An election of officers also was held on this day, though no notice was given in the prospectus that such act would be taken.

However, the Boiling Springs episode would have been comparatively insignificant had it been the beginning and the end of a mistaken zeal and act for a treasury, but instead, it seemed to open up new vistas of finance on lines of original novelty for the future.

The third financial essay of the Wanderers occurred on July 26. The idea to have the members of the club attend in a body worked very well, but certain other thrifty ideas were added to it. The organization which was specially honored by their atendance was the South Side Gun Club, of Newark, N. J. It regularly charges one cent for targets. The Wanderers, or some of them, on that day took charge more or less of the financial interests of the South Side Gun Club's shoot and from the purses deducted two cents for targets, one cent of which was appropriated and put in the Wanderers' treasury. According to our information, these two shoots netted the Wanderers $40. The management of the South Side Gun Club, so we were informed by good authority, were not highly pleased with the Wanderers' methods. That sum, $40, was an important one to take from the shooters so quickly and so shortly. We may infer that some one in consequence shot less than he otherwise would have done, either there or elsewhere.

For no useful purpose whatever $40 was thereby taken out of circulation.

In honor of the Wanderers, their treasurer, Dr. W. L. Gardiner, on Aug. 2 gave an entertainment, a succotash party, at his manorial home in the beautiful town of East Orange, N. J. Every one present enjoyed it most happily. As a host, he deserved and received much earnest praise.

However, in connection with that memorable function, he also acted in another capacity, that of treasurer of the Wanderers, and it is in that capacity alone that we now refer to him. He announced that targets would be two cents each, and that, after paying the expenses of the shoot, the balance would be placed in the Wanderers' treasury. That was all right.

On that day he publicly stated that there were already $40 in the treasury.

However, there were nine events on the programme, of which a part of No. 8 and all of No. 9 were not shot, on account of insufficient time. Every one had paid in $3.60, the full programme entrance fee for the nine 20-target events. There thus was about $14 or $15 over pay for targets which should have been refunded then and there, but no attempt was made to refund then, nor has any attempt been made since so far as we know. The refund could easily have been paid in ten minutes. It was known for about an hour before competition ended that the programme would not be finished. That money, so overpaid, either belongs to the Wanderers or it does not. If it does, how did it happen so? If it does not, why is it held so tightly in their treasury?

The next financial interest of the Wanderers to attract attention was in connection with the shoot of the North River Gun Club, held Aug. 16, at Edgewater, N. J. It was said by some of the members of the latter club that the treasurer of the Wanderers demanded a rake-off as a condition of the Wanderers' attendance at the shoot, and that the demand was refused. It thus seemingly was much less successful to ask for a rake-off than it was to take it without asking. At all events, when the matter came to question, there was much accusation and denial; much repudiation of responsibility; much attempt at justification; much modification of novel ideas of finance; much explanation which did not explain, nor in the least disturb known facts.

Public adverse criticism brought forth for the time being the declaration from those who were supposed to do the Wanderers' thinking for them that the Wanderer did not want any rake-off. For a while it was then difficult to find a Wanderers who approved of the policy of rake-off, or who had done so. It is strange indeed that, with such sentiments against the policy of a rake-off, so much of the latter got into the Wanderers' treasury in so short a time, and stays so firmly therein.

Evidently the Wanderers did not feel quite at ease about the matter, else they would not have issued the following for the benefit of the "whom." It was published in Field and Fancy of Aug. 16:

"A meeting was held at Paterson, N. J., on Aug. 9 for the purpose of taking action on certain matters and to elect a governing committee and new members. The following is the committee, all but the last three being officers: Colin R. Wise, Edward Banks, Dr. W. L. Gardiner, James T. Skelly, Capt. A. W. Money, F. V. Carlough and H. S. Welles. The new members are: J. Warren Smith, of Orange; B. L. Gruman, of Westwood, and D. D. Engle, of Newark. The following is published for the benefit and information of whom it may concern: 'There seems to be some misunderstanding as to the real objects of the organization of the Wanderers. That club wishes it to be thoroughly understood that, no matter what Dame Rumor may bruit around, the Wanderers are out for a sociable time and for the best interests of the sport of trapshooting in the vicinity of New York, and not for any financial benefit whatever.'"

In the foregoing, the official declaration that, in spite of Dame Rumor, the Wanderers were "out for a sociable time," which by the way is mentioned first, was hardly a feature of public interest. Whether they were out for the best interests of trapshooting around New York or not was hardly to be accurately determined at that exceedingly early period of their official existence. Moreover, their policy was under discussion. The "information" and "benefit" contained in the foregoing excerpt are exceedingly intangible. However, matter therein attributed to Dame Rumor should be properly credited to Dame Fact. The best interests of the sport may be an abstraction entirely independent of the Wanderers' moneyed treasury, or their treasury may be an abstraction entirely independent of the best interests of sport; but in either case, the query arises as to how, being out "not for any financial benefit whatever," they have so much money in their treasury, or indeed have a treasury at all? But may not others have at heart the best interests of sport also?

We understand that there still are members of the Wanderers who justify the policy of a rake-off on the ground that, insuring a good shoot by their attendance, they therefore are entitled to a reward. If this plea is sound for the Wanderers, it is equally sound for all others.

As this policy is of general public interest, we, for the benefit of trapshooting in general, desire to particularize some of its main pernicious tendencies.

First, if, as adopted by the Wanderers, the principles of the rake-off is sound, it can be adopted freely by other similar bodies of men here and in all other places where there is trapshooting to any important degree. There thus is no reason why New York should not also have others so that all clubs, owners of grounds, would every Saturday have the honor of entertaining and dividing their just profits with so many whatnot august flitting clubs during the season, that, as a consequence of such outside solicitude for the best interests of the sport, bankruptcy and weariness would supervene.

Second, the Wanderers into their membership have drawn shooters who are members also of other clubs, so that in adding such members to a Wanderers' shoot to make a good shoot, they are thereby coincidentally subtracting from such other club shoots. Thus, in promoting the best interests of trapshooting on one spot, they may be decreasing such best interests on several other spots. If the membership of the Wanderers had been confined to the unattached shooters, of whom there are enough in New York to carry out the original Wandering idea, then shooting about New York would have been greatly benefited by them. But to take members from one club to attend the ordinary Saturday shoot of some other club, and then to parade the act as "for the best interests of the sport of trapshooting in the vicinity of New York" is to assume as a fact that which is debatable and unreasonable as an assumption.

The same principles of fair dealing between man and man as individuals should govern when men are organized as a body. Because official responsibility may be vague and indeterminate in club matters, the principles of fair dealing need not thereby be clouded or lost. The business integrity of an organization should always be a matter of personal solicitude to its members.

A policy which needs so many excuses, so many fine-drawn distinctions, so many bolstering fallacies to sustain it, and which evokes so much opposition, would better be well considered first before adopting it than to adopt it first and then do all the considering and excusing afterward. And it is not amiss for the members of a club to have some voice in the management of its affairs.

If the principle of a rake-off was one which could be exercised by only one club, it would be a matter of trifling and passing importance; but as, if tolerated, it is a principle which has a universal application, it behooves all clubs to take a hostile stand against it.

Ossining Gun Club.

Ossining, N. Y.—The two days' shoot and clam bake of the Ossining Gun Club last week, Aug. 20 and 21, were well attended, and successful in every way. George Hunt made the bake, assisted by his veteran corps of helpers; Will See, Will Lawrence, Jr., Jake Beberich and Thanny Tuttle. Capt. George Washburn was on hand to see that everything was put in right. There were to have been three bakes—one at 1 o'clock, one at 4 and the last one at 6. One of the kettles sprung a leak, so the 4 o'clock issue was abandoned. The stuff was cooked right, and George Hunt has yet to make his first failure with the kettle bake.

The usual chronic kickers were on hand—some didn't get enough lobster, some didn't get enough clams, the clams weren't cooked enough, etc. Every one can't be suited, but the majority was, to the tune of ninety strong.

The place for the chronic kicker is "home, sweet, home," where usually the kick doesn't register over 0 by the Sergeant system. If at a clam bake you happen to get a clam which has not opened, don't "knock" the whole bake. Just throw down the clam and pick up another. If you think the targets are thrown a little hard, don't think the management is in collusion with the magautrap operator to "do" you because you are a back-liner.

The preliminary events on the programme started promptly at 11 A. M. Sim Glover, the crack amateur of New York city, was high, breaking all 60 targets straight. Then came the clam bake handicap, in which twenty-three shooters shot at 100 targets each. A. Betti, of Mt. Kisco, at 16yds., was high with 91 per cent.; Keystone, 19yds., and C. G. Blandford, at 18yds., were second, with 90 per cent. Blandford was high for the day with 147 breaks out of 160.

The paid experts and trade representatives in attendance were Ed Banks, Leroy, Neaf Apgar, Tom Morfey, J. G. Ewing, S. M. Van Allen and Bob Schneider.

Those who were fortunate enough to be present as spectators had a chance to see some high class work. The second day's shoot, Thursday, while not so well attended, was nevertheless interesting owing to the merchandise event.

Aug. 20, First Day.

Events:	1	2	3	4	6	7	8	9

C. G. B.

Mississippi and Louisiana Trapshooters' League.

Natchez, Miss., Aug. 19.—Herewith please find notice of a business meeting which I believe will interest your readers.

C. W. Walton, Sec'y.

The Mississippi and Louisiana Trapshooters' League held a business meeting at Vicksburg, Miss., Aug. 14, 1902.

This league has been organized two years and has held eight very successful tournaments, the attendance at two of them averaging over one hundred shooters.

Representatives of several gun clubs from outside the two States were in attendance and desirous of joining the league. It was decided to enlarge the field and increase the number of tournaments.

The name of the league was changed to "The Mississippi Valley Trapshooters' and Game Protective Association."

The membership now numbers nineteen gun clubs.

The first tournament next season will be given at New Orleans, about Mardi Gras time, to be followed by tournaments at other league cities.

The league offiers are: H. T. Baker, President, and C. W. Walton, Secretary; office at Natchez, Miss.

All communications intended for Forest and Stream should always be addressed to the Forest and Stream Publishing Co., New York, and not to any individual connected with the paper.

IN NEW JERSEY.

Fairview Gun Club vs. Oradell Gun Club.

Fairview, N. J., Aug. 16.—The accompanying scores show results of a very spirited contest between the above clubs on Saturday afternoon, the 16th inst. The match was shot on the grounds of the Fairview Gun Club. The weather conditions were excellent, and there was a good attendance of interested spectators.

The event was most pleasant in every respect. The Oradell boys again fully sustained their reputation both for good shooting and extreme cordiality.

Their opponents in this match are looking forward with pleasure to another test of skill at an early date.

The Fairview club is young, but progressive, and its members are taking pains to gain efficiency in shooting, and will be heard from later as winners.

The scores of the team shoot were:

Fairview Gun Club—G. E. Dods 17; Con Sedore 17, L Lambrix 17, E. Collins 20, H. F. Brinkerhoff 18; Chas. Sedore 14, C. Townsend 14, W. Annet 18; total 135.

Oradell Gun Club—M. J. Vreeland 16, F. Ackerman 17, J. W. Winters 14, Herring 14, A. Ackerman 16, E. W. Lundy 20, C. P. Post 20, B. L. Gruman 19; total 136.

The scores in the other events were:

H. G. Brinkerhoff, Capt

North Branch Gun Club.

North Branch, N. J., Aug. 20.—The North Branch Gun Club prepared for a shoot of unusual size to-day, on the assurance from a number of shooters that they would attend. A small percentage only made their pledge good. The club expended some $50 or $60 for the entertainment of the visitors, much of which, in view of the light attendance, was unnecessary, and could have been avoided if no promises had been made. On the first day five extra events were shot.

Aug. 20, First Day.

The programme events had a total of 190 targets. No. 4 was at 5 pairs; No. 8 was at 10 pairs. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	Total

WESTERN TRAPS.

Waterloo 100-Bird Shoot.

Chicago, Ill., Aug. 22.—There was a gala target event on the grounds of Waterloo Gun Club, Aug. 15, at which time a much mooted 100-target event was shot to a finish. There were sixteen entries, and the competition was spirited. Following this event quite a number of sweeps were shot, and over 3,000 targets were broken during the day. Farmer, of Waterloo, sends the following report of the event:

"Out of town shooters were C. H. Wise, of Cedar Falls; Gillin, of Oelwein; S. E. Cain and Al. Joder, of Hudson, and Burkhart and Fries, of Boies. City shooters who participated were E. M. Storm, J. C. Hartman, E. E. Hageman, E. W. Jones, L. Van Vleck, Will White, Carl White, Ralph Storm, Rob Jackson and Henry Steege. The targets were thrown from three expert traps, unknown angles. The traps were in first-class order, and the targets were thrown low and swift. The left angle was especially hard on account of the day being dark and a clump of trees in the background. The men shot in squads, retiring after every round of 20 targets. The entrance fee was $5, divided into four moneys of 40, 30, 20 and 10 per cent. First money, $22.40, was divided between C. H. Wise and Ralph Storm, who each broke 84. Second money, $16.80, was won by J. C. Hartman with a score of 82. Third money, $11.20, was won by Henry Steege, on a score of 79. ourth money, $5.60, went to Jackson, who broke 76. The scores:

Targets:	20	20	20	20	20	Total.
E Storm	15	16	11	12	14	68
J C Hartman	17	15	17	17	16	82

E. Hough.

Hartford Building, Chicago, Ill.

Garfield Gun Club.

Chicago, Aug. 23.—The appended scores were made on our grounds to-day on the occasion of the third trophy shoot of the third series. Dr. J. W. Meek won Class A trophy on 24. R. S. Leete won Class B trophy on 17. Kissack won Class C trophy on 20.

The trophy shoot was followed by the cup shoot at 15 singles and 5 pairs, in which event Dr. Meek, W. A. Jones and J. C. Kissack tied on 19, and Jones won on the shoot-off at 15 singles, scoring 14 to Meek and Kissack's 12 each.

The ground traps were used again to-day, and while not so satisfactory as the magautrap, were fairly successful. The day was an ideal one for target shooting:

Seventeenth trophy shoot:

Aug. 21, Second Day.

Only a few spectators were present to-day. A large field of shooters participated in the various events. Harvey Sconce, of Sidell, Ill., and Mr. Phellis, of Cincinnati, each made the remarkable record of 99 out of a possible 100 in the live sparrow events. They shot with great accuracy, and were applauded by the other crack shooters present. Mr. Sconce failed to kill one bird in the second event of 15, and Mr. Phellis missed one bird in the fourth event at 20 targets. In the other events they killed straight.

Sconce, Phellis, Clark, Tripp and Snyder formed a squad of five that killed straight in the sixth and seventh events. They made a record of 150 straight, which was one of the best ever made on the Limited Gun Club grounds or any place in the country at live sparrows.

The match at 50 targets for the Grand Hotel cup was won by H. M. Clark, of Wabash, Ind., one of the best amateur shooters of Indiana. He defeated H. J. Sconce, of Sidell, who was the holder of the cup. Mr. Clark scored 49 and Mr. Sconce 47. Mr. Clark made the best record ever recorded in the shoot for the Grand Hotel cup. He missed one in the first 25 and Mr. Sconce missed three. In the second round of 25 both men killed straight.

Ernest Tripp was the high gun in the target events during the tournament, scoring 181 out of a possible 200. The scores in the sparrow events follow:

PUBLISHERS' DEPARTMENT.

It Sells Boats Everywhere.

Salem, O., Aug. 15.—Forest and Stream Pub. Co.: The demand for our boats has been so very great within the last few months that we are compelled to run overtime in order to keep a supply on hand. So far this year we have sold twice as many of these boats as we did during the entire year of 1901, and we feel that the ad. which we have in your excellent paper has been to a great extent instrumental in bringing us many orders, and we would not hesitate to recommend it to the use of any one who wishes to place this class of goods before the sportsmen of the country. The demand for them does not seem to be confined to any particular part of the country, but seems to be from all parts of this country and Europe. We recently shipped a large order to Germany, and last week forwarded a carload of these boats to the Simmons Hardware Company, of St. Louis, Mo., and one to the Marshall-Wells Hardware Company, of Duluth, Minn.

W. H. Mullins.

Good Keeping Qualities.

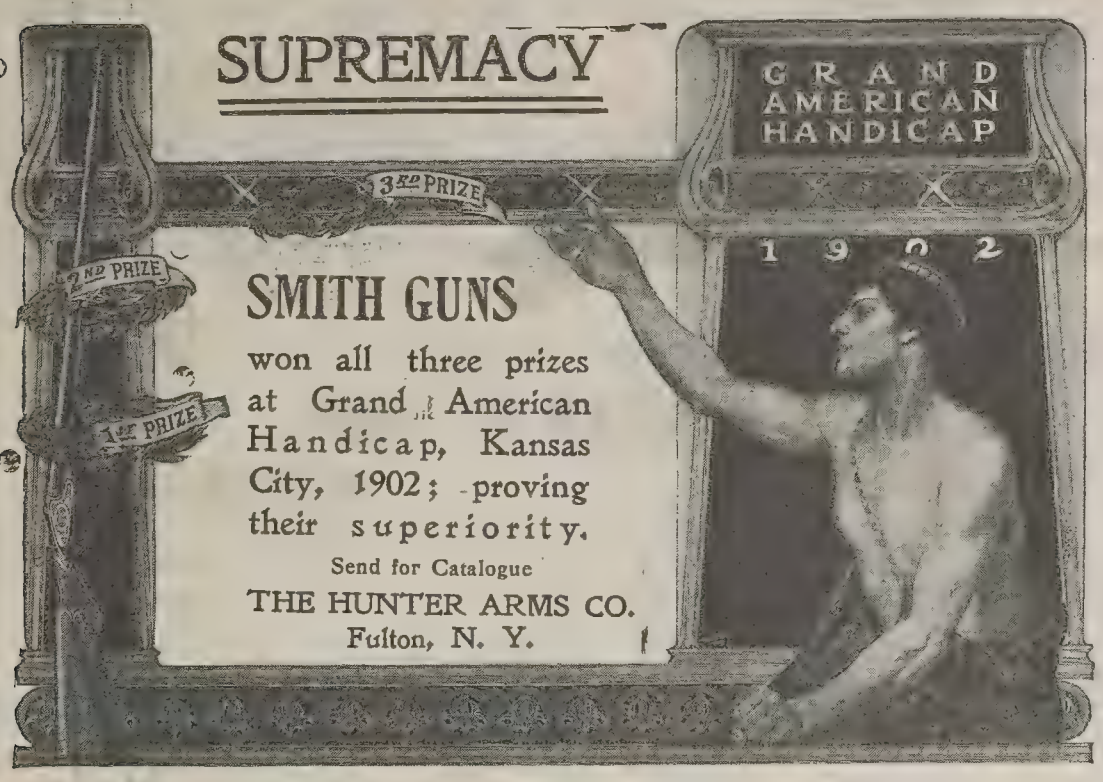
Alden Bridge, La., Aug. 11, 1902..—A. L. Burns: Sir—You may send me by express C. O. D., with privilege of examination the Wilkes Barre $125 for $30 gun. J. H. Simmons.

Aug. 14, 1902.—Forest and Stream Pub. Co.: The above was received to-day in reply to an advertisement in Forest and Stream, March, 1900. Forest and Stream evidently has good keeping qualities, or this man just woke up. I am sending this to you as a curiosity. A. L. Burns.

A few weeks ago Mr. Thomas, of the U. M. C. Co. visited Sea Girt with an improved bullet, which was made without the three rings of the Government model, and had certain other technical changes. With this bullet, Lieut. Leizear, of the Eighth Pennsylvania, made 72 out of 75 at 1,000 yards, which is the best score made up to that time with the service Krag.—*Adv.*

At Auburn, Me., Aug. 11 and 12, and Brunswick, Me., Peters factory-loaded ammunition forged its way to the front. Mr. Neaf Apgar made the remarkable run of 106 straight. He won first average, while H. G. Wheeler was second. At the Greenville, Pa., shoot James Atkinson, of New Castle, Pa., won high average, shooting a 95 per cent. gait. He used Peters Ideal factory load.—*Adv.*

Guns, Revolvers, Ammunition, etc.



5532 out of 5765

TARGETS WITH

DUPONT SMOKELESS

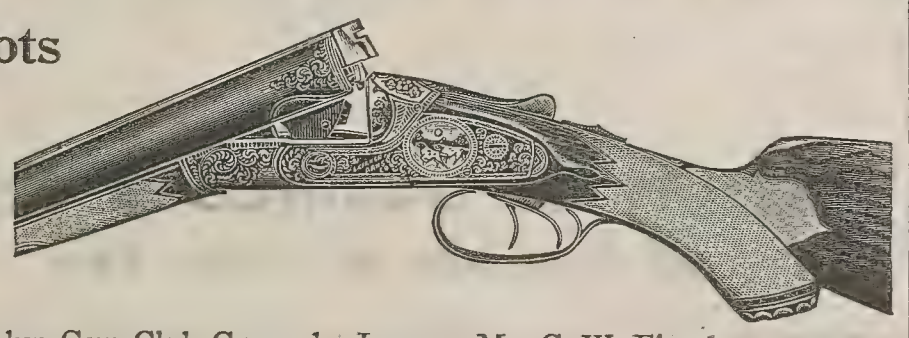
Since Jan. 1st Fred Gilbert has broken 5532 OUT OF 5765 TARGETS—nearly 96 per cent.

Such continued good scores prove the reliability of DUPONT SMOKELESS POWDER.

E. I. DU PONT DE NEMOURS & CO.,
WILMINGTON, DEL.

U N V the MAN

Who Shoots The Lefever.



At the Brooklyn Gun Club Grounds, June 7, Mr. C. W. Floyd, an amateur of New York City, shooting his

Lefever Arms Co. Ejector Gun,

Broke 230 out of 240, making a run of 105 straight.

No gun, Foreign or American, will outshoot THE LEFEVER. It will please you. Send for Catalogue.

LEFEVER ARMS COMPANY, - - SYRACUSE, N. Y.

"MY TRAP SCORES"

WILL ENABLE YOU TO

Preserve Your Scores.

A POCKET trap score book containing 50 pages of score sheets and the Interstate Association rules for target andl ive bird shooting, and for shooting under the Sergeant system. The cover bears the title "My Trap Scores," and the pages, in number and form, are arranged to make a complete record of the shooter's doings at the traps. The pages are ruled to make a record of the place, date, weather conditions, number of traps, number of shooters, gun and load used events, etc. The score sheets are ruled for 25 targets. Bound in leather Price 50c. postpaid.

FOREST AND STREAM PUBLISHING CO., NEW YORK.

When writing say you saw the ad. in the "Forest and Stream".

A Big Game and Fish Map of New Brunswick.

We have just had prepared by the official draftsman of New Brunswick a map of that province, giving the localities where big game—moose and caribou—are most abundant, and also the streams in which salmon are found and the rivers and lakes which abound in trout.

The resources of New Brunswick in the way of game and fish are only just beginning to be appreciated, and we are glad to offer to FOREST AND STREAM readers the first authentic information as to localities where sports may be had. The map is printed in colors, on a tough paper, and is enclosed in a stout manila envelope for protection in carrying. Price $1.

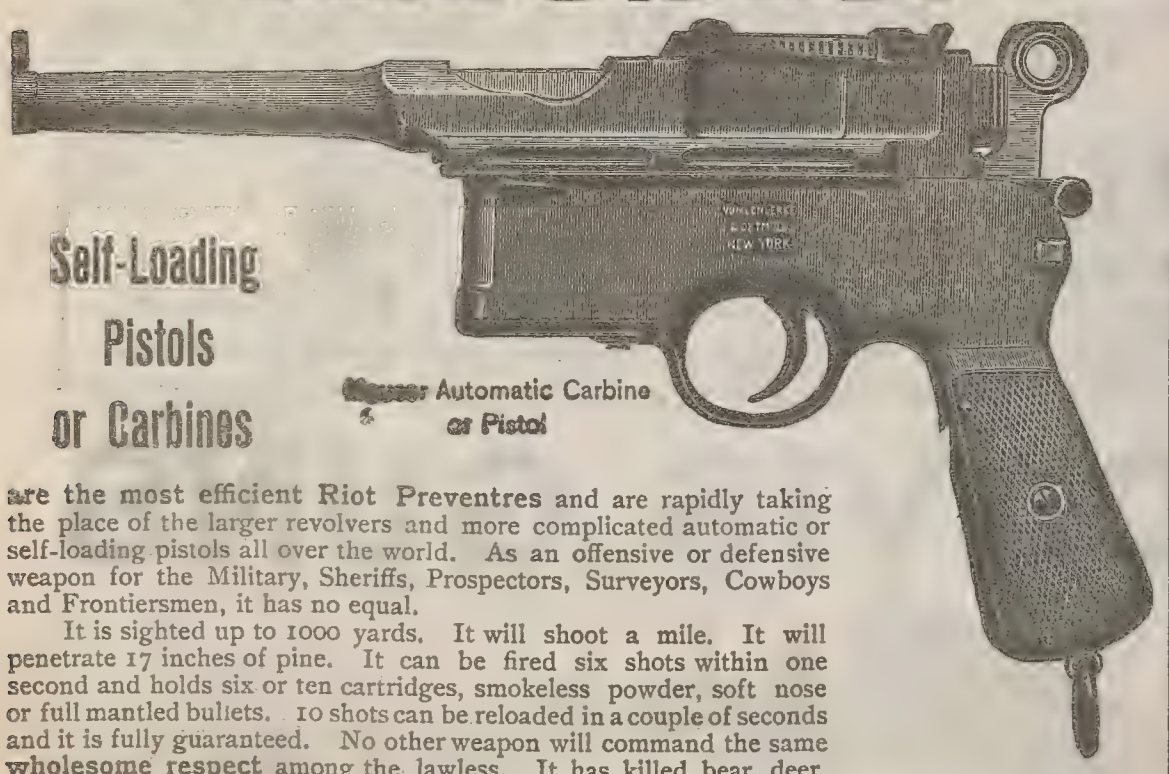
"MAUSER"



Self-Loading Pistols or Carbines

Mauser Automatic Carbine or Pistol

are the most efficient Riot Preventres and are rapidly taking the place of the larger revolvers and more complicated automatic or self-loading pistols all over the world. As an offensive or defensive weapon for the Military, Sheriffs, Prospectors, Surveyors, Cowboys and Frontiersmen, it has no equal.

It is sighted up to 1000 yards. It will shoot a mile. It will penetrate 17 inches of pine. It can be fired six shots within one second and holds six or ten cartridges, smokeless powder, soft nose or full mantled bullets. 10 shots can be reloaded in a couple of seconds and it is fully guaranteed. No other weapon will command the same wholesome respect among the lawless. It has killed bear, deer, and nearly all big game and little game to be found on this continent, and its small size and light weight make it a most desirable auxiliary.

PRICE, 6 Shot, Skeleton Stock, New Small Model,	$22.65
" 10 Shot, Wooden Holster and Stock Combined,	25.00

A New English Gun.

"Great Value for Little Money."

THE REGENT. PRICE $65 NET

We have just received the first few cases of a new English gun which we have named "The Regent". They are made for us by the best gunmaker in England and bored on the same principle that has won world wide honors for English guns. The barrels are best Siemens Martin steel, and the shooting is unexcelled. The stocks are selected English walnut, half pistol grip, latest model Anson & Deeley action, nicely engraved, and the finish and workmanship throughout are up to the English standard. English guns have long been the standard of the world, and this new product will mark a new era in price as well as quality. We have never before been able to offer so fine and good a gun for so little money. They can be supplied in weights from 6¼ lbs. to 8 lbs., in 12 bores, and from full choke to true cylinder.

We carry a large line of guns and rifles from $6.00 to $600.00, and are sole U. S. Agents for the celebrated guns of W. W Greener.

WINCHESTER .33 CALIBER

A NEW LARGE CALIBER HIGH POWER RIFLE.

BIG game hunters who have advocated a large caliber high-power rifle will find in the new Winchester .33 Caliber a gun that will meet their requirements. The popular and reliable Winchester Model 1886 Rifle has been adapted to handle this new cartridge, which is large enough and powerful enough to kill any big game known. The Winchester .33 Caliber Rifle is made in solid-frame or take-down style, with a 24-inch round nickel steel barrel and weighs about 7 3-4 pounds. The "Take Down" *lists* at $30.00 and the Solid Frame gun at $25.00. The Winchester .33 Caliber belongs to the high-power Smokeless-powder class of cartridges, having high velocity and flat trajectory, and which develop great striking energy and penetrating power. The .33 Caliber bullet weighs 200 grains, and with the load of Special Smokeless powder used in the cartridge develops a muzzle velocity of 2,050 foot seconds and a muzzle energy of 1,868 foot pounds. The penetration of this cartridge with a soft-pointed metal patched bullet at a distance of 15 feet from the muzzle is 12, 7-8-inch pine boards. Soft pointed bullets used in this cartridge have special upsetting, or mushrooming, qualities, owing to their high velocity. This makes the Winchester .33 Caliber a particularly desirable cartridge for big-game shooting, as mushrooming bullets of this size, have terrific killing power. For all practical purposes this cartridge is as powerful as the .30 U. S. Army or .303 British, and the fact that it is of considerably larger caliber is considered by some an advantage in its favor. Send for full description of it.

CANOE CRUISING AND CAMPING.
By Perry D. Frazer. Illustrated. 95 pages, cloth. Price $1.
This interesting little volume is a practical guide for the cruising canoeist, the man who wishes to start away from the city and for a short time to make his canoe his home. With this in view, Mr. Frazer, who regards canoeing as a healthful and economical method of passing away leisure hours, has written briefly but attractively of canoes, camping outfits, clothing, firearms and ammunition; fishing tackle, photography, and in general of cruising, camping and all that pertains to this phase of outdoor life. While the volume has been written chiefly for the younger men, it is yet full of practical information and suggestion that appeals to those who have had a wider experience.
Such a book as this should be in the library of every man who is interested in outdoor life or the things which pertain to it. It is one of the manuals which should stand on the shelf alongside of "Woodcraft," of which, in fact, it is a part.

YACHT ARCHITECTURE.
By DIXON KEMP, Associate of the Institute of Naval Architects, and Member of Council. Second edition. Super-royal 8vo. Price, $16.80.
This work enters into the whole subject of the laws which govern the resistance of bodies moving in water, and the influence a wave form of body and wave lines have upon such resistance. It also deals comprehensively with the subject of steam propulsion as applied to yachts. An easy system for designing is provided, and every necessary calculation is explained in detail. The latter part of the work is devoted to yacht building, and engravings are given of every detail of construction and fitting, including laying-off, taking bevels, etc. The list of plates (exclusive of over thirty devoted to the elucidation of the text, and nearly 200 wood cuts) exceeds fifty, and comprises the lines of some of the most celebrated yachts afloat by the most successful builders and designers.
FOREST AND STREAM PUBLISHING COMPANY, NEW YORK.

STEAM YACHTS AND LAUNCHES.
Their Machinery and Management. By C. P. Kunhardt. With plates and many illustrations. 267 pages. Price, $3.00.
A complete veview of the development and present status of the marine engine and boiler as applied to steam yachting. The theory of the engine is set forth and its parts fully described. The functions of the boiler and its mountings are explained. Simple and compound engines are compared, and the latest results in high expansion and high steam are detailed. Numerous examples of modern practice are introduced, including all the patent forms of pipe boilers and special machinery. Also kerosene and naphtha motors for launches, with many tables and rules, specifying their construction. The U. S. Government laws of inspection and Rules of the Road are given, and also rules for racing steam yachts, and complete directions for the care and running of machinery. CONTENTS: Theory of the Steam Engine. Boiler Efficiency. Boiler Mountings. The Engine and Its Parts. The Screw. Laws Applicable to Steam Yachts. Lloyds Rules. Racing and Steam Yachts. Management and Care of Machinery. Principal Types of Yacht Machinery. The Design of Hulls. Practical Construction. Small Cruising Steam Yachts. Lights on Steam Yachts and Useful Tables.

THE OLD OAK.

IN many a quarter of our land there still remain living monuments of a past so distant that it is hard fully to realize its antiquity. Botanists have estimated that the giant trees of California are over two thousand years old, but within easy reach of the homes of many of us grow trees, whose ages—if much less than this—still stretch back a long way. Standing before such an ancient tree, one often muses upon its past, and the changes that have taken place since as a tiny seedling it first struggled upward toward the light.

In those old days, long before they hanged witches in Salem, and even before the feet of the Pilgrims had become firmly established in New England, the oak was a sturdy young tree. Already it had reared its head alike above the alders that grew in the swamp just to the east, and the sumachs and little birches to the west, but during much of the day the tall white pines and hemlocks still shaded it, and it was in no respect unlike a thousand of its fellows of the forest.

Yet in the economy of the forest, the young tree played its part. In the spring when buds were swelling, and multitudes of insects gathered about the sweet sap exuding from them, hundreds of tiny birds—warblers, vested in blue and black and white, and gold and orange and green—ran over its branches and fluttered about the ends of its twigs as they fed. After the warblers had passed on to their northern home, a pair of sweet-voiced wood thrushes chose a horizontal branch for their nest, and while the mother bird tenderly brooded her blue eggs, the male, on the branch of a giant pine far above her, poured out sweetest music at morning and evening, or when the sun peeped through the clouds at the close of some summer storm. When frost had stripped other trees of their leaves, but its deep red foliage still clung rattling to the branches, the rusty grackles, rising from the swamp in a thick cloud, sometimes settled on it, and covered it as with a dark pall; and later it was often whitened by the quiet snows of winter.

In the swamps and forests among which the tree stood, the black bear, the deer, the turkey and the fox used to wander.

Down from the higher land to the northward runs a broad and almost level plain, the valley of an ancient stream which once flowed from the front of a retreating glacier. Along a ridge of high ground, well hidden by bushes, and passing close to the oak, ran a trail followed by the Indians, who journeyed from the interior down to the shore, where were to be had fish and clams and oysters, and many other things inaccessible to the far inland dwellers, though forming the chief sustenance of the gentler tribes that lived along the coast. But chiefly the trail was used by the fierce people of the interior on their war journeys; for the broad river a little further to the westward furnished an easier path to the shellfish gatherers who paddled down its course, and later, with full canoes, pushed their way up the stream toward their northern homes.

The years passed on, and as the oak waxed and grew stronger, there came into the land new and strange beings, different in a thousand ways from any that had been there before. At first few in numbers, these newcomers clustered close to the shore, but almost at once some of the hardier spirits began to push inland in all directions. They seemed to hold all nature in enmity. They slew the dwellers in the forest; they felled the trees and bushes, and burned them, and tore up the very ground where they had stood, and then a little later, strange new plants grew up thickly from these open spaces in an even regular crop, which these people cut down again and carried away.

The oak grew and thickened and sent out fresh branches, which in turn became stout and heavy as trees. The newcomers increased. Their houses of wood or stone or brick dotted all the landscape. On either side of broad roads lay fair fields of grain or grass and in many of them pastured slow-moving cattle or sleek-sided horses.

A new empire was born and grew—feebly at first, yet steadily—till it had reached a hundred years and had passed through struggles and agonies that shook it to its very foundations. Yet it survived and became stronger than ever. Most of the wild creatures have now gone, but the fox remains, and in the hollow which time and the weather have worn in the old oak's heart, the raccoon makes his winter home. These are the only ones left. The old forest has disappeared. The mighty trees which were tall when the oak was young, have long since fallen. For generations the oak has been the greatest tree in all the countryside, and people come long distances to wonder at its vast size and its beauty.

Yearly, as the weather grows cooler and leaves fall from the deciduous trees, the sportsman, pursuing the few birds that still inhabit the country, pauses beneath the great oak to rest or to eat lunch, or to smoke a pipe, while the thirsty dogs push through the fringe of alders to the brook, and greedily lap the cool water, and wallow in the stream that they have roiled.

One day, not many years ago, the dogs from the nearby farm chased a raccoon into the tree, and following the dogs came men to kill the beast. A fire was kindled at the lower opening of the hollow to smoke the animal out, and when it emerged at the top it was killed. A little later, the men found that a spark had ignited the dry, rotten wood within the hollow, and in the chimney formed by the trunk a hidden fire was raging. Flames spouted high from the opening above, and it was feared that the old tree must be destroyed, but the brook was near, and hands were many and willing, and the fire was put out.

So the oak stands to-day, ancient, but green and flourishing. At intervals some wind or ice storm tears away a venerable branch, but the tree remains, singular for its beauty, its size and its symmetry.

THE COLLECT POND.

THE work of the New York underground railway is in progress in Elm street, which is the first street east of Broadway and parallel with it; and where the digging is now being done, a quarter of a mile north of the City Hall, the operations are overlooked from the windows of the FOREST AND STREAM office. At this point the excavation is from the surface, and the method is to hoist the earth in great metal buckets, which are swung through the air and their contents dumped into carts. Interest was aroused the other day when from far down below the surface of the street the buckets came up filled with mud which was almost of liquid consistency, and instead of being deposited in the carts, was dumped out on the surface that the water might drain off. It developed that down below the gas pipes and the Croton water mains and the sewer, the workmen had come to a flowing stream. This is not the first of the Manhattan's forgotten waterways which the contractors have encountered still flowing far below the surface, for there are numerous such subterranean streams on the island, and they often present very difficult problems to the engineers who are laying foundations for buildings.

This Elm street water was struck just north of the Criminal Courts building and within 150 yards of the Tombs, and the stream must flow from one of the springs which in the old days fed the Collect Pond. For the site where the Tombs now stands, with the streets and blocks surrounding it, was once a body of water, which was called the Fresh Water or Collect Pond. This had no small part in the New York of an earlier day; but by later generations has been almost entirely forgotten, save when, as now, some deep street excavation or the digging for a building foundation brings to light some reminder of the old conditions.

The pond covered the site of the blocks bounded by Baxter, White, Elm, Duane and Park streets. In aboriginal times the Manhatoes lived on its banks; and from their excursions to the oyster beds in the adjacent waters the Indians brought vast quantities of oysters—coming in through the stream which connected the pond with the East River, or through the larger stream from the North River. The women, we are told, dried the oysters for future use and cast the shells on the shore, so that in time there came to be great heaps of oyster shells on the west bank, and when the Dutch gave the place a name they called it Kalch Hoek, which meant Shell Point. When the English succeeded the Dutch, the name Kalch Hoek was easily corrupted into Collect, and thenceforth the water was known as the Collect Pond, or the Fresh Water.

The lake was very deep—the old records range from fifty to seventy feet—and the water was very clear, for it was supplied from numerous living springs sending out their generous floods and overflowing, as has been said, through the two streams which went, one to the east and the other to the west. These streams, too, had a place in the topography of old New York. The one which went to the East River, following the line of the present Roosevelt street, was in British times called the Old Kill, and formed the northern boundary of the city down to the close of the Revolution. The old Post Road crossed it over a bridge, the famous Kissing Bridge, of which the Rev. Mr. Burnaby, an English visitor, wrote, "Just before you enter the town there is a little bridge commonly called the Kissing Bridge, where it is customary before passing beyond to salute the lady who is your companion"—which goes to show that in the earlier days on Manhattan Island some things at least were ordered better than now.

The stream which flowed west to the Hudson in turn formed the northern boundary of the city until 1808. Beyond it lay the stretches of marsh and swamp known as Lispenard Meadows, much resorted to by the sportsmen and the pot-hunter of that day, before whose flintlock fell abundant snipe and woodcock. The territory as now seen from the windows of FOREST AND STREAM is a broken and jagged expanse of walls and roofs. There was at one time a project to utilize the two Collect Pond streams for a canal across the island from the Hudson to the East River; and there actually was a canal from the Hudson to Broadway, following the line of the present Canal street. From the north there flowed into the stream a brook from the famous spring which gave its name to Spring street.

But in the earlier days the Manhattan gunners and anglers had no need to go so far north as Canal street to find their sport. The low marshes about the Collect gave good shooting; and if one knew how to shoot, he was in season assured of "a large quantity of fly-abouts." And as for the fishing, the Collect was famous for that; and there must have been trout in it, for it was a spring-fed water, and the fish could run down to the sea and back into the fresh water again, as do their Long Island successors to-day. It is of record that in 1734 a law was enacted to prevent the taking of fish from the Collect Pond by any other means than angling. But things went then as they do now, and we may be certain that the Collect was altogether too near town, and too convenient for the picnickers long to maintain its fishing and shooting attractions.

There was skating on the pond in the winters, and it was here that Prince William Henry, then a junior officer in the navy, and afterward King William IV. of England, learned to skate.

By far the most important and memorable event connected with the history of the Collect Pond occurred in the year 1796, when John Fitch, the early American steam inventor, in the presence of a distinguished company, sailed his experimental steamboat on the water. This was a ship's yawl, eighteen feet long, fitted with a propeller and a steam engine of which the boiler was a ten-gallon iron pot. The little craft successfully made several circuits of the pond, and got up a speed of six miles an hour. This was eleven years before Robert Fulton's Clermont made its trip on the Hudson; and it is here to the site of the obliterated Collect Pond that history points for the first American steamboat.

These steamboat experiments by Fitch are about the last things of interest the records have to tell us of the Collect Pond as a pond. For already the city was creeping northward, the shores of the pond were used for the dumping of refuse, and about the year 1800 the place had become such a nuisance that the authorities set about the task of draining it and filling it in. Streets were laid out and blocks of houses followed, and in 1835, on the site of the Collect Pond was built the Halls of Justice, the city prison, which, because of its gloomy architecture, borrowed from that of Egyptian tombs, was nicknamed the Tombs.

The meting out of justice to malefactors on this spot began very early in the history of the Collect Pond, for we are told that a Weekquaesgock Indian, who had come to town to sell beaver skins, was set upon and killed by three negro servants of the Dutch Governor on the sores of the pond. An Indian boy who had witnessed the deed inflicted justice by the murder of an inoffensive trader whom he killed on the same spot. In later years the gallows was erected here, and criminals were hanged after the fashion of the day in public, while the people flocked from town to witness the spectacle.

In the days when the murderers were hanged in the

Tombs inclosure, only the favored few were admitted to the function, and such a coign of vantage as the eighth story of a building overlooking the execution would have commanded a high premium. Not far from the Tombs is a tall shot-tower, which used to be resorted to by the newspaper reporters for getting view of the Tombs hangings.

The photograph on another page is of a view from the FOREST AND STREAM office in 1897; and it is already of antiquarian interest, for it pictures a scene which no longer exists. A new City Prison has risen in place of a large part of the old Tombs. The low houses in the foreground have been followed by a handsome twelve-story building, from beneath which, when the foundations were laid, forty feet below the surface, there was excavated a gnarled piece of cedar, which is now treasured in the FOREST AND STREAM'S cabinet, as a reminder of the green trees that long ago clothed the banks of Collect Pond.

The Sportsman Tourist.

Two English Gentlemen.

I WOKE up one morning just a little after day at my ranch on Rita Azul, Colorado, 300 miles east of Trinidad, just about nowhere. New York was frying meat and potatoes and making coffee for breakfast and seemed quite cheerful. "The flour is out, Dick."

"Haven't you any bread for breakfast? Go to one of the jacals and get some tortillas for breakfast"—I had two Mexican families living on the ranch in jacals. (Pronounced hackells, Anglice, pole houses.)

"Neither one has flour, either. They are eating meat, same as we are."

"I had about 500 pounds of flour in the storeroom two weeks ago when I left. What has become of it?"

"Perley came in from the outside camp and took 200. All the Rough and Ready flour we had. I hollered and told him to leave us one sack of good flour, and he said he wasn't coming in again for two months and that he wanted the best, as he didn't have much time to cook. That we could go to Trinidad any time and get more. [Perley was the man that herded the east side of the range, twenty-five miles away.] Each of the home Mexicans got fifty pounds of XX last week, but got away with the last of that somehow, and don't seem to care, so long as they have meat and coffee. Miguel came down day before yesterday and got a sack for himself and a sack for his mother-in-law. He said that Inez wouldn't live with him and his wife any longer. It seems that Inez was performing a little religious ceremony, part of which was calling up an evil spirit and asking him a few questions. Inez is a Navajo Indian squaw sure, and a witch perhaps. While she was having a nice time all by herself, her daughter had fled to the other Mexican house, not particularly because she was afraid, but Inez always makes a fearful noise when she has one of these fits. Well, Miguel came home and told Inez to stop and not monkey with the spirits any more in his house. She said she would do as she pleased, so he took the hickory cleaning rod out of his rifle and licked her till she said she would quit. The next day Inez cleaned out her stone hen house and moved into it to live alone. Miguel says that the weather is not very cold and that the old woman will be glad to move back when snow comes. So the flour is all gone."

"I'll fix that after breakfast."

So after a meal of beef and potatoes I saddled up and went to call on my neighbors. I told Miguel that I wanted to take Inez home with me, if he would not be offended, for she was old and I didn't care if she kept the devil under her bed. He said that it was satisfactory to him; he hoped the old witch would never come back; and so far as I was concerned I was a heretic and would go to the bad place anyhow, but he had to be careful of his morals. His wife who, though there were several chairs in the house, was sitting cross-legged like a tailor on the floor on a sheepskin smoking a cigarro, told him that the first time he had the stomach ache he would send her down to beg Inez to come back. He considered a moment and said that perhaps he would; but that he intended to be very careful of his stomach.

So I went out and saw Inez in the hen house. I told her to pack everything she had on Miguel's jackass (which rejoiced in the euphonious name of Diabolo, which it richly merited), and come down home with me, and to be sure to fetch the flour.

Within twenty minutes we were going home, with a terrible load on the burro and Inez on top of that, looking very triumphant. As we went past Miguel's house he said, "Good bye, mamma," and she snapped her fingers at him, which being interpreted in Navajo, means go to the infernal regions; and the procession moved on. Inez was shortly installed in a room next to the kitchen and I told her that I wanted her to cook, explained my fix about flour and told her that I'd have lots in two weeks, and that meanwhile we would use hers.

Then York and I held a council of war and decided to get a load of flour out of the face of the country, so we left Inez at the ranch and went off on a little hunt with the wagon. About thirty miles landed us in a veritable game pocket; and four or five days' hard hunting loaded us up with something like fourteen or more deer and antelope. We tried to hunt up a turkey roost, but could not find a fresh one that was being used, though I found three or four old ones, where the droppings were about two weeks old. When we got home to the ranch York shot a half-dozen of my black tame turkeys in the head with the shotgun, and we killed a two-year-old steer and put the hindquarters into the load. Wild turkeys are worth $1.50 to $2.50, when a tame turkey of the same weight is worth 50 cents to $1. Wat Rifenberg, of the United States Hotel, generally took my turkeys, but as he charged me $2 a day for board he never got the worst of it very much. I never paid him a cent in my life, and he never did me. He was a pretty good fellow and knew how to keep a hotel.

We went to Trinidad the next day and got in about dark. I gave Rif the first crack at the load. A deer and an antelope, a hindquarter of beef and all the turkeys but two—one for Dr. Beshoar, who was, and I hope is still, a friend of mine; the other for Web Brown, the loony man that I always stopped with. We got about $50 out of the rest of the load.

That evening when I went into supper I could smell my old pipe in my coat pocket, so I left it behind the bar in the saloon room attached to the hotel. The pipe had a little history. The winter before I had been living alone in a little cabin herding the east side of the Trinchara range for a few weeks, while Perley was taking a kind of a vacation in town. I lost my pipe and made a pipe bowl out of clay and shaped it up and ornamented it a little with a knife before I burned it. It was as big as your fist, but I got quite a successful bake on it. I made a stem out of elder wood and a mouthpiece from a calling bone from a turkey's wing. A few brass tacks in the stem and a red rag twisted round it made it look sweet, and I used to smoke it with great satisfaction, though it was very heavy. When I came out from supper I went to the bar to get a cigar and noticed a big red-faced man in checked clothes which didn't fit him, and a kind of an English expression, handling my pipe and looking at it with great interest.

"When you are through looking at that pipe, let me have it; it's mine."

"Hi declare, hit's rawther curious. Is it yours? Where did you get it?"

Here the evil spirit entered into me, and I lied basely. "It is a Comanche Indian pipe."

"How did you get it?"

"Killed the Injun."

"Ah, hindeed. Will you sell it?"

Yes, I would sell it for $2. He gave me the money quickly and put the pipe in his pocket. I asked him to take a drink, and was thinking how I could spend the rest of the money on him, for I couldn't tell him I had lied, and I didn't want to keep the two dollars. We drank, and he asked me if I had any other trophies. Then I remembered something. "I have a man here with me named New York, who has something you might like. He has a buckskin shirt trimmed with an Indian scalp. He killed the Indian, took the scalp and made the shirt and cut the scalp in two parts and sewed them on the shoulders. A Mexican woman that likes him embroidered the shirt with silk, put on flowers and a horse with a man on him. He has the shirt here in town in his trunk. He never wore it but once in town, and then he had a crowd around him in no time, and had to take it off and put it away."

"I would like to see it," said the Englishman.

So I went out and found York, and got him to put the shirt on. When the stranger saw it he fell violently in love with it, and asked York how much he asked for it. York told him that he had no use for money, but that he would like a certain pony that a Texas man was holding for sale at Webb Brown's stable.

"How much does he want for the horse?"

"Don't know," said York. "If you want to trade we will see in the morning."

The Englishman paid $55 for the pony the next morning; and I went to him and after making him promise to keep the peace, I confessed about the pipe, and he laughed and said that it had fooled him, and that he would give it to his brother-in-law to put in his collection, and would enjoy hearing him talk about it.

So York and I went back to the ranch, and I never saw that Anglo Saxon any more.

I intended to tell of two gentlemen, but it is very hot and I will keep the other man till it is cool. *Hasta manana.*

W. J. DIXON.

Sai-pi and Pe-tah-ky.

BY J. W. SCHULTZ.

YOU ask how the polygamous Indian family got along? said the Old Timer. Whether the women quarreled or lived together in harmony? Well, their lord and master ruled them with an iron hand, and outwardly they seemed to be happy and contented. But under the surface there was generally heart burning, and jealousy, and hate, which often cropped out in the absence of the head of the household, and then bitter things were said, and sometimes the row would end in a general fight. There was, after all, a god reason for the practice of polygamy among the Indians. The different tribes were always at war with each other, and the annual loss of men in battle, and also by the accidents of the chase, was very great; so there were always more than twice as many women as there were men. The surplus women had to be cared for, the very existence of the tribe depended on their fulfilling the obligation of their sex, and, of course, plural wives was the result, the families ranging from two to three, up to as many as twenty women.

In the tribe with which I am most familiar, the Blackfeet, if a man married a woman who had sisters younger than she, those sisters became his potential wives. If he did not choose to marry them he had the disposal of them. But usually the man married them all as fast as they grew to maturity. It was thought that a group of sister wives got along more amicably together than did a family of unrelated women.

In the polygamous lodge each woman had her particular place; the first wife sat at her husband's left and owned that couch in common with him. It was always at the back of the lodge, directly opposite the doorway. From it, on either hand, the couches of the other wives, in the order in which they were married, ranged around the sides toward the door, so that the most recently married had their places near the entrance. Each woman had her own little property, such as clothing, finery, robes, tanning tools and so on. Not even the food, the meat killed by the head of the family, was held in common; each woman was given her share, and dried it, or made it into pemmican, as she chose. Each one, however, furnished her share for the husband's sustenance, and they all vied with each other to furnish him the choicest portions. The husband, of course, claimed the buffalo robes and other skins they tanned and prepared for him, giving each wife what he chose from the sale of those she had tanned.

Years ago when I was in the employ of the American Fur Company, I was sent one winter to live with the Blackfeet, who were camping and hunting around the Sweet Grass Hills, and trade them the ammunition they needed. The company realized that the more powder and ball they had the greater would be their output of robes and furs. I made my headquarters in the lodge of Lone Bull, an old and tried friend, a fine looking, good-natured fellow and very wealthy; that is, rich as riches are reckoned by Indians; he had more than two hundred horses, mostly of the highly prized pinto color. Strangely enough, he had but one wife, whereas, had he cared to he could have had a dozen or more. Not a father or mother in the whole tribe with marriageable daughters on hand but wanted him for a son-in-law, and many a widow would have been glad of a place in his lodge. But Lone Bull did not seem to care for any of them. He was very reserved and proud, yet anyone could see that Pé-tah-ky, his wife, was all in all to him, his dearest and most cherished possession. Pé-tah-ky was a fine looking woman, comely featured, well built, with small hands and feet, and her luxuriant hair, gathered into two massive braids, hung down to the lower edge of her dress. She was always neatly and cleanly clothed, and everything about her lodge was kept spick and span and in order. She made no secret of her affection for her husband. Evenings, when work was dor and we sat gossiping around the cheerful fire in th lodge, I have seen her gaze at him for hours with suc an adoring, loving expression in her eyes as few husbands, I imagine, are ever permitted to see in the eyes of their wives. Beside them and myself, there were two other occupants of the lodge; Lone Bull's mother, a quiet, hard-working old woman, and New Shield, his brother, just growing into manhood, and a noted buffalo hunter. He kept the lodge supplied with more robes that the women could tan; with more choice meats than we could use.

At an early age every Blackfoot youth forms a sort of partnership with some other youth whom he calls his tuk-ka, or friend. The word really means more than that, but it has no English equivalent. This friendship is like that of David and Jonathan, as will be seen. Lone Bull's tuk-ka was Heavy Gun, also a well-to-do, fearless, proud warrior. The two always hunted together, went to war together, and even when in camp passed the greater part of the time in one or the other of their lodges. They were almost inseparable. Like his friend, Heavy Gun had but one wife.

One morning when we arose we found that a Chinook wind had vanquished the bitter cold of the previous day. The lately fallen snow had disappeared, leaving the plains brown and bare once more, and although 'twas in January, it seemed like a spring day, the air was so soft and warm. An immense herd of buffalo had been sighted the evening before not far to the southward, and the weather was so fine that I determined to join in the grand chase about to take place. We started, Lone Bull, Heavy Gun and myself riding apart from and on the left of the great crowd of hunters hurrying out from the camp. Everyone rode bare back and was stripped down to the least possible weight. Some carried guns—this was in the days of the muzzleloader—but the majority were armed simply with bow and arrows. The latter weapon was the most effective at close range, for a half dozen arrows could be shot into the vital parts of as many buffalo while a fuke was being reloaded and primed. Everyone, of course, was in high spirts, anticipating the excitement of the chase and the success sure to follow; the Indian is never so happy as when his camp is red with great sheets of fat, drying meat.

After half an hour's ride we sighted the buffalo. There might have been five thousand of them, perhaps twice that number. They were not, of course, bunched up in one solid herd, as many persons believe was their habit, but were scattered out singly, in little groups, and bands of two or three hundred, to the southeast and west as far as the great sere grass plain was visible. The scouts who had gone on ahead had halted us near the crest of a low ridge, from which, cautiously peering over, we had witnessed this grand sight. From the foot of the ridge there was a perfectly level flat a mile or more in width, to where the nearest of the buffalo were feeding, and it was evident that the minute we showed ourselves and began descending the ridge the animals would see us and run, and have such a start that our horses would be well blown before we could overtake them. I was wondering if my horse could stand the strain, when the great body of hunters on our right began to dismount. "Some one is going to decoy the herd," said Lone Bull, "let us also get down and give our horses all the rest we can."

We did so, and there ensued one of the most interesting sights I ever witnessed on these plains. Riding a small brown horse, lying flat on its back and covered with a buffalo robe, an Indian slowly descended the ridge and started out over the flat, not directly toward the buffalo, but zigzagging now to the right, now to the left, and in this way going ever nearer and nearer to them. The feeding animals paid no attention to him until, having arrived within a few hundred yards of them he began to bawl like one of their calves in distress. Then those nearest him stopped feeding, and after gazing curiously for a few seconds, began to walk toward him. He slowly retreated, bawling more plaintively than ever, and the buffalo soon broke into a trot, and then into a run in their haste to overtake what they thought was one of their calves in distress. More and more of them now began to join in the chase, until hundreds and hundreds were hurrying from all quarters to the scene. In a short time the decoy was riding for his life in front of the great and now compact herd, on and on, ever faster across the flat. There his work ended, for we had all mounted, and with one accord charged down the ridge into the dark brown mass of gleaming-eyed, shaggy-haired, sharp-horned animals. How they did scatter, and turn, and switch their short tails as the guns began to boom and the arrows to pierce their sides. We three swung into the rear of a couple of hundred head which had branched off from the main herd, and we had just got in among them and

began to drop some fat cows, when a much larger bunch close in behind us, pursued by other hunters, and there we were surrounded by a vast number of the frenzied animals. It was a dangerous situation; a fall then meant instant death, and then, so great was the press that one ran the risk of having his horse gored at every jump. Of course the frightened animals did their best to crowd away from us, and at times there would be an open space of a few yards about us, and then the jam would be so great that I could reach out and touch a buffalo on either side of me. Yes, I was surely pretty badly frightened, and feared my time had come. I got out of the crush first, and then Lone Bull. But Heavy Gun, just as he was nearing the edge of the herd, was charged by a wounded bull. The huge beast stuck its head under the horse and tossed it and its rider clear off to one side. Heavy Gun struck the frozen ground with a dull thud and lay motionless. His horse staggered to its feet just behind him and stood still, its intestines pouring out on to the plain from the gaping rent in its side, and that was all that saved the poor fellow from being trampled into an unrecognizable mass; the onrushing buffalo kept parting to the right and left when they came to the horse. In a moment or two the last of the herd swept by, and we hurried to the fallen man's assistance; he still breathed, but was unconscious. Some women soon came along with their travois, and lashing him on one of these

THE OLD NEW YORK TOMBS, BUILT ON THE SITE OF THE COLLECT POND.
Photograph from the Forest and Stream office in 1897.

we got him back to camp and into his lodge as soon as possible. Toward evening he revived a little, but he was mortally injured inside and the stamp of death was on his face. We could see that there was no hope for him. Shortly before died he called Lone Bull to his side: "Friend," he said, "I am going. Before morning my shadow will join those of our fathers in the Sand Hills. I give you my horses, my lodge, everything that is mine. And also I give you my wife to be your wife. Be good to her; even as you love and care for Pé-tah-ky, so care for her."

Lone Bull hung his head and did not reply, and presently Heavy Gun continued: "We have been boys, youths and men together. Always together we have fought the enemy, gone on the hunt, and have had our feasts and fun. And always, at any time, we would have died for each other. And now? What? Can you refuse your tak-ka's last request?"

"Say no more," Lone Bull replied. "I will take her and be kind to her." But his heart was heavy. He did not love her. What would Pé-tah-ky say?

After Heavy Gun died our lodge was not so cheerful as it had been. There were no more feasts, no more tales and jokes told around the evening fire. Lone Bull sat silent day after day grieving over the loss of his friend. Pé-tah-ky worked outside from daylight until dark tanning buffalo robes with fierce and tireless energy, saying nothing but thinking a whole lot, I was sure. In the evenings, instead of embroidering fancy moccasins for her husband, as was her custom, she sat with folded hands gazing moodily at the fire. She cooked and waited on him as usual, of course, but not with the affectionate solicitude and cheerfulness of yore. As for Saí-pi, the widow, or rather, the new wife, she sat huddled up in her robe near the doorway most of the time, dejected and forlorn. New Shield, his mother and I did our best to liven things up a bit, but our efforts were a dismal failure, and evenings the youth and the old woman would go visiting where they could find more lively and congenial company. But, of course, this state of affairs could not last forever. After a month or so Lone Bull began to recover his spirits; he joined in the hunt, visited his friends and gave them an occasional feast. The new wife also ceased mourning, outwardly, at least, doing her best to tan her share of the robes and furs, and perform the necessary household duties. Pé-tah-ky, however, could not become reconciled to the new order of things. In times gone by she had been very intimate with Saí-pi, but now she treated her as one beneath her notice, and repelled her little conciliatory advances with haughty scorn.

One afternoon I was dozing on my courch and heard Pé-tah-ky begin to scold the new wife bitterly for some fancied fault in her work; for the first time the other answered back, and a fine war of words ensued. "I'll give you to understand," cried Pé-tah-ky, "that I am the chief; you have got to do just as I say about the work."

"Here, here!" said Lone Bull, unexpectedly entering the lodge, grasping each woman by the hair and gently tunking their heads together, "There is no chief in this lodge but me. Stop quarreling now and behave yourselves."

When he let go of them they both began to explain in a torrent of words that the other was to blame. He stopped them with a wave of the hand. "No more of this," he said. "I love you both and treat you well, but if you persist in quarreling I shall have to punish you. Kiss and be friends."

Saí-pi advanced willingly enough, but the other—you should have seen her eyes flash as she hung back. "Kiss her," Lone Bull commanded sternly, and with a gasp Pé-tah-ky brushed the other's cheek as lightly as a breath of air, and rushed sobbing out of the lodge.

"Hai, Hai!" Lone Bull exclaimed, throwing himself wearily down on his couch. "I have got myself into a fine fix. I fear there will be no more peace in this lodge for me. But what could I do? How could I help it? It was impossible to refuse my old friend's last request."

I had no suggestions to offer. I remained in the lodge nearly all the time in order to trade with the Indians, and I knew the situation better than Lone Bull, for he was out hunting or looking after his horses the greater part of the time. I was sure that Pé-tah-ky would never become reconciled to sharing her husband's affections with another woman. I rather pitied her, too. She had been a most faithful and loving wife, and it was but natural for her to resent the new order of things. Also, I felt sorry for the other woman; she had had no choice but to obey Heavy Gun's dying request. Then, too, Lone Bull was deserving of sympathy; he had not taken the woman because he wanted her, but simply to please his friend.

In the latter part of February we moved south to the Marias River, where Fort Conrad now stands. The domestic affairs of our lodge had not improved. Saí-pi was quiet enough, but Pé-tah-ky was eternally scolding and nagging her, and ridiculing her skill as a worker.

One day when nearly the whole camp was out after buffalo, I went to the brush bordering the river to gather some red willow or "kinni-kin-ik," as some people call it, to mix with the strong tobacco I was smoking. I had cut about all I wanted and was preparing to take it to the lodge, when I saw Pé-tah-ky and Saí-pi, each with a bucket, going for water. The ice was very thick on the river, but out in the center, at the head of some rapids, there was an open place about ten feet long and eighteen inches wide where our part of the camp got its necessary supply of water for household use. I tied up my bundle of sticks and had just got out on the path leading to the water hole when Pé-tah-ky came running up, crying that Saí-pi was drowned. "She was filling her bucket," she said excitedly, "when she slipped in and the current drew her under the ice before I could reach out to save her."

We hurried down the path through the brush to the water hole. Sure enough no Saí-pi was to be seen, and below the narrow open place where the water flowed sluggishly, the river was frozen solidly as far as I could see. But there were both water buckets and both were filled! I looked at Pé-tah-ky and saw that her sleeves were wet; and then I noticed a short, heavy club lying near. All was made plain to me: Pé-tah-ky had stunned her hated rival and shoved her under the ice.

"Woman," I said sternly, looking her in the eyes, "you said she was filling her bucket when she slipped and was drawn under. There stands her bucket full of water; also, your sleeves are wet to the shoulder, and here is a club upon which I see a few hairs and some blood."

"I didn't strike her," Pé-tah-ky broke in, "I-I-Oh, go away—leave me."

I went back to the lodge with my willows and began to scrape them, and presently she came in. We did not speak, and she would not look at me. When Lone Bull returned she told him with many a hesitating stop and furtive glance at me, about the accident. I had made up my mind what to do and kept still. But I'll say this: No real woman wants to share her husband's affections with another one of her sex, be she savage or civilized, and I've no doubt that this was not the only murder that has been committed to prevent it.

Hunting Companions.

THERE is no better opportunity for testing the fiber of a man than when on a hunting trip. While it is true that such an expedition is merely an exploration in quest of health or recreative amusement, and seemingly an unimportant event in a biography, nevertheless, there is an intensity of purpose and a natural competition among ardent sportsmen on these occasions, regulated by no laws of comity whatever, excepting those self-established or interested, which go to make up an individual code.

Professional "courtesy," business "customs," social "laws" and athletic "rules" may be appealed to for arbitrating a difference of opinion in every-day life; but in the woods a man is free and the height of his enjoyment proceeds from this realization, together with the exercise of his freedom from all the restraints and limitations ordinarily imposed by the checks and balances, weights and measures of a delicately poised community; therefore, the camp-fire becomes a veritable X-ray which penetrates the outer covering—the veneer—illuminates the "inwards" and reveals any incongruities in the general make-up of the individual.

Preparations for the hunters' outing involves the search for a likely bit of territory, and with the decision as to which little out-of-the-way corner of the globe shall be visited, the matter of personal responsibility first appears above the horizon, and thenceforth, if allowed, will expand with each successive step of progress till burdensome proportions are assumed.

As regards this question of responsibility, it may be said to be scarcely probable that any two men have the same opinion of the same section of country; consequently, we may take it for granted that one of them persuaded the other to visit a particular hunting ground, and, since their interests are identical, he did so, of course, from the best of motives. Now, hunting is a game of chance—indeed, all the thrills and interest desert a sport when success is not in doubt—and while the coveted quadrupeds may have been very numerous in a certain territory during one hunting season, and thus earned for it a good reputation, they may be on a far distant tract the next. For instance, the writer visited a remote locality last autumn, where, during the previous season, a professional trapper had repeatedly met moose and caribou face to face on the woodland trails, and still, although the carcases of the slain (too many, we are sorry to say) supplied indisputable evidence of the truth of his assertion, the hardest kind of hunting was necessary in order to acquire the lawful quota of caribou, and not a moose was seen. So, a disappointment may be the first test of a comrade's disposition; and have you ever had the misfortune to have advocated a particular place for hunting, and thus assumed a certain amount of responsibility, to a man who was absolutely minus the resources which would enable him to find some kind of compensation in a hunting journey, notwithstanding a mischance?—a morbid individual who brooded over his troubles (?) morning, noon and night, shutting his eyes to the surrounding diversified beauty and interests, his ears to the soothing cadences or awe-compelling stillness of the forest, accepting no alternative than blood? Such as he, we need not add, are undisciplined and not true sportsmen; they are of the type of those so-called hunters who sit in camp until a guide "hoofs" an animal and then go forth to do the killing; but you cannot detect them at home. Think of the mental discomfort such a person causes an imputative responsible companion, and of the irritating influence of the oft-repeated query, "Who proposed this?" and you will comprehend that suggestiveness is undesirable and also that the relationship between erstwhile friends can become severely strained while away off in the woods, out of the reach of a referee.

Then again the plain, unvarnished, vulgar word money, may develop a discordant note in a member of a hunting party, although surely sordidness is conspicuously out of place in the midst of nature's lavishness. Estimates of the attending expenses may have been exceeded, and since "wherewithal" is the lubricant necessary to the mechanical department of a hunting journey, the subject must, unfortunately, now and then recur. Efforts to economize and retrench are, of course, entirely legitimate; but to mope because the other member of the expedition declines to deprive himself of any part of the pleasure of the outing, in order to abide by a guess as to the cost, is as unfair and as destructive of all mutual enjoyment as is the twitting of the projector of the trip with his error in financial judgment. The better able the man to bear his share of expenses, the more reprehensible is any display of littleness. To have every contract and

expenditure questioned, analyzed, probed and frequently resurrected is exceedingly irritating to any one who is weary of counting-house methods, and whose anticipated enjoyment is not associated with and cannot be estimated by dollars and cents.

As to laws for governing the relationship of hunters in a wilderness, the proposition seems an absurdity and entirely uncalled for, because the word hunting as applied to big game implies that an individual, independent and untrammeled, is busily engaged and much preoccupied in summing up all his inherited or acquired cunning, and measuring it with the keen sensibilities and instincts of the wary animals. Nowadays this mortal picture of a hunter must, usually, include a guide for the reason that few men can devote enough time to pleasure to learn the ramifications of the wildernesses. Still-hunting in groups (two hunters with guides) is apt to be as unsuccessful as unusual, but, nevertheless, because many would-be hunters are so devoid of resources and so afraid of the initiative, it becomes necessary to frame a law or an agreement in order to protect the ingenuity or methods of procedure and the pleasure of one from incursions of the other. Possibly a pertinent rule would be, after a fair shuffle and deal of the nearby hunting grounds and guides, each member of the party must play his own hand in accordance with his understanding of the requirements of the sport.

While sitting in camp in the Canadian woods one autumnal evening, after a hard day's hunt and a commensurate and rehabilitating meal, watching the shadows of the fir trees slowly efface the light from the surface of the adjacent lake, a canoe emerged from the twilight, traversed the remaining little circle of reflected sky and soon beached at my feet, a lithe, clear-eyed, resourceful-looking young man, appropriately clad and altogether prepossessing, stepped out and giving an order to his guide approached and introduced himself. After a request for my latest news from "the States," he having been absent for some time, the following remarks prefaced our evening's conversation: "Are you alone?" he asked. "Yes." "By the aid of wisdom or good fortune?" "I haven't analyzed the matter beyond the fact that it was my choice." "Then surely you chose wisely, for I came into the woods with a friend—a friend of long standing—but we have separated, and are now traveling our diverse ways with our respective grievances and considerable regrettable hard feeling toward one another. My friend relied so entirely and constantly upon me as to recall my experience with ill-trained hunting dogs, which would not be sent home and would persist in flushing the birds. He had the whole of this broad country in which either to hunt or fish, and still, he would remain quiescent with absolutely no preference, until my plans were perfected and would then elect to do the same thing at the same time. I tried to be patient and self-contained, but the pressure per square inch finally exceeded my resistance and I exploded."

When two or more men resolve to go hunting together, they should invariably be prepared with guides and equipment to, at any time, go it alone, and should not hesitate to thus exercise their pent-up individualism. The very fact that they agreed, as herein suggested, to be independent of each other, sought to prevent too much compression and prove a cushion for relieving possible disagreeable jars.

In the majoirty of cases of extended partnership hunting trips, more or less friction is the natural concomitant of individual strenuousness, ambition and, maybe, bitter disappointment.

Some of the causes of disagreement would at home seem trifling and at times even laughable, but when much is to be accomplished in a brief period, any seeming interference with what would appear to each to be the logical and most promising plan of procedure is apt to cause restiveness and irritation.

There are, however, at times, happy unions of congenial temperaments which dovetail in a complete and desirable manner, making the camp a delightful recollection for years to come and a subject of conversation as inexhaustible as are the reminiscences of a campaign by members of the same regiment; but the "fishermanic" disposition, placid, deliberate, good-natured and contented-with-any-outcome, is not incidental to hunters whose prototype would seem to be an earnest, energetic, probably taciturn, determined specimen of humanity, and therefore composed of a more inflammable material; hence, the chances for happiness are against a combination, and however highly the companionship of a friend may be rated in the abstract, far preferable to the danger of spoiling one's friends, or one's own outing—which is intended to be the salve for a whole year's wear and tear—is the vanishing into the wilderness in company with an inhabitant thereof as a companion and guide. Thus the entire environment becomes a consistent and responsive whole—an entity—which engulfs one and dissipates the perplexities and anxieties, incident to the every-day existence, by the aid of an irresistible and overwhelming calm.

Lonely? The time is too crowded with engrossing occupations to permit the wedging in of such a feeling. From the break of day, or, rather, from the very promise of it, until nightfall, a hunter is busy with his many interests. Each morning he is impatient to be up and away to read the new story to be found on the trails of his woodland neighbors—of their kind, number, sex, age, the directions of their travel, etc. Then, since he lives upon the country, in so far as fresh meat is concerned, he is apt to find the days too short not only for the satisfying of his greatest ambition, but also his necessities, and a resort to fishing or fowling is by no means an uncommon requisite. There is no evening to dispose of, because craving for his evening meal is not more marked than impatience for his bed of boughs, and long before he can exhaust his interest in the whispered confidences of the trees in their varied moods, or tire of his attempts to analyze the blended woodland odors which pervade his tent, or cease to glory in the wondrous beauty of a moonlit forest, he will have lapsed into insensibility.

Reserved for languorous days is the fund of desirable information in the close keeping of his associate, whose familiar knowledge of the denizens of the woods, and close observation of nature's laws make of him not only an instructor in the interesting department of natural history, but also in a homely philosophy which prompts much wholesome introspection.

LIPPINCOTT.

Old and New.

An old block house stands in Pittsburg, Pa., which is almost the only monument of ante-Revolutionary days in and about Pittsburg. It marks the site of fortifications which were built and held by the French as Fort Duquesne from April, 1754, to Nov. 25, 1758, when they fell into the hands of the English, who remodeled and strengthened them at a cost of £60,000, and ocupied them as a military post under the name of Fort Pitt till October, 1772, when they were abandoned.

Of these fortifications nothing remains except the block-house. It is now owned by the Daughters of the Revolution, who have undertaken to maintain it as a relic of the city's earliest history.

As time moves on, relics of the early history of the country become more and more prized and sought after; even persons who are yet living can see where they could have secured something in the past which, at the time when it could have been secured easily, appeared to be of no consequence, but which, if it could be had at this day, would be of almost inestimable value.

To one who is fascinated with every thing pertaining to pioneer days, the sight of any of the relics of the long ago starts a train of thought and produces a reverie from which the victim is aroused only by the necessary activities of the present.

Through the campus of the State University of this city extends a deep ravine, along the sides of which are a few giant oak and beech trees, which have been wisely and thoughtfully allowed to stand. Of the throngs of people who pass them daily, perhaps ninety-nine per cent, of them, if they see them at all, merely see old, gnarled, ill-shaped trees, to them les sattractive than the beautiful well-pruned shade trees of the lawns, and, indeed, some whose natures must be dwarfed to an alarming degree, have remarked about the folly of leaving the old "eye-sores" remain standing.

Noble old patriarchs which have stood the storms of perhaps two centuries or more; which have looked down upon the bear and deer gathering the nuts which they dropped, have witnessed tragedies of the woods which no human eye has seen; and have seen the silent Indian as he stole noiselessly through the woods in search of game, long before the white man trod the banks of the old Monongahela River.

Never do I see these silent monuments without thinking of their significance, and reading as plainly as if chiseled on monuments of granite, what they stand for Having stood silently through all these ages, and seen every change, from the solitude of the unbroken wilderness to the present active, industrial city, it would be easy to imagine their sighing for the good old times of long ago, like some old pioneer pining amid the activities and din of civilization, for his old wilderness home where quiet reigned, and where only the voices of nature broke the solitude. Unlike Daniel Boone and other like characters who could not and would not live in society but continued to move back as civilization advanced, the old trees must bear the din and turmoil of civilization and dense population and fall where they stand. Some years ago, while wandering through the open parks in the then unfrequented parts of the Rocky Mountains, old bleached buffalo skulls could be found scattered here and there all over the country, where the remnants of the once vast multitudes of these animals had sought refuge from their destroyers on the plains, and had finally been found and killed in their mountain fastnesses.

Not merely bleached and decaying skulls did they appear to me as I used to come upon them in my travels, but monuments, to which were attached a history not only interesting but sad. Often have I sat for long periods looking at these relics of the past, picturing in imagination the noble beasts roaming in wild freedom with none to molest them; then the slow but sure destruction, starting from the far east and working its way westward, steadily and surely, like a great canker worm, until it reached and devastated the uttermost parts of the West, leaving only these monuments to show where they were, but are not. I say it is not interesting but sad, and often have I continued my way after some of these reflections feeling that of all animals, man was the most abnormal and cruel.

Traveling along streams where for miles the bottom lands have been flooded by the damming of the waters by beaver, and where old stumps of trees which they have cut, can be found in great numbers, the reflective person can see in all the vast amount of work that has been done, monuments which recall the days when these industrious animals owned the waters, wisely directing and executing a most wonderful work, which, when examined in detail, shows a knowledge of engineering which would seem impossible of execution merely by instinct, but would suggest thought and reason, which, of course, we are not allowed to credit to these wise little workers. An eastern sportsman whom I knew was so interested in what he saw of their work that he had a stump of their cutting, which was 14 inches in diameter, taken up and shipped to his home as a relic of the past. Of all the resources of the once great unsettled and undeveloped West, the beaver was the first to be sought after. Long before any other inducements lured men into the great unknown territories of the West, the abundance and value of these animals caused men to undergo all manner of exposure and peril to secure their fur.

Recently, while hurrying along the street on business, I saw across the way an old man with white hair and beard, carrying on his shoulder a long, old-fashioned, full stock muzzleloading rifle. I know not who he was, from whence he came, or whither he went, but recognized in him a relic of the past, a pioneer; a living, moving monument so interesting that I forgot, for the time, the demands made up my time, and watched him as long as he could be seen; thinking, as I did so, how like the buffalo his kind once figured so prominently in the life of young America, and how, also, they have been crowded out and have vanished until only a few stragglers are left. No modern sportsman with modern hunting suit and modern firearm can ever be the ideal type of an American hunter, as is the old pioneer with his long muzzleloading rifle, who has played so important a role in the drama of American life.

After all has been said and written about the merits of the different hunting rifles, which merits, of course, have all been based on their powers of destroying life, the use of none of them will be as lasting in history as that of the old muzzleloading rifle; and it is with a feeling akin to reverence that I handle one of these ancient arms, and think how much more interesting is the history connected with their use than that of any of the more modern rifles. After all that has been said and written, and laws that have been enacted for game preservation, if there had been a law passed one hundred years ago that no firearms should be used for hunting purposes other than the ones then in use, and such a law had been enforced up to the present time, the people of to-day could kill more game with such guns and have more pleasure and less expense in doing so than is now possible with the best guns made.

In thinking of the long ago, with the natural, regretful feelings at the passing away of so many of the interesting conditions, we associate with those days that which most vividly recalls them, and in so doing it would seem that the three most distinctive representatives of that time would be the Indian, the buffalo and the pioneer. Around these three center the most interesting of early American history, and if a monument were to be erected to represent "Young America," it could not be complete without all three of these being represented. Never has a fuller and more completely representative picture of the wild American buffalo been shown than that of the July 5 supplement to Forest and Stream. Could a picture of like dimensions be had illustrating so perfectly the Indian as he was in his natural and undisturbed home, and one also showing the pioneer in his day, the three grouped together and framed would make a combination upon which to feast the eyes, and which would become more and more prized as time passes, which carries us further and further from the scenes therein represented.

We now deem it a privilege to meet and talk with men who have taken, to any extent, an active part in Indian warfare and buffalo hunting. Within the lifetime of many who now live it will be a matter of interest to see men who have seen the bleached skulls of the buffalo scattered over their range where they fell by the hand of the hunter.

Sometimes in the everlasting hurry and bustle of this advanced and progressive age we become fairly sick of the turmoil and wish we might stop and go back; but it can not be done. We must keep up with the procession, or, like the weaklings and stragglers of a great herd of stampeded buffalo in the past, we will be trampled under and perish in the mad race, while the great mass moves on.

It may be wicked to wish for that which is impossible, but from boyhood I have wished that I might have lived one hundred years earlier, and have often wondered whether or not any who live a century hence, when even all traces of a once wild and unsettled country will be practically gone, will continue to inherit and retain these tendencies to a wild-woods life.

It would be natural to believe that man, as he sees and knows less and less of these conditions as time goes on, will naturally and gradually drift away from such tendencies, adapting himself more naturally to his environments until little will be left of the spirit which stirred the old pioneers of long ago and moved them to perilous journeyings into the unknown, and caused them to keep moving back as settlements sprang up around them, depriving them of that wild freedom which their natures craved.

EMERSON CARNEY.

Morgantown, W. Va.

Sportsmen Are not a Class.

Editor Forest and Stream:

The position concerning classes, in the editorial in Forest and Stream of Aug. 23, was sound and well taken. The periodical cry of "class legislation," whenever laws are proposed or passed in favor of game protection, or restriction in killing, or the methods of killing, would have no harmful effect whatever, once the public is educated up to discern the fallacy of it. However, it is a plausible assumption, is this cry of class, which is conceded as true by the general unthinking public.

If a man does not shoot, he is prone to consider that all other men who do shoot belong in a class by themselves. He ignores the fact that the shooting privileges, under the law, are just as free to himself as they are to all others; that the "class" is not a class at all, but is a number of men, from every grade of business activity, rich and poor, aristocratic and humble, which drops business cares for the time being to engage in needed recreation or pleasant diversion for a few hours or days.

If the lawyer, the doctor, the clergyman, the tradesman, the mechanic, the man of leisure, take their guns and sally forth for sport, they do not by such act establish a class, for the whole nation has the same privilege. Because some men shoot and others do not, the ones who do not shoot are no more in a class by themselves than are the ones who do shoot.

While the legal enactments apply to all alike, there is a class distinction between a body of men, on the one hand, who are all agreed that the good of the public is best conserved by moderation in taking game, by restricting the methods with a view to game preservation, and on the other hand, a body of men who are agreed that to kill in any manner and in any quantity best agrees with their purposes and their desires.

The man who desires legislation for the public good is in a class, then the man who desires that his own appetite and ability to slay shall be the standard, is in a class also; yet which of the two classes is the better for the public good?

There is no class qualification whatever which obstructs any man's purpose or effort to become a sportsman, or to engage in sportsmanship. Personal actuation is the only requisite. Any man can take his gun, sally forth afield, return as he lists, without in any way becoming a member of a class. In season, thousands do so. The next day, other thousands are afield, with no

other idea than that of sport, yet while they are as one in the momentary pursuit, they are as diverse and unaffiliated on all other matters as are the people who hurry to and fro in the busy streets of a great city. The men who cannot go afield have the sporting instinct quite as much as those who do go.

And yet, in the legal phases and interests of sport, the term "class" is constantly and malevolently encountered. Not long since, a California judge, in delivering a decision, inimically used the term "classes" as applied to sportsmen, in passing on a subject which was of interest to the people.

What is free to all and for the benefit of all, cannot be properly termed "class" interest. People of every degree of life, who take a few hours or days to engage in diversion, cannot be properly termed a "class," for they are the people themselves. MOHIGAN.

Manliness and Sport.

Editor Forest and Stream:

To be honest, I believe in killing game for sport. I also believe it is more or less brutal to kill any animal, whether for sport or for food. And I do not believe that the mere killing of an animal is a manly act, nor yet an unmanly act. It is something that for certain reasons, which I cannot explain, affords satisfaction under certain conditions.

To meet and overcome difficulties in the primeval wilderness, to be able to provide the necessaries of existence unassisted, while on exploring, fishing or hunting expeditions, are qualities conducive to sturdy and independent manliness. But the mere killing of animals "which lack the weapons and intelligence of man," is simply a matter of the strong overcoming the weak. Yet it is my firm belief that nature has planned things in this way to work out her own wise end. And she is not governed by what we consider as manly.

Webster's definition of manliness is, "The qualities of a man; dignity; bravery; boldness." The argument has been extensively advanced in FOREST AND STREAM, and proved, to my satisfaction at least, that there are no wild animals in the United States which will voluntarily attack man. Then there can be nothing of "dignity, bravery," or "boldness" in killing harmless creatures, whether bird, fish, insect or quadruped. Should not the element of personal danger, self-sacrifice or mercy be present in any act which develops qualities of "bravery, boldness" or "dignity"? The killing of an animal of the chase is but an incident of the chase—the climax of a series of preceding incidents, some of which impart manliness to a greater or less degree. It is like the period at the end of a sentence.

It somehow appeals to my reason that the elements of primitive savagery exist to as great a degree in the heart of the man who kills a deer, moose, bear or bird as in the breast of the man who sets bloody-jawed bulldogs rending each other in pieces, though the latter be of a coarser variety of savagery.

I confess to a desire to kill a moose before I die; yet, if I succeed in my object, I cannot consider the act a manly one. To overcome the hardship connected with the trip will strengthen nerve and brain, and I trust impart some of the elements of "bravery" and "boldness," and the satisfying of a passionate love of nature, by getting close to her great, throbbing heart, may disclose some of the wise "dignity" of her ways. Should I kill the moose, however, I shall simply consider it the securing of a relic which will recall more vividly to memory the incidents of a hunt than memory retains of other hunts in which no relic was secured, but in which the elements of manliness were present in as marked a degree as where the relic was secured.

While I believe in killing game, that does not necessarily indicate that it affords me pleasure to look upon the dying agonies of an animal, done to death by my hand. And here the thought comes that personally I don't know one single sportsman that does not express some word of regret as he looks upon a dying animal, brought low by his aim. And who knows that like feelings are not experienced many times by the butcher as he slaughters for the meat trade? The animal brutality that exists, in some manner, to a greater or less degree in all of us, reinforced by the desire to outwit animals of other species to ourselves, causes us to fire the fatal shot; then sympathy, the extreme opposite to brutality, manifests itself—like fever following a chill. Even in athletics, one experiences a feeling of sympathy for a loser, while rejoicing in the victory of a favorite.

But if the elements of manliness do not exist in the mere act of killing an animal, but are associated with the obstacles attendant with that end, then it must appear that good has been accomplished, and that the killer has unconsciously absorbed manliness in the chase.

Personally, I know men whose morality has been of the loosest. They have "reformed." These voluntarily pose as shining examples for their fellow men to follow. They disgustingly presume to advise their natural superiors—those naturally endowed with good morals. They lie, believe they are telling the truth; steal, and do not know it. Their natural bestiality at one time caused them to drink to excess. To keep from filling a drunkard's grave they "signed the pledge." They question the chastity of all women who drink a glass of wine, and had they the power, so deep is their bigotry, they would sweep all wine from the tables of the cultured, refined and noble of our land. I firmly believe their ravings to be the reflections of minds weakened by former excesses. In this class of moral degenerates I would place the worst of the sentimentalists, who would stop the killing of all game simply because they have scruples. Perhaps in their time they may have killed to excess, and in mere wantonness.

One kills a chicken to satisfy his hunger, or smokes pipe or cigar, because it affords a certain satisfaction. Another collects relics, postage stamps, etc., etc. Another wears the most outlandish toggery, the highest of collars, the loudest of breeches, neckties, etc. In fact, persons of different temperaments follow different fashions, fads and whatnots. And none of these eccentricities conduce to make one manly or unmanly. They are simply a means of affording satisfaction to different tastes. Thus, while the legitimate act of killing an animal in the field may not be a strictly manly proceeding, yet, neither is it unmanly. It is simply a lawful way of gaining food, or of satisfying one's taste or vanity. Or it is the securing of the trophy emblematical of a successful day's hunt.

He of "dignity, bravery and boldness" exists in many walks of life, other than sport. He is found in his highest perfection where he struggles and suffers in self-sacrifice for the sake of others—whether in the slums or palaces of cities, in the cot on the mountain side, the fisherman's hut, or on the mighty deep. And his priceless worth and noble manliness are all too often not recognized or appreciated until the end of his weary trial is run, and his earthly task is ended.

WILLIAM H. AVIS.

HIGHWOOD, Conn.

The Nature of Sport.

Editor Forest and Stream:

I am much beholden to your able correspondent, Mr. Jos. W. Shurter, for his clean-cut and vigorous argument in FOREST AND STREAM of Aug. 23, in opposition to the views recently expressed by myself on the subject of "sport." With your permission I will endeavor to mollify Mr. Shurter's indignation by throwing out a few additional remarks on the same subject. Mr. Shurter combats my theory of the origin of the hunting instinct in man's nature by pointing to the fact that the hunting propensity still subsists though the conditions which implanted the instinct no longer obtain. From my point of view this is clearly a non sequitor, as it would also be if applied to the domestic dog, in which the same instinct, derived from the same source, is so strongly manifested that he continues to pursue game with a keen relish for the sole benefit of his master, long after the conditions have ceased that gave it birth.

I think Mr. Shurter is unfortunate in appealing to Webster's dictionary for a definition of "true sport" in an argument before the FOREST AND STREAM tribunal, in the face of my distinct announcement that my own plea was offered within the jurisdiction of this court alone. It shall hardly be contended that this journal is a proper arena for discussing the comparative merits of "draw poker," "old sledge," horse racing, or baseball, etc., as a means of diversion; for the members of the FOREST AND STREAM brotherhood, as such, are supposed to know nothing about these things. Neither is it likely that it should occur to the average member of this same brotherhood to associate Webster's dictionary in any way with his conception of what constitutes "true sport," as he could probably have given Uncle Daniel pointers on the subject when his dictionary was being compiled.

It has heretofore been a matter of discussion in FOREST AND STREAM, with deprecation of the unfair or unfortunate terminology that confounds "sport" as contemplated in the official organ of the brotherhood, with those games mentioned above, and other athletic exercises that belong to the same general category, and come under the classification of games. The term games in this connection, may be held as antithetical to game, as by common agreement the word "sport" is antithetical to "sportsman," the latter being applied to the man with gun and dog, or rod; while the former is appropriated by the "gent" who is typified by a velvet coat, red necktie, large gold chain, and nether garments of loud pattern.

While Mr. Shurter perhaps intended to comprehend only the manly, athletic games, in his definition of "true sport," I think the brotherhood will join me in the desire to exclude all manner of games from kinship with the sport of pursuing game, or fish, as a means of diversion.

Mr. Shurter argues that the chasing of mountain lions and foxes is true sport, notwithstanding the fact that these animals are not eaten when taken; also that tarpon fishing is true sport under the same restriction. I did not think it necessary in my former article to specifically justify the pursuit of predatory animals that prey upon man's domestic creatures, the benefit to man from their destruction being too obvious.

As to tarpon fishing, that pursuit has always in my own estimation, fallen short of true sport for the very reason assigned to sustain Mr. Shurter's argument, that the fish is useless after capture; and I cannot but believe that the sport of tarpon fishing would be immensely enhanced if the tarpon were as great a table delicacy as the salmon for instance.

It appears to me that the destruction of any living creature, for the mere pleasure of its destruction, if pleasure can be so derived, is ethically wrong, and unjustifiable; and "I am apt to believe," as Samuel Peppys would say, that the majority of "true sportsmen" will agree with me in this proposition.

I quote Mr. Shurter as follows: "I regard his (my) teaching as pernicious, because if generally inculcated it would degrade our fields and forests to the level of abattoirs, our game to the level of swine and our sportsmen to the level of gluttons."

Shades of Christopher North! what degraded creatures have sportsmen been during all these past centuries, before this new era of sublimated head hunters and tarpon fishers was ushered in but yesterday! In ye olden time the trophies of the chase that decorate baronial halls had their value not alone as mementoes of the pursuit and capture of the lordly stag and ferocious wild boar, but also from their association with feast and revelry, when the lord and his retainers gathered around the festal board nobly laden with the savory haunch of venison or smoking boar's head. Certainly these trophies did not bear evidence that the sportsman had paid an expert ten times as much as the game was worth to procure him a shot at close range, at the animal that bore the horns exhibited. If there is mercenary implication anywhere, it seems to me that here it lies.

In conclusion, this issue between Mr. Shurter and myself is fairly presented before the court, and I am content to leave it to the "consensus of opinion" of the FOREST AND STREAM brotherhood to decide between us.

The Forest Reserves.

BY FILIBERT ROTH, CHIEF OF THE FORESTRY DIVISION OF THE GENERAL LAND OFFICE, DEPARTMENT OF THE INTERIOR.

From the Year Book of the Department of Agriculture.

IN a consideration of the grazing problem in the forest reserves of the United States, it is necessary at every step to keep in mind the objects for which the reserves were set aside and the character, as well as the behavior, of the woods which exist on these several reserves. Since there appears to be still a great deal of confusion concerning the motives and objects which led to the formation of reserves, and also as to the character and behavior of forests in general, and the woods of the several reserves in particular, it may be helpful to review some of these points more in detail.

General Discussion of the Functions of Forests.

When a farmer in Ohio or Indiana has a piece of woods on fairly level ground he has no good reason for keeping it as woods unless he considers the wood growing on the land to be as valuable as any other crop he might raise—a matter often difficult to decide. A farmer in Mississippi, on the other hand, may be induced to leave a patch of forest on a hillside, not because he cares much for the wood, but because, if the forest is cut away, the land will wash into a labyrinth of deep gullies and soon become utterly worthless for any purpose. In the former case the forest is merely for the crop it yields; in the latter it is for both crop and protection, and this case is far more common than is usually supposed. But while the farmer in Mississippi may use the forest to keep a piece of land from gullying, and thus use it as a protection against erosion, he cares little as to how this forest affects the flow of water or the climate, for he has ample rain and does not utilize the creek or stream. With the farmer in Gallatin Valley, Montana, this is quite different. He takes what seems to be a desert gravel bar and by the use of 1 inch of water per acre* he converts this arid ground into a farm and raises as high as 90 bushels of a superior quality of oats per acre. To him the little mountain stream is everything. Here the forest takes on another function; it holds the soil of the neighboring mountains and keeps it more pervious, and thus it regulates the flow in these important streams. The manner in which it does this will be clearer from the following: Suppose we take a table and tilt it several inches, so that its top represents a slanting surface. If we sprinkle water on this surface, it is clear that the water runs off about as fast as it strikes the table. If the table is now covered with a layer of soil about 3 inches thick, and the sprinkling is renewed, some of the water runs off from the surface and some soaks into the layer of soil, so that if, after a time, we quit sprinkling there will still be water running off from the table for hours. We have here then a "surface run-off" and an "underground run-off," and it is clear that the thicker the layer of earth, and the more pervious, the more water it would take up and the longer and steadier it would be giving off this underground water.

The above statement shows exactly what happens all over the land, and is especially noticeable in the mountains. On the soilless, rocky slopes the water runs off as fast as it falls or the snow melts, but on slopes with deep, pervious soils part of the water is stored and continues to flow for months after the rain or the melting of snow has ceased.

Returning to the experiment with the layer of earth on the table, we notice that if we sprinkle more briskly, part of the earth is carried away, the layer is eroded, and the storage ground is diminished. If covered by a layer of cotton batting this erosion stops, and in addition we gain another very important point—the soil is kept softer, and allows water to soak in more easily than when the cotton is wanting, for then the water "pats" down; it hardens the surface where it does not wash it away. Much the same result might be obtained by sowing grass on the layer of earth, for then the tops of the grass would keep the drops from pounding the earth, form a mechanical obstacle to the surface run-off, and the roots would be an additional help in holding the earth and keeping it from washing away. But the grass is small, its tops are short, open, and close to the ground; its roots are short; it rarely forms a dense sod, and, especially in dry countries, it leaves a large part of the ground without protection. Here, then, the larger, long-lived, deep-rooted trees, with dense, shading crowns high above the ground, give far better and more constant protection against erosion, and are far better able to keep the ground in a pervious condition, since they strew it annually with large quantities of leaves and twigs and provide a network of slowly decaying roots which keep the forest soil mellowed for a foot and more in depth. An upturned hemlock, spruce, etc., will readily illustrate how much of the ground is occupied by the roots of these forest trees.

The trees, then, are in nature what the cotton is in the experiment; they help to keep the soil from being carried away, they keep it soft, and they break the force of the downpouring rain.

How much additional service trees perform by keeping sun and wind from the ground is well illustrated by the forests of the Lake States and Canada, where thousands of swamps have dried up and hundreds of miles of corduroy road have become useless, not by ditching and draining, but by removing the woods and giving sun and wind access to the soil.

In this connection, it may be well to mention a theory, sometimes advocated, which teaches that it would be better for water-storage purposes to have the forests removed in order that the snow may gather in large drifts, since, as it is claimed, it is these snowdrifts which supply the water of the streams throughout the dry summer season. This is not borne out by facts, for a study of the Big Horn Mountains and the Rockies of Wyoming, Montana, or Idaho will convince anyone that the few lingering snowdrifts of August have very little to do with the streams, and that it is the wooded and not the bald districts of each basin which serve as feeders and maintain the steady flow of water. The allied claim

*The inch of water here referred to is a miners' inch. Fifty miners' inches require a stream furnishing 1 cubic foot per second.

that snow melts more quickly in the forest than in the open is so palpably inconsistent with actual experience and simple physics that one might as well claim that the construction of an ice house to cover the season's supply was unnecessary, since ice would last longer in the sun than under cover.

Though there exist numerous forests in this country where the protective function of the woods is not apparent, in the majority of cases, and in all mountain districts without exception, the forest serves both to supply useful material and to protect and improve the ground, and thereby regulate the surface and underground drainage.

The Object of the Reserves and the Character of Their Forests.

For the forests of the present reserves it may be said that the protective function has been regarded as the more important. It is evident, therefore, that efforts will be made to maintain and improve these woods in order to continue to increase their usefulness in furnishing material, and still more in performing their protective function. This is the object of the forest reserves. The main purpose of the reserves is not exclusion, as is still so often claimed. They merely provide the means and men to give the much-needed care and protection which private enterprise at present could not afford and probably would be unwilling to furnish for a long time to come.

Scattered over a wide range of country, from the British line to Mexico, with climates varying from cold to hot, from excessively wet to arid, in altitudes of from 1,500 to 11,000 feet, the forests of the several reserves differ widely. In the Black Hills a fine forest of yellow pine covers a broad expanse of high, rolling ground and hills, and serves chiefly as a valuable source of timber. In the Western Rainier a dense forest of fine conifers on steep alpine ridges keeps the waters from carving the mountains into a waste. In the Big Horn a growth of pole-size lodgepole pine occupies a rough plateau, ranging from 8,000 to 9,000 feet in altitude, and helps to keep the useful streams from going dry.

Similarly, these woods differ in their present condition. The valley of the Skagit in the Washington Reserve, is almost an unbroken burn, and large burned-over areas, known as "burns," are scattered over the majority of the ridges of the east side of this same reserve. Similar conditions are met in the Mount Rainier, the Big Horn, the Priest River, and other reserves. In some cases these old burns have become reclothed with young forest trees, in others they are thickets of brush (species not trees), and in others they have changed to grassy pastures, often with little prospect of restocking under the conditions now prevailing. In some cases, as in the Big Horn Reserve, part of the extensive old burns are now so unmistakably prairie that it is difficult to prove that they were ever woods. Generally, however, a search reveals some fragments of stumps, bits of charcoal, etc., which show that at some time, at least, these places were not altogther prairie, and that a return to a wooded condition may be looked for. Besides these parks or grassy openings and small prairies (probably all due to fire), which in the aggregate cover many thousands of acres, there are large tracts of forest, such as the yellow pine woods of the Black Hills, where the mature timber, in keeping with the habits of this kind of pine, no longer forms dense stands. Here the ground is but little shaded, and a vigorous growth of grass and weeds eagerly seizes upon every yard of available soil, and thereby often prevents the starting of tree growth.

In other districts, where high altitudes tend to give an alpine character to the land, tree growth naturally becomes more scrubby and broken, and, in regions like the Cascades, at the tops of the high ridges are grassy parks, covering many thousands of acres more or less interrupted by patches of scrub woods. Whether these grassy areas were ever entirely clothed with woods, and whether, with any reasonable amount of care or protection, they can be made to reclothe themselves, is still in some cases uncertain.

In general, then, the forests of the reserves are primarily protective forests, they differ from reserve to reserve, they are all more or less damaged by fires, and in all dry localities and at high altitudes they are interrupted by grassy areas, the majority of which have long been in their present condition, and will probably require a long period of time before they are restocked with woods.

Natural History.

A Tiny Winged Performer.

Editor Forest and Stream:

One cold afternoon I was attracted by a crowd of boys and girls witnessing the strange antics of the oddest little feathered creature in creation. He was like a tiny wren in size and had a remarkably full breast covered with thick whitish down, the wings and back smooth and rather dark, and the feathers were tipped with white. The tail was square shaped. This tiny chit was apparently totally oblivious of the fact that he was the center of attraction of a throng, numbering more than 100, including many staid married people. The little joker would begin his search for food in the crevices of the trunk of a large tree, going around and upward at a tremendous pace for one of his ounces, or rather pennyweights, for he was a rare jewel. He seemed powerless to descend except in one way. After ascending to the small limbs he would flit downward like a ball to his old place on the trunk about two feet from the ground. It made no difference to him that little lads and lassies were forming in interested groups about that tree, and he would even select his position right within grasping distance of several young and nervous hands. My companion and I spent fully fifteen minutes watching the antics of that "dear little ball of down and feathers,' as she called it. I counted no fewer than six ascents and return flights to the bottom of the same tree. The bird had a short needle-like bill and often seemed to find food as he hopped up the tree. It was nearly dark when we left, but the amusing pigmy actor was still holding forth to a full house.

Our thought was: "Will any of the boys hurt that little atom of bird life, and where will he go this cold night?" We trusted the boys. Often since that day have we passed that tree on the edge of the walk east of the lower meadow and looked anxiously around for our comical mite. May he and the partner of his joys be now safe in some congenial haven! Ignorance has its disadvantages, and will some kind ornithologist or you, Mr. Editor, now tell us the name of that bird?

PETER FLINT.

NEW YORK CITY.

[A pretty sight and a good lesson in ornithology to the onlookers. Though the description of the bird tells little, we imagine from its actions that the bird was a nuthatch, or possibly a brown creeper.]

Dick and Gil

Two Florida Pets.

ABOUT two years ago FOREST AND STREAM published a paper entitled "Florida Pet Cranes." The history of these same birds in the interim may interest present readers.

The press copied so largely from FOREST AND STREAM at this time as to give the birds a real debut into the printed world. Many Florida tourists, on seeing the birds, would say, "Yes, we read of these cranes in so and so—our home paper."

Into every life some shadow must fall, and even the happy and much loved and innocent Dick met life's changes in an accident, that in its pathetic following touched the human heart—bringing tears many times.

The accident resulted in a broken leg. The bird, most imposing and picturesque, was a favorite with everybody, his intelligence and affectionate nature appealed to all, and when a fluttering was heard in the yard and we found the pet floundering, our sorrow could better be imagined than written.

The bird was carried in his master's arms to the doctor, where he had to wait an hour for the physician's return, the bird resting in the arms like a sick child the while. The leg was set—the bird turning his head to watch proceedings and seeming fully to understand what was being done for him, giving a "chirp, chirp" as the work proceeded and as his name was called with caressing tone.

For a day or two the leg seemed to do well and great hope was ours, when the setting gave way and Dick commenced to suffer. How his intelligence shone forth during all the long days of suffering that followed, for we felt every effort must be made to save the leg, and daily Dick was tortured with doctoring through mistaken kindness. Next he was swung, with the hope that the bone would knit. His eyes, so clear and brilliant in health, grew dull, and he would look at us with such a wistful longing as if asking to be helped.

It was touchingly pathetic to note his devotion. Showing pain and sick with the fever in his leg, which was reduced to little more than bones, he would raise his head on hearing his master come home, and in his weak voice greet him with his old-time welcome, a long, gurgling note of greeting.

Then came the day when the doctor announced that nothing could save the bird but cutting the leg off a few inches above the foot. Dick had grown so in our affections, his love for human society had endeared him so and his utter trustfulness during the long weary days we had nursed him made this ordeal hard and touching as if the bird were human. Dick bore the ordeal as though he understood. Then came days of nursing till the healing was over. Then he commenced to improve and his appetite became a prodigious thing. All day long and the last thing at night he was fed dainty bits, and he was always hungry. When we would approach he would seem almost to talk, and begin to peck at the ground as if saying, "put my dinner here."

All these weeks Dick stood on one foot, night and day. How his strength held out was then and is yet a question. Gradually the limb healed, and he was able to place it on the ground and thus get some rest.

During all his sickness he held his sovereignty over the yard. Neither dog, chickens nor Gill, the other crane, learned that Dick was helpless. While he ate his eye was intent on the invader, and his long bill would give them a punch, when they would retire to other parts. But Dick is well—his new feathers came last fall, his crest is brilliant crimson, and his eye clear and bright. He gets over the yard, showing little lameness as he walks on the short leg; takes his bath, plumes himself, and is happy. On approach of his owner, though it be ten times a day, he takes his old corner in the yard and carols a loud welcome.

One peculiar feature with reference to the greeting of the birds to their master, is that when he is certainly a quarter of a mile from home and in no possible view, they both grow interested, move about, station themselves at the corner where they meet him and commence a series of short gurgling calls. When the carriage is in view the calls grow louder, until when once in the yard they throw back their heads, and the greeting culminates in one long, clangorous, trumpeting call.

One thing in which Dick fails, and it is touching to witness his feeble attempt, is in his old-time glory of dancing. Alas! like an old race horse vanquished by old age or lameness, he must give it up. Gill dances for two, now. At the command of his owner, "Dance Gill, dance Gill," he begins with head erect and haughty step —then he bows, circles and jumps up and down with as much ease and lightness as if he were all feathers, then with curtsies and wings outspread he approaches his owner, bows and circles, and with a "hip, hip hurrah" from his master, swirls with open wings around the yard and back to bow and circle and dance again. Frequently, if he is not noticed, he invites attention by rushing up, bowing and prodding, picking up sticks, throwng them in the air and hopping up and down as if on a spiral wire.

The crane in its wild state is a most shy and wary bird, but under domestication is as gentle and trusting as a dog. Gill, for some cause, is very much afraid of a cow, but loves the pony, following her step by step as she grazes in the lot. Often in the evening Gill follows his owner as he takes the horse to the pasture, a block away, but if a neighbor's cow by chance is returning home, Gill seeks the protection of his owner and stays close by till the cow is out of range.

During the tourist season Dick and Gill adorn many a kodak series. Visitors come by and stately Gill walks majestically up to the fence and begins a series of investigations, picking at umbrella, cane or finger ring on my lady's hand. His picture is taken and the visitor goes off correspondingly happy.

It is great sport to watch the setter dog and Gill as they chase the buzzards that often alight in the chicken yard for scraps thrown to the hens. It might be likened to a game of tennis if we were to allow the buzzards to represent the balls. Gill with open wings rushes at the buzzards on his side of the fence, when the hungry vulture rises and alights on the other side of the division fence. Then the dog attacks him and he goes back with the hope of getting another morsel, when Gill rushes at him again. If the buzzard alights on the fence both dog and bird rush at him. When, occasionally, a whole flock of these buzzards drop down among the chickens and the effort is too much for Gill to keep them moving, Chipco, the dog, leaps the fence and assists in putting to flight the intruders.

The jay birds fly down to pick up corn, but Gill allowing nothing to come into the yard, drives them away, when in their pique they will sit on a limb above and call down in jaybird language all sorts of vilifications on Gill, who, evidently understanding bird language, clatters back in his strong crane notes, sometimes threatening to distract those who have to listen. When this controversy gets at its height the chickens feel something is wrong and commence to cackle, the dog then wakes from his doze and goes to investigate; the pony pricks her ears and whinnies in half alarm, till at last the mistress, disgusted with the clatter, proceeds to rebuke Gill and thus stop the quarrel.

MINNIE MOORE-WILLSON.

KISSIMMEE, Fla.

Wild Animals of the North.

From Richardson's "Fauna Boreali-Americana; or the Zoology of the Northern Parts of British America."

Some Smaller Mammals.

THE American hare, or white rabbit, as is well known, is the winter food of many of the Northern Indians. They are not killed in the fur countries in great numbers in the summer, because at that time the natives can procure abundance of water fowl and game of other kinds.

"In winter, however," says Dr. Richardson, "they are more sought after, and in the Hare Indian country, on the banks of the Mackenzie, where larger animals are scarce during that season, they constitute the chief food of the natives. They are principally taken in snares set in the paths that they make through the snow, and fixed to a pole which springs up when the noose is drawn, care being taken to obstruct their passage on one side of the noose by a small hedge of branches. To prevent them from cutting the snare instead of endeavoring to pass through it, it is occasionally rubbed with a little of their own dung. The Hare Indians, when they come to a place where the hare tracks are numerous, begin their operations by beating a circular path in the snow, so as to inclose a pretty large clump of wood, knowing that the hares will not readily cross such a path. They next bar the ways by little hedges, in the gaps of which they set snares, and then they enter the circle and beat among the bushes with their dogs to drive the hares into the nooses. On the success of this operation the supper of a whole horde often depends, as, with the usual improvidence attendant on a hunter's life, these Indians seldom keep any stock of provision by them. Unless when disturbed, the American hare rarely runs about during the day. It has numerous enemies, such as wolves, foxes, wolverines, martins, ermines, snowy owls and various hawks; but the Canada lynx is the animal which perhaps most exclusively feeds upon it. It has been remarked that lynxes are numerous only when there are plenty of hares in the neighborhood. * * * In some parts of the fur countries the natives line their dresses with hare skins, and the Hare Indians sometimes tear the skins with the fur into strips, and plait them into a kind of cloth. They resort to this expedient, however, only from the scarcity of deerskins and moose leather, which form closer and better dresses."

Larger than the varying hare is the polar hare, whose range is still further to the northward. It is common on the Barren Grounds at the northern extremity of the American continent. Dr. Richardson says that: "The polar hare is not a very shy animal, and on the approach of a hunter it merely runs to a little distance and sits down, repeating this maneuver as often as its pursuer comes nearly within gunshot, until it is thoroughly scared by his perseverance, when it makes off. It is not difficult to get within bowshot of it by walking round it, and gradually contracting the circle—a method much practiced by the Indians. In the late boat voyage along the northern coast, we landed in a rocky islet, off Cape Parry, which, though not above three hundred yards in diameter, was tenanted by a solitary Alpine hare. The whole party went in pursuit of this poor animal; but it availed itself so skillfully of the shelter of the rocks, and retreated with so much cunning and activity from stone to stone, that none of us could obtain a shot at it, although it never was able to conceal itself from our search for more than a minute or two at a time.

"The winter fur of the polar hare is of a snow-white color to the roots, and is more dense, and of a finer quality than that of the American hare. It bears a close resemblance to swandown."

Few hunters among the higher peaks of the mountains of the West have failed to hear the squeaking cry of the little chief hare, although many who have heard that cry have failed to see the animal that produced it. They sit at the mouth of the burrow, and call; but it is almost impossible to distinguish them from the rocks about them. Nevertheless, if one sits quiet for a long enough time he may sometimes see the little fellows run from hole to hole among the rocks, and may get a good notion of its appearance. The little chief hare is closely related to the true hares, but is at once distinguished from them by its small ears, which present no resemblance to those of what we commonly call the rabbits.

Mr. Drummond, of Dr. Richardson's party, who traveled west over the Rocky Mountains, killed several of these animals near the head of the Elk or Red Deer River. Of them Dr. Richardson says:

"Mr. Drummond informs me that the little chief hare frequents heaps of loose stones, through the interstices of which it makes its way with great facility. It is often seen at sunset, mounted on a stone, and calling to its mates by a peculiar shrill whistle. On the approach of a man, it utters a feeble cry, like the squeak of a rabbit when hurt, and instantly disappears, to reappear in a minute or two, at the distance of twenty or thirty yards, if the object of its apprehension remains stationary. On the least movement of the intruder, it instantly conceals itself again, repeating its cry of fear, which, when there are several of the animals in the same neighborhood, is passed from one to the other. Mr. Drummond describes their cry as very deceptive, and as appearing to come from an animal at a great distance, while, in fact, the little creature is close at hand; and, if seated on a gray limestone rock, its color is so similar, that it can scarcely be discerned. These animals feed on vegetables. Mr. Drummond never found their burrows, and he thinks that they do not make any, but that they construct their nests among the stones. He does not know whether they store up hay for the winter or not, but is certain that they do not come abroad during that season." A near relative of the little chief hare is found in Europe, and others in Asia.

Possible Origin of Animal Folk-Lore

ONE of the great functions of modern biology is to reveal the truth and by so doing to clear away the dense clouds of ignorance, superstition and needless fear that for centuries have befogged the human mind. It is a fact that the most superstitious persons are those who are the most ignorant. This may be in part because they are the most ready victims of intriguers, sorcerers and "healers" who would accomplish their ends by taking advantage of the mental condition of their victims; but it is also due in part to the tendency of the human mind to perceive a "sign" in whatever is mysterious. Whatever is not at once understood is mystifying and liable to be considered as supernatural. Uneducated persons understand but few of the observed phenomena of nature, and they but imperfectly observe that which they think they see. Hence nature is a fertile field for the origin of "signs and wonders," such as form the basis of folk lore and superstitions.

Omens must be for either good or evil, and as money and marriage are generally associated as blessings, and death is regarded as the greatest calamity that may befall man, we see why so many signs are associated with money, marriage and death. The more radically any occurrence departs from apparently normal conditions, the more remarkable is the event supposed to be indicated thereby. For example, there is a common saying, "When a cat refuses to kill a mouse there will be a death in the family." This may arise from the fact that shrews are sometimes caught in mouse traps, and although a shrew closely resembles a mouse, it has a strong odor which gives it effective protection, and cats and dogs rarely attack it. An uneducated person may catch a shrew, and when the trusted family cat refuses to kill the supposed mouse there appears a basis for the popular belief.

We must relegate to the field of folk-lore many of the common erroneous suppositions that are based only upon ignorance. We have been much interested in the possible origin of these common fallacies which are really considered true by most persons. Let us examine several specific examples; applying only to the higher or vertebrated animals:

It is commonly believed that lampreys attack man, probably from the mere fact that they are at times so very destructive to fishes. The idea that they produce a new gill opening each year may have arisen by analogy with the wrinkles on a cow's horn, the rattles upon a snake's tail, etc. The idea that sharks turn upon their backs to seize their prey may have originated from the ventral or inferior position of their mouths. The common sale of eel skins in most of our drug stores as cures for rheumatism is doubtless connected with the agility of these fishes, which is the opposite of rheumatic stiffness.

It is commonly believed that toads cause warts. This is based upon the following combination of facts: Toads are the only common animals that are naturally covered with wart-like lumps. They eject a clear liquid. This is supposed to do something. Warts appear mysteriously, and no one is able to explain the causes of their coming and going. It is erroneously inferred that they are produced by this wart-bearing nocturnal creature with peculiar habits, upon the basis of the doctrine, as with the eel skin, that, "like produces like." The common belief that tadpoles shed their tails has for its origin the facts that while living in water each possesses a swimming tail, but when it metamorphoses into a frog or a toad it becomes tailless. In fact, the tail does not drop off, but it is absorbed and disappears in the body, just as a swelling from a bump on the head disappears. How often do we hear that frogs and toads have fallen with rain, and almost every July we may read accounts of such phenomena. These may have for their basis the fact that during the month of July toads change from the tadpole stage and aquatic habitat to the adult form and terrestrial habitat and then migrate landward in great numbers. They are active only at night or during wet weather, effectually concealing themselves in the most common places during the day time. However, when a rain falls at such a time they appear by thousands, as if by magic, and give the impression of having fallen with rain. The assertion that to kill a toad makes cows give bloody milk may have originated in a laudable effort to protect these beneficial animals.

There are doubtless more superstitions concerning snakes than any other creatures. This arises in part from the traditions of the form of the original tempter, and in the part that but very few persons are willing to calmly observe serpents for themselves and learn the truth directly. We have met persons who believe that all snakes are venomous. This doubtless comes from the old Roman rule, *"Ab uno disce omnes."* How prevalent is the belief that horse hairs turn to snakes. There is no other foundation for this error than the resemblance of the so-called hair snake (*Gordius*) to a common horse hair. Snakes are often supposed to charm birds, but the facts are that the feathered songsters are paralyzed by fright when they suddenly see the reptiles at close proximity.

The common erroneous belief that snakes sting or bite by means of their tongues may come from the scriptural quotation, "It stingeth like an adder." The supposition that snakes bite themselves and die is doubtless based upon the actions of certain species, like the hog-nosed adder, which, when teased, will act as though dead and thus sometimes find protection. It is very commonly thought that snakes' tails "live" or are active until sundown. This arises from the prolonged activity of the tail, due to the reflex action of the caudal nerve centers, which may continue for a longer or shorter period, owing to temperature and other conditions. Many persons believe that there is a glass snake or joint snake which may be broken to fragments when struck, but can rejoint itself and live. This may come from the fact that a certain lizard (*Ophiosaurus ventralis*) readily loses its tail, and while the body escapes the caudal member wriggles and attracts the attention of the pursuer.

It is generally thought that all lizards are venomous, yet the only one that is so is the Gila monster (two species of *Heloderma*) found only in the extreme southwestern United States and Mexico. This error may arise from the fact that lizards and serpents are closely related in appearance, structures and habits; and because some serpents are known to be venomous it is inferred that all snake-like creatures are so.

The erroneous idea that turtles breathe under water, as do fishes, is derived from the observations of their having remained submerged for some hours. But this is made possible by their large lung capacity, the repeated use of the air therein, their limited need of oxygen compared with that of warm-blooded animals, and their ability to store oxygen in their tissues and use it as needed.

Both species of American cuckoos (genus *Coccyzus*) build nests, contrary to the popular belief. The error comes from the fact that the European cuckoo (*Cuculus*) builds no nest, but is parasitic, laying its eggs in the nests of other birds, as does our cowbird (*Molothrus*). The old idea that "A sight of the oriole cures jaundice," doubtless is connected with the yellow color of the bird and the homeopathic doctrine, *"Similia similibus curantur"*—Like cures like. Nuthatches are wrongly accused of sucking sap merely because they slightly resemble the so-called sapsucker (*Dryobates*), and the latter is thought to be a sucker of sap because it makes holes in the bark of some fruit trees. This is nearly always done to obtain insects. Swallows are thought to hibernate in mud, because in damp places is where they are seen last in fall and first in spring. They of course migrate, as do most other birds.

Many persons believe that owls, cats, and other nocturnal animals can see in absolute darkness. This error arises from the fact that in these animals the pupil of the eye is very large or dilatable, and in subdued or very feeble light they can see much better than can man. One can readily demonstrate the fallacy of the supposition by taking an owl or other nocturnal animal into a perfectly dark room, as we have done, and touching it with the hand. It does not move, even though it be an untamed animal.

Cats and other nocturnal animals are erroneously thought to emit light from their eyes, because when looking toward the light the crystalline lens of the eye produces a glaring reflection. The ideas that swans sing when dying and moles open their eyes at the time of death, are handed down from the writings of Pliny, and represent ignorance of the facts of zoology. Skunks afford the basis of many odd superstitions, because they, like serpents, are not studied deliberately, and therefore the truth about them is generally not known. There is sometimes justification in haste when near such animals, but generally the danger is more assumed than real.

do the little lambs' tails drop off?" He had accurately

We were once seriously asked by a teacher, "At what age observed that the tails of the lambs are long, while those of the old sheep are short, and he had obtained a false idea, which is, however, prevalent. Of course, he was shocked to learn that sheep raisers amputate the tails to prevent the soiling of the wool.

H. A. SURFACE, Professor of Zoology.

PENNSYLVANIA STATE COLLEGE, Department of Zoology, Pa., Sept. 1.

Bay Birds at Sea.

NEWARK, N. J., Aug. 27.—*Editor Forest and Stream:* While on the steamship Philadelphia from Southampton to New York, in longitude 67 degrees north, latitude 42 degrees west, about 10 A. M., Aug. 22, I noticed several flocks of small sandpipers flying close to the water, going in a southwesterly direction at the rate of about twenty-five miles an hour. I could gauge their speed by that of the ship. The course they were taking would approximately correspond to a line drawn from the southern part of Nova Scotia to Cape Hatteras, and at the time they were about 200 miles from Nova Scotia and 600 miles from Cape Hatteras. They were at least 200 miles distant from Nantucket, the nearest point on the Atlantic coast. I write you this as I do not remember hearing that bay birds have been seen that far from land.

HOWARD W. HAYES.

[The occurrence is interesting and well worth noting. In this connection should be read Mr. W. Hapgood's interesting chapter on "Range and Migration of Bay Birds," published in the little pamphlet "Shore Birds" (Forest and Stream Pub. Co.).]

Vipers and their Young.

THE London Field, having offered a reward for the production of a viper which had swallowed its young, makes this interesting report of a snake which had been sent in for the prize:

A viper has been forwarded to us by Mr. H. Winchester, of Backsteep Manor, Dallington, as entitled to the reward offered for a viper that had swallowed its young. In order to insure an examination by an impartial and competent observer, the reptile, without being removed from its box, was conveyed by Mr. Tegetmeier to the College of Surgeons, and carefully dissected in his presence by the conservator in charge. After cutting the string round the neck, the skin of the under side was carefully slit down the whole length of the body, and then the ribs were divided, disclosing the whole of the viscera. The gullet and stomach were perfectly empty, nor was there any trace of food even in the intestines. No young viper had been swallowed. There was in the lower part of the abdomen four unhatched eggs or embryos, which, when opened, disclosed four immature young that in the course of nature would not have been hatched for several days. The young vipers that Mr. Winchester saw had probably been recently expelled from the mother, and, escaping, as they do, in the herbage, had given rise to the impression that they had gone down her throat. Under these circumstances we are unable to pay the promised reward for the body of a viper that had been secured after having swallowed its young, but the offer still holds good, and will immediately be paid on the production of such a specimen.

The Spreading Adder.

Editor Forest and Stream:

Last June while putting in my vacation at the "Little Bresh Cabin" on Oakledge Tract, up in Woodstock, Conn., I was surprised to see the number of broods of partridges there. Of the scores of broods that I came across I think that not one was seen with less than a dozen chicks and many of them had at least fifteen. I was also amused at the antics displayed on different occasions by the mother birds in protecting their broods.

Quail were very plenty on the Tract and also on the neighboring farms. Gray squirrels, both old and young, were often seen in the woodlands; all pointing to a first-class game season this fall up there.

While there I solved the problem about rattlesnakes being found in that part of the State, as several of the neighboring people claimed.

Instead, one day I came across a goodly-sized spreading adder—a species of the hog-nosed snake—which I showed to a farmer, who declared it to be a young rattler, as it was just like other rattlers occasionally found there, and he would not be convinced to the contrary.

Although the spreading adder is perfectly harmless, its fierce look while distending and flattening its body and hissing would make one not versed in ophiology think it was a venomous serpent; and it being mottled or blotched something like a rattler, would also tend to make one think it was a half-grown rattler.

The spreading adder is the only snake that I have seen that will "play 'possum." At several different times I have seen it after having been struck or slightly wounded, turn upon its side or back and feign dead, and the simulation would be so perfect that one would think the reptile's life was surely gone.

Although I have come across many snakes of the hog-nose species in South Jersey, Delaware and Maryland, I was surprised to know that they are also to be found up in northeastern Connecticut. A. L. L.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

A Reminiscence with a 'Coon in It.

I BELIEVE I have hunted most kinds of game from a reed bird to a wild turkey that has feathers, and everything from chipmunk to black bear that has hair on it. But never did I find my experience thoroughly ripe until I went 'coon hunting.

'Coon hunting is like some people, very much in a class of its own; be they liars or be they saints, they are so pre-eminently below or above others of the human race that they just hold a little position all by themselves, and to my mind 'coon hunting is in a class all by itself, and deservedly so, too. Yet some people are fond of it. I don't know why, but just because they are; and they never miss a chance of going. Perhaps they see something weird in it that appeals to their weird natures. I did once, and I would not have missed it for a farm, but I would not go again for two farms with a hayrake thrown in.

A party going 'coon hunting should consist of six beings—i. e., two good woodchoppers, one pig-sticker, one telegraph lineman and two 'coon dogs that are "onto" their job. Experience in other lines of hunting is not necessary. One need not know anything about a shotgun or rifle in 'coon hunting. A good stout club and butcher's knife are about the requisite weapons. Sometimes the ax may be handy, or the lineman's climbers can be used to beat a 'coon to death. Then, too, this sport should be indulged in at night, when most honest folks are in bed or ought to be, which means that one should wear armor as a protection against bull-briers, rhododendrons, old stumps, broken rocks and various other inconveniences of the swale and mountain-side, that knock the breath out of you and bark your shins. The 'coon hunter should be a "soft mark" for an accident insurance agent. He needs it worse than a full-fledged burglar, and my experience dictates that one should have a "pull," a real political inside well-greased pull, too, with the land owners in the county in which you find yourself; and if near the line, the adjoining county, too. Then 'tis wise to send out notices over the country-side of the impending foray. It prevents at least one little danger, that of having your well-groomed 'coon dogs ambushed, or chewed up by some badly behaved dogs that are jealous because they don't know enough to run even a 'coon—dogs whose specialty seems to be passing dogs of good manners, and human hams and shoulders and tender calves—and who regard night as the proper time for chewing.

However, my experience was so long ago that it occurs to me now as a reminiscence only, though there are some things in this life that have long since agone that have their mark. It may be a tender heart throb or it may be a broken nose. And that's the way with me; it marked me for life, not seriously, only just enough to remind

me when I am laid up for repairs, that one time I went 'coon hunting.

It happened in Michigan, as I have intimated, many years ago, that business and a pretty pair of brown eyes called me quite often to a small but interesting business center, and I should say, in explanation of my impoliteness in mentioning business before eyes, that I got the business, but the brown eyes got away, and I'm not sure that that 'coon hunt, or the subsequent consequences had not something to do with it. A 'coon cuts some queer pranks, yet in this case I at least respect him.

In the course of my visits I naturally met some of the local sporting fraternity, among others her brother, and it was proposed to take the "Quaker tenderfoot" 'coon hunting. The party consisted of her brother, an aquatic athlete; a journeyman lawyer, the hotel proprietor's son Dick, and myself. Accompanying us were two dogs, one gun, two axes, a baseball bat and one lantern. About two miles from town on a lovely highway we had a dog fight nearly to a finish (and I have always regretted I didn't finish it and then call the owner of that dog up out of bed and lick him for owning such a brute), in consequence of which we only had seven good legs under our two dogs for some days to come.

About two miles further on we took to cover, and in a little while our four-legged dog was "opening up" beautifully, and we after him and the three-legged one after us. I was carrying the gun (I felt safer that way) when I took a header over an old log that marked me and that gun both for life. The gun was broken; I was only bent and barked, both badly; however, I waded on into that gloom and dense atmosphere in the wake of a skunk that our sound dog was just hazing.

Soon, however, our athletic friend had the dog in hand (being impervious to small things), and got him headed the other way, and in a short while he struck the real thing and treed a 'coon. Here consider the sagacity of a 'coon. That fellow had as pretty a collection of trees to select from as ever made a forest, and he just took to the meanest one in that county. I have forgotten what breed of a tree it was, but I do remember how high it was, and I shall never forget how thick it was, and I'll never forget how tough it was. It would have taken a "Steeple Jack" to climb it. So that just left us the alternative of going through it, and the ax began to swing. It was glorious, invigorating, perspiring, blistering sport. How the echoes of those manly strokes went reverberating from tree to tree, clack clacking, calling back as they passed on into nothingness.

Now that aged monument of time stood near a worm fence; and on a rise of ground a quarter of a mile away stood a farmhouse, in its peaked, puckered-up outlines looking deserted and haunted in the moonbeams; and to prevent surprises we posted Dick on the fence as a sentry, not to challenge, only to warn (us). Well, about the time that tree was ready to fall, her brother collared the dogs, gathered in the pieces of gun, and collected the lantern, while the oarsman and I put in our last strokes with our last breath on the tree. It must have been the fall of the tree that woke Dick up, and revealed to his senses (what he had) a six-foot, raw-boned Michigan farmer with anger up, within ten feet of him, coming head on. I have heard the whoop of an Indian and of a ferry boat in distress; but I have never heard anything quite so nerve-rattling as Dick's screech. It all came in a heap, the tree, Dick and the howling dogs. Pandemonium reigned; the 'coon struck for a stream and the dogs after him, and we after the dogs, through briers, over stumps and fallen trees galore. The dogs caught the 'coon in a run in about nine inches of water and were doing fine battle when the oarsman got in with his bat and closed business. Swinging the 'coon over his shoulder we pulled out for a pasture field, in the center of which we sat down to await developments, among them Dick. Hearing nothing and seeing nothing, we commenced halloing, and instead of quietly making his way to us, poor Dick would hello every time in return; and, of course, it did not take the sleuth long to locate Dick and grab him, and in that moment Dick's heart could not have nearer gone out of him had he committed murder. We heard the collision and knew its consequences. The farmer took Dick home with him to hold as a ransom for his timber. We couldn't go home without him, so we followed and reconnoitered. It revealed Dick and his captor sitting in the kitchen with a candle between them eating apples. So we knocked and "gave ourselves up," told the "granger to come to town in the morning and we would pay for the tree. He set up the cider and some good apples, and we pushed for town, some four miles away.

Next day, according to agreement, we all met our friend of the timber at the hotel and proceeded to dispense our hospitality in earnest; entertained him for dinner, learned something about farming we didn't know, and unraveled our several repertoires of stories, and had "just one more," until about 4 P. M. we loaded our friend in his wagon, and he assured us that we could have all the derned timber on his place, and his neighbor's place, too; "and they's allus a jug o' cider and a barrel of apples open to you." And, strange as it may seem, after he had gone, some of us felt as though we owned most of that country, including its trees, her brother being the biggest shareholder—and I was blamed for his enriched condition.

Of all the words on tongue or pen,
The saddest are these, it might have been.

THOS. ELMER.

Well Qualified for the Position.

From the Duluth News-Tribune.

An aristocratic woman, who has had the usual number of failures in the way of domestics, having tried nearly every nationality, heard the other day that a number of girls had come here from Finland to seek employment as servants, and that they were highly recommended as strong, intelligent, capable and generally excellent help. With high hope, the housekeeper hied her to the office where these paragons were on exhibition, and was soon brought face to face with a brawny specimen, who could not speak a word of English. With the aid of an interpreter, the following conversation took place:

"Can you cook?"

"Oh, no"

"Can you wash and iron?"

"No."

"Can you sweep and dust, or clean the house?"

"I have never done anything like that."

"For goodness' sake!" exclaimed the astonished matron to the interpreter, "ask her what she can do."

With calmness and complacency, the reply came back, "I can milk reindeer!"

The Old Flint-Lock Musket.

RUMMAGING the other day in the back attic of my memory, among the dust and cobwebs of early recollections, some of which I had thought, hoped at least, were obliterated, I stumbled across a long-forgotten remembrance which, on brushing up a bit, became almost as fresh and bright as when it was first relegated to the limbo of temporary obscurity; it was that of an old flint-lock musket, designated in the olden time as a "Queen's Arm."

There was a tradition in the days when the old gun was a palpable entity, that a certain Uncle Chet. had carried that self-same weapon when he "fit the Britishers" in the days of '76. In the minds of us youngsters there was a more or less firmly rooted conviction that our enjoyment of the "certain unalienable rights of life, liberty and the pursuit of happiness" was largely due to that weapon and the "man behind the gun." A sort of halo of liberty seemed to hover over that homely aggregation of wood, iron and flint. A more impressive sentiment, however, was one engendered by the terrific racket which it made when some older, and hence more favored member of the household, fired it off.

Equal in degree, and greater in effect, were the sentiments with which mother regarded the gun. Fear tinctured the views that she entertained, impelling the issuance of an ukase, absolute and prohibitive, touching the attitude of "us boys" thereto. This deterrent pronunciamento invested the situation with a charm that we longed but never dared to break. When, on all too rare occasions, a warning clatter from the henhouse betokened the invasion of a predatory hawk into the normal peacefulness of the feathered preserves, father or an elder brother would proceed to load the gun, then stalk stealthily to behind the barn, in an ever vain anticipation of "getting a shot," with what sentiments of almost awe and reverence did we regard the weapon's custodian; and we would wax impatient at the more than snail-like pace of time which debarred us from the privilege.

The hens reassured and quiet restored, the old gun would be returned to its resting place in the woodhouse corner. At rare intervals, against the almost tearful maternal protest, the gun would be permitted to retain its load. Upon such occasions mother would reiterate her standing injunction, impressing it upon us with the added force of contingent penalties. With what wonderful interest did this element of danger and its proscriptions invest that old firearm! From a simply interesting bit of mechanism it now became transformed into a potent, death-dealing embodiment of concrete power, about which we hovered and feasted our eyes, speculating as to what probable results would attend possible misadventures, such as the cat jumping on it and knocking it over. Deliberative sessions of this character would be usually dissolved by maternal motion, and its members ignominiously scattered.

Unwritten history maintains that the musket originally came from Holland, in the company of a goodly body of adventurers, on the staunch ship William and Mary; also that it played a not inconsiderable part in the civilization of the New England Indians in the early days of that colony. Certain suggestive nicks engraved upon the curly maple stock were construed as a tally sheet of the Indians it had "civilized." According to this record, the number of aborigines thus "made good" lacked but one of three-fourths of a score, and it was by no means the least interesting feature of the weapon. As an imaginative youngster, I was wont to weave a separate and individual romance round about each specific nick, investing it with such gruesome details as, to my original intelligence, best appertained to mortal strife.

However much credence these traditions were, in justice, worthy of, they served to invest the old gun with an associate value that was keenly appreciated by those to whom they were familiar. In one of these individuals the knowledge aroused such an intense longing to possess himself of the war-like relic that he approached an elder brother of mine with a fine, new fowling-piece, of the most approved pattern, offering the same for the old flint-lock for the consideration of a bushel of potatoes "to boot." My brother accepted the proposition with alacrity and, without the formality of consulting higher authority, made the trade. Father no sooner heard of the transaction, however, than the esteem in which he held the old flint-lock was made forcibly apparent and negotiations were nullified in short order.

And so the old gun resumed its wonted corner, with the added security of a revised paternal prohibition, addressed to all the boys of the household, hedging it round about. The flight of the years eventually brought a period of my existence in which I felt old enough and venturous enough to encroach upon forbidden ground, and to shoot the proscribed old flint-lock. Of course the anticipation of an act of such stupendous import involved many hours of grave cogitation and no little preparation as to ways and means. I fixed upon a certain July 4 as the date of my projected infringement of the parental gun law. I managed to acquire a quantity of powder (that proved to be blasting powder) without the knowledge of any in the household; even my brothers were excluded from the secret. Fortune favored me, in that I was permitted to have a bed all to myself on the night of July 3, the excessive heat affording an unsuspected pretext for advancing my claim thereto. Barely had the final stroke of 12 o'clock died away when I stole softly down the stairs, realizing for the first time in life what was meant by one's "heart getting in his throat." Not a loose board protested nor a door squeaked, in the stereotyped manner of the story books, and I reached the woodhouse, secured the gun and escaped without disturbing a member of the sleeping household. A glorious full moon made the night almost as bright as midday, and I lost no time in getting to the secluded spot of prior selection. My hand trembled so that I could hardly measure out what I esteemed as the proper amount of powder, while all the fates of disobedient boys in all of the story books I ever had read, crowded in upon my mind most embarrassingly. Nevertheless, I finally succeeded in getting the gun loaded, primed it with a bit of fine powder that I had purloined from the home horn, took a firm "rest" across a convenient fence rail, shut my eyes and pulled the trigger. True to tradition and an established habit of that particular gun, the flint clicked upon the pan steel with no further result. Again and again I repeated this preliminary function, gaining courage as each successive trial produced no more alarming consequences than the sharp click of flint upon steel. At last, however, there was a spark, a flash, and, instead of the anticipated explosion, a terribly smoky and hissing demonstration of fireworks. This was something new on my expected programme and I dropped the gun and ran behind a tree, whence I ventured to cast furtive glances at the fiery fountain, wondering what had bewitched the old flint-lock, and half-fearing it was a retributive judgment on my disobedience. With a final splutter, the vesuvian demonstration ceased and I was enabled to ascertain that the charge (because of the powder being damp) had blown out through the vent, after the manner of a fire rocket. Then I was compelled to take one of my elder brothers into my confidence to get assistance to dig out the wadding, which I had rammed most vigorously into the long gun. I was forced to undergo a most unmerciful "rigging" for some time thereafter, the others of the family wondering what significance attached to my brother's allusions to "fireworks" and kindred themes when I was present.

But "the ice was broken," so to speak, and it was not long until I felt sufficiently courageous to break the parental prohibition and take out the old gun with the coveted freedom I had so long envied in my elder brothers. With what admiration I regarded that old weapon as I reflected upon the marvelous, yea, almost inconceivable, strides taken by man's inventive faculties which had resulted in its evolution from the sling and cross-bow of historic days. True, I had heard of the "percussion lock" that was said to eclipse the flint and steel mechanism; but I failed to conceive how it was possible to construct anything more perfect in its operation than the firing machinery of that self-same warlike institution that I clung to so loyally. To be sure the old flint and steel lock sometimes, oftener than otherwise, in fact, failed to meet the anticipations of the would-be shooter, remaining quiet when a noisy demonstration had been planned and looked for; but this, I argued, gladly condoning the seeming dereliction, was due rather to the setting of the flint than to any mechanical flaws.

But the time soon came, however, when I was compelled to concede to the percussion lock its due superiority over the flint-lock. With something of the sentiment, I imagine, that leads wolves to slaughter and consume a wounded comrade, I no sooner detected a loss of prestige in the old flint-lock than I underwent a radical change of heart and rated it as a clumsy imposition. In fact, I experienced such an antipathy toward it that I wrenched the barrel from the stock and determined to blow it out of its similitude to a gun barrel. I took a chum into my confidence and we fixed upon the coming Fourth of July, but a few days distant, to execute the intention. Very early in the morning, while all the country-side was yet wrapped in slumber, we went to a lofty, rocky eminence, taking the gun barrel, a half-pound canister of finest rifle powder, a quantity of plaster of paris, paper and matches. Emptying the contents of the canister into the barrel, followed by a paper wad, we moistened the plaster and rammed it down in small installments, until it came within about a foot of the muzzle, a solid obstruction. Near the summit of the ledge was a huge rock which rested upon a solid rock base and which some big convulsion had split vertically. The two sections were separated several inches, and into this crevice we inserted the gun barrel, the muzzle down and resting firmly upon the base rock. Over the breech pan we placed a strip of paper, putting a little heap of powder on it, directly over that in the pan. Applying a match to one end of the paper we ran to the shelter of an overhanging rock and awaited developments. Nor did we wait long; soon there came a detonation that echoed among the hills and re-echoed through the silent woodland, followed by the cackling of fowls and the lowing of kine roused by this untoward demonstration. The morning air was heavy with smoke and stifling with the fumes of nitre as we emerged from our shelter and proceeded to look for souvenirs of the event. Of a sudden, with a mighty swish and a blood-curdling shriek, something came down from the o'er-canopying blackness and half buried itself in the rocky hillside. It was the old gun barrel, and, when we pulled it out, we found that, aside from scratches superficially received, it was perfectly uninjured. The force of that tremendous charge of powder, expended upon the unyielding surface of solid rock, had, by its recoil, sent the barrel, like a mighty arrow, some thousands of feet up into the circumambient ether. Where, among latter day stub and twist or chokebores, can a barrel be found that would survive such a test?

SAMUEL MANSFIELD STONE.

Kansas Prairie Chickens.

LEAVENWORTH, Kan., Aug. 27.—A hunting party, of which A. Maduska, D. R. Anthony, Jr., Albert Schilling and Carl Schilling were members, returned yesterday from western Kansas with a bag of 51 prairie chickens. The chicken shooting has not been satisfactory this year, many other hunters returning with empty bags. While on this trip Mr. Maduska had a narrow escape from serious injury or possible death by the bursting of his gun. Maduska's dog had just pointed a covey of chickens. As the birds raised Maduska downed one bird with the right barrel and covering a second bird pulled the trigger. At the discharge of the gun the shooter reeled back, badly stunned. Upon investigation it was found that the gun had burst at the breech. A large piece of the metal flew off and went whistling through the air with the noise of a piece of shrapnel, so says Charles Kulp, who was standing by Maduska when the explosion occurred.

That Mr. Maduska escaped serious injury was a piece of great good fortune. He has been an ardent sportsman for the past 40 years and never before had such an accident. Curiously enough, the shot which caused the gun to burst also killed a prairie chicken.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., New York, and not to any individual connected with the paper.

CHICAGO AND THE WEST.

The Shooting Season.

CHICAGO, Aug. 29.—A sudden drop has taken place in the angling ardor of this community, and instead of going fishing everybody now is getting ready to go shooting. I do not know where all the bird dogs come from, but I have seen more in the last two days than for the last six months put together before that time. As nearly as can be told there is going to be an unusually large exodus of chicken and duck shooters Sept. 1. It seems to be the general belief that we are not going to have much chicken shooting in Illinois this year, and our duck shooters practically agree that we cannot count on much shooting at ducks in this part of the world any more.

I presume that there are some localities in Illinois where very descent chicken shooting will be had, but of those who are making preparations now for a chicken shoot, a very large proportion are figuring on going outside of this State. One party of more than twenty shooters from different portions of the State of Michigan stopped off here in Chicago yesterday and are going on west to-morrow. Nearly all of these gentlemen will shoot in South Dakota at different points, a good many of them going out along the line of the Milwaukee and St. Paul Railway. There will also be a good many shooters who will go to Minnesota for their opening hunt. Wisconsin will get its usual proportion, and it is to be said that there is much better chicken hunting in Wisconsin than is generally known or advertised. I have not heard from my old chicken shooting companion, Mr. Neal Brown, of Wausau, Wis., this fall, but suppose that he has no chickens this year, or that he has no chicken dog. I am afraid the old meat dog of my old friend, Jim Varney, at Babcock, has passed in his checks before now.

The Crop.

It is too early as yet to make any confident predictions in regard to the chicken crop. The impression is that it is as good as it has been for the last two or three years over most of the West. It is perhaps better in Minnesota than it has been for many years. There will be a few birds left in Iowa, but Iowa is not a model of excellence in the enforcement of game laws. South Dakota will have as many birds as it had last year. The law in North Dakota is not stringently enforced, but there will be birds in most of the old places in that State. I do not hear much from Nebraska or Kansas, and think that the prairie chicken is not so prominent there as it was a few years ago. Mr. Jason C. Clark, of Oklahoma City, O. T., tells me that he used to live in Kansas until a year or so ago, and was instrumental in the framing of the Kansas game law, subject, of course, to the amendments of the Legislature, as is always inevitable. Mr. Clark says that there are no prairie chickens now left in lower Kansas, but states that in his newly adopted home of Oklahoma they have rattling good chicken shooting. He asks me to come down and prove the truth of this assertion, and naturally I wish I might have one more hunt in the beautiful Indian Nations country, where I used to shoot chickens years ago.

Dog Trainers in Oklahoma.

Mr. Clark adds that, although they have a great many prairie chickens left in Oklahoma, he can see the early finish of the birds in that region also, in spite of the efforts of a great many citizens to break up the illegal shooting of game in that territory. He states that much of the destruction of the game there is done by "sooners," whose numbers are largely made up of dog trainers from the Southern States. He says that last week a party of 12 dog trainers from Mississippi with more than 30 dogs, passed through Oklahoma City in search of chicken country. It hardly need be stated that these men killed very large numbers of birds before the season opened. Not all of them did work of that kind, but some of them did. We had a very good instance of that kind reported in FOREST AND STREAM of last week from the State of Minnesota. Nothing but good work at game law enforcement by the local men can break up this "sooner" shooting, and it is much to be hoped that the men of Oklahoma will lock the door of their game stable before and not after the horse is stolen.

Testing Michigan Export Law.

Early last spring William Van Pelt, of Wayne County, Mich., was convicted of having wild ducks in his possession for the purpose of shipping the same out of the State. The case was appealed to the Michigan Supreme Court, which took the ground, now well supported by many precedents in other States, that the State owns the game and has a right to restrict its taking and use. Van Pelt appealed from the Supreme Court of Michigan to the Supreme Court of the United States, the case going up on Aug. 25. This case is one of very great interest to all sportsmen and to all legally or personally concerned with matters of game protection. It has been stated in my hearing in dozens of instances that the State of Michigan dared not undertake to enforce the law prohibiting the export of fish and game. The result of this case will, it is to be hoped, put an end to this sort of talk. This case, unfortunately, does not cover the question of carrying game out of the State, as it is understood that Van Pelt intended to ship his game and not carry it with him. None the less, the decision of the U. S. Supreme Court will be awaited with much interest. Gradually the game laws of the United States are gaining definiteness and acquiring respect.

Where Shall They Go?

Mr. Sam J. Ryan, of Appleton, Wis., wants some good readers of FOREST AND STREAM to help him frame up a trip for next year. The readers of FOREST AND STREAM know everything in the world that is worth knowing, and I feel sure that Mr. Ryan will get the information he desires. His letter follows:

"Mr. P. M. Conkey and self are planning a long canoe trip for next year and want some pointers. We want to hear from parties who have made trips on the Albany, Rainy and English rivers northwest of Lake Superior; also, would like to hear from those who have made trips on waters in northern Minnesota and on the Ottawa and Gatineau rivers."

In the Dry Southwest.

Mr. M. S. Taliaferro, now of Watseka, Ill., came into my office one day this week and stirred me all up. Mr. Taliaferro and I used to be mixed up in newspaper work and other things down in White Oaks, New Mexico, something like a quarter of a century ago. He is now just on his way for a visit to White Oaks, which point he left some years ago, when all of us had to walk out of town. He has a brother living down in that country, and thus knows considerable of what has been going on in that far off corner of the world as the years have been rolling by. I want to go down there some time and revisit the old places which I knew, but I am afraid I shall find a country much changed and hardly so interesting to-day. Mr. Taliaferro tells me that some of my old friends are dead, and a good many of them are in the penitentiary. One of them is postmaster at Las Vegas; one has made a fortune in cattle ranching; another has got rich out of a mine which we all thought was worthless; another one has been to Congress a couple of time. One who was at one time rich is now clerking in a grocery store in Chicago; and so on, and so on. Most of the boys who stuck it out have made their pile long ago, and I reckon Taliaferro and I missed it when we walked out of White Oaks. We used to have to ride 90 miles by stage. Now the Rock Island road has built within six miles of the town and has a station on the Carizozo stock ranch, where Jimmie Alcock and I used to hunt antelope, before Jimmie went back to England. Another railroad runs from El Paso close to White Oaks. Lincoln County, which used to be about as big as the whole State of Pennsylvania, is now cut up into three counties. Old Whiteman, the Jew, is replaced by a number of modern merchandizers. The town has got plum quiet, and nobody down in that part of the world is now allowed to wear his six shooter! These surely must be changes, my countrymen, and they mark the changes which have gone on all over the West. This part of New Mexico twenty years or so ago was about as remote from civilization as any in the United States. You see what it is to-day. I am afraid I should be a very sad man if I went down to my old stamping grounds.

And yet there might be some trout and turkeys down in the far Southwest even to-day. My friend tells me that a party of hunters brought in a wagon load of antelope one day this year. The trout fishing over on the Riodoso, on the Mescallero Apache Reservation, is said still to be good. My old friend and roommate, McDonald, now manager of the Carizozo stock ranch, has plenty of horses and buck-boards these days, as well as a wife and some children, none of which he had when I last saw him 20 years ago. Another old friend, Jim Nabours, once foreman of the Carizozo, after a big experience in ranching for himself, now has a ranch over toward the Nogals. Others of the boys are scattered here, there and everywhere all over the territory. I believe if I should go down in there I could get a place to sleep once in a while, and someone to go fishing or antelope hunting with me. *Quien sabe?*

Quien sabe?—I think I will quit right here. That old Spanish phrase was one which one heard continually down at White Oaks, but I have not heard it up here for more than twenty years. This is a shore funny world, but on some occasions not altogether as good as it might be.

A Notable Camera Hunter.

Hon. Geo. Shiras, 3d, of Pittsburg, recently passed through this city on his way home after a sojourn at his camp in northern Michigan. Mr. Shiras has this season enlarged his famous collection of game photographs by many other beautiful specimens. He has now what is perhaps the most complete and beautiful collection of photographs of wild game animals ever made in this part of the country. There are many sportsmen of America who would be glad to see this series published in accessible form, and Mr. Shiras has made some rash promises looking in that direction.

Forestry Convention.

Aug. 29.—At the convention of the American Forestry Association at Lansing, Mich., yesterday, Gen. C. C. Andrews, chief fire warden of Minneapolis, read a paper on the Minnesota system of preventing and checking forest fires. Other addresses were made by Dr. Gifford, of the New York State College of Forestry; H. B. Ayres, of Carleton, Minn.; Frank G. Miller, of the Bureau of Forestry; W. C. Winchester, of Grand Rapids; H. H. Chapman, of the Minnesota experiment farm; Grand Master G. B. Horton, of the Michigan State Grange; Gov. A. T. Bliss, and State Land Commissioner Wildey.

ST. PAUL, Minn., Aug. 30.—The baggagemen of the Union Depot here say they never saw the like of the hunting travel. "There's more going out this year than all that had gone out of here in the last three years," said one baggage hustler to me.

I met here this morning Mr. Richard Merrill, of Milwaukee, who was just having an interview with State Warden Sam Fullerton about a shooting permit. Dick had a nice box full of dogs, some likely looking gun cases, etc. "I'd hate to have my men confiscate this outfit," said Mr. Fullerton, "but we've sworn in a big lot of men and they will enforce the license law. Dick had a permit. I think Sam was sorry. It does him good to annex a good $400 gun and a crate of dogs once in a while.

By the way, Mr. Fullerton and I are going up to Fergus Falls to see our old friend, Jimmie Jones, who has about 8,000 acres solid full of prairie chickens waiting for us. Five dogs—good, cool weather—oh, I don't know!

Mr. and Mrs. Shattuck, of Minneapolis, are inaugurating a bad precedent in chicken hunting. They used to tour in a hunting wagon. This year it is an automobile. They have started for South Dakota and will follow closely the line of the Milwaukee & St. Paul Railroad. If it is getting to be necessary to use an automobile in chicken hunting, the pace is getting some swift for the dogs. But I suppose a modern field trial winner won't mind it.

Among the Eastern sportsmen to make chicken hunting expeditions into the West for the season now opening, is Theodore Roosevelt, Jr., 14 years of age, but apparently full heir to his father's love for field sports. The young hunter arrived in Chicago yesterday, and will, on the hunt, be the guest of H. R. McCullough, vice-president of the Chicago and Northwestern Railway; Marvin Hughitt, Jr., general freight manager of the same railway, and Mr. E. W. Cox, all of Chicago. The start will be made to-day for South Dakota, where a few days will be spent on the grouse stubbles. After that the party will return to northern Wisconsin, fish for a time in waters along the northwestern line. The first sporting trip of an Eastern boy into the West is something he never forgets all the rest of his life, and, although it will be relatively a very tame part of the West which Theodore Roosevelt, Jr., visits, there is little doubt he will enjoy himself.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Bill Sewall and the President.

BOSTON, Aug. 30.—Bill Sewall, of Island Falls, Me., is the envied of all the Maine guides to-day. He has been especially honored by President Roosevelt; called to the President's side by the President himself. Twenty-three years ago, Theodore Roosevelt, "a raw young chap," as Bill described him, came down to the camps of Bill in Maine and spent a hunting season with him. The next year he came again, and then again, till the yearly visit came to be a regular annual event. Later Mr. Roosevelt decided to start a hunting ranch in North Dakota, and nobody would do like Bill Sewall, his Maine guide and hunting friend, to manage it. Arrangements were completed, and the camp was put in charge of Bill Sewall and his nephew, Wilmot Dow. Later Mrs. Sewall came, accompanied by Mrs. Dow, to do the cooking and look after the men. Sixteen years ago the ranch was abandoned, and the Sewalls and Dows came back to Maine. Naturally they thought a great deal of Mr. Roosevelt, and Bill now declares that he always knew that he would be President some day. They had not seen him since they came back to Maine. When the President made up his mind to come to Bangor he sent a telegram to Bill to meet him, and one of the first things he did on leaving the train was to ask the chief of police if Bill Sewall, of Island Falls, was in town. But nobody among the officials had seen such a man. At the conclusion of a short address from the steps of the Bangor House, the President said, by way of conclusion: "Now, I want to act the part of town crier for a moment. I have a friend lost in the crowd. If anybody sees Bill Sewall, of Island Falls, around this county, I wish they would say to him that I want him here to lunch with me."

Some one shouted: "He's here now. Governor Powers has got him." It seems that Sewall and his wife and Mrs. Dow—Dow having died some years ago—had come to Bangor, in response to the President's telegram. But Bill, naturally feeling bashful about coming into the presence of the President, had kept in the background, till Governor Powers had found him and dragged him forward, in response to the President's proclamation.

"Indeed, I am glad to see you," said the President, shaking the hand of his old guide.

"You're no gladder'n I be," replied Sewall.

And there was a suspicion of moisture in the eyes of both men which lent pathos to the spoken words.

"Are you glad you came?" some one asked Bill during the afternoon.

"I was glad before I came," he dryly answered.

"The last time I ate with Bill Sewall," explained the President to some of his friends at the luncheon, "we dined off a bit of boiled muskrat."

"Muskrat isn't such very bad eatin'," said Bill.

"You remember that we had to eat it for want of any other meat?"

It seems that on that particular day the hunters had traveled far, but had shot nothing but a muskrat.

Mrs. Sewall and Mrs. Dow were presented later, and a most pleasant meeting it was, with reminiscences and recollections of adventures almost forgotten by the President. Bill sat at the President's right hand at the luncheon where the big officials and their wives were assembled, and after all the old guide was glad that he came down to Bangor. "I wanted to see him," said Bill, and my wife she wanted to see him, and we're glad we came."

It seems that Mr. Roosevelt's appointment to the Civil Service Commission was the incident which led to the breaking up of the ranch.

"He did not really want the place," said Bill. "He liked ranch life and he could make more money from his books. I told him he ought to take it, and I remember I said at the time, 'Take it, it will lead up to other things. Some day you'll be President.'

"He thought I was joking him then, and he said:

"'You think more of me than I do of myself.' But what I said has come true, and he'll be our next President, sure as you're born." Bill is a sort of David Harum, for quaintness, in his own town; postmaster and general good fellow.

SPECIAL.

Shipment of Western Game.

WE printed last week the Department of Agriculture circular respecting interstate commerce on birds and game. Paragraph 5, relating to Western game, has been revised and now reads as follows:

(5) Western Game.—All the States and Territories west of the Mississippi River except six prohibit export of all game protected by local laws. Of the six exceptions, Louisiana and Texas prohibit export of all game except a few birds, while Arkansas, Missouri, Montana, and Wyoming either prohibit export of certain species or practically cut off export trade in game by means of other restrictions. Eastern dealers in ordering or receiving such game from these States encourage direct violations of local laws and may render themselves liable to the penalties provided for violating the Federal law.

Non-Residents.

Editor Forest and Stream:

Having read articles in your columns on non-resident licenses and thinking that it is a question which deserves some investigating, not in regard to any one State, but to all, I wish to ask of the readers three things:

First—Is a non-resident State license law a law which would prove constitutional in the United States if it were tried or tested?

Second—Would a non-resident license law be one of the most effectual laws with which to protect the game?

Third—Does a non-resident law add to the welfare of a community in which it is enforced or not?

I wish to see all game protected by laws or lincenses or whatever is best and fair to all persons concerned.

In regard to my first question, does any person know of a case where this law was tested or will some person who knows explain what is meant in the United States Constitution when it says in Article IV, Section 2, Clause 1, "The citizens of each State shall be entitled to all privileges and immunities of citizens in the several States," and again in Article XIV, Section 1, "No State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States." I have heard of cases where persons were fined for not taking out the license, but they, like many others I suppose, were more willing to pay the fine than risk sending the case to higher courts, especially so when in one case where the license if taken out would have cost $25, and the fine for not taking it was only $10. Laws are a puzzle to me, particularly in some States where county licenses exist, and you pay taxes to keep up the game, stock streams with fish and pay $10 to $20 every time you cross a line where all the laws have been changed and altered for the especial benefit of the game in that particular locality.

Virginia has a law which allows no persons from Maryland to shoot wild fowl in certain parts of the State of Virginia unless they first pay for a license, but, again, it allows all Marylanders who belong to a certain association to shoot without a license. Is this constitutional and can laws be made to deal differently with different persons simply because they belong to an association or not? A smaller matter than being a resident of the State or not, I think. Let us suppose two hunters, both from Maryland or any other State, are arrested in Virginia for hunting without a license, and both are found guilty of precisely the same violations, but the one states to the court that he is a member of a certain association and is acquitted, while the other, because he does not belong to it, is convicted.

Now, is a non-resident law the best to protect the game with? I know that ducks by the thousand are sent to the market from the State of Virginia. They have the law on ducks. Some species are hunted there the year around legally, and I do not believe any are near so well protected there as they are in some other States that have no non-resident license. In some States the game is protected to a certain extent, but in no case do I believe it is the non-resident law which does it, but some other law, such as one which does not allow game to be shipped from the States, only a certain amount to be killed by each hunter or no sale of game, and various other and better laws could be made, I believe.

In some instances the non-resident law never was passed for the protection of game, but wholly for the protection of the people, that they in their district could kill all they wished and do with it as they pleased without being afraid some other fellow would get in and get some for his own use and enjoy a vacation, for I don't believe very many persons who travel any distance to hunt could be classed as a game hog or market hunter.

In Maine I have thought the game better protected than in most any other States; yet they have never passed the non-resident license law, and I have always looked at Maine as saying to her neighbors, "Come with us to hunt or fish and we will treat you as if you were one of us, giving you all the show we can." Some other State laws read about the same as, "Raus mit em!" and I am much like the Irishman who once had an experience at a German picnic; always afterward he used to say, "If you ever go to a German picnic and they begin to yell 'Raus mit em,' get out!"

I hear that the game in Maine is decreasing, and if it requires a non-resident license to protect it, I say put it on, and if my coming with a gun and $20 will help the game increase more than coming with the gun alone would, I'll be willing to bring both. But I say try to show by your laws that you wish to be as fair with all as you can and that you wish them to come; if you do.

In regard to the third question, I know very little, but we may safely say that the men in general who travel to a distant State to hunt will leave from $25 to $75 in that State, and many of the same class will cease to visit a State if they think a law exists which is intended to give them a slight hint not to come or a good pull at the leg simply for the purpose of making money.

I think most persons go to the States which have no license and their money goes to the private citizens, making them better off, but it does not go toward the game. I also think a lesser number of persons go to States with the license, but the decrease favors the game. The money has also decreased especially with the private citizens, some of it has gone to the State, but whether it will ever help the game or not is in many States a question and in some, I am sure, it never does.

I may be mistaken in a number of ways, but will some person with more experience and knowledge please write.

WOODHAWK.

Iowa Prairie Chickens.

HUMBOLDT, Ia., Aug. 23.—About a week is left now before the season opens in Iowa on chickens and ducks, and sportsmen have been preparing for some time. From the best information the chicken shooting will not be above the average this year in Iowa. Storms have done much damage to the young birds in southern and central Iowa, and the shooting there will be poor. In the northern part and especially the extreme northern part the shooting will be quite good. Many Iowa sportsmen are looking toward Minnesota to give them their chicken shooting this fall. Reports are coming from all parts of that State telling of an unusual abundance of chickens, and as the non-resident license of $10 is somewhat reasonable, many will journey north.

The usual large amount of "sooner" shooting has been done this year in Iowa, and State Game Warden Lincoln has had little money to cope against it. Farmers and town sportsmen have been blazing away at the half-grown birds ever since the first of August, as though there was no law prohibiting it.

Every year which opens the chicken shooting in Iowa finds the poor man set back a notch further in the line of successful chicken shooting. The farmers are getting more and more strict about who hunts upon their lands, and a bird dog has become almost a necessity, although when one is lucky enough to know farmers who will pilot him to the birds it is a great help, but even then one needs a dog to find the birds which have been shot. A friend writing to me from southeastern Kansas has the following, among other things, to say about conditions there: "There are a few chickens around here, but about two weeks ago some parties were out killing them off. We have a few game laws in this State, but there is no State game warden and very few others. There is no effort being made to enforce the game laws, and quail are shot all winter and summer, too, for that matter."

Commencing September first turtle doves can be shot in this State, and I hope to have something to say about these birds later on.

G. J. BICKNELL.

No Young Ducks in Montana.

SHELBY JUNCTION, Mont., Aug. 26.—*Editor Forest and Stream:* This year there are no young ducks in this region. The high prairie in this part of northern Montana, close to the mountains, is dotted with a thousand little lakes, on each of which usually breed ducks of various kinds, and all through the summer two, three or half a dozen broods may be seen swimming in these lakes. This year, however, there are none.

The spring and summer, up to mid-July, were extraordinarily cold and rainy, and it is believed that the entire absence of young birds is due to this fact. Since this portion of Montana is commonly so great a breeding ground for ducks the failure of ducks to breed here is really a serious matter to Western duck shooters generally. Whether the same weather conditions and the same absence of breeding took place north of the boundary line along the mountains, in the Provinces of Assiniboia and Alberta is not known.

Ducks are already migrating in northern Montana and people are beginning to shoot them.

F. P.

Connecticut Rail Opening.

MILFORD, Conn., Sept. 2.—*Editor Forest and Stream:* The rail season in Connecticut opened Sept. 1, and what its early days will bring forth no man yet knows. The experience of two shovers on the Housatonic River the day before the season opened was not encouraging. One man passing through the grass of one of the best pieces of ground on the river, and covering territory that it takes an hour to pass over, started but a single bird. Another man covering another large strip of grass started only two birds.

This seems very discouraging as to the breeding of rail on this particular ground. If it is true that no birds were bred there this season, the reason is probably to be found in the wet weather of the early summer which may have destroyed the eggs or the young birds. It will be interesting to have reports from the shooting at various points and thus to learn whether similar conditions prevail elsewhere. We shall look with interest for reports from the marshes at North Haven and at Essex, Conn., as well as from other points.

F. P.

Tribble Remembered How.

Rifle, Colo., Aug. 18.—W. E. Tribble is the hero of a desperate hand-to-hand encounter with two bears, and that he escaped with his life was due in part to the visit of President Roosevelt to this part of the country two years ago. Mr. Roosevelt showed the old guide just how to give the coup de grace to a bear with the knife. Tribble, while in the mountains, was surprised by a grizzly, and succeeded in dispatching him à la Roosevelt. When confronted by another big bear, he dispatched it in a like manner. Tribble was covered with wounds, but managed to crawl to his horse, and ride to camp, where he lost consciousness.

At Moldanga, a village in the Bankura district, a poor old ryot was sitting one morning lately in the front of his hut. A tiger, which had been committing havoc among the sheep and cattle in the neighboring villages, suddenly made his appearance and coolly walked into the hut. A little child, a grandson of the ryot, was in the hut, and the old man at once rushed inside and was coming out with the child when the tiger fell upon them. There was a country-made axe close by, and with this weapon the man fought the tiger for a time, and then stepping out, shut and bolted the door of the hut from outside. So "Master Stripes" was made a close prisoner in the peasant's hut and was kept there for several hours until he could be shot. The old man and his grandchild, who were severely mauled by the brute, expired a few days after the occurrence.—**Asian.**

Take inventory of the good things in this issue of FOREST AND STREAM. *Recall what a fund was given last week. Count on what is to come next week. Was there ever in all the world a more abundant weekly store of sportsmen's reading?*

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., New York, and not to any individual connected with the paper.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

Fish and Fishing.

Some Monster Maskinonge.

THE present seems to be a record year for large maskinonge. From the vicinity of the Thousand Islands come reports of catches of very heavy fish. Having no means of authenticating the stories of these big fellows, I had determined to pass them by unnoticed until a possible opportunity should offer for verifying them. In the meantime, however, come two stories of even larger fish, about the verification of which these is no possibility of doubt. On Aug. 21 the Ontario Department of Fisheries at Toronto received a magnificent specimen of maskinonge, over five feet long and weighing fifty-two pounds. It was caught in the branch of the Rideau River which passes through Kemptville, by Sam. J. Martin, of Kemptville. Big as this specimen was, it has been cast altogether in the shade by a capture by a French-Canadian, Mr. Alphonse Allard, at Chateauguay, on the border of the St. Lawrence, a little west of Montreal. This monster, which was sixty pounds in weight, had a girth of twenty-seven inches. The length of the head from the tip of the snout to the back of the gill, was exactly a foot. It was sold to a Montreal dealer, and was exposed to view in the shop of T. Charbonneau & Co., of Bonsecours Market. There have undoubtedly been larger maskinonge caught than that just reported, but it is claimed that no larger one has been seen for many years past in the Montreal markets.

The Philology of the Maskinonge.

There are probably almost as many different ways of spelling the name of this fish as there were, up to a few years ago, of writing the name of the fresh-water salmon of Lake St. John. I was induced some time ago to prepare a paper for the Royal Society of Canada on the philology of the ouananiche, giving some twenty different spellings of the name, and contending for the general adoption and use of the form of the word which has priority in its favor. While upon this free American soil we have no academy, as they have in France, to arbitrarily spell for us all our difficult and scientific names, but can fearlessly employ as many different orthographical forms of the same word as may tickle our fancy, convenience would seem to dictate at least an attempt to arrive as nearly as possible at uniformity in the spelling of more or less familiar names.

In the case of *Esox nobilior,* or *Lucius masquinongy,* whose popular title in its original form, like that of the ouananiche, comes down to us, as correctly claimed by the late Fred Mather, from its Indian nomenclature, an apparent desire to get away from French orthography has produced a somewhat similar confusion of language to that which so long existed in the case of the ouananiche. The original spelling of the Indian name was undoubtedly "maskinonge," and such it is still officially called in the statutes of Canada, in which country the fish was first known and the name originated. According to Bishop Lafleche, who was a recognized authority upon Indian customs and dialects, and in his early life a devoted missionary to the Northwest, "maskinonge" is derived from *mashk* (deformed) and *kinonje* (a pike), and was applied to the *Esox nobilior* by the Indians, because it appeared to them a deformed or different kind of pike from that to which they had been accustomed. The river of the same name that flows into Lake St. Peter, which name has been extended to the town built at its mouth, and to the county of which it is the chief place, was doubtless so called from the number of these fish taken in or near its estuary, and after their Indian name. And it is a singular corroboration of the absolute correctness of the French orthography "maskinonge," that no less an authority than Dr. James A. Henshall, the author of the paper on this fish in "American Game Fishes," following the nomenclature of Dr. Mitchil, and of De Kay in his "Fishes of New York," substitutes for *nobilior,* as the name of this particular species, *masquinongy,* which is about as near as it is possible for English orthography to go in representing the correct pronunciation of "maskinonge." Yet Dr. Henshall claims that by common consent and custom the name is "mascalonge" among the majority of anglers, and that "mascalonge" it will be for generations to come. Nor does this mongrel name represent the full extent of the departure from the original name. Dr. Henshall mentions, among other forms, "muscalonge," "muskellunge," "muskallonge," etc., and a variety of other spellings has been adopted by other writers. "Muskellunge"—one of the forms already quoted—is the name employed to designate the species by Dr. Brown Goode, in his "American Fishes," and is as far removed from the original name as "winninish" is from "ouananiche." It may take some time to arrive at uniformity in the spelling of *Esox nobilior's* familiar name, but it is encouraging to note the general conformity, in recent years, to the name "ouananiche," which is the statutory designation in the country in which that fish is found, and it may be useful to point out that "maskinonge" is also the statutory form of the name of another Canadian fish, and, like "ouananiche," has in its favor the undoubted claim of priority of nomenclature. However, the Bard of Avon, whose frequent references to hook and line shows that he was quite as well up in angling as in botany, is authority for the statement that "a rose by any other name smells quite as sweet," and no matter how we spell the name of the great game fish of the St. Lawrence, the angler who takes it with becoming tackle, will find that he has a foeman worthy of his steel.

Tackle for Maskinonge.

Most maskinonge are taken with hand line and trolling spoon, and hauled in hand over hand, so that the fish have no opportunity of displaying their game qualities at all. I am sorry to say that I have seen the large brook trout of some of the finest of our Canadian lakes treated in the same unsportsmanlike manner. When, however, one fishes with an eight-ounce black bass rod and brings a

St. Lawrence maskinonge of thirty-two pounds fairly to gaff on it in twenty minutes, as Dr. Henshall once did, he has certainly enjoyed twenty minutes of exciting sport, and has reason to be proud of his achievement. On a taut line, the maskinonge often leaps clear of the water, and being a powerful fish, requires at this time very careful handling. The great difficulty, with light tackle, is to keep the maskinonge from running into and entangling himself in the weeds, rushes, or sunken tree tops in which he probably lay concealed when he rushed for the angler's bait. This cannot always be done, but there is sport in trying it, and good assistance can be rendered the fisherman by his guide, who should know enough to pull for deep water immediately a fish is hooked. The rod should not be more than nine feet in length, and eleven or twelve ounces in weight, but the hook should be fastened to the line on a gimp snell, for the teeth of the fish renders gut impossible of success.

Doctored Carp and Catfish.

Not very long ago I was dining in a New England hotel when the waiter brought me a portion of fish, which was described upon the menu card as bluefish. My companion, who was a resident of the place, asked me if I knew what I was eating, and surprised me by the remark that it was simply carp so prepared and served up as to imitate the better fish. To the credit of the hotel's culinary department I am compelled to say that the fish formed by no means an unsavory dish, and that it was a very fair imitation of bluefish. I am reminded of this misrepresentation on the part of the hotel people, by reading in a New Orleans newspaper of a new fishing traffic which has sprung up in California, and which is described as being rapidly developed into a large and paying business along the lower coast. It consists of the catching and selling of the river catfish to a company at three cents per pound. The fish are emptied and then packed in barrels, salted and shipped to some northern city, where they are chemically prepared as to color and flavor, packed in cans, and labeled and sold as salmon. It is claimed that when thus prepared for canning, the fish cannot be detected, either in flavor or color, from the genuine Pacific coast salmon. Some of these fish weigh as much as fifty pounds each, and those engaged in catching them have been known to earn as much as five dollars a day.

I was expatiating the other day upon the immorality of the frauds committed upon unsuspecting consumers, who in this age of shams are offered all kinds of foul imitations with their food, when I was tenderly invited, from the other side of the dining table, to say what I thought of the iniquity of men who impose upon the credulity of the lower orders of creation, by offering to hungry trout the tinsel imitation of their natural food, in order to lure them to their death. But that, as Kipling would say, is altogether another story! And fishes are not of those to whom we are expected to do as we would they should do unto us, are they? That is only one reason why I think the question posed to me and the laughter that followed it around the table were so very cruel and uncalled for. Don't you? E. T. D. Chambers.

Fishing in the Atbara.

Where is the Atbara? Take down your map of Africa, find the Nile, and follow it with your finger, past Cairo, Luxtor, Karnak, the Lower Cataract, Philæ, Korosko and Berber, till you come, about twenty-five miles above the latter, to what, in the dry season, from about Oct. 1 to June 1, is an arid bed of sand, lying white and blistering in the torrid heat, but during the other four months of the year is a rushing torrent of chocolate-colored mud, brought from the Abyssinian Alps, six hundred miles away. Thick as pea soup and dirtier even than the Missouri, it well deserves, at this time, the name given it by the Arabs, "Bahr el Aswat," or "Black River." Not entirely waterless is it, however, even in the dry season, for, all along its length, where the river bed has been hollowed out, are found pools, some of which are five miles long by two hundred yards wide and fifty feet deep. In these pools lurk crocodiles and hippopotami, and to them, from the neighboring desert and mimosa groves, come the thirsty elephant, the lion, wild ass, rhinoceros, buffalo, giraffe and antelope of various kinds. They are full too of huge turtles and strange fish, gamy and fierce, who will make the angler's nerve thrill in the wild fight for life and liberty.

Let us "go a-fishing" here—you and I and Sir Samuel Baker, that plucky Englishman, who, with his no less plucky wife, is known to, and loved by, all the wild Hamran Arabs, Tokroori negroes and Basé savages of the land. Let us stand and watch him, as, at one of these pools, two hundred miles from the mouth, he prepares himself for the sport. No four-ounce fly-rods and single gut will do here. His "pole" is a stout bamboo, twenty feet in length, cut from the banks of the stream. To the tip is firmly lashed a half-inch brass ring, taken from his game bag, and his huge reel holds two hundred yards of stout line, to which is fastened, by a yard of coarse gimp, his largest-sized salmon hook. But we will let him tell the tale in his own words, for it would be hard to say whether he handles the pen, the rod or the gun the best.

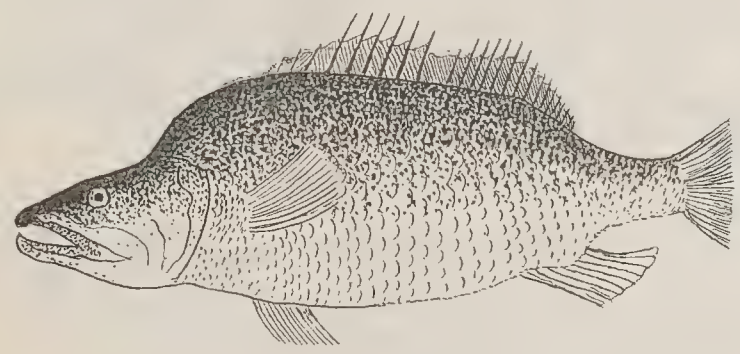
"In the afternoon I arranged my tackle and strolled down to the pool to fish. There was a difficulty in procuring bait; a worm was never heard of in the burning deserts of Nubia, neither had I a net to catch small fish; I was therefore obliged to bait with pieces of hippopotamus." (Imagine catching a hippopotamus for fish bait!) "Fishing in such a pool as this of the Atbara was sufficiently exciting, as it was impossible to conjecture what creature might accept the invitation; but the Arabs who accompanied me were particular in guarding me against the position I had taken under a willow bush close to the water, as they explained that most probably a crocodile would take me instead of the bait. I accordingly fished at a few feet distant from the margin, and presently I had a bite; I landed a species of perch about two pounds weight; this was the boulti, one of the best Nile fish mentioned by Bruce. In a short time I had a respectable dish of fish; but hitherto no monster had paid me the slightest attention; accordingly I changed my bait, and upon a powerful hook, fitted upon treble-twisted wire, I fastened an enticing strip of a boulti. The bait was about four ounces, and glistened like silver; the water was tolerably clear, but not too bright, and with such an attraction I expected something heavy.

"My float was a large-sized pike float for live bait, and this civilized sign had been only a few minutes in the wild waters of the Atbara when bob! and away it went. I had a very large reel, with nearly three hundred yards of line that had been specially made for monsters; down went the top of my rod, as though a grindstone was suspended on it, and, as I recovered its position, away went the line, and the reel revolved, not with the sudden dash of a spirited fish, but with the steady, determined pull of a trotting horse. What on earth have I got hold of? In a few minutes about a hundred yards of line are out, and as the creature was slowly but steadily traveling down the center of the channel, I determined to cry 'halt!' if possible, as my tackle was extremely stout, and my rod a single bamboo.

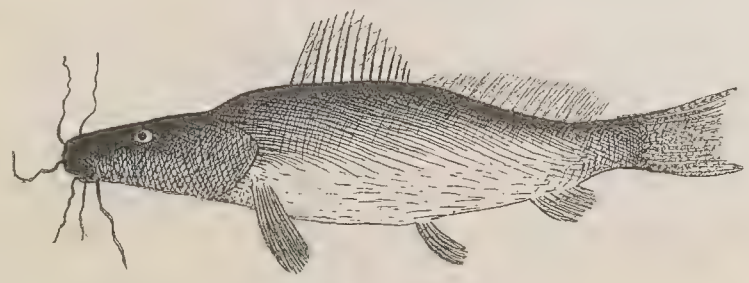
"Accordingly I put on a powerful strain, which was replied to by a sullen tug, a shake, and again my rod was pulled suddenly down to the water's edge. At length, after the roughest handling, I began to reel in slack line, as my unknown friend had doubled in on me; and upon once more putting pressure upon him or her, as it might be, I perceived a great swirl in the water, about twenty yards from the rod. The tackle would bear anything, and I strained so heavily upon my adversary, that I soon reduced the distance; but the water was very deep, the bank precipitous, and he was still invisible.

"At length, after much tugging and counter tugging, he began to show; eagerly I gazed into the water, to examine my new acquaintance, when I made out something

COOR.



BAGGAR.



BAYARD.

below, in shape between a coach wheel and a sponging bath; in a few moments more I brought to the surface, securely hooked, a monstrous—turtle! I felt like the old lady who won an elephant in the lottery; that I had him was certain, but what was I to do with my prize? It was at least a hundred pounds weight, and the bank was steep, and covered with bushes; thus it was impossible to land the monster, that now tugged and dived with the determination of the grindstone that his first pull had suggested.

"Once I attempted the gaff, but the trusty weapon that had landed many a fish in Scotland, broke in the hard shell of the turtle, and I was helpless. My Arab now came to my assistance, and terminated the struggle. Seizing the line with both hands, utterly regardless of all remonstrances (which, being in English, he did not understand), he quickly hauled our friend to the surface and held him, struggling and gnashing his jaws, under the steep bank. In a few moments the line slackened, and the turtle disappeared. The fight was over! The sharp horny jaws had bitten through treble-twisted brass wire as clean as though cut by shears. My visions of turtle soup had faded."

But "fortune favors the brave," so let us try our luck with him again, but this time at the close of the rainy season, when the river is rapidly receding, to its former state of dryness. We are camped at the junction of the Atbara with the Till, a small stream whose waters are falling fast. At the mouth of the Till are huge boulders, past which the swift current foams and eddies. A "pot hole" in the rocks at the water's edge has been emptied of sand and pebbles, and filled by our Arab gamins with fresh water and live bait, caught in a pool in the Till, and we are ready for the sport.

"I chose a little fellow about four inches long to begin with, and delicately inserted the hook under the back fin. Gently dropping my alluring and lively little friend in a deep channel between the rocks and the mouth of the Till, I watched my large float with great interest, as, carried by the stream, it swept past the corner of a large rock into the open river; that corner was the very place where, if I had been a big fish, I should have concealed myself for a sudden rush upon an unwary youngster. The large green float sailed leisurely along, simply indicating, by its uneasy movement, that the bait was playing; and now it passed the point of the rock and hurried round the corner in the sharper current toward the open river. Off it went! Down dipped the tip of the rod, with a rush so sudden that the line caught somewhere and broke!

"'Well, that was a monster!' I exclaimed, as I recovered the inglorious line; fortunately the float was not lost, as the hooks had been carried away at the fastening to the main line; a few yards of this I cut off, as it had partially lost its strength from frequent use.

"I replaced the hooks by a little larger set, with the stoutest gimp and swivels, and once more I tried my fortune with a bait exactly resembling the first. In a short time I had a brisk run, and quickly landed a fish of about twelve pounds; this was a species known to the Arabs as the 'bayard'; it has a blackish green back, the brightest silver sides and belly, with very peculiar back fins, that nearest the tail being a simple piece of flesh free from rays. This fish has four long barbules in the upper jaw, and two in the lower. I have frequently seen the 'bayard' of sixty or seventy pounds weight, therefore I was not proud of my catch, and recommenced fishing. * * * I chose from my aquarium a fish of about half a pound; I dropped this in the river about twenty yards above the mouth of the Till, and allowed it to swim naturally down the stream, so as to pass across the Till junction, and descend the deep channel between the rocks. For about ten minutes I had no run; I had twice tried the same water without success; nothing would admire my charming bait; when, just as it had reached the favorite turning point at the extremity of the rock, away dashed the line, with the tremendous rush that follows the attack of a mighty fish. Trusting to the soundness of my tackle, I struck hard, and fastened my new acquaintance thoroughly, but off he dashed down the stream for about fifty yards at one rush, making for a narrow channel between two rocks, through which the stream ran like a mill race. Should he pass this channel, I knew he would cut the line across the rock; therefore, giving him the butt, I held him by main force, and by the great swirl in the water, I knew I was bringing him to the surface; but just as I expected to see him, my float having already appeared, away he darted in another direction, taking a hundred yards of line without a check. I at once observed that he must pass a shallow sand bank, favorable for landing a heavy fish; I therefore checked him as he reached this spot, and followed him down the bank, reeling up line as I ran parallel to his course. Now came the tug of war! I knew my hooks were good, and my line sound, therefore I was determined not to let him escape beyond the favorable ground; so I put a strain upon him, that after much struggling brought to the surface a great shovel head, followed by a pair of broad silvery sides, as I led him gradually to shallow water. Bacheet now cleverly secured him by the gills, and dragged him ashore. He was a splendid 'bayard,' of at least forty pounds weight. I laid my prize upon some green reeds, and covered it carefully with the same cool material. * * * I put on a large bait, and threw it about forty yards up stream, and allowed the float to sweep the water in a half circle, thus taking the chances of different distances from the shore. For about half an hour nothing moved; I was just preparing to change my position, when out rushed my line, and, striking hard, I believed I had fixed the old gentleman himself, for I had no control over him whatever; holding him was out of the question; the line flew through my hands, cutting them till the blood flowed, and I was obliged to let the fish take his own way; this he did for about eighty yards, when he suddenly stopped. This unexpected halt was a great calamity, for the reel overran itself, having no drag, and the slack of the line caught the handle just as he rushed forward again, and with a jerk that nearly pulled the rod from my hands, he was gone!

"I found one of the large hooks broken short off; the confounded reel! The fish was a monster! Putting on another bait, in a few minutes I had a tremendous rush, and about a hundred and fifty yards of line ran off the reel, without my being able to stop it. I followed along the bank, holding hard, and after about half an hour of difference of opinion, the fish began to show itself, and I coaxed it into the shallows; here it was cleverly managed by Bacheet, who lugged it out by the tail. It was an ugly monster, of about fifty pounds, a species of silurus (first cousin to the catfish), known to the Arabs as the 'coor.' It had lungs resembling delicate branches of red coral, and, if kept moist, will live upon the ground for many hours, like an eel. It smelt strongly of musk, but was gladly accepted by the Arabs. * * *

"This afternoon I took the rod, and having caught a beautiful silver-sided fish of about a pound weight, I placed it upon a large single hook fastened under the fin. In about an hour I had a run, but upon striking, I pulled the bait out of the fish's mouth, as the point of the hook had not touched the jaw. I wound up slowly for about thirty yards, hoping that the big fellow would follow his lost prize, as I knew him to be a large fish by his attack upon a bait of a pound weight. I found my bait was killed, but having readjusted the hook, I again cast it in the same direction, and slowly played it toward me. I had him! He took it immediately, and I determined to allow him to swallow it before I should strike. Without a halt, about a hundred yards of line were taken at the first rush, toward the middle of the river; he then stopped, and I waited for about a minute, and then fixed him with a jerk that bent my bamboo like a fly-rod. To this he replied by a splendid challenge. In one jump he flew about six feet out of the water, and showed himself to be one of the most beautiful fish I had ever seen; not one of those nondescript antediluvian brutes that you expect to catch in these extraordinary rivers, but in color like a clean-run salmon. He gave tremendous play, several times leaping out of the water and shaking his head furiously to free himself from the hook; then darting away with eighty or a hundred yards of fresh line, until he was at last forced to yield to the tough and elastic bamboo, and his deep body stranded upon the fatal shallows. Bacheet was a charming lad to land a fish; he was always quiet and thoughtful, and never got in the way of the line. This time he closely approached him from behind, slipped both his hands along his side, and hooked his fingers into the broad gills; thus he dragged him splashing through the shallows, to the sand bank. What a beauty! What was he? The color was that of a salmon, and the scales were not larger in proportion; he was about fifty pounds in weight. The back fin resembled that of a perch, with seven rays; the second dorsal fin had fourteen rays; the head was well shaped, and small in proportion to the body; the eyes were bright red, and shone like rubies, and the teeth were very small. * * * This species of fish is considered by the Arabs to be the best in the river; it is therefore called *El Baggar* 'the cow.'"

And so ends our day's sport, and we return to our camp under the huge mimosa trees, and smoke our restful

pipe, and watch the Sofi Arabs quarreling and fighting over the distribution of our day's spoils, while the sun sets behind the Nubian desert, and the goats bleat with terror as the hollow boom of the lion's roar comes reverberating over the sandy waste. H. P. U.

CHICAGO AND THE WEST.

Missouri Bass Streams.

Mr. H. K. Kuhn, of Bolivar, Mo., writes very pleasantly in regard to the bass fishing in his part of the world. This Ozark country is one of the best sporting regions now left in the West, and the excellence of the fishing to be found in parts of Missouri is something which does not seem to be realized by our anglers, many of whom go much further and fare much worse. Mr. Kuhn's letter follows:

"I was raised on the Chesapeake Bay, and thought it was the proper thing to pull in three croakers at a time, hand over hand, in about twenty feet of water; but after an experience of about twenty years with regulation rod and reel and the black bass, I now consider it very tame sport.

"Dr. Richard Winn, dentist; Mr. Ed. Schofield, brother of General Schofield, and myself, made a trip last fall, starting Oct. 15, from this place, to Camden county to the Niomqui, or, as the natives call it, Miongo. We traveled sixty miles by wagon, a fourth of the way over as pretty roads as you ever saw, the rest very rough. We were in the Ozarks. The weather was perfect, and the different colors the foliage presented were grand—yellow hickories and sumac, green cedars, brown and green oak, and the grandest of all, the sugar maple with its rainbow tints. The river as clear as it could possibly be and the perpendicular bluffs and the dark water at their base, produced a scene which caused us all time and again to express our admiration and reverence.

"We had a great time. The first three hours we caught seventy small-mouths about one and a quarter pounds average; this was under the dam. We had use for these fish, but concluded to seek for larger ones in the pools. We found them, and I wish to give you the last half day's experience.

"Dr. Winn and the driver went together and Mr. Schofield and myself. Mr. Schofield and I had not very good luck the first couple of hours of early morning, and we changed our location. We passed Dr. Winn and he invited us to join him, as he said he 'was getting them,' but we refrained—did not like to spoil a good thing. He had gone up and down a mountain to get to his position, but he was rewarded. Mr. Schofield and I also climbed a mountain, and walked across a small valley, and there lay a most lovely pool, a 150-foot perpendicular bluff for shade. We commenced at one end of it, and they were biting. Mr. Schofield had knee boots. I had waders. I saw a very likely looking place, if I could get to it, and with considerable trouble I made it. The bluff made a perfect right angle about thirty feet from where I stood. The water was deep, and I thought where the bluff turned was the proper place. My minnows were a remnant, rather small, but the bass took them rapidly. I caught probably forty or fifty, but did not count them. As the bait was getting very trifling, and I had one very large wide-mouth chub, I thought I would try him, and so hooked him through the upper lip and cast him over. The water just boiled where the chub fell. To be as brief as possible, the bass that happened to get the bait was landed in due form, and was a four-pounder. The minnow was not dead, and I put him in service again. Same result; another four-pounder. The minnow was pretty badly chewed and dead, but after taking a fresh 'holt' in his mouth, and smoothing him out a little, I made a long cast beyond the corner and reeled rapidly. Result, a tremendous strike, and a well-hooked fish; I said to myself 'I have an elephant this time.' I finally brought him to the edge of the water at my feet and secured him. We estimated his weight at 7½ pounds. Mr. Schofield has fished on the Niomqui since boyhood, and is now forty-three. He said it was the largest black bass he ever saw. Dr. Winn said the same, and the natives concurred.

"Mr. Schofield had a nice string. When we got to camp the driver and Dr. Winn had struck camp and were waiting for us. We already had a fine supply of fish, but this fresh lot helped things greatly, and we arrived home with plenty for our friends and neighbors after an eight days' trip. The large bass were caught on a No. 1 Sproat.

"W. H. Talbot, of reel fame, was to have accompanied us, but sickness prevented. We contemplate another trip about Oct. 15, and Mr. Talbot is billed for it."

Scared by Bear Baits.

Aug. 23.—Two Chicago gentlemen, Mr. Charles Tripp, of the Auditorium Hotel and Julius French, of the French Car Spring Co., went hunting last week out in the White River country of Colorado. They did not come back at once, and naturally had no way of communicating with their friends in Chicago. Another party passing over the country which they had traversed found two horses shot in the head. These gentlemen took great alarm and promptly telegraphed to Chicago that in all likelihood Mr. French and Mr. Tripp had been killed, since these horses might, could, should or would have been theirs. To-day the comforting advice is received by their Chicago friends that the above named hunters are quite safe and have not been killed by train robbers, as was hurriedly supposed. I suppose that perhaps the searching party discovered a couple of horses which had been killed for bear baits. Such things have been in the mountains, but there is no use getting excited over it.

Peaches and Cream and Grizzlies.

I have located my long-lost grizzly in several different parts of the West. He is down in the Wahsatch spurs in Utah. Also he used to be in the Salmon River country of Idaho, but I think he moved. The Seven Devils' Mountains once held him, but I am not sure that he is there to-day. The Crazy Mountains, where a 1,700-pound bear is stated to have been killed, also for a time appealed to me. Of course lower California might do, but that is too uncertain. Then there is my beloved Two Medicine country up in Montana, and also the Vermillion River country, west of the main range in Montana. I have not had time to go to all these places after my bear, and maybe now I will postpone it. A man by the name of W. A. Hill came into my office this morning and tells me that he knows where my bear is, beyond the shadow of a doubt. It is out along a tributary of the Snake River in Oregon. There is a little valley where the settlers raise peaches and cream and have goose hair for pillows. At the upper end of this valley there are some big snowy mountains, flanked by bad lands, worse than those of Dakota or Montana. In these mountains are some mountain sheep, a good many deer and some bears; not little bears, but big ones; not black bears, but silver-tips, which some call grizzlies, which we used to call "*platado*" in New Mexico—but anyhow long-toed bears, which will scrap, and which will kill a horse or steer when they are hungry, as the settlers of my little valley will testify. Now it seems to me if I could find a country where peaches and cream and grizzlies grew all together, and where five-pound trout came along as a matter of course, I ought not to have any kick coming whatever. I will have to ask the lady who is my side partner in bear hunting whether she has lost any grizzly, and if so we may visit this enchanted valley one of these years.

As instancing the size of the bears in this newly discovered country, I may state that last year one was killed which weighed 800 pounds. This was a pretty good bear, but it is nothing to the one killed by a settler this summer. My informant, Mr. Hill, could not give me the name of the rancher who killed this bear, but he knew the facts very well. The old grizzly came down into the rancher's corral and killed a two-year-old steer, which he proceeded to eat up. This made the farmer some hot, and he immediately started after his gun. The aforesaid gun was a short-barreled squirrel rifle, carrying a bullet about the size of a .32 caliber, a plain, unvarnished gun which loaded at the top and had to be capped at the bottom, after the fashion of our forefathers' weapons. Thus equipped the irate farmer walked out to the pen, within fifteen yards of the grizzly, and took a shot at him. He shot him straight through the heart, and, strange as it may seem, one shot was enough for Bruin. He sank down and never got up at all. The bullet passed through the heart and lodged in the ribs on the opposite side. This bear weighed 1,400 pounds, according to Mr. Hill, who states that his information was correct. It's a good bear story, anyhow. Think of a bear like that, with peaches and cream and five-pound trout on the side! This world is not such a cheerless place after all.

In Different Directions

It is one of my personal ambitions to entirely break down the commercial system of the world and send everybody out to live chiefly hunting and fishing. Among other efforts in that line this week I have sent one Florida gentleman to Texas for bird shooting and tarpon fishing; one Chicago gentleman to New Brunswick after moose, and seven gentlemen of assorted localities out to Minnesota after chickens and ducks; that is to say, all these start at the opening of the respective seasons. My moose man is Mr. T. W. Robinson, of the Illinois Steel Co., this city, who goes in with Adam Moore, or rather Jack Moore, Adam's son, on his newly located moose range in the Serpentine country of New Brunswick. Mr. Robinson and I have just had a pleasant time in talking over the details of his outfit, route, etc. I am sure he will get his moose, and I wish he would get the rest of mine if he sees it lying around in there anywhere.

About Fly Tying.

Mr. Jeptha G. Dunlap, a long-time reader of the FOREST AND STREAM, writes from San Jose, Cali., in the matter of the tying of artificial flies, his communication being as follows:

"For a long time I have wanted some one to tell me something which, so far, I have been unable to determine for myself. Through FOREST AND STREAM I see that you have become interested in the art of artificial fly-making, and I infer, therefore, that you are in a position to know or ascertain the facts in the case.

Some years ago, without other instruction than I obtained from FOREST AND STREAM and one or two books mentioned in its columns, I took up fly-making with the result that I am able to construct a fly that I need not be ashamed of in comparison with some professional work. According to instruction I have always applied shellac varnish to the head of my flies, giving them at intervals of eighteen or twenty-four hours two or three coats. Often, but not always, this varnish turns white as snow when the fly is put in the water, and this spoils the appearance and probably the usefulness of the lure. What I wish to know is the cause of this and why the varnish sometimes turns white and sometimes not. I always use the orange or brown shellac dissolved in alcohol, except occasionally, when I wish the tying thread to show its color, in which case I use the clear shellac.

"Is there any satisfactory substitute for shellac with which to coat the heads of artificial flies? If so be kind enough to tell me what it is and if possible how to prepare it.

"Could you not kindly give a detailed description of the Onondago pattern of black bass fly, to which you refer in the FOREST AND STREAM of June 21, which would enable one to make the fly; giving wing, body, tail, hackle, tinsel, etc. It would add very much to the interest if, when special flies not commonly known, are mentioned by various writers, they would give a full description of them in accordance with the usual formula."

I am afraid that I am so much of a novice in the art of fly-tying that I cannot be of much assistance to Mr. Dunlap.

As to the pattern for the Onondago fly, I would say the body is made of white silk—in some which I had of white cotton covered with white silk. The fore part of the body is black and the hackles are black, and the wing is black and white tip, of magpie feathers. The body is tied very full and heavy, and in some patterns of the Onondago is ribbed with silver tinsel, or rather, a silver gimp or cord. The hook used was a No. 4 O'Shaunessy with flat wire. The whole was very heavy and indeed clumsy, although very powerful. The body becomes water-soaked in use and the fly is then so heavy that it is awkward to cast. It sinks almost at once on striking the water. I should think a lighter body could be used with good effect. This fly is tied with a tag, a few filaments of the magpie feather, black with white tip. I found the fly very effective on small-mouth bass in the Mississippi River. It makes a large and rather showy lure in the water.

Southerners Going North.

Judge Warwick Hough, of the Circuit bench, St. Louis, Mo., outfitted in Chicago this week for a trip of a few weeks at Plum Lake, Wis., where he goes with his son, Warwick Hough, Jr. They take cottages at the O. W. Saynor place on Plum Lake, and hope to interview muscallunge as well as a good many bass before they get back home.

The Largest Muscallunge.

The largest muscallunge of this season was probably that taken by Dr. E. C. Williams, of Chicago, in Pelican Lake, Wis. This fish measured 52 inches in length and 32 inches in girth, the latter measurement proving it a very deep and heavy fish. Its weight was 41 pounds four hours after it was taken. This was actual weight and not guess work. The captor, who has fished muscallunge a great deal in different Wisconsin lakes, says this is the largest muscallunge he ever saw. He has taken several other good fish in Pelican Lake this year.

Back from the Magnetawan.

Mr. F. L. Brown and party, of Cincinnati, are back from their boating trip down the Magnetawan River of Canada. They got through all right in spite of a self-advertised guide, who proved to be a very poor guide indeed and a still worse cook. But for the kindly offices of one of the Government wardens, the party might have had rather a dismal time, but as it was, they are very much pleased with their experience.

From West Virginia.

Mr. H. E. Thoms, of Huntington, W. Va., is passing a short time in this city. Mr. Thoms says that West Virginia is one of the most delightful places in America for a residence, and that it offers a wide variety of sport. The deer and turkey hunting is good in many localities, and the trout fishing, he says, is as good as anyone could ask; that is, of course, for the speckled brook trout, the same fish which is known in the North.

Mr. Thoms is an occasional visitor to the wilder portions of the West, and is something of a cow-puncher himself, having acquired the art of roping to such extent that he can pick up any foot he likes of an animal or make a neck throw with but few failures. He finds his chief difficulty in getting horses which will not tangle themselves up or get the rider into grief after the catch is made. E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

A Cast.

The cast made by the vibrating rod, as it propels foot after foot of silken thread forward and straight away, the line ends up in a gentle curve of gossamer-like gut until the curve has spent its force in its effort to force the feathered hooks out upon the air where they, hesitating for a moment, like tired insects uncertain how to shape their course, drop exhausted and fluttering upon the water. Deep down in the pool the watchful trout has seen the shadow of the flies upon the surface above him, he has seen them slowly descending upon the water. Nearer and nearer they come, and with a swish of his powerful tail he gathers the speed of an arrow and meets them with distended jaws as they drop upon the glassy surface of the stream. A twitch of the rod and the barb is set; the prick of the hook and the haul of the leader upon the jaw sends the fish in terror to the deepest part of the pool, where he so many times has fled for safety before. But it is different this time, for tug as he may, that iron point encased in feathers remains fixed in his jaw, and it is endeavoring to lift him toward the surface. With a mighty effort he rushes up stream, not, however, with the speed and freedom heretofore, because of the thing that ceaselessly strains at his jaw. He stops in that hole behind the rock where he so often has poised himself ready for the prey brought down in the swift water. But he gets no peace there, the everlasting strain and haul of that gaudy, deceptive lure is still drawing him inch by inch down stream. The restraint becoming too great, he again madly rushes up stream, ending his rush with a mad leap in mid air. All to no avail, however, for as he once more plunges back into the stream, the strain is again felt. Resist as he may, yet does he yield to its invisible draft until, as drawn toward the surface, he sees in clear relief his arch enemy—man, and becoming frantic with fear plunges here, there, up stream, now down stream, anywhere in the air or water to work free from his bondage. But a shis strengths fails, so does he yield faster and faster to the wizard who stands knee deep in the stream above him. Once more he leaps free of the water and with a despairing shake of his jaws attempts to dislodge the lure. He fails, falls back exhausted, and resting upon his side is drawn toward the net and feels himself lifted from the water. A breaking of his neck and his life goes out.

CHARLES CRISTADORO.

Remarkable Growth of Brook Trout.

BOZEMAN, Mont., Aug. 25.—*Editor Forest and Stream:* Four years ago I furnished some brook trout fry (*S. fontinalis*) to State Senator C. W. Hoffman, who put them in a spring pond on his ranch a mile from Bozeman. Last summer he caught several that weighed from two to two and a half pounds. Yesterday his son, Mr. Eugene Hoffman, caught one on the fly that was 21 inches long, 13 inches girth, and weighed 4¼ pounds down weight. The fish was presented to me and I can vouch for the measurements and weight as being correct. This is quite a remarkable growth for a four-year-old and proves that the Eastern brook trout is well adapted for the waters of Montana, as shown in this and other instances coming within my knowledge and observation.

JAMES A. HENSHALL.

Galveston Fishing.

GALVESTON, Aug. 27.—*Editor Forest and Stream:* There have been several weeks of high water in the Brazos and Trinity rivers that muddied the Gulf shore waters as far as Galveston and drove the fish out to clear water, but notwithstanding we have had a fair season, as our gamiest fish, the Spanish mackerel, put in appearance earlier than usual. They are unusually large, and we have had them since in April. Just now the fishing is superb. Mr. Jake Davis, a member of our club, was on the Rocks day before yesterday from 2.30 to 6 P. M., and with a man he had with him brought in 37 fine mackerel, Davis caught 19 and several over four pounds each. The largest mackerel I have seen this season was 5¼ pounds.

Seven of the members of the club and a visitor spent three hours and a half on the Rocks one afternoon and brought back ninety-six Spanish mackerel, a 9-pound redfish, one large pompano, three trout and a sheepshead; and caught two blue sharks about four feet long each. The whole party had had all the rod and reel fishing and exercise they wanted and were ready to leave for town half an hour before sundown. Of the party, H. K. Rowby, the genial ticket agent of the Union Depot, and John W. Keenan, the local agent of the Galveston office of the Waters, Pierce Oil Co., fished together, putting their catch in the same bags, and they caught 47 mackerel and the redfish, beside wrestling with and losing tackle to several loafing tarpon that were too heavy for mackerel rigs. Not a jackfish was hung, strange to say, as we have generally to dispose of several.

There is many a man who, if he knew of it, would be glad to come a thousand miles to wrestle with a jackfish or shark or tarpon, standing on a granite rock six miles out in the Gulf of Mexico.

It is strange that so few fishermen know of the fishing we have at Galveston. There is no other place in America that deep sea fishing can be had for the rod and reel from a comfortable footing on a flat rock, many of the rocks six to eight feet square, and so adjacent that you can follow your big fish along for a hundred yards if you wish. The jetties are some nine miles from the wharves, just far enough to keep out the pot fishers and loafers, yet within an hour's run for a good launch. The tarpon club is small and has only one boat, but it is a fine seaworthy launch, carrying a dozen fishermen. It leaves for the jetties every day at one o'clock when the weather is suitable for fishing, and nearly every day some of the members go at four o'clock in the morning and get back in time to do a day's work. We have an enthusiastic set of fishermen who are always glad to welcome the stranger within our gates who is of the rod and reel craft, and to give him the best advantages we can for fishing.

We are expecting Mr. Waddell, the tarpon man, of Kansas City, in September, to try King Tarpon from the Rocks or in the usual way from a boat, as he may prefer. A. B. Horner, of Prouts Neck, Me., is trying to arrange to wet his line in Gulf waters before the season is over. Dr. A. F. Sampson, a fisherman from away back, came all the way from San Francisco this season and reeled in Spanish mackerel until he cried enough.

G. E. MANN,
President of Galveston Tarpon Club.

Pike, Pickerel, Mascalonge.

Editor Forest and Stream:

I have read with much interest your article in FOREST AND STREAM for July 19, on "Pike, Pickerel, Mascalonge." The article is very instructive. It is too bad that the legends for the illustrations got mixed, and I am glad to see the slip corrected in your issue of July 26.

A few additional corrections are needed to put the matter entirely right. Taking the cuts in your issue of July 26, the three heads (Figs. 1, 2 and 3) are all correctly labeled. The first or upper full-length figure is apparently from a very poor drawing of the Western brook pickerel, whose scientific name is *Esox vermiculatus*. The next figure is properly labeled. The third is the pike (*Esox lucius*), while the last is the common muskallunge (*Esox masquinongy*).

The pike family (*Esocidæ*) contains a single genus (*Esox*) with seven species. One of them (*Esox lucius*) is cosmopolitan, it being found throughout northern regions in America, Europe and Asia. The remaining six species are confined to North America. No species of the family is known from Africa, and it is *very* improbable that any occurs there.

This family has in most recent fish literature been called *Lucidæ*, the name being based upon the generic name *Lucius*, which was supposed to be the proper one. But it appears that Linnæus, in characterizing his genus *Esox* evidently had in mind the common European freshwater pike (which is also our common pike). That species must therefore be taken as the type of the genus *Esox*, the family must be called *Esocidæ*, and, as all our pikes, pickerels and muskallunges belong in the genus *Esox*, *Esox* must constitute the first part of the binominal name of each.

Their names may be written in full as follows:

1. Banded pickerel (*Esox americanus*).
2. Little pickerel or grass pike (*Esox vermiculatus*).
3. Eastern pickerel (*Esox reticulatus*).
4. Common pike (*Esox lucius*).
5. Common muskallunge (*Esox masquinongy*).
6. Chautauqua muskallunge (*Esox ohiensis*).
7. Great northern muskallunge or pike (*Esox immaculatus*).

The last three are all muskallunges. Usually they have been regarded as constituting but one species, the second and third as subspecies of the first, but they occupy different habitats and are not known to intergrade.

The common muskallunge occurs in the Great Lakes, the upper St. Lawrence River, certain streams and lakes tributary to the Great Lakes, in Canada north of the Great Lakes, and perhaps in a few small lakes in the upper Mississippi Basin. The Chautauqua muskallunge is native only to Lake Chautauqua and the Ohio Basin; while the great northern muskallunge is found in Eagle Lake and other lakes in northern Wisconsin and Minnesota. From the common muskallunge this form seems to differ in having the body entirely without spots, there being at most only vague, dark cross-shades. The tail is said to be a little more slender and the fins a little higher. It is fair to say that this form has not been critically studied and its exact relations to *E. masquinongy* and *E. ohiensis* have not been fully and clearly defined.

I recently had an opportunity to examine a number of fine examples of the Chautauqua muskallunge, while spending a few days at Mayville on that beautiful lake, and found them quite distinct from the muskallunge of the Great Lakes. The two are doubtless entirely distinct species.

I hope I may sometime soon have a chance to examine fresh examples of the muskallunge of the small lakes of northern Wisconsin and Minnesota.

The suggestion by some that it is a cross between the common muskallunge and the pike is based upon an erroneous conception of what species really are. "Crosses" are so rare in nature as to render this suggestion scarcely worth consideration.

But how can one identify the various species of *Esox?* The illustrations given in FOREST AND STREAM for July 26 will help very much for three of the species.

I believe one can, with the following simple key, taken from Jordan and Evermann's "American Food and Game Fishes," readily identify any of the seven species:

a. Cheek entirely scaly; branchiostegals 11 to 16.
  b. Opercle entirely scaly; dorsal rays 11 to 14. Color, greenish, barred or reticulated with darker.
    c. Branchiostegals normally 12 (11 to 13); scales 105 to 108; dorsal rays 11 or 12; anal rays 11 or 12; snout short, middle of eye nearer tip of lower jaw than posterior margin of opercle; species of small size; the fins unspotted.
      d. Head short, 3.56 in length of body; snout 2.5 in head; eye 2.67 in snout. Color, dark greenish, the side with about 20 distinct curved blackish bars; fins pale;
        BANDED PICKEREL.
      dd. Head longer, 3.25 in length of body; snout 2.2 in head; eye 2.5 in snout. Color, light greenish, the side with many narrow curved streaks of darker, these usually distinct, irregular and much reticulated; fins plain;
        LITTLE PICKEREL; GRASS PIKE.
    cc. Branchiostegals 14 to 16; scales about 125; dorsal rays 14; anal 13; middle of eye midway between tip of lower jaw and posterior margin of opercle. Color, greenish, with many dark narrow curved lines and streaks, mostly horizontal and more or less reticulated; fins plain;
      COMMON EASTERN PICKEREL.
  bb. Opercle without any scales on the lower half; dorsal rays 16 or 17. Color, grayish, with many whitish spots, the young with whitish or yellowish cross-bars; dorsal, anal, and caudal spotted with black; a white horizontal band bounding naked portion of opercle. Size large;
    COMMON PIKE.
aa. Cheek as well as opercle with the lower half naked; branchiostegals 17 to 19.
  d. Sides grayish, with round or squarish blackish spots, not coalescing to form bands;
    MUSKALLUNGE.
  dd. Sides brassy, with narrow dark cross-shades, which break up into vaguely outlined dark spots;
    CHAUTAUQUA MUSKALLUNGE.
  ddd. Sides grayish, unspotted or with very vague dark cross-shades;
    GREAT NORTHERN PIKE.

BARTON WARREN EVERMANN.

New England Angling.

BOSTON, Sept. 1.—The President's New England trip is over, and sportsmen consider that their special recreation has been highly honored. Perhaps it will hardly do to say that at every point he seemed as much interested in fishing and shooting as in national affairs, but he certainly showed great interest in matters pertaining to the rod and gun. At Augusta, Me., he was dined, at Governor Hill's, off small brook trout. It is claimed that the trout came from an Androscoggin stream, and that they were caught by Col. E. C. Farrington, whom everybody will remember as greatly interested in fish and game affairs, and secretary of the Maine Fish and Game Association. Doubtless Col. Farrington knew just where to find the trout; possibly they had been corraled for some time. The Rangeley Hotel men did not get the President into their region, and they feel that he made a great mistake. But he did turn aside into New Hampshire and fished Sunapee Lake with Secretary Hay and Senator Proctor of Vermont, though with what success I am unable to learn. The celebrated Austin Corbin Park offered a great attraction, and there the President was permitted to shoot a wild boar. He expressed himself as greatly delighted with the park. He made a clean shot of fifty yards at the wild boar, and brought the animal down with one shot. "I have shot my wild boar," he explained to political friends whom he met on leaving the park, "and that is better than shooting another mountain lion."

Mr. C. F. Danforth, of Boston, who has done so much toward getting big fish from Dan Hole Pond, New Hampshire, hands me the following boy's letter. It is a model of good composition, and anglers will be interested from the amount of enthusiasm manifested, as well as the easy way in which it is told. Mr. Danforth says that he is not "Fish Commissioner" of that section, though the boys call him so, because he has helped put the small fry into Dan Hole for several seasons, furnished by the U. S. Fish Commission. In commenting on the "boy's letter," he remarks that "the rising generation is receiving good training from somewhere, and the senior lovers of rod and reel, as well as good education, are getting good returns for their efforts." The letter is as follows:

Maple Lodge, Roland Park, Moultonville, N. H., Aug. 24, 1902.
—Mr. Danforth: Dear Sir—As you are Fish Commissioner of Big and Little Danhole Ponds, I suppose you would be interested in hearing about a salmon I caught on Saturday last.

Herbert and Ralph Gridley and myself went out fishing about 10 o'clock, Saturday morning for pickerel on the little pond. We anchored on a piece of brush a little way from the shore. I had for bait a shiner, that I had caught a pickerel with, which was almost split in two. I put my line in the water and had about eight feet of line out, and put my feet on the seat in front of me and said, "This is the only way to fish."

I had no sooner said this than I had a little bite. I jumped up, but didn't have any more bites, so I laid back again. I had another bite, and I jumped up again, and something began to bend my rod.

I began to reel in, thinking I had a pickerel on, but I kept reeling in, and I saw a large fish jump about six feet in the air By this time I had about two feet of line out. The fish kept swimming and jumping about all the while. Fortunately we had a net with us, and as he made a dive for the boat, Herbert put the net in front of him and he swam into it. We landed him in less than three minutes.

The salmon was twenty-two inches long and weighed four pounds.

The rod was made by J. Clark Smith, Lynn, Mass.

I am thirteen years old and live in Lynn.

Yours respectfully,
JOSEPH W. LEWIS.

Mr. Danforth went to Dane Hole Friday for a final try for the salmon—the season ending Sept. 15. Mr. George Loud and Mr. I. A. McLaughlin are back from their fishing trip to Runaway Camp, Clearwater Lake, near Farmington, Me. They were there for two weeks with wives and children, and had beautiful weather. Mr. McLaughlin says that he had the best fishing that he has ever had, especially for small-mouthed bass, with which that lake is well supplied. They took the fly well at times, and came freely to bait. They had some trout fishing also. At the right time of day trout could be taken at the several inlets in the lake. The streams directly tributary to the lake are legally closed to all fishing; these tributaries being regarded as the natural nurseries for the trout and salmon. From the Middle Dam, Richardson Lake, Me., come reports of good fly-fishing. The sportsmen seem well disposed and put back most of the small fish. Mr. Charles Wiswell has recently taken a trout of five pounds from the Pond-in-the-River. Robert A. Livingston, of New York, has hooked a large salmon in swift water, below the Dam. After a very hard fight the hook broke and the salmon was free. Dr. E. H. Stevens and party, of Cambridge, Mass., have gone to the doctor's camps at Carry Ponds, Me. Dr. Hildreth and daughter, of Cambridge, with Dr. G. W. Gay, of the same city, have returned from Carry Ponds, and report great fly-fishing, with large game constantly seen. The fall fly-fishing is on at Bemis, and some good-sized trout are being taken. Every day sees trout and salmon brought in weighing from two and a half to five pounds. Bemis is no longer the terminus of the Portland & Rumford Falls Railway. Last week the Railroad Commissioners viewed the extension from Bemis to Oquossoc Station, and permission was given to run passenger trains to that point. Oquossoc is about half-way between Haine's Landing and Mountain View, and sportsmen to the Upper Rangeleys can now be landed there in a day from Boston, or a day and a night from New York. The road is being rapidly pushed through to Canada, and one of the best hunting regions in Maine is being made easy of access. The largest black bass on record is reported to have been taken from Lake Wentworth, N. H., recently. Mr. Baril, the lucky captor, says that the fish was too large for his landing net, and when brought up beside the boat, after a hard fight, the chances for saving the monster looked small. Mr. Salinger, his fishing partner, suggested that they row for the shore as rapidly as possible. When shoal water was reached both men jumped out of the boat, pulling the fish quickly on to dry land. It weighed nineteen pounds.

SPECIAL.

Carp in the Susquehanna.

AFTON, N. Y.—*Editor Forest and Stream:* In olden times we read of plagues. They were sent then and a lesson taught. In modern times we also have had the plagues of different kinds to contend with. This year we have had the seventeen-year locusts, and it's often enough at that. Mosquitoes and black flies we have always with us, but we have the satisfaction of knowing that they were here from the first. We have a little charity for the man who introduced the English sparrow to this country, for there is something to say in praise of this saucy and pugnacious bird. But where can an excuse be found for the bringing of the German carp? Our friend from Pohunk says "they make torably good feed for hogs," but I should hate to eat a hog that had been fed on that diet. Like thousands of others, we have tried to eat our share of carp. It was no fault of the splendid cooking, or the perfect serving. Then and there we donated all of our future share to any who will take.

Many years ago, near the headwaters of the Ouleout, a pond was stocked with these fish furnished by the United States Fish Commission. During a very severe storm this pond was washed out, and all its very undesirable contents landed in the Susquehanna River, distributing them for many miles. For a few years the damage was but partly known, but now a river that formerly was clear and sparkling in all its length, is in places a regular mud hole. And it is kept so by these water hogs, which are at all times rooting up the mud from the bottom. Only a little way down the river from this place, where in times past was our very best bass fishing, to-day hardly a fish is taken; and the theory is advanced by some of our closest angling friends that there is no doubt that the carp do the greatest damage to the nests of the bass. They have been known to suck up clean every egg from the bed. But be that as it may, we know that the condition of the water in the deep places where these fish are will not admit of any game fish living. While the water was high last week from the heavy rains, and where it overflowed its banks at this very spot we have spoken of, nine of these monster fish were taken from a ditch as the water receded. The smallest weighed six and one-half pounds, others twelve and sixteen pounds, while the largest, a mighty mass of disappointment, tipped the scales at twenty pounds and six ounces. Think of the destruction of those nine fish alone in waters where game fish are. For a distance of at least three miles the carp have taken entire possession of the river and are there in countless

numbers. We ask the readers of FOREST AND STREAM is there a remedy? Is there any way the fish can be destroyed? They are working their way slowly but surely to every part of the river, and it is only a question of time when they alone will be the sole occupants of one of the best bass waters in this section. We have called the attention of the State Fish Commission to the facts as stated here, and I have on my desk a letter from the secretary, saying that the matter will be brought before the board for their action at the very first meeting of that body. And we would also be glad of any information or suggestions from your thousands of readers.

A. T. ENGLAND.

Bass in Rideau Waters.

Editor Forest and Stream:

A short sketch of a black bass fishing trip upon the Rideau waters, in eastern Ontario, may be of interest to your readers.

The Rideau waters run from Kingston, Ontario, lying at the western end of the St. Lawrence River, northeasterly to Ottawa, a distance of about 125 miles. It is a navigable waterway, chiefly natural, but with six locks along its length built by the British military authorities in 1830. These waters abound in salmon, pike and various kinds of bass, according to locality, and a real angler's paradise not as yet very well known to the outside public.

On Monday afternoon, the 29th ult., a party of five of us, Rev. D. Strachan, Dr. W. Brace, Editor A. T. Wilgress, Mr. E. A. Geiger and myself, set out from Brockville, Ontario, a fine town lying at the end of the Thousand Islands, to go over the Brockville, Westport & Sault Ste. Marie Railway to the town of Westport, forty-five miles away on the banks of the Rideau. We reached there about 7 P. M., took tea at the hotel and then drove to our destination at Wolfe Lake—or West Rideau, as it is also called—some three miles distant. Wolfe Lake is one of the many subsidiary waters of the Rideau, and affords very fine black bass fishing. There are also a few pike and rock bass, but no salmon or large-mouthed (Oswego) bass. The country is somewhat rough and rocky in this section, with a good amount of second growth spruce and poplar scrub, but a number of fine farms run down to the shores of the lake. F. E. Pollard, one of these farmers, has a little shanty built on his shore line, about half a mile from his house, and this shanty we rented at a small cost per day. Pollard met us at Westport Station and drove us to camp. He also supplied us with ice, milk, eggs, vegetables, etc. At Westport we procured a guide, James Conley, who provided the two boats necessary, and cooked for us, so that we were in comfortable circumstances.

The weather during our stay there, from Monday to Thursday night, was fine and hot. We fished from about 7 to 11 in the morning, went to camp for dinner, loafed in the shade until 4, then went out again fishing until night fell about 8:30 o'clock.

The bait used by local fishermen was a wooden minnow bristling with five sets of triple gangs. It was taken readily by the fish, but we found that it not only hooked the fish in the jaw and side, thus preventing them from having free play, but also got sadly mixed up in the landing net. We therefore discarded the wooden minnow with its array of hooks and used a somewhat small-sized Cincinnati bass hook with a live minnow, meeting with good success, beside giving the fish a chance and having more real sport out of it. The rods we used were split bamboo (8½ ounces), Bristol steel and lancewood rods, with braided silk lines and three-foot double gut leaders.

The black bass we found were in the deep water outside the shoals—say from fifteen to thirty feet deep. During our three days' fishing we killed about seventy good black bass, beside several pike. Beside this we hooked many small black bass and rock bass, which we returned to the water. The black bass we killed ran from a pound weight to three and three-quarter pounds, and were as gamy as possible, fighting from five to fifteen minutes. Directly they struck they leaped into the air and gave a desperate twist to break free, and in this way we lost some especially fine fish.

In this lake there have been some splendid bass killed. Last summer George B. Reeve, late general manager of the Grand Trunk Railway, fished there for a week and said he never, in a wide experience, had had better sport. His largest black bass weighed four and three-quarter pounds. Superintendent Geiger, of the Brockville & Westport Railway, and A. Thomas, of Atlanta, Ga., also caught black bass weighing as much, while the local fishermen claim to have beaten these records.

The Rideau waters are very easy of access. A fisherman can leave New York at 10:30 P. M., reach Brockville, Ontario, over the New York Central via Morristown, N. Y., by 11 A. M. next day. He could then take the Brockville & Westport road at 4 P. M. and be in camp at Wolfe Lake, for instance, by 8 P. M. Of course Wolfe Lake is but one of the many fishing grounds of the Rideau. The Brockville & Westport touches half a dozen at least where bass, salmon and pike are to be caught in plenty. Charleston Lake, Beverley, Lyndhurst and the Openicon, Sand, Clear, Newboro, Upper Rideau, Lower Rideau, of the Rideau chain—any of these waters will afford the fisherman all the sport he can desire and at a very small cost. The hotels charge from one to two dollars per day, and the oarsmen, who supply boat, bait and guidance, charge two or two and a half a day. Add railway fare and incidentals according to means or inclination, and there you are. Camping out is much cheaper for the experienced.

R. N. HORTON.

BROCKVILLE, Ont., Aug. 12.

Black Bass in Lake Mahopac, N. Y.

A MR. BARTLETT, an old-time resident of the vicinity, caught a 6¾-pound large-mouth black bass on Labor Day, Sept. 1. The fishing has been below par all the season, but this phenomenal catch, which is reported to be the record fish, has sent Lake Mahopac fishing stock up with a rush. Mr. Bartlett was fishing with a chub. I saw the bass; it was a fine, fat, very deep specimen. The fishing in this charming lake, I think, could be much improved by judicious stocking, as the food seems plentiful and conditions favorable for black bass and perhaps landlocked salmon.

C. L. S.

Near New York.

THE trout season of 1902 in New York and Pennsylvania has, in some respects, been an unusually good one, Particularly as regards the summer months. Anglers had not been particularly sanguine, as there had been much snow, away from the coast, and heavy floods during the winter and spring were reported to have done much damage in many localities, entirely changing the courses of the streams. It was supposed that many trout had been killed, but when fishing began they appeared in fair numbers, in fact, it seemed to us that there were more than usual, but that the average size was less. The weather was warm for a time in May, and in the lower portions of the large streams the water became quite heated, but this state of affairs was of short duration. Soon after the first of June conditions became unusually favorable, copious rains purified and swelled the brooks, and the temperature thereafter was never high for many days consecutively. All the well-known tributaries of the Delaware and Hudson rivers fished well and the water has been cool all summer, even in the lower reaches.

There had been many freshets, and anglers who were fortunate enough to be on the water at the right time had excellent sport. In fact, there were not many days when trout could not be caught by the exercise of a little skill and patience. There was a good deal also in the choice of fly, as the trout were as usual somewhat whimsical and hard to please. Some one has said that fly-fishing affords an endless field for study, experiment and speculation, and this is quite true. Certainly no sport takes a stronger grip upon those who have once become interested in it.

We can have no drouth this year and prospects for next season should be bright. The year 1900 was a disastrous one, as after splendid fishing in the early months, and with fish of unusually large average size, there began, in June, a drouth such as had never been experienced by the well-known "oldest inhabitant." It lasted right through the summer and autumn months and caused great destruction of fish life. Many of the tributary streams dried up entirely and larger ones were reduced to mere streaks of silver. From what we have seen this year we believe that the trout have recovered from the losses then incurred. The stock of fish is large, and with modern fishculture to assist nature, we need have no fears as to the future. If we can have an abundance of pure cold water in our streams we can be sure of good fishing. We have said that the average size was not large, yet many fine fish have been taken this season, running from 2 pounds up to over 5 pounds, in the tributaries of the Delaware in Pennsylvania and New York, and of the Hudson in Ulster County, N. Y. These streams have been resorted to by countless anglers for many years and probably afford better fishing to-day than they did to our grandfathers half a century ago.

Camping on Toddy Pond.

EAST ORLAND, Me.—*Editor Forest and Stream:* I arrived here last week from my home, Macomb, Ill. I am in camp and having a good time and living on the "fat of the land." Our camp is alongside of Toddy Pond, a beautiful sheet of water nine miles long. There is any quantity of landlocked salmon in this pond, put in here by the Government. These salmon are now weighing from 1½ to 4 pounds. Rev. Mr. Raferty and Mr. Bell, of Portland, Conn., caught a string of fifteen with a fly last week. There have been over a hundred caught in the last week, and the sport is still going on. I have the fortune to own a tract of timber bordering on this lake, where the salmon are taken out. There is a muddy bottom, with deep water, and the fresh-water smelt is found here, and the salmon come here to feed on the smelt.

Last week a bear and two cubs were seen on my tract of land. The partridges here are very plenty, and there will be fine shooting this fall. I saw one within five rods of Mr. Bell's camp yesterday.

Dr. Brainard, of Hartford, Conn., is here in camp with his family. He has the finest camp in this section, one which cost $3,000.

Rev. Roberts preached in the old school house last Sunday where I used to go to school fifty-five years ago, and where I attended church fifty-three years ago. There are quite a number of camps here, mostly occupied by Connecticut people, and the people here will be sorry to have them return to their homes after the season is over.

Dr. W. S. Blaisdell and family, of Punxsutawney, Pa., is here in camp, and Charles Huckins and family, of Bangor, Me., are here. All are having a good time.

W. O. BLAISDELL.

The Kennel.

Dec. 15.—Huntsville, Ala.—Alabama Field Trial Club's (member of the American Championship Club) third annual trials. John F. Fletcher, Sec'y, Birmingham, Ala.

National Beagle Club of America.

In order to facilitate the arrangement for the shipment of dogs to the field trials of the National Beagle Club, which will commence on Nov. 3 next, a committee was appointed for the purpose of ascertaining the express rates from the various express companies and the rules and regulations governing the shipment of dogs so that the members of the club should be advised upon this subject.

It has occurred to the club that the information contained in the report of the committee might be of some interest, not only to beagle men, but to all breeders or owners of all breeds of dogs, who exhibit the same, and who are obliged to make use of the express companies.

The following is a copy of the report:

Report of Special Committee on Express Rates.

N. B. C. A., Feb. 19, 1902.

The regulations as applied to the shipments of dogs, adopted by the Adams, Adirondack, American, Denver & Rio Grande, Dominion, Earle & Prew, Great Northern, Long Island, National, New York and Boston Despatch, Northern Pacific, Pacific, Canadian Southern, United States, Wells, Fargo and Western express companies are as follows:

On execution of express companies live stock contract and payment of double merchandise rates, dogs will be accepted for shipment if boxed or crated, but to a point where the merchandise rate is $2 or more per 100 pounds single merchandise rate will be charged with a minimum of $1, unless the charges at double merchandise rate is less, in which case the latter will be charged.

The charge between points where the merchandise rate is less than $2 per 100 pounds, must not be more than the charge at $2 per 100 pounds.

When shipments pass over the lines of two or more companies and the shipping or destination point is an exclusive office, each company's charge will be separately assessed and not on the through rate made by combining the local rates.

Carload shipments are estimated at 10,000 pounds and two attendants will be carried free in car with the dogs.

Dogs boxed or crated on which have been paid double merchandise rate to fairs or expositions, may be returned free if accompanied by a certificate from the secretary that they are being returned to the original owner.

Dogs for service may be returned free when double rates were paid going; in such cases the forwarding agent will note on way-bill "Sent for Service—to be returned free"; upon receipt of which the destination

agent will issue to the consignee a memorandum entitling him to a free return of the dog, within 90 days—this memorandum must state the value and the route by which the dog was carried, and such route mustt be used for the return; the receipt issued for the dog when returned must not bear a valuation in excess of that shown on the memorandum.

CHAS. R. STEVENSON, Secretary.

Points and Flushes.

The prize list of the Inaugural Dog Show of the Orange County Agricultural Society, Sept. 16 to 19, can be obtained on application to Mr. W. G. Davis, superintendent, Middletown, N. Y. Entries close Sept. 6.

Yachting.

Yachting Fixtures, 1902.

Secretaries and members of race committees will confer a favor by sending notice of errors or omissions in the following list and also changes which may be made in the future.

SEPTEMBER.

4-6. Seawanhaka Corinthian, Y. R. A. of L. I. S., open, Oyster Bay, Long Island Sound.
5-6. Eastern, open, Marblehead, Massachusetts Bay.
6. Corinthian, club championship, Marblehead, Massachusetts Bay.
6. Boston, club, City Point, Boston Harbor.
6. Hull-Massachusetts, club, Hull, Boston Harbor.
6. Beverly, open, Mattapoisett, Buzzard's Bay.
6. Wollaston, club, Quincy Bay, Boston Harbor.
6. Quincy, M. Y. R. A., open, Quincy, Boston Harbor.
6. South Boston, sailing tender race, City Point, Boston Harbor.
6. New York C. C., Y. R. A. of Gravesend Bay, Sea Gate, New York Bay.
6. Penataquit-Corinthian, Lighthouse cup, Bay shore.
8. Eastern, open, Marblehead, Massachusetts Bay.
11. New York, autumn regatta, New York, Lower Bay.
13. Knickerbocker, ladies' day race, College Point, L. I. Sound.
13. Kennebec, club, Bath, Maine.
13. Beverly, seventh Corinthian, Monument Beach, Buzzard's Bay.
13 Atlantic, fall regatta, Sea Gate, New York Bay.
13. Larchmont, club, Larchmont, Long Island Sound.
20. Manhasset, Y. R. A. of L. I. S., open, Port Washington, Long Island Sound.
20. Y. R. A. of Gravesend Bay, Sea Gate, New York Bay.
—. Seawanhaka Corinthian, club, Oyster Bay, Long Island Sound.
27. Riverside, Y. R. A. of L. I. S., open, Riverside, L. I. Sound.
27. Manhasset Bay, club raceabouts, Port Washington, L. I. Sound.

For Cruising Yachtsmen.

WITH the purpose of stimulating the interest in cruising, and the keeping of a detailed log by cruising yachtsmen during the season of 1902, the publishers of FOREST AND STREAM offer prizes for the best stories of cruises submitted to be published in FOREST AND STREAM. It is believed that these will form not only entertaining records of pleasant summer days spent afloat along our coasts and waterways, but will furnish information of practical value to other yachtsmen making subsequent cruises on the same waters.

Prizes will be awarded to the three best stories as follows:

First prize, $50.00.
Second prize, $30.00.
Third prize, $20.00.

Contributions are invited under the following conditions:

1. The cruise must be made in waters of the United States or Canada in the season of 1902.

2. The cruise must be made in a sailing yacht, power to be used only as an auxiliary, if at all.

3. The story must be prefaced by a description of the boat. Cruises should be treated in as interesting and readable a way as possible, but should be practical and contain all possible information and data that would be of value to men going over the same route. A description of the handling of the ship in all weathers will be regarded very favorably in making awards, and it is suggested to writers that an accurate account be kept of all incidents happening while under way.

4. An outline chart suitable for reproduction, showing the course taken, must accompany each article. When possible, articles should be accompanied by amateur photographs taken on the cruise, including one of the boat. Good photographs will be considered in making the awards.

5. The story should contain about seven thousand words, written on one side of the paper only, and must be received at the office of the Forest and Stream Publishing Company, 346 Broadway, New York city, on or before Nov. 15, 1902.

Mr. T. C. Zerega has very kindly consented to act as judge and to make the awards.

American Y. C.

MILTON POINT, LONG ISLAND SOUND.

Thursday, Aug. 28.

THE regatta given by the American Y. C. on Thursday, Aug. 28, was devoted entirely to one-design classes. Six Long Island Sound clubs were represented, and twenty-one boats started. The course for all classes was triangular from off the Scotch Caps Buoy, east northeast one and five-eighths miles around the Larchmont White Spar Buoy, off Parsonage Point, south one-half east one and five-eighths miles around a stakeboat, and west northwest one and five-eighths miles to the starting line. The distance was four and seven-eighths miles, and the course was sailed twice over by all the classes except the Manhasset Bay and the Horseshoe Harbor boats.

At the start the wind was fresh from the E.S.E., but during the afternoon it veered around to E. by N.

Howdy and Hobo sailed a remarkably close race in the American Y. C. 21ft. class. At the end of the first round Howdy was ahead by only two seconds. On the last round Howdy slowly increased her lead and won by 37s. Three boats started in the Larchmont Y. C. 21ft. class. During the race Adelaide was in collision with Jolly Tar, and the former lost her bowsprit and withdrew. Mr. L. G. Spence, Adelaide's owner, protested Jolly Tar. Dorothy won in this class by 2m. 30s. In the American Y. C. 18ft. class, a close race was seen between Zelica III. and Mongoose III., the former boat being sailed by Mr. Hazen Morse and the latter by her owner, Mr. Simeon Ford. Mongoose III. was handicapped by getting a bad start, but at the end of the first round was on even terms with her competitor, and on the last round she worked slowly into the lead and won by the narrow margin of five seconds. Hustler tore her mainsail and withdrew. Only two of the Manhasset Bay Y. C. 18-footers turned up, Lambkin and Arizona. Just before the start for this class Arizona parted her throat halliards. Lambkin waited while repairs were made on Arizona. This delayed these boats so long that they were only able to sail once around the course. Lambkin won by 2m. 23s.

Three of the New Rochelle one-design boats started and Caper won handily. Catherine and Indra started in the Horseshoe Harbor one-design class, and the former won by 2m. 35s. The Regatta Committee—Trenor L. Park, H. de B. Parsons, W. H. Browning and Stuyvesant Wainwright, used Com. Eaton's yawl Audax as a judges' boat. The summary:

	Finish.	Elapsed.
American Y. C. 21ft. Class—Start, 2:05.		
Jolly Tar, S. Howland	3 52 35	1 47 35
Rascal, S. C. Hopkins	3 53 56	1 48 56
Howdy, S. Wainwright	3 50 33	1 45 33
Hobo, T. L. Park	3 51 10	1 46 10
Cricket, H. Willetts	3 54 41	1 49 41
The Kid, O. Harriman, Jr.	Disabled.	
Ping Pong, W. H. Browning	4 00 50	1 55 50
Larchmont 21ft. Class—Start, 2:05.		
Houri, J. H. Esser	3 58 54	1 53 54
Adelaide, L. G. Spence	Disabled.	
Dorothy, Louis Spence	3 56 24	1 51 24
American Y. C. 18ft. Class—Start, 2:10.		
Driftwood, O. C. Townsend	4 19 57	2 09 57
Hustler, J. T. Downey	Disabled.	
Mongoose III., Simeon Ford	4 18 02	2 08 02
Zelica III., H. A. Sherman	4 18 07	2 08 07
Manhasset Bay Y. C. 18ft. Class—Start, 2:40.		
Lambkin, S. W. Roach	3 47 36	1 07 36
Arizona, G. A. Corry	3 49 59	1 09 59
New Rochelle 18ft. Class—Start, 2:15.		
Knave, R. N. Bavier	4 26 32	2 11 32
Caper, P. L. Howard	4 22 45	2 07 45
Ace, W. N. Bavier	4 28 42	2 13 42
Horseshoe Harbor 14ft. Class—Start, 2:20.		
Catherine, R. E. Robinson	3 46 13	1 26 13
Indra, W. S. Allen	3 48 48	1 28 48

The winners were Howdy, Dorothy, Zelica III., Lambkin, Caper and Catherine.

Friday, Aug. 29.

There were twenty-nine starters in the open race of the American Y. C. held on Friday, Aug. 29. The wind was E. by S., with enough strength to make the racing interesting. The course was from the starting line, off Scotch Caps, leaving the committee boat on the port hand; thence southwest two and three-quarter miles to and around red and black horizontal striped buoy, to the northward of Execution Light, leaving same on port hand; thence east by south, one-half south, three and one-half miles to and around Larchmont white spar buoy, off Red Springs Point, leaving same on port hand; thence northwest by north, one-half north, three and one-quarter miles to the starting point, the total distance being nine and one-half miles. The course was sailed over twice by classes L, M and N. The others sailed once around, while the two special cats sailed to Execution Light and back. The first leg of the course was a reach, the second a beat to windward and the third another reach.

The 43-footers were the first boats to start, but both Effort and Dorwina were slow in getting away. Dorwina crossed ahead of Effort. The former boat held her lead until the windward leg, when Effort took first place. At the end of the first round Effort was nearly a minute ahead. The wind hauled a little, allowing these boats to carry spinnakers on the first leg of the second round. Effort continued to draw away from Dorwina and beat her on corrected time 5m. 10s.

The 36-footers started in the following order: Leda, Spasm and Possum. They remained in this position all through the race and Leda won easily by 4m. and 4s. There were four starters in the 30ft. class. Mimosa led over the line, followed by Marguerite, Alerion and Helen. Mimosa and Alerion got into a luffing match and Marguerite took first place and led at the end of the first round. On the second round Mr. Edward M. McLellan, who was sailing Alerion, settled down to work and brought his boat in to the finish line far enough ahead to save the time he had to allow the other boats and win by 1m. 17s.

Scamp led the other three raceabouts over the line, but on the windward work Mavis did good work, and passing Scamp continued to increase her lead, and finally won by 4m. 57s.

Three of the Larchmont 21-footers started, Dorothy was first over the starting line and led all over the course.

Lambkin scored another victory in the Manhasset Bay one-design class by beating Arizona 3m. 38s.

The American Y. C. 21-footers sailed another close race. Jolly Tar won by 49s. In the American Y. C. 18ft. class Rattler won by 1m. 54s.

The Race Committee was Trenor L. Park, H. de B. Parsons, H. Livingston Center and Cornelius Sewell. The summary:

	Finish.	Elapsed.
Sloops—Class L—36 to 43ft.—Start, 12:20.		
Effort, F. M. Smith	3 13 12	2 53 12
Dorwina, C. V. Brokaw	3 17 02	2 57 02
Corrected time of Effort, 2.51.52.		
Sloops—Class M—30 to 36ft.—Start, 12:25.		
Leda, H. L. Maxwell	3 27 22	3 02 22
Spasm, E. D. King	3 31 26	3 06 26
Possum, E. S. Ballou	3 36 53	3 11 53
Corrected time of Possum, 3.11.35.		
Class N—25 to 30ft.—Start, 12:30.		
Alerion, A. H. Alker	3 42 56	3 12 56
Marguerite, J. S. Dingee	3 45 40	3 15 40
Helen, N. B. Fuller	3 46 36	3 16 36
Mimosa, Trenor L. Park	3 45 03	3 15 03
Raceabouts—Start, 12:35.		
Mavis, G. L. Pirie	2 17 55	1 42 55
Scamp, J. T. Pirie	2 22 52	1 47 52
Jolly Roger, T. B. Bleecker	2 23 29	1 48 29
Snapper, J. B. Alley	2 25 25	1 50 25
Larchmont 21ft. Class—Start, 12:40.		
Houri, J. H. Esser	2 35 40	1 55 40
Adelaide, L. G. Spence	2 30 43	1 50 43
Dorothy, Louis Spence	2 29 35	1 49 35
Sloops—Class R—Under 18ft.—Start, 12:40.		
Cricket, H. C. Pryer	2 45 39	2 05 39
Pandora, H. B. Towle	Withdrew.	
Manhasset One-Design Class—Start, 12:40.		
Lambkin, S. W. Roach	2 49 36	2 09 36
Arizona, G. A. Corry	2 53 14	2 13 14
American Y. C. 21ft. Class—Start, 12.45.		
Jolly Tar, S. Howland	2 28 36	1 43 36
Rascal, S. C. Hopkins	2 33 57	1 48 57
Howdy, S. W. Wainwright	2 29 25	1 44 25
Hobo, T. L. Park	2 33 47	1 48 47
American Y. C. 18ft. Class—Start, 12:50.		
Rattler, J. E. Bowles	2 52 56	2 02 56
Driftwood, O. C. Townsend	2 55 49	2 05 49
Zebea III, H. A. Sherman	2 54 50	2 04 50
Special Catboat Class—Start, 12:55.		
Champion, T. J. Dee	2 58 13	2 03 13
The Kid, A. N. Kitching	Withdrew.	

The winners were Effort, Leda, Alerion, Mavis, Dorothy, Cricket, Lambkin, Jolly Tar, Rattler and Champion.

Newport Special Thirties.

NEWPORT, R. I.

Monday, Aug. 25.

ON Monday the 30-footers sailed a race over a six-mile to leeward and return course. On the run down the wind Veda held the lead, but soon after rounding the leeward mark Esperanza passed her and had the race well in hand when she was cut off by a tug that had a long tow of barges, and in this way lost the race. Carolina was benefited by Esperanza's misfortune and won by thirteen seconds. The summary, start 3:33:

	Finish.	Elapsed.
Carolina, Pembroke Jones	4 56 46	1 22 46
Esperanza, H. O. Havemeyer, Jr.	4 55 59	1 22 59
Barbara, W. Rutherfurd	4 56 51	1 23 51
Veda, W. L. Stow	4 57 27	1 24 22
Breeze, W. G. Roelker, Jr.	4 58 29	1 25 29
Wawa, R. Brooks	5 01 33	1 28 33

Tuesday, Aug. 26.

The 30-footers sailed a race on Tuesday for the cup offered by Mrs. H. O. Havemeyer, Jr. The course was to Dyer's Island and return, a distance of eighteen miles. It was a run to the Dyer's Island mark, and Wawa led all the way, but after hauling on the wind Carolina drew into the lead and finished a winner by 2m. 35s. The summary, start 3:26:

	Finish.	Elapsed.
Carolina, Pembroke Jones	5 42 41	2 16 41
Esperanza, H. O. Havemeyer, Jr.	5 45 16	2 19 16
Wawa, R. Brooks	5 45 44	2 19 44
Barbara, W. Rutherfurd	5 46 04	2 20 04
Breeze, W. G. Roelker, Jr.	5 46 37	2 20 37
Asahi, L. Warren and W. S. Miller	Withdrew.	

Wednesday, Aug. 27.

The race sailed on Wednesday was for a cup offered by Mr. H. O. Havemeyer, Jr. The course was from Rose Island to and around Brenton's Reef Lightship and return. The boats had all the wind they wanted for full sail, and several squalls were encountered. Carolina got the best of the start, and was in the lead when her fin got tangled up with a lobster pot, which caused some delay, and in all probability lost her the race. Barbara won by seventeen seconds. The summary, start 3:44:

	Finish.	Elapsed.
Barbara, W. Rutherfurd	5 15 51	1 31 51
Carolina, Pembroke Jones	5 16 08	1 32 08
Wawa, R. Brooks	5 16 28	1 32 28
Veda, W. L. Stow	5 18 52	1 34 52
Asahi, L. Warren and W. S. Miller	5 19 08	1 35 08
Esperanza, H. O. Havemeyer, Jr.	5 20 16	1 36 16

Thursday, Aug. 28.

The cup offered by Mrs. Winthrop Rutherfurd was sailed for on Thursday. The wind all through the race was light and variable from the S.E., and the contest was a most unsatisfactory one. Carolina won by over three minutes. The summary, start 3:32:

	Finish.	Elapsed.
Carolina, Pembroke Jones	5 01 56	1 29 56
Esperanza, H. O. Havemeyer, Jr.	5 05 01	1 33 01
Breeze, W. G. Roelker, Jr.	5 06 12	1 34 12
Asahi, L. Warren and W. S. Miller	Withdrew.	
Barbara, W. Rutherfurd	Withdrew.	
Wawa, R. Brooks	Withdrew.	

Friday, Aug. 29.

The race sailed by the 30-footers on Friday was for the cup offered by Mr. Henry Walters. The course was a triangular one, and the breeze was light from the S. Esperanza started in the lead, but she was soon passed by Barbara, which boat stayed in first place up to the finish and won by nearly two minutes. The summary, start 3:23:

	Finish.	Elapsed.
Barbara, W. Rutherfurd	5 41 38	2 18 38
Wawa, R. Brooks	5 43 19	2 20 19
Carolina, Pembroke Jones	5 44 49	2 21 49
Breeze, W. G. Roelker, Jr.	5 48 08	2 25 08
Esperanza, H. O. Havemeyer, Jr.	5 55 02	2 32 05
Asahi, L. Warren and W. S. Miller	Withdrew.	

Saturday, Aug. 30.

The 30-footers sailed a race on Saturday for a cup offered by Mr. Pembroke Jones. The cup was won by his own boat, Carolina, but that boat was sailed by Mr. Ralph N. Ellis. A good S.W. breeze held throughout the race, and the boats sailed over the Dyer's Island course. On the run up to the leeward mark Esperanza held the lead, but on the beat back to the finish line Carolina took the lead and beat Wawa, the second boat, by 26s. The summary, start 3:26:

	Finish.	Elapsed.
Carolina, Pembroke Jones	5 39 15	2 13 17
Wawa, R. Brooks	5 39 43	2 13 43
Breeze, W. G. Roelker, Jr.	5 40 58	2 14 58
Esperanza, H. O. Havemeyer, Jr.	5 42 57	2 16 57
Veda, W. L. Stow	5 45 33	2 19 34
Barbara, W. Rutherfurd	Withdrew.	
Asahi, L. Warren and W. S. Miller	Withdrew.	

The racing for the Paget cup has been quite close. The standing at the end of the month of August shows that Esperanza has 67 points and Carolina 61.

The Seawanhaka Corinthian Y. C. has made arrangements for winter quarters in New York city. The following notice has been sent out by Mr. Francis G. Stewart, the secretary of the Club:

The trustees of the Seawanhaka Corinthian Y. C. take pleasure in notifying the members of the club that they have secured rooms in the city, on the first floor of the Mansfield, on West Forty-fourth street, adjoining Sherry's, and have appointed the following committee to take charge of the city quarters: Franklin A. Plummer, Chairman; Beverly R. Robinson, Henry M. Crane, John D. Kilpatrick, Louise de F. Donner, Wilson M. Powell, Jr., and Francis G. Stewart.

Larchmont Y. C.

LARCHMONT, LONG ISLAND SOUND.

Saturday, Aug. 30.

THERE were only seven starters in the special race given by the Larchmont Y. C. on Saturday, Aug. 30.

Elmina did not materialize and Mr. Charles Smithers, owner of Muriel, not wishing to take a sailover, did not start. The two 60ft. sloops Weetamoe and Neola are both down east preparing for the races to be given by the Newport Y. R. A. Yankee and Rainbow were the only 70-footers to start, Mineola having been laid up.

As there was no wind at 12 o'clock, the time the race was to have started, it was postponed until 12:30. In the meantime a nice S.W. breeze sprung up, which held all through the race. The course for the 70-footers was east three-quarters north, six miles; southwest, five-eighths west, six miles, and north northwest three miles, which triangle was sailed twice, making thirty miles. The 43-footers went east four miles, southwest four miles and north northwest three miles, the circuit of eleven miles being sailed twice, making twenty-two miles, while the Larchmont 21-footers covered a 5½-mile triangle twice. The first leg was a reach, the second on the wind and the third a run.

The preparatory signal was given at 12:30, and the seventies started five minutes later. Rainbow was first over the line, but Yankee was just on her weather quarter. On the reach to the first mark, Rainbow drew ahead a little, but on the windward work Yankee worked through Rainbow's lee and at the second mark she was 1m. 18s. in the lead. On the run across the Sound, Rainbow set her spinnaker, but it did more harm than good. Yankee stuck to her ballooner and continued to get away from Rainbow, and at the end of the first round she was 2m. 57s. ahead. On the first leg of the second round Rainbow cut down Yankee's lead somewhat. On the windward work the boats' positions remained unchanged, and on the run across to the finish Yankee again gained a little and won by 2m. 37s.

The 43-footers were started at 12:40. Effort, cleverly handled by Mr. Addison G. Hanan, got the best of the start. Soon after starting these boats got in a luffing match, which resulted in Effort's favor. From this time on Effort continued to get away from Dorwina, and finally won by 4m. 6s.

Three of the Larchmont 21-footers started and Adelaide had the best of it from the start and beat Dorothy, the second boat, by 4m. 50s. The summary follows:

Sloops—Class H—60 to 70ft. Racing Length—Start, 12:35.

	Finish.	Elapsed.
Yankee, J. R. Maxwell	4 00 08	3 25 08
Rainbow, Cornelius Vanderbilt	4 02 45	3 27 45

Sloops—Class L—36 to 43ft. Racing Length—Start, 12:40.

Effort, F. M. Smith	3 57 34	3 17 34
Dorwina, C. V. Brokaw	4 01 41	3 21 40

Larchmont 21ft. Class—Start, 12:45.

Houri, J. H. Esser	3 24 24	2 39 24
Dorothy, L. D. Spence	3 21 27	2 36 27
Adelaide, J. J. Dwyer	3 16 37	2 31 37

Monday, Sept. 1.

Fifty-two boats started in the fall regatta of the Larchmont Y. C. sailed on Labor Day. The race was a great success, and a good S.W. breeze held all through the day.

The 70-footers sailed twice over a fifteen-mile triangle. The first leg was a reach of six miles, the second a beat of six miles and the third a reach of three miles. Yankee and Rainbow got away at 11:35, the former a little in the lead, but to leeward. After a luffing match, which lasted a few minutes, the boats squared away on their course. Yankee immediately went to the front. Rainbow's sails have been fitting very badly ever since the New York Y. C. cruise, and should have been recut. This has been a great handicap to Rainbow, and accounts for the poor showing she has made, for she has been well sailed by Mr. E. A. Willard. Yankee beat Rainbow by 5m. 15s.

In the 43ft. class Effort, sailed again by Mr. Addison G. Hanan, gave Dorwina another bad beating. Dorwina has been poorly sailed of late, and that is why Effort has won with such great regularity. Dorwina was first across the starting line, but was soon passed by Effort, which boat was never again headed, and won by 11m. 36s. The 43-footers covered an eleven-mile triangle twice.

Four boats started in the 36ft. class. Spasm got a good lead soon after the start, and to every one's surprise stayed in first place and beat Leda by 3m. 8s.

In the 30ft. class Mimosa led all over the course, but lost the race on time allowance to Marguerite.

Jolly Tar won in the raceabout class by 1m. 5s. In the Larchmont 21ft. class Dorothy won, beating Adelaide by 15s. Pristis beat Trouble in class I by 3m. 58s. Knave won by 1m. 53s. in the New Rochelle one-design class. In class R Flim Flam won by 10m. 16s. Bab beat Lambkin 8m. 10s. in the Manhasset Bay one-design class. The summary follows:

Sloops—Class H—70 to 80ft. Racing Length—Start, 11:35.

	Finish.	Elapsed.
Yankee, J. R. Maxwell	3 27 41	3 52 41
Rainbow, Cornelius Vanderbilt	3 32 56	3 57 56

Sloops—Class L—36 to 43ft. Racing Length—Start, 11:50.

Dorwina, C. V. Brokaw	3 30 08	3 40 08
Effort, F. M. Smith	3 18 32	3 28 32

Sloops—Class M—30 to 36ft. Racing Length—Start, 11:55.

Hanley, C. D. Mallory	4 07 48	4 12 48
Spasm, E. D. King	3 43 39	3 48 39
Leda, H. L. Maxwell	3 46 47	3 51 47
Possum, E. S. Ballou	Disabled.	

Yawls—Class M—30 to 36ft. Racing Length—Start, 11:55.

Tern, John Hyslop	4 07 45	4 12 45
Sekana, A. B. McCreery	4 03 30	4 08 30
Zenoble, H. W. Lator	4 11 08	4 16 08
Escape, George Matthews	4 13 08	4 18 08

Sloops—Class N—25 to 30ft. Racing Length—Start, 12:00.

Mimosa, T. L. Park	4 03 36	4 03 36
Alerion, A. H. Alker	4 05 03	4 05 03
Helen, M. P. Fuller	4 07 32	4 07 32
Marguerite, J. F. Dingee	4 03 58	4 03 58
Pyxie, E. L. Hopkins	Withdrew.	

Corrected time, Marguerite, 4.02.18.

Larchmont 21ft. Class—Start, 12:05.

Dorothy, L. H. Spence	2 50 00	2 45 00
Houri, J. H. Esser	2 51 45	2 46 45
Adelaide, J. J. Dwyer	2 50 15	2 45 15

Raceabouts—Start, 12:05.

Davis, G. L. Pirie	2 43 50	2 38 50
Snapper, A. B. Alley	2 41 28	2 36 28
Whistle Wing, H. M. Crane	2 41 46	2 36 46
Jolly Tar, S. Howland	2 40 23	2 35 23
Sis, F. T. Bedford, Jr	2 44 43	2 39 43
Scamp, A. L. Pirie	2 46 33	2 41 33
Jolly Roger, T. B. Bleecker	2 42 57	2 37 57
Rascal, S. C. Hopkins	2 46 56	2 41 56
Hobo, T. L. Park	2 43 57	2 38 57

Sloops—Class Q—18 to 21ft.—Start, 12:10.

Gazabo, N. P. Vulte	3 18 45	3 08 45
Trouble, W. H. Childs	3 05 25	2 55 25
Pristis, Iselin & Law	3 01 27	2 51 27

New Rochelle Raceabouts—Start, 12:10.

Caper, P. L. Howard	3 28 34	3 18 34
Knave, R. H. Bavier	3 17 07	3 07 07
Ace, W. H. Bavier, Jr	3 19 00	3 09 00
Deuce, L. D. Huntington, Jr	3 22 12	3 12 12

Sloops—Class R—Under 18ft.—Start, 12:10.

Eleanor, R. Jacob	3 34 07	3 24 07
Pandora, N. B. Towle	3 21 48	3 11 48
Cricket, H. C. Pryer	3 34 59	3 24 59
Flim Flam, A. D. Prince	3 21 52	3 11 52

Corrected time of Flim Flam, 3.01.32.

Manhasset Bay Raceabouts—Start, 12:10.

Lambkin, S. W. Roach	3 30 01	3 20 01
Arizona, G. A. Corry	3 35 45	3 25 45
Bab, J. R. Hoyt	3 21 51	3 11 51
Mist, A. H. Alker	3 42 26	3 32 26

Horseshoe Harbor One-Design Class—Start, 12:15.

Joan	Withdrew.	
Gloomy Gus, L. H. Riley	3 47 37	3 32 37
Indra, W. S. Allen	Withdrew.	

Catboats—Class W—Under 18ft. Racing Length—Start, 12:15.

Scout, A. E. Cuqua	4 03 25	3 48 25

Dory Class—Start, 12:15.

Prize, H. H. Van Rensselaer	3 15 00	3 00 00
Marguerite, W. F. Johnston	Disqualified.	

Special 15ft. Class—Start, 12:15.

Sneaker, R. N. Kitching	4 28 33	4 23 33
Champion, T. J. Dee	Withdrew.	

The winners were Yankee, Effort, Spasm, Sekana, Marguerite, Jolly Tar, Dorothy, Pristis, Knave, Flim Flam, Bab, Gloomy Gus, Scout, Prize and Sneaker.

Indian Harbor Y. C.

GREENWICH, CONN.

Saturday, Aug. 30.

THE fall regatta of the Indian Harbor Y. C. was sailed on Saturday, Aug. 30. The race was scheduled to start at noon, but on that hour there was no breeze and the starting time was postponed until 1:30 P. M. At this hour a fresh S.W. breeze had come up and the preparatory signal was given.

The 36ft. and 30ft. sloops sailed twice over a course from the starting line, E. by N., 3½ miles to the Cow's Can Buoy, off Shippan Point; thence S.W., ½ S., 3¼ miles, and thence to the starting line, N.W. by N., 2¼ miles, a total distance of 18 miles. The 21ft. and 18ft. sloops and the Manhasset and New Rochelle one-design boats went once over the same course, a distance of 9 miles. The raceabouts and the 25ft. sloops went a distance of 12 miles, twice over a course from the starting line, E. by N., 1⅝ miles; thence S. ¾ W., 2⅛ miles, and thence to the starting line, N.W. by N., 2¼ miles. The Indian Harbor sailabouts sailed once over the same course.

The S.W. wind made the first leg of the course a broad reach, the second leg a beat to windward and the third a spinnaker run.

The 36-footers were sent away at 1:35, and three boats started, Leda, Spasm and Hanley; the former crossed first in the weather berth and from that time on she was never headed. At the end of the first round Leda was 2m. 33s. ahead of Spasm, and she finally won, beating Spasm 3m. 40s., and Hanley 3m. 34s. The special cup offered by Com. Frank Tilford goes to Leda.

Four boats started in the 30ft. class, Mimosa, Marguerite, Alerion and Empronzi. Mimosa got the best start and led all over the course. Marguerite was second across the line with Alerion, and Empronzi some distance behind. Alerion overtook Marguerite, but these two boats could not catch Mimosa. Empronzi broke down before the end of the first round and withdrew. On the second leg of the course Mimosa increased her lead and won by 2m. 35s.

The four raceabouts had a close race. At the start they were well together, but Mavis and Jolly Roger soon got away from Hobo and Scamp. At the end of the first round Jolly Roger was only two seconds ahead of Mavis. On the second round Jolly Roger got away from Mavis a little and won by 15s. She beat Scamp and Hobo 3m. 36s. These boats sailed a dead heat.

Some good racing was seen in the smaller classes.

The Regatta Committee—Frank Bowne Jones, Charles F. Kirby, Charles P. Tower, Charles E. Simms, and Raymond Babcock—were on board Rear-Com. R. P. Whittaker's steam yacht Wissol. The summary follows:

Sloops—Class M—30 to 36ft. Racing Length—Start, 1:35.

	Finish.	Elapsed.
Leda, H. L. Maxwell	5 09 36	3 34 36
Spasm, E. D. King	5 12 16	3 37 16
Hanley, C. D. Mallory	5 23 10	3 38 10

Sloops—Class N—25 to 30ft. Racing Length—Start, 1:35.

Mimosa, T. L. Park	5 18 59	3 43 59
Marguerite, J. F. Dingee	5 21 42	3 46 42
Enpronzi, Alfred Peats	Disabled.	
Alerion, A. H. Alker	5 21 34	3 46 34

Raceabouts—Start, 1:40.

Scamp, A. H. Pirie	5 01 28	3 21 28
Mavis, G. L. Pirie	4 57 37	3 17 37
Hobo, T. L. Park	5 01 28	3 21 28

Sloops—Class P—21 to 25ft. Racing Length—Start, 1:45.

Robin Hood, G. E. Gartland	5 05 06	3 20 06
Ojibway, D. P. Morse	5 08 46	3 23 46
Pristis, Iselin & Law	5 12 16	3 27 16
Viper, Newcombe & Elson	5 06 14	3 21 14

Sloops—Class Q—18 to 21ft. Racing Length—Start, 1:50.

Gazabo, N. P. Vulte	4 08 24	2 18 24
Trouble, W. H. Childs	4 00 11	2 10 11
Montauk, J. P. Sheldon	4 07 28	2 17 28
Cicada, L. Cranford	3 59 07	2 09 07
Malillian, R. P. Thompson	4 16 10	2 26 10
Bogie, E. H. Outerbridge	Withdrew.	
Eos, E. D. Mead	4 07 16	2 17 16
Neola, J. S. Johnson, Jr	3 59 24	2 09 24

Manhasset Bay One-Design Class—Start, 1:50.

Mist, J. W. Alker	4 21 56	2 31 56
Bab, J. R. Hoyt	4 17 56	2 27 56

New Rochelle One-Design Class—Start, 1:50.

Caper, P. L. Howard	4 17 58	2 27 58
Knave, R. N. Bavier	4 17 22	2 27 22
Ace, W. N. Bavier, Jr	4 16 59	2 26 59

Sloops—Class R—18ft. and Under Racing Length—Start, 1:55.

Pandora, H. B. Towle	4 18 40	2 23 40
Cricket, H. C. Pryer	4 17 57	2 22 57
Tar Baby, T. A. Howell	4 26 28	2 31 28

India Harbor Sailabouts—Start, 2:00.

Cero, R. Mallory, Jr	4 27 35	2 27 35
Queenie, F. Tilford	4 29 25	2 29 25
Noggin, C. S. Somerville	4 18 08	2 18 08
Stingy, E. E. Zittel	4 20 25	2 20 25

Catboats—Class W—18ft. Racing Length and Under—Start, 2:05.

Scud, D. B. Abbott	4 40 55	2 35 55
Bantam, F. Page	4 45 26	2 40 26
Louie Belle, J. M. Williams	4 45 40	2 40 40

The winners were Leda, Mimosa, Jolly Roger, Robin Hood, Cicada, Bab, Ace, Noggin and Louie Belle.

Monday, Sept. 1.

A special regatta of the Indian Harbor Y. C. was held on Labor Day. There were seventeen starters in the handicap class, and four of the Indian Harbor sailabouts went over the course.

The wind was moderate from the southwest. For yachts in the handicap race and for oyster sloops the course was to the gas buoy, off the eastern end of Little Captain Island, S.E. ½ S. 1¼ miles; thence to a club spar buoy placed ¼ ile S. of Great Captain Light S.W. by W. 1⅜ miles; thence to the red spar buoy off the western end of Great Captain Island, W. by N., ½ N. ½ mile; thence to the red spar buoy on Carmel Reef N. by E. ¼ E., ¾ of a mile, and thence back E.N.E. ½ E. 1⅛ miles. The course was twice sailed over, making the total distance 10 nautical miles.

Several boats met with accidents—Empronzi carried away her spreaders, Surprise parted her throat halliards. Crab, one of the contestants in the handicap class, shipped a big sea near one of the outer marks and was nearly swamped. Mr. J. M. Williams, owner of Louie Belle, ran alongside of Crab and took off her owner and a lady that were on board, and sent them ashore. The boat was towed into the harbor. The finishes in the handicap class were very close. Robin Hood was a winner by 9s.

The Indian Harbor sailabouts had a good race, and Noggin won.

Venture, one of the oyster boats, carried away her topmast and declined to sail in her crippled condition. Susie C. covered the course alone for a special prize. The summary:

Handicap for Sloops 36ft. and Under.

	Start.	Finish.
Crab, T. R. Pell	Disabled.	
Bantam, F. Page	2 45 00	5 09 03
Louie Belle, J. M. Williams	Withdrew.	
Kerry, E. W. Russell	Withdrew.	
Adeline, C. W. Trippe	3 05 00	5 15 47
Bogie, B. H. Outerbridge	3 05 00	5 14 43
Verona, H. S. Osborne	3 05 00	5 09 08
Malillian, R. B. Thompson	3 10 00	5 12 24
Eos, E. D. Mead	3 15 00	5 14 25
Montauk, G. P. Sheldon	3 15 00	5 18 27
Neola, E. W. Russell	3 20 00	5 16 30
Cicada, L. Crawfurd	3 25 00	5 13 27
Robin Hood, G. E. Gartland	3 25 00	5 08 54
Viper, Newcombe & Elson	3 25 00	5 14 08
Why Not, J. M. Rosseau	2 40 00	5 27 01
Surprise, E. Nagel	2 40 00	Disabled.
Empronzi, Alfred Peats	3 35 00	Disabled.

Indian Harbor Sailabouts—Start, 2:45.

	Finish.	Elapsed.
Noggin, C. S. Somerville	4 18 59	1 33 59
Stingy, E. E. Zittel	4 20 18	1 35 18
Betty, Swods & Hyde	4 23 45	1 48 25
Bug, G. F. Dominick, Jr	4 24 26	1 39 26

Oyster Sloops—Start, 4:30.

Susie C., Stanley Chard	5 23 21	0 53 21
Ventura, S. Starkins	Withdrew.	

New York Y. C.

Autumn Sweepstakes and Sail-off of the Annual Regatta, New York, Sept. 11.

The annual regatta, having been called off on account of calm, at 4 P. M., with the assent of the contestants, will be merged in the autumn sweepstakes, and both events will be sailed on Sept. 11.

Club Prizes, Regular.—In each class there will be a prize for first, if two or more start; and a prize for second, if four or more start.

Courses Nos. 1 and 2.—Racing trim and cruising trim. Cruising trim cups, two-thirds value of regular cups.

Handicap Cups. Sealed Handicaps.—Ex-Rear-Com. Bergen offers a cup for schooners, in one class, and a cup for single-masted vessels and yawls, in one class, open to vessels launched prior to Nov. 1, 1896. Course No. 2, cruising trim.

Special Cups.—The Bennett Club Course Cups, for schooners and single-masted vessels and yawls, respectively. Challenge cups, club book, p. 290. Course No. 1, racing trim.

Naval Alumni Association of Annapolis Challenge Cups. A cup for schooners in one class and a cup for single-masted vessels and yawls in one class. Course No. 1, racing trim.

Each winner of a challenge cup will receive a medal.

Rear-Com. C. L. F. Robinson offers a cup for the vessel making the fastest corrected time over course No. 1, all sailing as one class, with allowance for rig as in R. R. II. Racing trim.

Sweepstakes.—Stakes of $25 for each vessel entered, must be deposited with the committee by 9 P. M. Sept. 10.

Entries.—Will close at the club house at 9 P. M. Sept. 10.

Classification.

SCHOONERS.

Class A—All over 95ft. racing length.
Class B—Not over 95 and over 85ft. racing length.
Class C—Not over 85 and over 75ft. racing length.
Class D—Not over 75 and over 65ft. racing length.
Class F—Not over 65ft. racing length.

SINGLE-MASTED VESSELS AND YAWLS.

Class G—All over 80ft. racing length.
Class H—Not over 80 and over 70ft. racing length.
Class I—Not over 70 and over 60ft. racing length.
Class J—Not over 60 and over 51ft. racing length.
Class K—Not over 51 and over 43ft. racing length.
Class L—Not over 43 and over 36ft. racing length.
Class M—Not over 36ft. racing length.

Seawanhaka-Corinthian Y. C.

OYSTER BAY, LONG ISLAND SOUND.

Saturday, Aug. 30.

THE Seawanhaka knockabouts sailed a special race over inside course No. 2 on Saturday, Aug. 30. The race was for a cup offered by Mr. Henry H. Landon. The breeze was strong from the S.W. Wyntje won by 40s. Heron did not finish. The summary, start 3:20:

	Finish.	Elapsed.
Wyntje, C. Hoyt, Jr.	5 22 14	2 02 14
Gowan, F. G. Stewart	5 22 54	2 02 54
Lucille, H. H. Landon	5 23 49	2 03 49
Marcia, Dresser & Jacquelin	5 26 46	2 06 46
Bobs, W. A. Stewart	5 28 01	2 08 01
Heron, F. R. Coudert	Withdrew.	

New Restricted Classes for the Atlantic Y. C.

For some time past it has been the desire of a number of Atlantic Y. C. members to secure several classes of boats of moderate size in which good racing was to be had. The one-design plan was not approved of nor was it desired that the boats should be built under any formula. This together with keeping the price of the boats down to a reasonable figure was what Mr. George Hill, the Secretary of the club, had in mind when he sent out letters to a number of reputable builders, of which the following is a copy:

Aug. 11, 1902.

Gentlemen: I would be pleased to receive from you on or before Sept. 1, sketch plans to 1in. scale, with sketch specification and proposal for one or more of the following restricted classes, and would be obliged if you would advise me as to whether or not I may expect to receive the same from you. Your proposal to state the price bid for one boat and the price bid should three of the same or similar type be ordered.

It is the intention of the committee to secure the building of boats of different types as far as possible, as we wish to determine by actual practice which type is best suited to our waters. In furtherance of this idea you may if you wish, submit several different designs for each class. Of course the committee reserve the right to reject any or all proposals. Should the order be given for any yachts, delivery would not be expected prior to May 15, 1903. Should you wish to submit models instead of drawings, they must not exceed 24in. long, including the back board, and must be simply varnished with the erect and inclined waterlines shown on the same by a fine black line. The general instructions are as follows:

Class.	Inc. L.W.L., Feet.	Sail Area, Square Feet.	Displacement, Pounds.	Draft. Feet.
N	30	1,000	10,000	7
P	25	600	6,000	6
O	21	400	3,500	5
R	18	325	2,800	4

The inclined waterline is to be the length of the load waterline, as determined from the plans when the yacht is inclined to the greatest angle at which she should be heeled when under way. This angle is to be stated in the certificate. The sail area is to be the actual area of the sails used when going to windward when full stretched, 80 per cent. of the area being placed in the mainsail. A balloon jib may be carried, but the luff must not go outside of the luff of the jib. A spinnaker may be carried having an area equal to 75 per cent. of the area of the sail aft of the main mast. The displacement stated is a minimum. A greater displacement may be used if desired. The ballast must not exceed 40 per cent. of the displacement. The construction should be of yellow pine or cypress planking; oak keel and frames; galvanized iron fittings; deck and cabin house canvased; coaming of oak; spars solid; blocks of bronze; stays of steel; the sails should be light and mildew proofed. Centerboard and rudder of steel galvanized. No slide on the cabin top, but two doors to get into the cabin, which would project 12in. above deck for the smaller yachts, and not more than 18in. for the larger ones. Small square hatch forward of the mast. Yacht to steer with a tiller with a 7ft. dinghy of the sharpy type with oars and rowlocks and a fender on the bow. Yacht equipment to include all light sails, water proofed; sail cover for mainsail; two small ring life buoys, two anchors, fifteen fathoms of Manila cable, ten fathoms of 5/8in. running line; sweep, boat hook, lead and lead line.

(Signed), GEORGE HILL.

American Y. C.

MILTON POINT, LONG ISLAND SOUND.

Saturday, Aug. 30.

THE two one-design classes of the American Y. C. sailed a club race in a fresh S.W. wind over a triangular course on Saturday, Aug. 30. Rascal won in the 21ft. class, and Rattler won in the 18ft. class. The summary:

21ft. Class—Start, 2:30.

	Finish.	Elapsed.
Rascal, S. C. Hopkins	5 05 32	2 35 32
The Kid, O. Harriman, Jr	5 06 16	2 36 16
Howdy, S. Wainwright	5 10 34	2 40 34
Ping Pong, W. H. Browning	5 10 52	2 40 52
Jolly Tar, S. Howland	5 11 20	2 41 20
Cricket, H. Willetts	5 12 15	2 42 15

18ft. Class—Start, 2:38.

Rattler, J. E. Bowles	5 33 19	2 55 19
Zelica III., H. A. Sherman	5 35 31	2 37 31
Hustler, J. T. Downey	5 36 32	2 58 32
Mongoose III., Simeon Ford	5 37 32	2 59 32
Driftwood, C. C. Townsend	Withdrew.	

Monday, Sept. 1.

Rear-Com. W. H. Browning offered prizes for which boats of the 21 and 18ft. one-design classes raced for on Monday, Sept. 1. Cricket won in the 21ft. class and Rattler won in the 18ft. class. The summary:

21ft. Class—Start, 2:30.

	Finish.	Elapsed.
Cricket, H. Willetts	4 52 46	2 22 46
Ping Pong, W. H. Browning	4 54 58	2 24 58
Jolly Tar, S. Howland	4 55 02	2 25 02
Rascal, S. C. Hopkins	5 19 59	2 39 53
Howdy, L. Wainwright	Withdrew.	

18ft. Class—Start, 2:35.

Rattler, J. E. Bowles	3 17 42	2 42 42
Hustler, J. T. Downey	3 17 51	2 42 51
Mongoose III., S. Ford	3 18 32	2 43 32
Zelica III., H. S. Sherman	3 24 55	2 49 55
Driftwood, O. C. Townsend	3 27 03	2 52 03

Seawanhaka-Corinthian Y. C.

OYSTER BAY, LONG ISLAND SOUND.

Wednesday, Aug. 27.

CHIPMUNK and Eleanor, two boats of the 18ft. sloop class, sailed a race for a silver prize cup on Wednesday. The boats covered inside course No. 2. At the start the wind was light from the N., but later swung around to S.W. and became stronger. Chipmunk led over the starting line, but was passed by Eleanor. At the end of the second round Chipmunk led by 1m. 42s. In the freshening breeze Eleanor did better and finished only 18s. behind Chipmunk. The summary, start 11:55:

	Finish.	Elapsed.
Chipmunk, B. S. Young	3 04 12	2 09 12
Eleanor, Robert Jacob	3 04 30	2 09 30

Bridgeport Y. C.

BLACK ROCK, CONN.

Saturday, Aug. 23.

SIXTEEN boats started in the annual regatta of the Bridgeport Y. C. The breeze was fresh from the N. by W., and the boats made good time over the course. Mimosa won again in the 30ft. class, beating Marguerite by nearly three minutes. In the 25ft. class Folly had matters all her own way and defeated Arbeeka easily. Hobo had no competitor in the raceabout class, and was forced to take a sailover. Vagabond won in the 25ft. catboat class, beating Shippan, the second boat, by over seven minutes. Considerable interest was centered in the race for 25ft. power launches. Mephisto won handily. The summary:

30ft. Class—Start, 3:00.

	Length.	Finish.
Mimosa	29.96	4 42 40
Marguerite	29.73	4 45 21
Kit	30.00	4 51 24

25ft. Class—Start, 3:05.

Folly	24.93	5 06 02
Arbeeka	22.88	5 13 11

Raceabouts—Start, 3:10.

Hobo	20.83	4 55 33

25ft. Catboats—Start, 3:20.

Shippan	25.00	5 49 44
Vagabond	24.60	5 42 18
Critic	21.40	5 52 16

18ft. Catboats—Start, 3:20.

Juanita	15.40	6 31 20
Marietta	15.90	6 30 15
Monsoon	18.00	5 59 42

25ft. Power Launches—Start, 12:00.

Mephisto	....	12 45 07
Topaz	....	12 55 27
Laurel	....	12 55 55
Idunno	....	12 56 31

Sachem's Head Y. C.

GUILFORD, CONN.

Monday, Aug. 25.

ON Monday the Sachem's Head Y. C. sailed the sixth race for points in the season's championships. The contests in all three classes were interesting and exciting. The wind was fresh from the N. and squally. The Seawanhaka knockabouts sailed over a course eleven and one-half miles long, and Thelga won. Possum won in the Sachem's Head one-design class, and Hunky Dory won in the dory class. The summary:

Seawanhaka Knockabouts—Start, 10:23.

	Finish.	Elapsed.
Thelga, C. P. Clark	12 17 58	1 54 58
Senta, R. C. Mitchell	12 18 00	1 55 00
Frances, R. C. Lincoln	12 21 31	1 58 31
Kittywink, J. J. Phelps	12 24 11	2 01 11
Midge, W. E. Peck	Withdrew.	

Sachem's Head One-Design Class—Start, 10:28.

Possum, S. W. Sharpe	11 25 52	0 57 52
Chipmunk, J. E. Wayland	11 27 02	0 59 02
Mosquito, Mr. Tyler	11 28 32	1 00 32

Mosquito Class—Start, 10:33.

Hunky Dory, Thos. Prentice	11 59 30	0 46 30
Gretchen, W. H. Deming	11 22 00	0 49 00

The present standing of the boats in points is as follows:

Seawanhaka Knockabouts—Senta, 36; Gloria, 29; Frances, 27; Kittywink, 27; Midge, 19; Thelga, 15; Ariel, 11.

Sachem's Head One-Design Class—Possum, 26; Chipmunk, 16; Ghoorka, 16; Mosquito, 6; Minnie C., 3.

Hempstead Harbor Y. C.

SEA CLIFF, LONG ISLAND SOUND.

Wednesday, Aug. 27.

THE first race for power boats ever held by a club belonging to the Y. R. A. of Long Island Sound took place under the auspices of the Hempstead Harbor Y. C. on Wednesday, Aug. 27. The boats were divided into three classes, the "red class" being made up of boats of 15ft. or under; the "white class" of 20ft. or under, and the "blue class" of 25ft. or under. The weather was clear and the water smooth, making ideal conditions for launch racing. The race was a great success in every way. Mr. Ward Dickson handled the regatta. The summary:

Red Class—Six Miles—Start, 3:05.

	First Round.	Finish.	Elapsed.
Rake Handle, A. D. Tappan	3 53 35	4 43 12	1 38 12
Golden Rod, H. Van Cott	3 50 30	4 34 09	1 29 09
Wee-Wee, E. T. Jackson	3 53 30	4 41 52	1 36 52
Scout, August Belmont	3 53 38	4 42 45	1 37 45

White Class—Ten Miles—Start, 3:10.

Louise, J. D. Sayre	4 03 45	5 00 19	1 50 19
Yvonne, G. H. Morin	4 10 51	5 15 37	2 05 37
Memory, R. N. Bavier	3 59 00	4 48 11	1 38 11
Valpa, W. M. Valentine	4 06 05	5 03 30	1 53 30
Americus, A. P. Dunlap	4 03 30	4 56 01	1 46 01
Scout, F. Van Cott	4 02 05	4 54 45	1 44 45
El Capitan, H. Douden, Jr.	4 04 30	5 00 18	1 50 18
Red Rover, R. F. Cocks	Did not start.		

Blue Class—Ten Miles—Start, 3:15.

Pawnee, F. A. Snedeker	4 09 27	5 03 52	1 48 52
Ariel, W. F. Hicks	4 08 25	5 01 53	1 46 53
Wriggle, G. S. Wilson	4 07 55	5 01 27	1 46 27
Cabot, G. Stelz	4 11 15	Withdrew.	

The winners were Golden Rod, Memory and Wriggle.

YACHT CLUB NOTES.

Vice-Com. Frederick G. Bourne, of the New York Y. C., has purchased from Mr. N. B. Stewart, of Greenock, Scotland, the English-built steam yacht Maria. Maria was designed by Mr. G. L. Watson and built by Messrs. Napier, Shanks & Bell, at Glasgow, in 1896. Maria is 217ft. on the waterline, 27.65ft. breadth and 17.8ft. deep. The yacht has two decks and six watertight bulkheads. She is also fitted with an electric light plant.

Messrs. Colven & Bickmann, have sold through their agency the steam yacht Alma for the estate of the late Charles J. Clarke, of Pittsburg, to Mr. E. S. Clouston, of Montreal.

Com. Morton F. Plant, of the New Haven Y. C., has sold his steel schooner Ingomar to Mr. Frank J. Olney, of Providence.

The thirteenth annual open regatta of the Stuyvesant Y. C. will be held on Sunday, Sept. 28.

Western Yachts.

Pewaukee Regatta.

CHICAGO, Ill., Aug. 23.—In the regatta of Pewaukee Y. C., sailed to-day, Aspirant won in A class, Dora in B class. Scores:

Class A.

	Finish.	Elapsed.
Aspirant, Edwin Wollager	5 22 27	1 22 27
Comet, Fred Pabst	5 23 48	1 23 48
Calumet, J. W. Scheets	5 29 53	1 29 53
Defiance, Ed. Schwartzburg	5 33 33	1 33 33
Elk, Ed. Leunzman	5 39 45	1 39 45

Class B.

Dora, W. H. Meyer	5 43 20	1 43 26
Kite, George Poppert	6 02 26	1 57 26
Allemac, Kopemeyer	6 10 15	2 05 15

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

YACHTING NEWS NOTES.

Mr. Frederick W. Ayer, who formerly owned the Burgess 40-footer Vandal has had a steam yacht built by the Eastern Manufacturing Co., at South Brewer, Maine, from designs made by Mr. Charles B. Clark, who superintended the vessel's construction. The yacht was launched on Aug. 6, and was named Helena. The hull, which is built of wood, is 108ft. 8in. over all, 17ft. 2in. breadth and 10ft. 4in. depth. Helena has a mahogany deck house forward and is schooner rigged. Her engines are 300 horsepower, and it is expected they will drive the yacht at about fifteen knots. She is lighted throughout by electricity. Helena is the largest yacht ever built on the Penobscot River.

Rifle Range and Gallery.

Cincinnati Rifle Association.

CINCINNATI, O.—The following scores were made in regular competition by members of the Cincinnati Rifle Association, at Four-Mile House, Reading Road, Aug. 24. Conditions, 200yds., off-hand, at the German ring target. Payne was declared champion for the day with the good score of 221. Weather clear, Thermometer 80 degrees. Wind from 3 to 9 o'clock, and blowing in the shooters' faces. Jonscher made the top score on the Honor target. The scores:

Payne	221	219	215	215	214	Roberts	202	201	199	196	191
Hasenzahl	220	219	218	215	211	Hofer	202	189	182	177	175
Gindele	217	215	213	212	206	Hoffman	201	199	191	191	182
Nestler	211	208	208	207	205	Odell	200	199	198	189	176
Drube	210	204	196	166	...	Jonscher	198	198	198	191	182
Bruns	210	200	197	189	...	Weinheimer	193	187	185	175	173
Trounstine	206	199	198	197	191	Uckotter	188	185	165	...	...
Lux	203	203	202	198	197	Freitag	188	184	177	177	171

Honor Target.—Payne 62, Hasenzahl 52, Gindele 61, Nestler 58, Drube 39, Trounstine 58, Lux 56, Roberts 52, Hofer 52, Hoffman 59, Odell 56, Jonscher 69, Weinheimer 52, Freitag 58.

A grand prize shoot will be given by the Cincinnati Rifle Association, Sunday, Sept. 28, at Four-Mile House, Reading Road. There will be rest and off-hand shooting, and a large list of valuable and select prizes. Any rifle allowed excepting calibers over .45 and jacketed bullets or telescope sights. Open to all. Great inducements given all local shooting societies.

Committee: M. Gindele, E. D. Payne, S. F. Trounstine, C. Nestler, A. Lux.

The Palma Trophy.

The All-American team, which will engage in the International contest for the Palma trophy at Ottawa, Canada, Sept. 13, has been very carefully reorganized, and, due to the known skill and steadiness of its members in competition, there is a feeling that the Palma trophy, emblematic of long-range skill and success with the rifle, may this year return to the United States, where it was so many years held in possession.

Trapshooting.

Fixtures.

If you want your shoot to be announced here send a notice like the following:

Sept. 3-4.—Nappanee, Ind.—The Interstate Association's tournament, under the auspices of the Nappanee Gun Club. Ed. J. Bowers, Sec'y.

CONTESTS AT INTERSTATE PARK.

Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have published. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York. FOREST AND STREAM *goes to press on* TUESDAY OF EACH WEEK.

John Parker's twelfth annual international shooting tournament, an event of eager interest to all trapshooters, is near at hand. The dates are Sept. 16 to 19, and the place is Rusch House grounds, Jefferson avenue, Detroit, Mich. It is open to all, and has $200 cash added. The programme for targets is alike for each of the first three days, excepting that No. 6 is the Peters Cartridge Company's international handicap trophy on the first day, the King Powder Company's two-man team international trophy on the second day, and the Peters Cartridge Company's international expert trophy (all stand at 22yds.) on the third day, each of which is at 25 targets, 75 cents entrance. Of the other nine events each day, five are at 15, four at 20 targets, entrance $1.50 and $2. For each day there is $5 for best average. Targets 2 cents except in event No. 6. Entrance includes price of targets. Shooting commences at 9 o'clock. Sept. 19 is live-bird day. There are four programme events as follows: No. 1, 5 birds, $3, 60 and 40 per cent., high guns; No. 2, 7 birds, $5, 50, 30 and 20 per cent., high guns; No. 3, Gilman & Barnes' international live-bird trophy, value $150, 10 birds, $7, 40, 30, 20 and 10 per cent., high guns; No. 4, 15 birds, $20 entrance, $50 added, class shooting, 30, 25, 20, 15 and 10 per cent. Entrance includes price of birds. The programme contains further information as follows: "All target events shot under handicaps, 16 to 22yds. Here is a good chance to take in the excellent bass fishing on the St. Clair Flats. Take car in front of Wayne Hotel and transfer to Jefferson avenue through car, which runs direct to grounds. Ship all shells, etc., to Joseph A. Marks & Co., 93 Woodward avenue, and they will be delivered free of charge on grounds. First-class up-to-date meals at Rusch House on grounds. Fish, frogs and chicken a specialty. Shooters protected from weather. Plenty loaded shells on grounds. Extra live-bird sweeps shot every day. Birds and traps ready for practice at all times through tournament. Practice shooting Monday, Sept. 15. A handsome diamond trophy to Michigan shooters, donated by Traub Bros., for best average in all programme events. Solid gold watch for best general average throughout programme events. Yaller team, of Detroit, donates handsome trophy for best average Detroit shooters in all target events. Yaller team, of Natchez, Miss., allowed to compete for same. American Association rules. No targets will be thrown over 50yds. Target moneys divided Rose system, 5, 4, 3, 2. All of the target trophies become property of the winner. The Gillman & Barnes' live-bird trophy must be won three times, not necessarily in succession. All live-bird events under handicap, 26 to 31yds. If anybody by his shooting, half of first day, proves that he is unfairly classified, the mistake will be rectified. Plenty of help, come and see a first-class up-to-date shoot. Address all communications to John Parker, 465 Junction avenue, Detroit, Mich. Paul Weise, manager. Don't forget the Circuit: Indian shoot, Battle Creek, Sept. 9-12; Detroit, Sept. 16-19; Cincinnati, Sept. 23-25. All Indians are invited. Chief Des-Chree-Shos-Ka, 'Jack.'"

Concerning the Interstate at Haverhill, Mass., last week, Mr. C. F. Lambert writes us as follows: "The painfully small attendance at the Interstate Association tournament continued during the open shoot to-day. The interstate and interclub events were declared off by the committee, there being no entries for same. The individual handicap was run off, to which the club added $30, this event calling for 25 targets at regular angles and a like number at each, Sergeant system, reversed pull, and unknown angles, 100 in all. About 20 shooters contested in this event with the following result: Kirkwood at 18 yards broke 85, LeRoy at 22 yards broke 84, and Lambert at 20 yards broke 83. An extra 25 target event was arranged, through which the balance of the left-over prizes were disposed of. The trade on this day was represented by J. S. Fanning, B. LeRoy Woodard, Horace Kirkwood and T. E. Doremus. Mr. and Mrs. Park were present, and although Mrs. Park shot but little, not having her own gun, her work would seem to indicate that the necessity to most shooters of being accustomed to a certain gun is to her a trivial matter."

The souvenir programme of the Consolidated Sportsman's Association, Grand Rapids, Mich., is of special interest, owing to its artistic features and the numerous illustrations and portraits of eminent sportsmen which it contains. The dates of the C. S. A.'s annual target tournament are Sept. 4 and 5. It is open to the world. Trophy events of the Michigan State Trapshooters' League are open to members. Added money, $413. Ship guns and ammunition care of W. B. Jarvis & Co. Interstate rules. Handicaps, 14 to 21 yards. Two sets, Sergeant system. Rose system, 7, 5, 3 and 2, will govern the moneys. Targets in open events, two cents; in trophy events of M. S. T. S. L., 3 cents; one cent rebate to visiting teams shooting through the M. S. T. S. L. events. Shooting for targets only is prohibited. Grounds open for practice Sept. 3. Shooting commences at 8:30. Dinner served on grounds, 50 cents. On the first day the Amateur State Championship, Semi-Expert State Championship, Expert State Championship, State Championship of three-man teams are on the programme, beside the nine regular events at 15, 20 and 25 targets; $1.50, $2 and $2.50 entrance; $50 for five high guns. There are twelve events on the second day, and $50 to five high guns, and $60 for six low guns. There is a liberal sum of added money to the events.

The sixth annual tournament of the New London (Iowa) Gun Club, has a programme which comprises both target and live-bird competition, at its tournament Oct. 15 and 16. There are twelve target events on the first day, 15, 20 and 25 targets, $1.50 and $2 entrance. On the second day there are six events at targets, and two at live birds, 7 and 15 birds, $5 and $10 entrance. Shooting commences at 9 o'clock. Targets 2 cents. Live birds, 20 cents. Grounds open for practice on Oct. 14. High averages for entire programme, $15, $10, $7.50; for target programme, $7.50, $5 and $5. Guns and shells shipped to Dr. C. E. Cook will be delivered on the grounds. Target handicaps, 14 to 22 yards; live birds, 27 to 33 yards.

The programme of the Interstate Trapshooting tournament, given for the Lewiston, Ill., Gun Club, Sept. 29 and 30, has a similar programme for each day; ten events, of which five are at 15, entrance $1.50; four at 20, entrance $2; and one at 25 targets, entrance $2.50, and to each events $2.50 is added. Targets, two cents. Lunch served on the grounds. Loaded shells may be obtained at the clubhouse. Purses divided 50, 30 and 20 per cent. fifteen entries or less; over 15 entries, 40, 30, 20 and 10 per cent. Guns and ammunition prepaid and marked in owner's name, forwarded to the secretary, Mr. H. H. McCumber, will be delivered on the grounds free. Shooting will commence at 9 o'clock.

The series of Birch Brook Gun Club shoots for merchandise prizes terminated on Aug. 30. Messrs. Hebbard, Hilliard, Straw, Rowe, Rand, Dudley, Hastings, Riley and Yelmah were the winners in the order mentioned. Mr. Hilliard won the series of medal shoots by a total score of 332 out of a possible 400.

At the Budd-Hinshaw tournament last week, at Spirit Lake, Iowa, Mr. Fred Gilbert was high average with 96 per cent. for the four days. This was professional and was restricted to targets only and a special prize. In the amateur class Mr. J. M. Hughes was high with 93.5 per cent.

The sad news reaches us that Mr. Albert Ray, of Mt. Kisco, N. Y., was thrown from his horse while returning from the Pleasantville tournament on Saturday of last week, therefrom suffering a fractured skull and three broken ribs. We have not been informed as to the prospects of his recovery. He was a member of the Mt. Kisco Gun Club. He was well known and popular with trapshooters, to whom the knowledge of his calamity will bring profound sympathy and grief.

Programmes of the Enterprise Gun Club's all-day shoot, to be held on Sept. 20, can be obtained of the secretary, Mr. Geo. W. Mains, McKeesport, Pa. The ten events of the day are alternately at 10 and 15 targets, $1.20 and $1.50 entrance. The Rose system will govern the money. Those who wish may shoot for targets only. A magautrap will throw the targets. Shooting commences at 9 o'clock.

Capt. A. W. de Bray (Gaucho) in our trap columns this week, gives some excellent advice on "Hints on Trapshooting." There are quite a number who will think that the advice fits the other fellow, but it would not be amiss to carefully compare notes with onesself before taking up the comparison of notes as to the other fellow.

In the Troisdorf trophy contest of the South Side Gun Club, of Newark, N. J., on Saturday of last week, Mr. I. Terrill was the winner for the week. He made a clean score of 25. Gardiner and Hemisch scored 24 each, Engle and Harrison 22 each.

The new Troisdorf handicap, a regular monthly shoot open to all, will take place on Saturday of this week at Watson's Park, Burnside Crossing, Ill., and the Nonpariel Gun Club will hold their regular added money shoot, same day and place.

On the grounds of the Fairfax Gun Club, Bonesteel, S. D., Aug. 26, Mr. Carl Porter (holder) defeated Mr. G. F. Spatz for the Peters Cartridge Co.'s trophy, emblematic of the championship of Gregory County, by a score of 46 to 42.

Mr. J. S. Fanning was high average at the Haverhill (Mass.) Interstate tournament last week, leading his closest competitor, Mr. Neaf Apgar, by two targets for the two days. He broke 336 out of a possible 350, a 96 per cent. gait.

The series of club shoots of the Baltimore Shooting Association ended to-day, and the winners were Messrs. G. E. Edwards and J. R. Malone, who tied on 242 out of 250, and Dr. H. E. Lupus, who scored 242 out of 250.

In the main contest of the Nonpareil Gun Club, Watson's Park, Chicago, on Saturday of last week, the winners were: First, Kuss, 47; 2d, Willard, 45; 3d, Roll. Numerous sweeps also were shot.

Messrs. W. B. Darton, of Portland, Me., and Mr. C. M. Stark, of Dunbarton, N. H., shot their 100-target match for $100 a side at Concord, N. H., last week, with the result that the former won.

With the Lewiston, Ill., tournament, the series of Interstate Association tournaments, for 1902, closes. It is probable that the series for 1903 will all be target tournaments.

Mr. R. O. Heikes was high average at the tournament of the Puducah (Ky.) Gun Club, Aug. 26-28, with the excellent average of 97.1 per cent. for the tatal target programme.

We are informed that Mr. W. H. Wolstencroft has cancelled the tournament which he had arranged to take place from Sept. 1 to 6.

The Peters Gun Club, of New Paris, Ohio, announce a one-day tournament, Oct. 9. Mr. G. L. Lyne is the secretary.

BERNARD WATERS.

Budd-Hinshaw Tournament.

ARNOLD'S PARK, Ia., Aug. 30.—Budd and Hinshaw's four-day amateur tournament was fairly well attended. There were about fifty entries on the first three days, and thirty on the fourth day.

The programme called for eight 15 and four 20-target events, with $5 added to the 15 and $7.50 to the 20 target events each day. The shooting was from two sets of traps, Sergeant system. The traps were set on the lake front, and targets thrown about 55yds. over the water.

Manufacturers' agents shot for targets, and an elegant set of pearl-handled knives and forks, donated by the management. Crosby, Gilbert and Riehl were the only three agents who shot through, and Fred Gilbert won the set with an average of 96 per cent. for the four days. J. M. Hughes was high in the amateur class with 93.5 per cent; Klein second with 93.3 per cent.

A number ot the shooters brought their families, and a very pleasant week was enjoyed by all in attendance.

Mrs. Copley, of Spirit Lake; Mrs. McKelvey, of Hedrick, and Miss Bridie, of Nichols, made some good scores, and were warmly congratulated on their good shooting.

First Day, Aug. 26.

Dominion of Canada Tournament.

HAMILTON, Canada.—I regret the unavoidable delay in forwarding the balance of the scores due to our desire to hand them to you in proper order and in adequate form. In the team race for the Mail trophy, the Sherbrooke Gun Club has protested against the Ridgetown team on the grounds that all their members were not residents of Ridgetown, one man coming from a distance of about 60 miles, out of said place; the matter is still in the hands of the committee, and a decision equitable to all parties concerned is assured.

Jack Fanning refereed the above match; J. H. Cameron and Mr. Ellis acted as scorers.

Manufacturers' representatives present were: Rupert Watson, John Parker, J. H. Cameron, A. H. Fox, F. Conover, Jack Fanning, D. F. Pride.

The championship of Canada was won by H. Throop, of Ottawa. His success was a matter of delight to all his friends.

Aug. 15, Second Day.

IN NEW JERSEY.

Hell Gate Gun Club.

Carlstadt, N. J., Aug. 26.—The Hell Gate Gun Club held its August shoot at Mr. J. H. Outwater's place to-day. The birds were good in the early part of the shoot. The handicap was by yards and points. Mr. A. Dielzel and Mr. E. Meckel killed straight:

	Handicaps, Yards.	Points.	
H Kohla	28	6½	*111210112— 8
Baron Van Volkenburg	28	6½	21*0211012— 7

Chesapeake Gun Club.

NEWPORT NEWS, Va., Aug. 27.—The annual shoot of the Virginia Trapshooters' Association will begin in Lynchburg, Aug. 31, and will last two days. It is probable that one or two of the members of the local club will go up and shoot as individuals, but there will be no team to represent Newport News.

Recently five of the local shooters organized a team and challenged all comers to shoot for the privilege of representing Tidewater, Virginia, at the State shoot, the losing teams to share with the winner the expenses of the winning team on the trip to Lynchburg. No answers have been received, so it looks as though there will be no team to go as Tidewater's representative.

The Portsmouth team, of which Mr. T. F. Stearnes, of this city, is a member, will shoot in the annual affair. Mr. Stearnes will go to Portsmouth to shoot with the club to-day.

The Chesapeake Gun Club had its regular shoot yesterday afternoon. The trap was not working well and a strong breeze was blowing, so the shooting was difficult and the scores not as good as usual, especially during the early part of the afternoon.

Out of a possible 25 in each of the seven events, the following scores were made:

T F Stearnes	22	19	21	19	23	24	24
B B Semmes	18	21	15	17	16	23	21
F Palmer	15	15	13	15	..	..	..

T. F. S.

Interstate at Haverhill.

Haverhill, Mass., Aug. 30.—When the Interstate Association decided to give a tournament for the Haverhill, Mass., Gun Club the club at once set to work with the determination to do its full share toward making it a success. The tournament was held on Aug. 27 and 28, and an extra day open tournament on the 29th, and those who participated, we think, will testify to its success from start to finish. It is true the entries fell far below what every one had reason to expect, and why, no person present was able to offer a plausible explanation. Never was a tournament better advertised. Never was a tournament better worked up. Never did a shooting organization receive more promises from shooters that they would be present. Every inducement that would ordinarily bring out a large attendance was offered—but they came not.

A few words regarding the Haverhill Gun Club may not be amiss. Organized in 1896, it now has a membership of sixty, many of whom are successful business and professional men of the city. Its affairs are managed by a committee of three—successfully, if the pleasant comments made by visiting sportsmen are any criterion. The shooting grounds and club house are located about two miles from the center of the city, at Hoyt's Grove, the same being reached by two electric car lines. The arrangements for this particular tournament were strictly up to date; two sets of traps were used, a set of five expert and a set of three expert arranged according to the Sergeant system. A cozy club house and a large tent with seating capacity for speciators as well as shooters afforded ample protection and shelter from both sun and rain.

One feature of this tournament, and one to which but little attention is ordinarily paid in connection with events of this character, was the ample seating facilities for all. Another feature, and one which is also often overlooked, was the catering. This was in charge of Mr. B. T. Pickard, who furnished in ample quantity and good quality and at a very moderate price those things which are so necessary to a hungry shooter. The contestants were loud in their praise of this arrangement.

Much of the success of this tournament was due to the committee who had immediate charge of it; the committee was composed of Messrs. Miller, George and Tozier, all of whom were indefatigable in their efforts that all should leave for their respective homes with nothing but pleasant memories of Haverhill.

Thirty-four shooters faced the traps on the opening day, which was about one-half the number expected, and among these were the usual number who went home early, as well as those who came late. The conditions were simply perfect for high scores, and those who were fortunate enough to be present witnessed some phenomenal shooting. No. 1 squad, composed of Apgar, Van Allen, Fanning, Leroy and Griffith, in event No. 1, broke 73 out of 75; in event No. 5, 74 out of 75; in event No. 6, 97 out of 100; in event No. 8, 96 out of 100; in event No. 9, 73 out of 75; and in event No. 10, again broke 97 out of 100. This excellent shooting was again and again applauded by both shooters and spectators.

Apgar was high for the day with a score of 173 out of 175, Fanning was second with 170, and Van Allen third with 169.

A side issue in connection with the tournament, and one which afforded much entertainment to onlookers, as well as profit and pleasure to those who contested, was the cash and merchandise prize event, which was shot over a special trap. The conditions governing were as follows; But one trap was used, and contestants were divided into four classes, A, B, C, D. Class A shot at their first target at 16yds. rise, moving back one yard for each succeeding target until 15 were shot at, which brought a contestant in this class to the 30yd. mark when shooting at the last target. Class B shot at their first two targets at 16yds. rise, moving back one yard for each succeeding two targets, which brought a contestant in this class to the 23yd. mark when shooting at the last target. Class C shot at all of their targets at 18yds. rise, and Class D shot at all of their targets at 16yds. rise.

Out of 175 trials but one straight score of 15 was made, and this by a Class A man, Mr. Neaf Apgar, which won for him a five-dollar gold piece, in addition to putting him on record with a highest possible.

The boys soon named this event "the wheel," and many times did they "give the wheel a whirl." All told, there were some sixty prizes that went with this event, and all contestants received a prize, regardless of the score made. Entrance money was 50 cents, with re-entries unlimited at 30 cents each.

The scores of the programme events for the first day follow:

Events:	1	2	3	4	5	6	7	8	9	10	Shot at.	Total Broke.
Targets:	15	20	15	20	15	20	15	20	15	20

Aug. 28, Second Day.

Thirty-four shooters faced the traps the second day, the same number as on the first day, among whom were several new faces. The number, however, still fell far short of expectations. High scores still prevailed, although not as good as on the first day.

The race for first place between Apgar and Fanning was a pretty one, and each time No. 1 squad came to the score, shooters and spectators alike crowded to the ropes and watched each succeeding shot with increased interest. When event No. 10 started Apgar was leading Fanning by 1 target, but in this event Fanning broke 18 to Apgar's 15, thereby landing first average for both days by 2 targets.

Fanning was high for the day with a score of 166 out of 175; Dickey was second with 163, and Apgar and Le Roy tied for third with 161.

The merchandise event closed at 3 P. M. Out of 170 trials today but two additional straight scores of 15 were made; these by Messrs. Hebbard and Lambert. In the shoot-off, Apgar won first, Lambert second and Hebbard third. The ties in the other classes were shot off, and it was nearly dark before completed. Every contestant received a prize, sufficient being left over to form a nucleus for another event of the kind.

On this, the last day the tournament was favored by the presence of Capt. J. A. H. Dressel, president of the Interstate Association, who arrived on the grounds rather late, being detained by a railroad wreck, but he was none the less welcome on that account.

The tournament was also graced by the presence of Mrs. W. K. Park, well known to all New England shooters under the nom de plume of "Miss Kay." Mrs. Park numbers among her warm friends all members of the Haverhill Gun Club, as well as all others having the pleasure of her acquaintance.

The trade was represented by the following: Frank Butler, S. M. Van Allen, A. H. Barrell, E. B. Thompson, Neaf Apgar, J. S. Fanning T. E. Doremus, B. Leroy Woodard, and O. R. Dickey.

In closing, would say that shooters of all classes as a rule are never backward in reaching for those things most dear to their hearts, namely, cash and useful prizes; therefore, should any one be able to offer an explanation for the non-appearance of a greater number of contestants at this tournament, the Haverhill Gun Club will be deeply in their debt.

The scores of the second day follow:

Events:	1	2	3	4	5	6	7	8	9	10	Shot at.	Total Broke.
Targets:	15	20	15	20	15	20	15	20	15	20

Hints on Trapshooting.

Thinking that perhaps a few timely remarks might not come amiss, the writer timidly lays at your feet the following, hoping some inexperienced person may be benefited by reading these notes.

The great interest, and, I might say, paternal solicitude exhibited by certain otherwise well-meaning individuals toward beginners, and the divers kinds of advice so lavishly and unstintingly bestowed on them, has suggested a few ideas, the ventilating of which I am sure must be received by both instructors and pupils with feelings of gratitude.

By adopting a few suggestions herein laid down it is to be hoped that much time may be saved during large tournaments, fewer accidents happen, and that those dears whose benevolent proclivities cause them to forget themselves in the fervent endeavor of advancing others may find solace and reward for a labor of love so cheerfully given and, alas! too often so carefully followed that every year we find more and more past masters in instruction who signally fail to instruct, simply because their theories are too fine spun to be of practical use.

Honi soit qui mal y pense.

Never get your ammunition until you are called to the score. There is always plenty of time for that, and it is obviously unwise to go about carrying extra weight.

Make it a rule to always load your gun before filling your pockets, for then there can be no mistake as to its being loaded. If it has a safety, at this juncture carefully push it forward, then you may be reasonably sure it is ready to go off. If perchance it should explode in some unaccountable manner before you reach the score that makes no difference, as you will be allowed another shot, so nothing is lost thereby; while on the contrary, spectators and contestants alike have been treated to a slight diversion calculated at all times to break the monotony of the occasion.

After having fired at position No. 5, always load your piece while walking down to No. 1. If a thing is worth doing at all do it well, so dextrously slip in the cartridge, en passant, and slam the gun together, meanwhile walking briskly to your post, keeping the muzzle of your gun well in line of every shooter's stomach. Until one has thoroughly tried this method nothing but the faintest idea can be entertained of the various emotions and impulses experienced by the brethren at the score. Should any over timid brother remonstrate, an assurance of the fact that one has done a world of field shooting and only on rare occasions sprinkled a dog or companion will at once remove all symptoms of fear and give one at the same time the air of a finished sportsman, the ear-marks of which are an absolute disregard of human life and limb. It is only super-nervous people who are careful with firearms; an experienced shot is so sure of himself and his weapon that he can make no mistake. If, however, by any chance the gun should go off, a hearty "ha! ha!" accompanied by a jaunty swagger and expression of nonchalance will render all apologies unnecessary—nay, superfluous.

The loquacious and experienced trap shot dislikes above all things to start an event commencing from position No. 1, because then he cannot commune intelligently with any one on his left, and, as the man at his right has not had a shot, good, bad or indifferent, there is technically nothing left to applaud or criticise.

Therefore No. 1's only consolation should he miss would be to instantly explain how it happened to No. 2. If this is done in a loud, stentorian voice, nothing will be more conducive to No. 2 following suit. If No. 2 is a gentleman he will not say much above his breath, but he will think a few things, and then and there his opinion of No. 1 will be formed for all time to come.

The most enviable position while at the score is clearly when at No. 3, for then by slightly raising the voice one can converse freely on both sides to the full extent of the line and give vent to one's feelings, as to the management, trappers, puller, etc., etc. A few remarks at this juncture well placed with precision and aplomb at once establish one's status with the shooting world and render the speaker a subject for much comment among the fraternity.

To err is human; it is therefore always in order to question the decision of the referee. By doing this at all opportune times one is naturally regarded as being alert and on the qui vive, which is highly gratifying to the referee and the squad, who are all pleased to know they have so interested a contestant at the score.

There are very few topics of conversation so keenly appreciated and enjoyed by contestants and spectators than to positively know beyond a peradventure why you have missed such and such a shot. It is naturally instructive and of benefit to all to know why and how this was done. So to render your information the more striking and command the greatest attention, proclaim in a loud voice the exact facts in the case, placing yourself near the referee, so that he at least may reap the benefit of your experience. It may interfere with his rendering correct decisions, but the squad at the score can wait. Hours were made for slaves. It is more laborious to relate your mishaps in detail, and then one is apt to strike some unresponsive, rude, vulgar person, whose looks indicate that he does not care a ——, well, does not care.

When not shooting strictly up to form, always make it a rule to change gun or ammunition, or both. It is reasonably certain that the man who cannot master one gun could easily learn to shoot with several others. Guns are fickle things; fortunately, too, they are mute. It is only such prosy individuals as Gilbert and Crosby, whose mediocre skill has placed them where they are, who stick to one gun. They do this purely from ingorance as to other guns and loads, and because their limited experience has taught them no better.

It is always en regle to bluntly criticise a competitor's gun when of other make than your own. Knowledge of its mechanism and construction is not imperative—in fact, the less some would-be coaches know the more they proclaim. A few well planted remarks, driven in with pile-driver force, and clinched with an assurance, generally carry the day.

At the time, while his gun is under discussion, aforesaid competitor may not enjoy it, but when he makes a bad score, it is balm to a bleeding wound to know, that after all the gun was largely to blame.

Very few gun clubs are in so deplorable a condition that they are barren of at least one or two up-to-date, progressive experimenters, otherwise known in the vernacular as gun cranks. To belong to a club devoid of a few of these is to be sadly misplaced. One genuine, well-matured, full-fledged crank can, and does, keep many beginners on the anxious seat, and between a sneeze and cough condition the year round. A matriculated gun crank to the novice is a beacon of such magnitude and splendor that he can keep lesser satellites revolving on their own axis, as it were, from pumps to double guns, and from dense to bulk powder, scarcely knowing, or caring, whether they are shooting or hoeing corn.

No rational being when in great bodily distress consults a regular practitioner, but rather trusts to the quack, who cures him while he waits or kills him at his leisure.

Hence it is that the intelligent novice, when desiring reliable information, should never apply to men like S. A. Tucker or Harvey McMurchy, men who have made a life-long study of guns and shooting, but instead seek the advice so freely given by the versatile gun crank, the man who has run up and down the gamut of guns and loads, and in turn condemned them all. The powers of speech of such a mentor are so persuasive that no tyro can withstand them. His knowledge of misfits and mishaps covers encyclopedias. He can instantly correct any fault or vice the beginner may exhibit, albeit he never could correct his own. Strange as it might appear, the adept and successful gun crank seldom shoots even decently well, his time having been exclusively devoted to picking flaws in guns and loads, and educating others on correct (?) lines.

Gaucho.

Haverhill Gun Club.

Haverhill, Mass., Aug. 30.—We were prepared for everything that might come for our Interstate tournament, and got the unexpected. Our arrangements were about as near the proper thing as ever happens, with a country club, and with Mr. Shaner as manager, I would liked to have known how many shooters it would have taken to have made us hustle. But it was a frost, and we just took it easy. As to numbers, it was disappointing; other than that would let the boys tell it.

Our open tournament was more than we expected. While the Interstate team and Interclub team races did not materialize, the Individual handicap was shot with sixteen entries, Horace Kirkwood winning first, $15, with 85; Leroy second, $10, with 84, and Lambert third, $5, with 83 out of the 100 targets. Twenty-three shooters participated on the wind-up day. I herewith inclose summary of events; Nos. 2, 3, 4 and 5 constituted the Individual Handicap:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	Broke.	Av.

S. G. Miller, Sec'y.

Darton vs. Stark.

Dunbarton, N. H., Aug. 30.—The above match came off promptly at the advertised time. The Concord Gun Club had sent out a great many programmes of the events of the day. The shooting fraternity did not respond. Four men from Maine, one from Exeter and one from Dover and some five or six from neighboring towns.

As to the match, Darton won in a walk. I was beaten when the first ten targets were shot at, after that I sort of wabbled along trying to save being distanced. It apparently made no difference where I held, those targets sailed away unbroken.

Neaf Apgar was the only trade representative present. All of you know as to his ability to break targets. We were glad that Apgar was on hand.

It was some consolation to us to see that he often failed to score. We were also sorry that there were not other paid experts present. We think none of them would have made scores they would care to brag of. The blue rocks were thrown fairly low and quite fast from magautraps. Hitting them was one thing and breaking another. Target after target was hit and hit hard, and yet sailed serenely on.

As for my shooting, the gun and ammunition were all right, the man alone was to blame.

Now, as to my challenge to Maine. It was straight and it was promptly accepted. There were a number beside Darton ready and willing to accept it. It is easy to say, Go in and do up the Maine sons of guns. The saying is easy; the doing is different. Try it on, some of you.

The best Massachusetts could do in the recent team contests was to tie those Pine State men. If Massachusetts can't beat them New Hampshire has not a ghost of a show.

As to future challenges, I am out of such doings. Anyone, young or old, can "sass" me all they will, and that is all the good it will do them. My next shooting will be on birds. The opening day is near and there are quite a number of partridges nearby waiting for me. I am considering whether I shall have to shoot them on the ground or out of a tree. You will get the scores of the Concord shoot in due time. Just remember when you look over those scores that there were a few good shots in the squads.

A boiled owl is said to be tough; those targets must have been close relations to the owl.

C. M. Stark.

Raleigh Gun Club.

Raleigh, N. C., Aug. 28.—The Raleigh Gun Club gave their last barbecue of the season, and many regrets were heard that we would not be able to enjoy another one this year. The best was reserved for the last, and about fifty of our friends could vouch for its good qualities.

Several of our members made a very good record, especially our president, Jas. I. Johnson, making 49 out of 50 at 18yds., also 23 out of 24 at doubles. This is a record that any amateur should be proud of. The following scores were made at 50 targets: Johnson 49, Gowan 44, Gray 43, Parker 41, Walters 27, Ferrall 40, Busbee 28, Ball 37, Pearce 37, Crowder 38, Harden 27.

R. T. Gowan, Sec'y.

PUBLISHERS' DEPARTMENT.

You ought to keep a little good whiskey in the house. For accidents, fainting spells, exhaustion, and other emergency uses, it relieves and revives. But you must have good whiskey, pure whiskey, for poor whiskey, adulterated whiskey is injurious. Hayner Whiskey is just what you need for it goes direct from their distillery to you, with all its original strength, richness and flavor, carries a United States Registered Distiller's Guarantee of Purity and Age and saves you the enormous profits of the dealers. Read the offer of The Hayner Distilling Company elsewhere in this paper. They are a reputable house, have a paid up capital of half a million dollars, been in business over 36 years and will do exactly as they say.—Adv.

The average man's vacation is limited, and he wishes to get as much pleasure from it as possible. Too often, though, he goes afield with a lot of enthusiasm, but with body ill prepared for physical work. Soft and flabby muscles, even though backed by a plucky spirit, will not enable him to tramp after game or over mountain. Often half his vacation time is lost in getting into training.

The physical culture system described by Prof. Anthony Barker, properly applied, should double the pleasure—and the length of the sedentary man's vacation trip.

The name Danbury suggests at once a head covering, for Danbury is a great hat-making center. Hawes & Von Gal are among the principal hat manufacturers of Danbury, for, as one of their advertisements says:

Fashions come and go—what then?
Hawes' hats are worn by a million men.

There are more than a million men in the country, however, and this firm continues to reach out for more business, which it will no doubt secure.

Unless properly treated, time and use speedily take the life out of leather. No one knows this better than your coachman, who regularly treats your harness to its dressing of oil. Your shooting shoes should have the same care that your harness receives. Collan Oil is highly recommended as a dressing for leather and as an oil for guns.

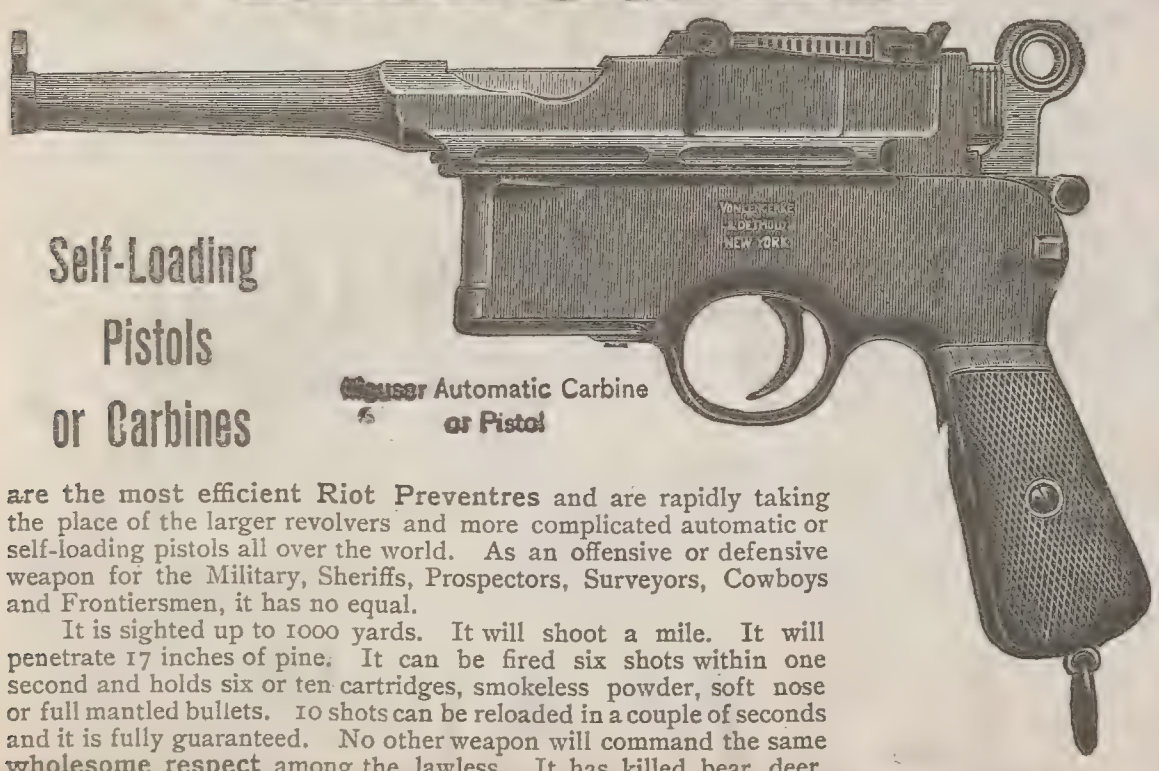
"MAUSER"



Mauser Automatic Carbine or Pistol

Self-Loading Pistols or Carbines

are the most efficient Riot Preventres and are rapidly taking the place of the larger revolvers and more complicated automatic or self-loading pistols all over the world. As an offensive or defensive weapon for the Military, Sheriffs, Prospectors, Surveyors, Cowboys and Frontiersmen, it has no equal.

It is sighted up to 1000 yards. It will shoot a mile. It will penetrate 17 inches of pine. It can be fired six shots within one second and holds six or ten cartridges, smokeless powder, soft nose or full mantled bullets. 10 shots can be reloaded in a couple of seconds and it is fully guaranteed. No other weapon will command the same wholesome respect among the lawless. It has killed bear, deer, and nearly all big game and little game to be found on this continent, and its small size and light weight make it a most desirable auxiliary.

A New English Gun.

"Great Value for Little Money."

THE REGENT. PRICE $65 NET

We have just received the first few cases of a new English gun which we have named "The Regent". They are made for us by the best gunmaker in England and bored on the same principle that has won world wide honors for English guns. The barrels are best Siemens Martin steel, and the shooting is unexcelled. The stocks are selected English walnut, half pistol grip, latest model Anson & Deeley action, nicely engraved, and the finish and workmanship throughout are up to the English standard. English guns have long been the standard of the world, and this new product will mark a new era in price as well as quality. We have never before been able to offer so fine and good a gun for so little money. They can be supplied in weights from 6¼ lbs. to 8 lbs., in 12 bores, and from full choke to true cylinder.

We carry a large line of guns and rifles from $6.00 to $600.00, and are sole U. S. Agents for the celebrated guns of W. W GREENER.

WINCHESTER

BOX MAGAZINE REPEATING RIFLE MODEL 1895.

.35 CALIBER.

WE have adapted the Winchester Model 1895 box magazine repeating rifle to handle a new Smokeless Powder cartridge, known as the Winchester .35 Caliber, which is the most powerful shooting cartridge, at both long and short ranges ever offered. Rifles for this cartridge are made with 24 inch round nickel steel barrels, and weigh about 8 1-2 lbs. The Winchester .35 Caliber Cartridge embodies high velocity and consequent flat trajectory, great energy and striking power, making it a very desirable cartridge for hunting the biggest game known. Some idea of its tremendous killing power may be gained from the fact that the striking energy of this cartridge at 200 yards equals the muzzle energy of the .45-70. This cartridge is loaded with a 250 grain soft point metal patched bullet, and special Smokeless powder, which imparts to the bullet a muzzle velocity 2,200 foot seconds, thereby developing a muzzle energy of 2,685 foot pounds. The penetration at 15 feet from the muzzle is 15 7-8 inch pine boards. Owing to their size and high velocity, .35 Caliber soft point bullets upset, or mushroom, in a most perfect manner. Send for circular fully describing this rifle.

Forest and Stream Pub. Co

CANOE CRUISING AND CAMPING.
By Perry D. Frazer. Illustrated. 95 pages, cloth. Price $1.
This interesting little volume is a practical guide for the cruising canoeist, the man who wishes to start away from the city and for a short time to make his canoe his home. With this in view, Mr. Frazer, who regards canoeing as a healthful and economical method of passing away leisure hours, has written briefly but attractively of canoes, camping outfits, clothing, firearms and ammunition; fishing tackle, photography, and in general of cruising, camping and all that pertains to this phase of outdoor life. While the volume has been written chiefly for the younger men, it is yet full of practical information and suggestion that appeals to those who have had a wider experience.
Such a book as this should be in the library of every man who is interested in outdoor life or the things which pertain to it. It is one of the manuals which should stand on the shelf alongside of "Woodcraft," of which, in fact, it is a part.

FORGED TOBIN BRONZE TURNBUCKLES.

With Cast Manganese Bronze Sleeve.
Our Turnbuckles, the style of which is shown above, are made of the very finest quality of manganese bronze centers and forged tobin bronze ends. They have been subjected to most severe tests by several of the largest and most practical Yacht Builders for the past two years. Made with great care and beautifully polished, they are a delight to the eye, as well as being the strongest Turnbuckle made. These Turnbuckles are nearer perfection than any yet placed on the market, and being non-corrosive, they really do the work expected of a Turnbuckle. Notice device used to prevent center from unscrewing and being lost as had always been the case with old style goods.

YACHT ARCHITECTURE.
By DIXON KEMP, Associate of the Institute of Naval Architects, and Member of Council. Second edition. Super-royal 8vo. Price, $16.80.
This work enters into the whole subject of the laws which govern the resistance of bodies moving in water, and the influence a wave form of body and wave lines have upon such resistance. It also deals comprehensively with the subject of steam propulsion as applied to yachts. An easy system for designing is provided, and every necessary calculation is explained in detail. The latter part of the work is devoted to yacht building, and engravings are given of every detail of construction and fitting, including laying-off, taking bevels, etc. The list of plates (exclusive of over thirty devoted to the elucidation of the text, and nearly 200 wood cuts) exceeds fifty, and comprises the lines of some of the most celebrated yachts afloat by the most successful builders and designers.
FOREST AND STREAM PUBLISHING COMPANY, NEW YORK.

STEAM YACHTS AND LAUNCHES.
Their Machinery and Management. By C. P. Kunhardt. With plates and many illustrations. 267 pages. Price, $3.00.
A complete veview of the development and present status of the marine engine and boiler as applied to steam yachting. The theory of the engine is set forth and its parts fully described. The functions of the boiler and its mountings are explained. Simple and compound engines are compared, and the latest results in high expansion and high steam are detailed. Numerous examples of modern practice are introduced, including all the patent forms of pipe boilers and special machinery. Also kerosene and naphtha motors for launches, with many tables and rules, specifying their construction. The U. S. Government laws of inspection and Rules of the Road are given, and also rules for racing steam yachts, and complete directions for the care and running of machinery. CONTENTS: Theory of the Steam Engine. Boiler Efficiency. Boiler Mountings. The Engine and Its Parts. The Screw. Laws Applicable to Steam Yachts. Lloyds Rules. Racing and Steam Yachts. Management and Care of Machinery. Principal Types of Yacht Machinery. The Design of Hulls. Practical Construction. Small Cruising Steam Yachts. Lights on Steam Yachts and Useful Tables.

Yacht and Boat Sailing.
By DIXON KEMP, Associate Institute of Naval Architects. Price $12.
This edition has been largely re-written, and contains a great number of new subjects, and the lines of many boats never before published, the total number of plates exceeding 100, besides more than 350 woodcuts in the text. Contents: "Selecting a Yacht," "Examination of the Yacht," "Building a Yacht," "Equipment of the Yacht," "Seamanship," "The Management of Open Boats," "The General Management of a Yacht," "The Rules of the Yacht Racing Association," "Yacht Racing: Handling a Yacht in a Match," "Centerboard Boats," "Centerboard Boats for Rowing and Sailing," "Sails for Centerboard Boats," "Small Centerboard Yachts," "Mersey Sailing Boats," "Clyde Sailing Boats," "Belfast Lough Boats," "Dublin Bay, Kingstown Boats," "Cork Harbor Boats," "Itchen Boats," "Falmouth Quay Punts," "Thames Bawley Boats," "Lake Windermere Yachts," "Yachts of the Norfolk Broads," "Small Yachts and Boats of Y. R. A. Rating," "Singlehanded Cruisers," "Types of Sailing Vessels," etc.

THE NATIONAL GUN CLUB.

ELSEWHERE in our columns we publish the recently issued constitution and suggestions of the National Gun Club. Having formally announced, by that instrument, its official existence and purposes, it may be considered as being actively launched on its mission.

At the outset we wish it understood that we are in sympathy with the idea of a central governing body in the trapshooting world. Indeed, we have advocated it in many years past. The friendly criticism which we are about to offer is therefore not against the idea or the body itself, but against what we deem to be radical faults of organization, defective purpose and inadequate powers.

One of the chief faults of organization is that it is a self-constituted body, and therefore has not been vested with any powers by those whom it purposes to govern. It has made the government first, and then follows the suggestion to shooters to come in and be governed. This in a way somewhat reverses the ordinary procedure where the governed declare the purposes of the government, and then vest men with governmental powers. Moreover, as to membership, the units of organization should be clubs instead of individuals. The latter will be passive if there is nothing to appeal to their self-interest. If the members are passive, the association is inoperative. Clubs, instead of individuals, are the units in other national organizations which have shown the greatest stability and usefulness. As an instance, which will serve as an example of many similar organizations, the American Kennel Club has a membership of regularly organized clubs. It derives its powers exclusively from its members, who are represented respectively by delegates. Thus the governing body is the creature of the governed, instead of vice versa. Each club settles upon its policy and purpose, the delegates are instructed as to the wishes of the clubs, and there is thus an effective and satisfactory legislative machinery provided which would be impossible if the units were individuals. Individual zeal cannot be long maintained without something of material advantage which appeals directly to the self-interest of the individual.

Let us now examine the purposes as set forth in the constitution, and consider whether they have sufficient importance to engage public support. These purposes number six, and are substantially as follows: To protect fish and game; to establish game preserves; to promote trap and wing shooting; to promote acquaintance and friendship of trapshooters throughout the United States; to establish local associations; to familiarize the youth of the country with firearms.

The protection of fish and game, the first purpose mentioned, has a place in the constitution of many trapshooting associations, but it is a notorious fact that, in the majority of cases, it is a dead letter. Trapshooting organizations make trapshooting paramount to all else. At all events, at this stage of game protection, the protection which is a fact and not a meaningless term is that instituted by the States' legislatures, backed up by the personal vigilance of the game wardens who are paid for their services. A national protective organization, self-constituted, has no powers within the States or elsewhere other than the time-honored "Whereas, and therefore be it resolved." It is a fair estimate of the value of this game protection clause that it is a dead letter. This may be said also of the establishment of national and State game preserves.

In regard to fostering trap and wing shooting, there is no more effective means than the local gun club to foster trapshooting, and as for wing shooting, there are more wing shooters now than there are birds to supply their demands. Stringent restrictions of means and seasons are necessary to conserve the supply. In any event, the wing shots are not the product of national associations. They are local products entirely. Acquaintance and friendship are at a high tide now. There is every facility for extending both without any official body to further them, and in any event, they are largely a matter of the personal equation. How can a national club familiarize the youth of the country with firearms? The local shooters and the local clubs are the real educators. All the foregoing seem to be too trivial or too impracticable for bringing into existence a national body. They are the purposes often used to give a sonorous roundness to constitutions of trapshooting and game protective associations which have a vital main purpose.

The National Gun Club also states that "beginning with the year 1904 there will be held in different parts of the country, under the immediate control of the National Gun Club, two tournaments annually, in the spring and autumn, details of which will be furnished later." The National Gun Club could not hope to do much of national import in the way of holding a tournament. The Interstate Association, and the Peters Cartridge Co., with their trained, skillful managers, are already in the field doing work of great scope and merit.

Strange to remark, the real purpose of a national club, the regulation of professional and amateur, is entirely ignored by the National Gun Club.

GAME AND THE LANDOWNER.

MOST of the States have fairly good game laws, but in a very large number of localities these laws—owing to inefficiency of wardens or lack of interest by the public—are very imperfectly enforced. Complaint of this is extremely common, and in a majority of cases is undoubtedly well founded. The enforcement of laws which have not the support of public sentiment is rather hopeless, and one of the remedies to be applied in a section where the laws are not regarded is education. There is hardly any quarter of the land where there does not exist some little game protective leaven, even if the few in any county who possess the right spirit are no more numerous than the righteous men of Sodom. Each man who wishes to see law respected and game protected can influence some other man or men, and by tactful discussion of the subject can win over converts to his way of thinking.

There is a form of game protection, which, old in the old country, is comparatively new here and is especially so in newly settled regions. This consists in inducing each land holder to become a game protector for his own acres, by the proper posting of his land, and the enforcement of the trespass laws. At first, this results only in the protection of isolated farms, but it has been found that the landholders are quick to follow a lead of this kind, and that in any country such a movement rapidly spreads. In some parts of the South this posting of the land has become very general, and where practiced, does much to reduce the number of birds killed.

Even in a region so newly settled as Oklahoma, portions of which have been opened for about ten years, while other portions have been open for only one or two, this posting of the land is practiced. It does not seem to be directed against sportsmen generally, but has been adopted as a protection against the market-shooter, who has been accustomed to visit Oklahoma and the Indian Territory, and to systematically sweep the prairies bare of birds, which he shipped to some great city to the north and east.

For some reason or other the market-hunter is not generally popular, and he is perhaps less popular in the South than elsewhere. It is said that the individual sportsman, shooting for pleasure and satisfied with a moderate number of birds each day, has little difficulty in procuring from the Southern landholders generally the privilege of shooting over his fields. On the other hand there are many regions where associations of sportsmen have leased all the farms lying together over a considerable area.

As time goes on interest in game protection and respect for game laws is certain to grow, and the time is not far distant when game protection by the State will become generally efficient. In the meantime the individual farmer is perfectly able to protect his own land and should do so, and may very properly make the birds which are bred and fed on his farm yield him some small income either in money or in satisfaction.

It may fairly enough be inferred that if the general public realized how rapidly lands and waters are being taken up by associations of well to do men and women for outdoor purposes, the general indifference as to the game laws would cease to exist. As urged so often by President Roosevelt in written and spoken word, good game laws are far more important to the man of modest means, or the poor man, than they are to any one else. The average man must depend for his outdoor sport on the game which is free to all, and which is near by. He cannot afford to travel 500 or 1,000 miles for a few days' shooting, but he can enjoy his legal holiday or his Saturday afternoon by going abroad to shoot or fish over the country near his home. It is the poor man then who is most interested in the game laws, and as those of us who are poor far outnumber those who are rich, and as each one of us has some influence we ought to be able to arrange matters so as to have good laws, and a proper enforcement of them. That has not yet come. In the meantime let each landholder do what he can for the protection of the game on his own property.

A NEW PROFESSION.

A RATHER alluring article is going the rounds of the press expatiating upon the attractions of scientific forestry as a new profession opened to young men. It is held up as an ideal pursuit, which offers unequalled opportunity for living a free and healthful outdoor life. "It deals with nature's greatest beauties. It is a profession that is not crowded. It offers chances for wealth, since the trained eye of a forester can see chances in the wilderness which the untrained man, and even the trained but unscientific woodsman, would not guess. It is a business that promises ample salary, for the forester can show his employers where they can save or earn thousands of dollars that without him would be lost."

All of which is pleasing to read and enticing to contemplate when regarded through the rosy spectacles of simple and trustful youth. The cold, hard fact, however, is that in its present development in America, forestry as a profession is one which offers extremely meager emoluments to those who engage in it. There are, of course, numerous individual and corporate holders of woodlands who are ready to undertake the practical scientific administration of their estates, but for all such the United States Government stands ready to supply the services of the experts of the Bureau of Forestry. The Government will not only prepare plans for treatment for a forest tract, but will give such explicit and precise instructions for the carrying out of the plan that there remains only work for the unskilled and untaught day laborer at so much per day. Thus it happens that the trained forester, who seeks a commission from such a landowner and who must have pay for his services, finds himself in direct competition with the Government, which performs precisely the same service for nothing. There remains for him employment with the Bureau of Forestry; and here, if his taste for outdoor life and the beauties of nature be so predominant that their gratification will compensate for low wages and exile from home, he may do something for his day and generation.

It is true indeed that in this country forestry is as yet in its infancy, and the future will surely see vastly changed conditions. There will come a time without doubt when the profession of scientific forester will have remunerative recognition; but as conditions now exist it is much simpler to pen an alluring and delusive article on the charms of the forester's profession than it is to find work for a professional forester at living pay. In the year 1902 in the United States forestry as a profession may safely be recommended only to young men whose means will permit them to engage in it as a dignified diversion.

The opening weeks of the Adirondack deer hunting season have been signalized by the killing of two human beings mistaken for deer. One of the victims was walking on the railroad track; the other, if the newspaper reports are correct, was out with a jacking party on a pond tributary to Blue Mountain Lake, and when the jacklight was flashed on him the hunter in the other boat thought he saw a deer and shot before he made sure. One circumstance of this case, which adds to its deplorable nature, is that hunting deer at night is forbidden by law. In view of this human sacrifice, it is manifest that the game protectors should exercise extraordinary vigilance to suppress illicit deer jacking in the Adirondacks, not so much for the sake of the deer supply as for the prevention of such casualties as this.

The interesting paper on Labrador, on another page, will be supplemented next week with an account of a summer excursion to the country by one of FOREST AND STREAM's contributors.

The Sportsman Tourist.

Beyond the Long Divide.

Beyond the long divide what valleys lie
Elysian? Say! does the fair, blue sky
Shine there as here, on flowery meads,
Where singing streams make music night and day,
Where, all about, the fragrant zephyrs play
Æolian strains, and whither fancy leads
We wander, care-free, happy, side by side,
Friend close to friend, beyond the long divide?

Beyond the long divide! Is it desert drear
Where we must penance do for all that here
Was done amiss; where, amid ashes and the gray,
Unburied past, drives unrelenting Fate,
'Til full atonement's made, be it soon or late?
Is it joyless gloom, where breaks no radiant day
To give us hope, and bitter memories glide
Like shadows just beyond the long divide?

Beyond the long divide! Is it endless rest,
Where tired, disappointed with earth's quest,
We lay life's burden down and sleep
Dreamless, unwaking sleep, pleasure and pain
Unknown: sleep on our mother's breast again?
So slept we years agone, long ere we crosed the deep
Unfathomed ocean, from whose hither tide
The path leads upward, toward the long divide.

Shoshone.

Memories that Endure.

I am well up the divide if not at its top. The years which intervene from boyhood have brought vicissitudes more or less common to all. While later experiences grow dim, earlier ones take on a roseate hue. To have forgottetn that we were once a boy is to have lost from life's history its brightest page. Nature kindly paints out the tragic of that early time and retouches in brighter colors its pleasant recollections. The old farmhouse in which I was born, built by my grandfather, at a time when western Pennsylvania was an almost unbroken forest, with its front "stoop," big brick chimney, large, small-paned windows, cavernous cellar and stairway with a jog, roomy, sunny, cheerful with voices, whir of wheel and chuck of loom, a veritable beehive of industry and contentment; it rises before me as clear and distinct as the house across the street from where I now sit. The stories related by my grandfather and grandmother of their pioneer life, early instilled into my mind the love of the gun and "fish pole." My father was a good shot with the rifle and frequently brought home deer, turkey and lesser game. Often he would let me shoot while too young to hold a gun, but would lay it across a log or stump and explain to me how to bring the sights into range with the object shot at. With great pride I once poked a hole through his hat which he said I could not hit. From him, also, I learned to catch the "speckled beauty." The greatest fun, however, began when I was able to manipulate the gun and "pole," "all by myself." This combination of gun and pole sometimes brought disaster upon myself and an older brother, but who could remember when to go home when in the woods or along a creek hot after "chipmuck" or chub?

When first the possessor of a fish line, it was one made (not exactly to order) by my mother. The flax was grown, rotted, broken, skutched and hetcheled by my father and spun double and twisted by my mother. When she gave it to me with a kiss and good wishes for my success, do you think I was not happy nor proud of mother? Alas! she died before I could fully realize what her loss was to me. They laid her to rest on a sunny slope that overlooks the blue waters of Lake Erie.

The line was smooth and strong, made upon honor. My hook was not as fine as you can buy to-day, but if well yanked, it brought out the fish all right. Armed with hook and line, together with a bottle of wriggling "first principles" and gathering up an older brother, and Washington, and Marcus, and Steve, cousins, and old Porter, the dog, it was but a short half mile to a thicket of young birch sprouts, where we provided ourselves with poles, having borrowed father's jack knife for the purpose. Here happened one of those annoying incidents which mark epochs, perhaps, but which, from the very nature of boys ought not to happen at all. That knife was lost. Thanks to an inscrutable Providence, we did not know it though at the time.

No gray-headed fisherman ever looked over his Hortons, his Henshalls or his Leonards with keener criticism or delight than the boy who picks his "fish-pole" from the lusty thicket provided by kindly Nature ready to his hand. Every sense is alert. No haste in his step nor excitement warps his judgment. Dignity and deliberation mark every stage of the operation as they should every important undertaking. The eye takes in a half hundred at a glance, to be discarded one by one until a suitable one is chosen. To cut, trim and attach the line and hook is but the work of a moment. Enthusiasm grows apace as the judgment of each is commended or disparaged in his choice, and an indescribable joy suffuses the whole being as each reaches the conclusion that his is best. It is quickly decided that Miller's Pond is the place to go. Years before a log dam had been built across a stream which ran at the bottom of a deep gully. The dam extended from bank to bank a hundred feet perhaps, and from 12 to 15 feet high. Many dead trees yet stood in the water and gave to the place rather a dreary appearance. Logs projected into the water from either side, and on the west side the water grew deep rapidly, the east side being much shallower.

The water had washed the soil from around the roots of many trees which stood along the banks and formed in boy parlance "good holes." Just below the dam were deep pools in which lived and flourished much larger trout than we ever took out.

Therein, perhaps, lay the charm of it. I do not know how our method of fishing ever originated. I reckon, like Topsy, it "just growed." If, as in the present instance, we were to fish at the pond, each had his allotted "holes," and no one "poached on his preserves." It seemed to be a fair arrangement then, and still seems so. If two or more fished a stream, we fished down. Each took a position and fished it until those up stream had all passed, when he went below all to the next hole. When you passed from up to down, you could hold whispered consultations with each boy of your crowd, and thus keep in touch with all the fun going.

I have fished many streams, rivers and lakes since, but never with a keener delight. From the dam for a couple of miles down stream was known as Turner's Gulf. The water was clear, cool and rapid, lying occasionally in a deep pool, but more often dashing over stones or submerged roots and logs. It was an ideal place for brook trout. A few special places existed where the whoppers lived, and he to whom these fell as his portion, was happy indeed. The banks were steep, covered mostly with fallen trees and grown up with blackberry and native bushes. Occasionally the stream would run through a bit of pasture, where the undergrowth would be eaten off, and here and there an elm, beech or birch would cast a grateful shade, sought alike by drowsy cattle or weary man. A few shiny, slanting hemlock logs lay along the banks, where in spring and early summer time the partridge beat the long roll or wooed his mate lovingly.

Two years ago I visited for the only time in many years the well remembered spots along Turner's Gulf. They came nearer being as I held them in mind than anything else in the whole township. So many things were dwarfed; the hills were not so steep nor high; the woods were much less; the fields were smaller; the acquaintances were mostly dead or gone, but Turner's Gulf brought back the scenes and incidents of boyhood these fifty years gone by. W.

More About Sport.

East Wareham, Mass., Sept. 4.—*Editor Forest and Stream:* Reading in the last issue of your paper "The Nature of Sport," by Coahoma, I must take an exception to his remarks on "Uncle" Daniel. Noah Webster is the author he had in mind. Daniel ranged all through these parts, and his ideas in regard to sport were sound. Noah, from all accounts, pursued his hunting among the classics, chasing derivations and synonyms through old lexicons and rounding up obsolete words in the times of Chaucer, Milton, Shakespeare and others of that ilk. There are no records of his prowess in other fields. Daniel, on the contrary, while well posted in bookish lore, would have been a competent judge to decide any questions relating to the sports of his day.

As the essence of hunting is the matching of wits and skill against the same qualities in the game, its satisfaction is merged in one of two ends, either capturing the game alive, or securing it dead. Civilization advances, and men grow less savage for the reason that the implements of destruction have been so perfected, that the qualities which hunting demanded in a previous age are but little required now. When men hunted to kill, sport was a very secondary consideration, as the arts advanced it became possible to develop a certain skill not dependent on superior physical endurance. Even as late as the middle of the eighteenth century we read of huntsmen riding out on a "sausage cart," which was simply a log of sufficient length, on which the men sat astride, the whole thing mounted on four wheels, and drawn by as many horses as was necessary to keep it going at a gallop.

In the days of archery it took more courage and skill to kill an elk, boar or bison than now. The matchlocks and arquebuses were not much better as weapons, but the flintlock was a decided improvement, and the sportsman of to-day, with his magazine gun, is as far ahead of his predecessors with the bow as the astronomer of to-day with his 36-inch object glass is ahead of the observer who sat on the great pyramid and viewed the heavens with naked eyes.

This great improvement in arms has changed about the conditions of sport entirely; to-day it has no connection with necessity or economy; therefore, the death of an object pursued is often regrettable. The saving of the flesh of game is frequently only a sop to a conscience that will stir when life is taken.

As no mechanical contrivance requires anything more than mechanical skill to reduce to possession, it is doubtful if any inventions will ever take the place of live game as a stimulus for pursuit while game lasts. But, as the population increases and game grows rapidly less, it is evident that "sports" will gather and draw mankind to scenes where death is no factor.

The man who has but two weeks in a year for relaxation and who inherits a love for hunting, may well be permitted to hang an elk or moose head on his wall—he will not want many—much better he go and and get it than buy.

In a certain great house years ago a mighty elk head and horns served as a hat rack. How many who paused before that head while adjusting their own headgear on one of its many points, ever thought of it as sentiment? It cost its owner $50 when such trophies were much rarer in houses and plentier in forests than now.

Had the owner shot it himself he would have looked at it with pleasure all his life, would have had a good story to tell—well might people doff their hats before it then.

Who shall say that whaling is not sport? Or that a whaler is not a sportsman? He hunts the biggest game known; the pursuit requires the utmost perseverance, coolness and judgment, and affords a spice of danger by no means insignificant.

Gentlemen, the shield has two sides. You are both right and all right. Walter B. Savary.

The Eskimos of Labrador.

Number 4 of Volume III of the Bulletin of the Geographical Society of Philadelphia, which has just reached us, is devoted to an interesting report of the Brown-Harvard expedition to Nachvak, Labrador, in the year 1900. The report is written by Dr. E. B. Delabarre, of Brown University. Like all the publications of the Philadelphia Geographical Society, it is handsomely brought out. It is ornamented with many illustrations of Labrador scenes, and covers not far from 150 pages; gives an outline of the voyage from day to day, a summary of the trip, with its meteorological conditions, an account of an overland trip from Hebron to Nachvak, of Nachvak Bay and the ascent of Mount Faunce, chapters on the scenery of the Atlantic Coast of Labrador, its life, the scientific results of the expedition, with reports on botany, ornithology and geology.

The report on ornithology is a very briefly annotated list of 79 species, and this list appears in somewhat more extended form in the "Auk" for January, 1902.

Outside of the itinerary, the report is devoted chiefly to botanical, geological and mineralogical features. Little is said about the bird life, and practically nothing about the mammalian life of the region. There is, however, an attractive reference to the people inhabiting the country. We give below some remarks on the present condition of the Eskimo there.

In this report there is abundant information which will be useful to persons visiting the Labrador coast. To all such it may be warmly recommended. The account of the Labrador Eskimo is as follows:

A thousand miles or more of desolate seacoast stretch from St. John's, in Newfoundland, to Nachvak, near the northern end of Labrador. In the summer time it is crowded with fishing schooners, whose crews toil laboriously for their scanty winter supplies. But in the winter, except for a few widely separated and lonely settlements of hardy natives and whites, it is inaccessible, and given over to the undisputed sway of ice and snow.

The visitor to these shores finds much to interest him. If he be a lover of nature, he will find few more beautiful and attractive regions than this, with its irregular coastline, diversified by rocky hills, imposing cliffs, and island-dotted bays; with its many-hued Arctic vegetation; and in the north with its deep fiords and huge mountain masses. If he be a scientist, its plants, its geological formation and history, its animal life, will give him plentiful opportunity for study and new discovery. The sportsman will revel in brooks teeming with trout, or may haply discover big game worthy of his rifle. The mere traveler, seeking new sights and adventures, will come away enthusiastic over the novelties of a summer in the far north, where numberless icebergs, a brilliantly phosphorescent sea, a sky often alive with wonderful quivering displays of auroral light, a season of continuous autumnal comfort, and the strange, impressive landscapes of a sub-arctic country, have given him a bountiful reward for his journey.

Yet, after all, wherever one may go, it is the human life, with its varieties and occupations, its differences from ourselves, its triumphs, vicissitudes and problems, that furnishes the study of most absorbing interest. This is certainly true of Labrador. Simple, rugged and primitive, like the land they live in, its people present features of interest alike to the psychologist, the anthropologist, the student of social economy and conditions—and naturally, also, to the practical philanthropist.

Eskimos.—Of the aboriginal inhabitants, aside from the Indians of the southerly interior, there are now only about a thousand Eskimos along the Atlantic Coast. From Hopedale southward most of them are of mixed blood; but north of there they are said to be almost entirely pure blooded. We met them frequently north of Hopedale. Their present southern limit is Hamilton Inlet, though in former times they are reported to have spread as far south as Massachusetts. They swarmed over our schooner, peering curiously into all its recesses, and offering their simple possessions in exchange for tobacco and clothing; and we met many of them in their villages on shore. We find them here not in their original crude condition, but greatly modified in dress, manners and customs by their long contact with white men. The Moravians sent missionaries to these coasts more than a century and a quarter ago. In consequence, the Eskimos who have come under their influence have adopted many features of civilized dress, implements and beliefs. It is only further north or west than we penetrated that we find them unchanged.

The men look strong and sturdy. They are rather short, seeming to average about five feet and a half*. Their heads are very long from front to back, as compared with their breadth; the cephalic index, according to the anthropologists, averages about 75. Their faces are broad and round, with projecting cheek bones and prominent processes at the upper end of the jaw. They are usually very fat. The jaws, or at least the lips, are very apt to be rather protuberant. The eyes are narrow. The forehead, usually covered over with hair, is of medium height. The hair is straight and jet black, except in the case of the old men, and is worn long, cut off straight below the ears and just above the eyes; though some of the younger men wear it close-cut. The beards are very thin, and often entirely wanting. When there is little fat in the face the prominent bones, and the deep wrinkles in the old people, make it of very irregular outline. The eyes and the complexion are always dark, but the latter varies from the color of a

* Statements vary as to their height. Low (loc. cit., p. 52 L) says: "The males, as a rule, are quite as tall as the average white man, but owing to their broad, heavy build, they appear shorter than they really are; and this appearance is enhanced by their wide garments of hairy deer or seal skins. Where seen by the writer * * * several of the men were six feet and upward in height, the average height being about six feet five inches." Deniker ("The Races of Man," 1900, p. 578) gives the average height of twenty-six measured Eskimos of Labrador as five feet two inches. Robert Brown (Encycl. Brit., VIII., 543) says they measure five feet four inches to five feet ten inches, and in rare cases even six feet. The cephalic index (Deniker, p. 587) is 76.8 for the living subject, as measured on 614 Eskimos of Greenland; and for the skull has been found to be 72.4 for thirty-one cases from Greenland, 71.3 for 152 cases from Eastern America (measurements of Davis). They are said by Ripley ("Races of Europe," 1899) to be almost the longest headed race known.

moderate sunburn to a much deeper brown. Where the skin is not exposed, however, it is apparently as white or rosy as that of a white man.

The women closely resemble the men in their features. Their black hair is done up in a coil on the head. Most of them now wear skirts, especially when strangers are about, though some of them still cling to deerskin trousers. One feature of their original dress that they still retain, and that serves by its different form to distinguish the men from the women, is the jacket or attigi. It is a loose garment, furnished with a hood for both sexes. It is cut square across at the bottom for the men, but for the women ends below in a curve or tail both in front and behind, the rear appendage being much the longer. The hood is often bordered with fur, and in the case of the women bears more or less elaborate ornamentation. These garments were doubtless made originally entirely of fur, but this has now been supplanted, in summer at least, by a white, thick, flannel-like cloth supplied by the missionaries. The hood of the women serves not only as a head protection, but also as a convenient receptacle for the babies.

These people are of an essentially sanguine temperament. Of course, they differ much from one another individually, but there are many traits that are true of them in general. They are naturally cheerful, merry, and light-hearted. They are fond of song and music, and have some skill in its production. They seem to be often joking together; are jovial and good-natured, with a well developed sense of humor. These sunny qualities give place at times to darker moods. Quarrels may arise; stealing may occur, though it is rare; murder may be committed, but Mr. Ford, of Nachvak, has known of the occurrence of only three cases. Their emotions are apparently not deeply seated or persistent beyond the immediate presence of the exciting cause. They are almost always honest and peaceable, and friendly to the stranger. Warfare is almost unknown among them. They naturally resent injury, as when, as too often happens, the Newfoundland fishermen encroach upon their fishing grounds or steal their wood for huts; but they rarely resort to violence, and when this occurs it is usually under the lead of some one with white blood in his veins. They have an excellent reputation for industry, are active, quick and enduring. Whenever we employed them, we found them willing and eager. They lay by little for the future. When they have plenty they are pretty sure to be generous, and a good hunter will support sometimes several families, the rest being content to live lazily by the exertions of the one. They can be just as greedy as they are generous, when circumstances are different. They have a good average degree of intelligence—a high degree, it would seem, when one considers the few solicitations to thought and ingenuity in their environment; but their intelligence is combined naturally with a great deal of superstition. They are easily led, and their special character and actions depend much on the nature of their leader. Yet they rarely have any sort of government, but live together in tribal amity with no chief or ruler unless one temporarily arises by virtue of his own unusual gifts of wealth or wit. Where their primitive ideas are not weeded out by the missionaries, however, they are largely in subjection to their medicine men or sorcerers.

Where missionary influences prevail the marital relations of the Eskimos are of the conventional civilized type, and their sexual morality is of a high order. But further north they vary much, each doing much as he likes and can. One man may have three or four wives; and at least one case is known where two men have one wife in common.

The life of the Eskimos is one of hunting and fishing. They live principally on a meat diet, consisting chiefly of seal, whale, caribou and fish. Berries are almost their only natural vegetable food, though now they obtain also flour and bread with considerable ease. Formerly they did little cooking, but now the introduction of civilized kettles makes it easier. They place their main reliance on the seal, and it is hard to imagine how they could continue to get along without it. It gives them food, dog meat, clothing, boots, tents, dog traces and harpoon lines, fuel for light and heat. They have little in the way of implements and possessions except such as are needed for their hunting and fishing, for clothing, shelter and food. Once they lived very crudely, with no implements except of stone, of bone and of skins, no fuel except seal oil, and no domestic animals except their magnificent dogs. One still finds in old graves specimens of these cruder implements formerly in use. But a hundred years of contact with the white man have given them many of his utensils and methods. A few useful articles remain much as in the days before they knew the white man and his ways. One of these is the kayak, a rapid and seaworthy canoe made of skin, entirely decked over except for the round hole in the middle in which its one occupant sits. Another is their remarkable harpoon, whose barb detaches itself from the handle when the animal is hit, and, being attached to a float and drag, prevents the escape of their game. Still a third is the komatik, or dog sledge, in which the only important change has been the substitution of iron runners for those of wood, bone or frozen mud formerly in use; though runners of ivory or whalebone are also still used.

Most of the Eskimos now live in small communities of not more than three or four hundred about the mission stations or posts of the Hudson's Bay Company. Usually their crude houses are of wood covered over on the inside with turf; though in some places they are entirely of wood. In former times their central dwelling was constructed of walrus or whale bones covered over with skins, or of an underground excavation, or of a half-underground, half-over ground framework of stones covered with turf. One still sees remnants of such structures. They often leave these more permanent dwellings, however, and go off, in the summer for fishing, in the winter for hunting or sealing. It is only on these occasions that they now use their snow houses in winter, and in summer their skin topeks or canvas tents.

The conditions of their life, with the continual necessity of warm clothing and shelter, and the difficulties of obtaining warm water and soap, naturally render impossible any large degree of cleanliness. Yet they tolerate a rather unnecessary amount of filth and refuse in and around their dwellings, which, with their utter disregard of ventilation, while less offensive and less deleterious to their health than the same conditions would be in a warmer climate, are nevertheless harmful to a considerable extent.

Many of them have considerable skill in making carvings of the ivory of walrus tusks. They do not, however, possess the fine feeling for ornamentation and finish shown by their Alaska kinsmen. This, together with their music, seems to be their only art. Their language is highly polysynthetic, single words of complex structure taking the place of whole sentences. There is a remarkable similarity in its dialects everywhere, from Siberia to Greenland. They differ hardly more from each other than do English and broad Scotch (Keane, "Man, Past and Present," 1899), in spite of the separation of some of the tribes from each other for perhaps thousands of years.

Natural History.

Wild Animals of the North.

From Richardson's "Fauna Boreali-Americana; or the Zoology of the Northern Parts of British America."

Moose.

Dr. Richardson has much to say about the moose, but his article consists very largely of quotations from earlier authors. The names moose and elk, current in North America, had already created confusion among writers of the Old World, who did not realize that the moose was nearly related to the elk of Europe, while the elk of America was really the Canada stag, known to the Indians as wapiti. Dr. Richardson speaks of the moose as found as far north as the shores of the Arctic Sea, in the Mackenzie Delta, in latitude 69 degrees. He speaks also of the Indian method of moose hunting, practiced particularly by the Crees, "who take to themselves the credit of being able to instruct the hunters of every other tribe. This is the method described by Mr. D. M. Barringer, in one of the books of the Boone and Crockett Club, some years ago. He speaks also of the gentleness of the young, who are captured without difficulty, and quotes Hearns as saying, "The moose is the easiest to tame and domesticate of any of the deer kind."

Caribou.

Of the barren ground caribou, Richardson speaks at great length, and so interestingly that it seems worth while to quote his article in full. While these remarks are familiar to students of mammals, to sportsmen at large they are not so:

"This variety of reindeer is of small stature, and weighs so little, that I have seen a Canadian voyager throw a full-grown doe on his shoulders and carry it as an English butcher would a sheep. The bucks are of larger size, and weigh, exclusive of the offal, when in good condition, from 90 to 130 pounds. The old males have in general the largest and most horns, while the young ones and the females have them less branched and more cylindrical and pointed; but this is not uniformly the case, and the variety of forms assumed by the horns of the caribou is indeed so great, that it is difficult to comprehend them all in a general description. Some have the branches and extremities broadly palmated, and set round with finger-like points; others have them cylindrical, and even tapering, without any palmated portion whatever. The majority of adult males have a brow antler, in form of a broad vertical plate running down betwixt the eyes, and hanging over the nose. In some, this plate springs from the right horn, in others from the left; in many there is a plate from each side, and in a considerable number it is altogether wanting; the plate is in general widest at its extremity, and is set with four or five points, which are sometimes recurved. The main stem of the horns also exhibits an endless variety in its thickness, altitude and curvature. During the growth of the horns they are covered with a hairy skin, which is soft and velvety to the touch, and in an early stage their interior consists of a substance which has the flavor of marrow, and resembles it much in appearance, but has a finer consistence, and is furnished with more conspicuous blood vessels. The horns become indurated as they increase in size, and when they have attained their full growth, their velvety covering shrivels and peels off in ragged filaments. This takes place in the males in September, previous to the commencement of the rutting season, and by the end of November most of the old bucks have shed their horns. The young males retain theirs much longer, and the females do not lose their horns until they are about to drop their young in the month of May. Hearne observes that the barren ground caribou bears horns twice the size of those of the woodland variety, notwithstanding that the latter is a much larger animal.

"In the month of July the caribou sheds its winter covering, and acquires a short, smooth coat of hair, of a color composed of clove-brown, mingled with deep reddish and yellowish browns; the under surface of the neck, the belly, and the inner sides of the extremities remaining white in all seasons. The hair at first is fine and flexible, but as it lengthens it increases gradually in diameter at its roots, becoming at the same time white, soft, compressible, and brittle, like the hair of the moose-deer. In the course of the winter the thickness of the hairs at their roots becomes so great that they are exceedingly close, and no longer lie down smoothly, but stand erect, and they are then so soft and tender below, that the flexible, colored points are easily rubbed off, and the fur appears white, especially at the flanks. This occurs in a smaller degree on the back; and on the under parts the hair, although it acquires length, remains more flexible and slender at its roots, and is consequently not so subject to break. Toward the spring, when the deer are tormented by the larvæ of the gadfly making their way through the skin, they rub themselves against stones and rocks, until all the colored tops of their hair are worn off, and their fur appears to be entirely of a soiled white color.

"The closeness of the hair of the caribou, and the lightness of its skin, when properly dressed, renders it the most appropriate article for winter clothing in the high latitudes. The skins of the young deer make the best dresses, and they should be killed for that purpose in the months of August and September, as after the latter date the hair becomes too long and brittle. The prime parts of eight or ten deerskins make a complete suit of clothing for a grown person, which is so impervious to the cold, that, with the addition of a blanket of the same material, any one so clothed, may bivouack on the snow with safety, and even with comfort, in the most intense cold of an Arctic winter's night. The hoofs of this variety of reindeer are very large, and spread greatly; and the posterior or accessory ones make a loud clattering noise when the animal runs. The forms of the latter are almost always visible in its footmarks, unless the ground be so hard that even the principal hoofs make little impression.

"The barren ground caribou, which resort to the coast of the Arctic Sea, in summer, retire in winter to the woods lying between the sixty-third and the sixty-sixth degree of latitude, where they feed on the *Usneæ, Electoriæ* and other lichens, which hang from the trees, and on the long grass of the swamps. About the end of April, when the partial melting of the snow has softened, the *Cetrariæ, Cornicularieæ* and *Cenomyces,* which clothe the barren grounds like a carpet, they make short excursions from the woods, but return to them when the weather is frosty. In May the females proceed toward the sea coast, and toward the end of June the males are in full march in the same direction. At that period the power of the sun has dried up the lichens on the barren grounds, and the caribou frequent the moist pastures which cover the bottoms of the narrow valleys on the coasts and islands of the Arctic Sea, where they graze on the sprouting carices, and on the withered grass or hay of the preceding year, which is at that period still standing, and retaining part of its sap. Their spring journey is performed partly on the snow, and partly after the snow has disappeared, on the ice covering the rivers and lakes, which have, in general, a northerly direction. Soon after their arrival on the coast the females drop their young; they commence their return to the south in September, and reach the vicinity of the woods toward the end of October, where they are joined by the males. This journey takes place after the snow has fallen, and they scrape it away with their feet to procure the lichens, which are then tender and pulpy, being preserved moist and unfrozen by the heat still remaining in the earth. Except in the rutting season the bulk of the males and females live separately—the former retire deeper into the woods in the winter, while herds of the pregnant does stay on the skirts of the barren grounds, and proceed to the coast very early in spring. Captain Parry saw deer on Melville Peninsula as late as Sept. 23, and the females, with their fawns, made their first appearance on April 22. The males in general do not go so far north as the females. On the coast of Hudson's Bay the barren ground caribou migrate further south than those on the Coppermine or Mackenzie rivers; but none of them go to the southward of Churchill.

"The lichens, on which the caribou principally feed while on the barren grounds, are the *Cornicularia tristis, Divergens* and *Ochrileuca,* the *Cetraria nivalis, Cucullata* and *Islandica,* and the *Cenomyce rangiferina.* When in condition, there is a layer of fat deposited on the back and rump of the males to the depth of two or three inches or more, immediately under the skin, which is termed *depouille* by the Canadian voyagers; and as an article of Indian trade, it is often of more value than all the remainder of the carcass. The *depouille* is thickest at the commencement of the rutting season; it then becomes of a red color, and acquires a high flavor, and soon afterward disappears. The females at that period are lean; but in the course of the winter they acquire a small *depouille,* which is exhausted soon after they drop their young. The flesh of the caribou is very tender, and its flavor when in season is, in my opinion, superior to that of the finest English venison; but when the animal is lean it is very insipid, the difference being greater between well-fed and lean caribou than any one can conceive who has not had an opportunity of judging. The lean meat fills the stomach, but never satisfies the appetite, and scarcely serves to recruit the strength when exhausted by labor. The flesh of the moose deer and buffalo, on the other hand, is tough when lean, but is never so utterly tasteless and devoid of nourishment as that of a caribou in poor condition. The Chipewyans, the Copper Indians, the Dog-ribs and Hare Indians of Great Bear Lake, would be totally unable to inhabit their barren lands were it not for the immense herds of this deer that exist there. Of the caribou horns they form their fish spears and hooks; and previous to the introduction of European iron, ice chisels and various other utensils were likewise made of them. The hide dressed with the fur is, as has been already mentioned, excellent for winter clothing, and supplies the place of both blanket and feather bed to the inhabitants of the Arctic wilds. When subjected to the process described in the article on the moose deer, it forms a soft and pliable leather, adapted for moccasins and summer clothing, or when sixty or seventy skins are sewed together, they make a tent sufficient for the residence of a large family. The shin bone of the deer, split so as to present a sharp edge, is the knife that is used to remove the hair in the process of making the leather. The undressed hide, after the hair is taken off, is cut into thongs of various thickness, which are twisted into deer snares, bowstrings, net lines, and, in fact, supply all the purposes of rope. The finer thongs are used in the manufacture of fishing nets or in working snowshoes; while the tendons of the dorsal muscles are split into fine and excellent sewing thread.

"Beside these and many other uses to which the Indians appropriate different parts of the caribou in their domestic economy, the animal is no less useful in the way of food. The hunter breaks the leg bones of a recently slaughtered deer, and while the marrow is still warm devours it with much relish. The kidneys and part of the intestines, particularly the thin folds of the third stomach or many-plies, are likewise occasionally eaten when raw, and the summits of the antlers as long as they are soft, are also delicacies in a raw state. The colon or large gut

is inverted, so as to preserve its fatty appendages, and is, when either roasted or boiled, one of the richest and most savory morsels the country affords, either to the native or white resident. The remainder of the intestines, after being cleaned, are hung in the smoke for a few days and then broiled. The stomach and its contents, termed by the Esquimaux *nerrooks,* and by the Greenlanders *nerrokak* or *nerriookak*, are also eaten, and it would appear that the lichens and other vegetable matters on which the caribou feeds are more easily digested by the human stomach when they are mixed with the salivary and gastric juices of a ruminating animal. Many of the Indians and Canadian voyagers prefer this savory mixture after it has undergone a degree of fermentation, or lain to season, as they term it, for a few days. The blood, if mixed in proper proportion with a strong decoction of fat meat, forms, after some nicety in the cooking, a rich soup, which is very palatable and highly nutritious, but very difficult of digestion. When all the soft parts of the animal are consumed, the bones are pounded small, and a large quantity of marrow is extracted from them by boiling. This is used in making the better kinds of the mixture of dried meat and fat, which is named *pemmican,* and it is also preserved by the young men and females for anointing the hair and greasing the face on dress occasions. The tongue roasted, when fresh or when half dried, is a delicious morsel. When it is necessary to preserve the caribou meat for use at a future period, it is cut into thin slices and dried over the smoke of a slow fire, and then pounded betwixt two stones. This pounded meat is very dry and husky, and is eaten alone, but when a quantity of the back fat or *depouille* of the deer is added to it, is one of the greatest treats that can be offered to a resident in the fur countries. Pemmican is formed by pouring one-third part of melted fat over the pounded meat and incorporating them well together. If kept dry it may be preserved sound for three or four years, and from the quantity of nourishment it contains in small bulk, it is perhaps the best kind of food for those who travel through desert lands. Thueehawgan is a mixture of pounded deer's meat and dried fish or fish roe, which is eaten raw, or when made into soup, by throwing a handful of it into boiling water.

"The caribou travel in herds, varying in number from eight or ten to two or three hundred, and their daily excursions are generally toward the quarter from whence the wind blows. The Indians kill them with the bow and arrow or gun, take them in snares, or spear them in crossing rivers or lakes. The Esquimaux also take them in traps ingeniously formed of ice or snow. Of all the deer of North America, they are the most easy of approach, and are slaughtered in the greatest numbers. A single family of Indians will sometimes destroy two or three hundred in a few weeks, and in many cases they are killed for the sake of their tongues alone.

"The following extract from Captain Lyon's interesting journal, details some of the Esquimaux methods of killing them. 'The reindeer,' says he, 'visits the polar regions at the latter end of May or the early part of June, and remains until late in September. On his first arrival, he is thin, and his flesh is tasteless, but the short summer is sufficient to fatten him to two or three inches on the haunches. When feeding on the level ground, an Esquimaux makes no attempt to approach him, but should a few rocks be near, the wary hunter feels secure of his prey. Behind one of these he cautiously creeps, and having laid himself very close, with his bow and arrow before him, imitates the bellow of the deer when calling to each other. Sometimes, for more complete deception, the hunter wears his deerskin coat and hood so drawn over his head, as to resemble, in a great measure, the unsuspecting animals he is enticing. Though the bellow proves a considerable attraction, yet if a man has great patience he may do without it, and may be equally certain that his prey will ultimately come to examine him; the reindeer being an inquisitive animal, and at the same time so silly, that if he sees any suspicious object which is not actually chasing him, he will gradually, and after many caperings, and forming repeated circles, approach nearer and nearer to it. The Esquimaux rarely shoot until the creature is within twelve paces, and I have frequently been told of their being killed at a much shorter distance. It is to be observed that the hunters never approach openly, but employ stratagem for their purpose; thus, by patience and ingenuity rendering their rudely formed bows and still worse arrows, as effective as the rifles of Europeans. When two men hunt in company, they sometimes purposely show themselves to the deer, and when his attention is fully engaged, walk slowly away from him, one before the other. The deer follows, and when the hunter arrives near a stone, the foremost drops behind it and prepares his bow, while his companion continues walking steadily forward. This latter the deer still follows unsuspectingly, and thus passes near the concealed man, who takes a deliberate aim and kills the animal. When the deer assemble in herds, there are particular passes which they invariably take, and on being driven to them are killed by arrows of the men, while the women, with shouts, drive them to the water. Here they swim with the ease and activity of water dogs, the people in kayaks chasing and easily spearing them; the carcasses float, and the hunter then presses forward and kills as many as he finds in his track. No springs or traps are used in the capture of these animals, as is practiced to the southward, in consequence of the total absence of standing wood.' The caribou entirely quit the districts which Capt. Lyon visited, in the winter; but the Esquimaux who inhabit the coast of the Welcome, to the southward of Chesterfield inlet, have an opportunity, by the animals continuing in their country, of showing their ingenuity in the construction of deer traps, of their convenient and elegant building material, compact snow. The sides of the trap are built of slabs of that substance, cut as if for a snow house; an inclined plane of snow leads to the entrance of the pit, which is about five feet deep, and of sufficient dimensions to contain two or three large deer. The pit is covered with a large thin slab of snow, which the animal is enticed to tread upon by a quantity of the lichens on which it feeds being placed conspicuously on an eminence beyond the opening. The exterior of the trap is banked up with snow so as to resemble a natural hillock, and care is taken to render it so steep on all sides but one, that the deer must pass over the mouth of the trap before it can reach the bait. The slab is sufficiently strong to bear the weight of a deer until it has passed its middle, when it revolves on two short axles of woods, precipitates the deer into the trap and returns to its place again in consequence of the lower end being heavier than the other. Throughout the whole line of coast frequented by the Esquimaux, it is customary to see long lines of stones set on an end, or of turfs piled up at intervals of about twenty yards, for the purpose of leading the caribou to stations where they can be more easily approached. The natives find by experience that the animals, in feeding, imperceptibly take the line of direction of the objects thus placed before them, and the hunter can approach a herd that he sees from a distance by gradually crawling from stone to stone, and remaining motionless when he sees any of the animals looking toward him. The whole of the barren grounds are intersected by caribou paths, like sheep tracks, which are of service to travelers at times in leading them to convenient crossing places of lakes or rivers.

"Hearne gives the following account of the deer pound in use among the Chipewyans:

"'When the Indians design to impound deer, they look out for one of the paths in which a number of them have trod, and which is observed to be still frequented by them. When these paths cross a lake, a wide river, or a barren plain, they are found to be much the best for the purpose; and if the path run through a cluster of woods, capable of affording materials for building the pound, it adds considerably to the commodiousness of the situation. The pound is built by making a strong fence with brushy trees, without observing any degree of regularity, and the work is continued to any extent, according to the pleasure of the builders. I have seen some that were not less than a mile round, and am informed that there are others still more extensive. The door or entrance of the pound is not larger than a common gate, and the inside is so crowded with small counter hedges as very much to resemble a maze, in every opening of which they set a snare, made with thongs of parchment deerskins well twisted together, which are amazingly strong. One end of the snare is usually made fast to a growing pole; but if no one of a sufficient size can be found near the place where the snare is set, a loose pole is substituted in its room, which is always of such size and length that a deer cannot drag it far before it gets entangled among the other woods, which are all left standing, except what is found necessary for making the fence, hedges, etc. The pound being thus prepared, a row of small brushwood is stuck up in the snow on each side of the door or entrance, and these hedge rows are continued along the open part of the lake, river, or plain, where neither stick nor stump beside is to be seen, which makes them the more distinctly observed. These poles or brushwood are generally placed at the distance of fifteen or twenty yards from each other, and ranged in such a manner as to form two sides of a long acute angle, growing gradually wider in proportion to the distance they extend from the pound, which sometimes is not less than two or three miles, while the deer's path is exactly along the middle, between the two rows of brushwood.

"'Indians employed on this service always pitch their tents on or near to an eminence that affords a commanding prospect of the path leading to the pound; and when they see any deer going that way, men, women, and children walk along the lake or river side under cover of the woods, till they get behind them, then step forth to open view, and proceed toward the pound in form of a crescent. The poor timorous deer finding themselves pursued, and at the same time taking the two rows of brushy poles to be two ranks of people standing to prevent their passing on either side, run straight forward in the path till they get into the pound. The Indians then close in, and block up the entrance with some brushy trees that have been cut down and lie at hand for that purpose. The deer being thus inclosed, the women and children walk round the pound to prevent them from jumping over or breaking through the fence, while the men are employed spearing such as are entangled in the snares, and shooting with bows and arrows those which remain loose in the pound. This method of hunting, if it deserve the name, is sometimes so successful, that many families subsist by it without having occasion to move their tents above once or twice during the course of a whole winter; and when the spring advances, both the deer and the Indians draw out to the eastward, on the ground which is entirely barren, or at least what is called so in these parts, as it neither produces trees nor shrubs of any kind, so that moss and some little grass is all the herbage which is to be found on it.'

"Captain Franklin observes that 'the reindeer has a quick eye, but the hunter by keeping to leeward of them and using a little caution, may approach very near; their apprehensions being much more easily roused by the smell than the sight of any unusual object. Indeed, their curiosity often causes them to come close up to and wheel round the hunter, thus affording him a good opportunity of singling out the fattest of the herd, and upon these occasions they become so confused by the shouts and gestures of their enemy, that they run backward and forward with great rapidity, but without the power of making their escape. The Copper Indians find by experience that a white dress attracts them most readily, and they often succeed in bringing them within shot, by kneeling and vibrating the gun from side to side, in imitation of the motion of a deer's horns when it is in the act of rubbing its head against a stone. The Dogrib Indians have a mode of killing these animals which, though simple, is very successful. It was thus described by Mr. Wentzel, who resided long among that people. The hunters go in pairs, the foremost carrying in one hand the horns and part of the skin of the head of a deer, and in the other a small bundle of twigs, against which he, from time to time, rubs the horns, imitating the gestures peculiar to the animal. His comrade follows treading exactly in his footsteps, and holding the guns of both in a horizontal position, so that the muzzles project under the arms of him who carries the head. Both hunters have a fillet of white skin round their foreheads, and the foremost has a strip of the same round his wrists. They approach the herd by degrees, raising their legs very slowly, but letting them down somewhat suddenly, after the manner of a deer, and always taking care to lift their right or left feet simultaneously. If any of the herd leave off feeding to gaze upon this extraordinary phenomenon, it instantly stops, and the head begins to play its part by licking its shoulders and performing other necessary movements. In this way the hunters attain the very center of the herd without exciting suspicion, and have leisure to single out the fattest. The hindmost man then pushes forward his comrade's gun, the head is dropped, and they both fire nearly at the same instant. The deer scamper off, the hunters trot after them; in a short time the poor animals halt to ascertain the cause of their terror, their foes stop at the same moment, and having loaded as they ran, greet the gazers with a second fatal discharge. The consternation of the deer increases, they run to and fro in the utmost confusion, and sometimes a great part of the herd is destroyed within the space of a few hundred yards.'"

Of the woodland caribou, on the other hand, Richardson knew little, for they did not inhabit his country.

Cat and Coral Snake.

Tapachula Chiapas, Mexico, August 16.—*Editor Forest and Stream:* Some years ago I saw a cat bring a snake into my house. She had four half-grown kittens at the time, and immediately called them up for a supper. I looked at the snake and saw that it was a "coral," considered by the natives to be very deadly.

I thought no more of the matter until next morning, when I saw the cat dead. Remembering the circumstances, I examined the cat and found where she had been punctured in the side by the two fangs. Strange to say, the body of the cat was very little swollen.

The color of this snake is black, red and yellow. I have never seen one over three feet long, and they are very cowardly. Guatemala.

[This was very likely the southwestern coral snake (*Elaps euryxanthus*), described by Kennicott more than forty years ago, in the Proceedings of the Academy of Natural Sciences, Philadelphia. It is probably very poisonous.

Concerning the Florida coral snake, Dr. Einar Loennberg wrote in the Proceedings of the United States National Museum, Vol. XVII., 1894, page 334: "Few people know or believe that it is poisonous, it looks so harmless, and as a consequence they catch it and handle it rather roughly; the snake gets angry, bites, and a human life is endangered. I know personally of such a case. A Swede at Pakland, Orange county, found an *Elaps*, and because of its beautiful color he caught it and tried to put it into a bottle of alcohol. The snake bit him, but the wound was not large, and as it did not swell he did not care much about it at first. After a while he was taken very sick, went to bed, asked for a physician, and drank whisky; but it was then too late. He died the next morning, about twelve hours after the snake had bitten him. During the last two hours he was unconscious, but before that he suffered most excruciating pains. I have heard of several other cases of boys dying from *Elaps*' bite.

"In other cases people have been bitten by an *Elaps fulvius* without suffering from it in any way, but I suppose that in such cases the *Elaps* had not been able to inject any poison into the wound, as it has a rather small mouth. However that may be, I cannot agree with Cope that the bite 'of the smaller ones (meaning smaller species of *Elaps*) is innocuous to man and the larger animals.' It is to be observed that the *Elaps* bites differently from the Crotalids and Viperids. The latter snake throws its head forward in striking, and draws it back again immediately. The *Elaps fulvius* I have seen and heard about have acted in an entirely different manner. The poor Swede above mentioned had to pull the snake from the wound, and other specimens that I had induced to bite into sticks kept the stick in the mouth for a good while. This habit probably signifies an intention to press as much poison as possible into the wound, which makes the snake the more dangerous. *Elaps fulvius* is, however, a good-natured snake, and it does not bite unless it is very much provoked. If not handled too roughly, an *Elaps* may be allowed to crawl on one's hands from one to the other. I have allowed it myself once, but I hardly think I would do it over again, and would not advise any one else to try it."]

The Bobolink's Song.

Knoxville, Tenn., Aug. 28.—I have read with interest the various comments appearing in Forest and Stream of late regarding the sayings of this beautiful bird.

In my boyhood days in New England, bobolinks nested in the corn and hay fields, making their appearance about corn-planting time, and my father's version of what they said was this:

"Bobolink, bobolink, whistlink, whistlink, watchee, watchee, don't speak to me again in all your lifetime."

I, as any observing boy would, became interested; and year after year an old Bob—apparently the same bird—would come, and when I went too near he would rise and circle around over my head, and to my mind very plainly said:

"Tro Mon Tre Male, hired a horse to go fifty mile, carriage broke down, kill 'em, kill 'em, kill 'em."

Samuel B. Dow.

More Song Birds for Oregon.

From The Portland Oregonian.

Some months ago a number of citizens of Portland subscribed a purse to send to Germany to purchase nightingales. Word has been received here that the birds, sixty-five pairs of them, of the black-headed and plain varieties, will arrive in a few days. With them will arrive a supply of ants' eggs and meal worms, which are said to be the natural foods of the nightingales, though no one knows how on earth such tiny birds dig up ant hills for the eggs or break into meal bins to catch meal worms. The birds will be placed in a conservatory in Riverview Cemetery for the winter, and when the ants begin to lay and the meal worms to hatch broods in the spring they will be turned loose. It is intended to import a lot of mockingbirds and cardinal birds from the East and South next spring. They will be only a few days on the way and will be turned out as soon as they arrive, and so should be in good condition. Oregon has been known as the land of big apples and red-cheeked girls, and of late has been a land flowing with milk and buttermilk and honey. Hereafter the land will be filled with the notes of the sweet songsters of many lands. The mockingbirds will sing all day and the nightingale all night, and the air will be filled with music.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

Extinction of the Elks.

IT seems that about once in ever so often it becomes necessary that some one should rise up and get off a screed about the extinction of the elks, simply because a few members of the B. P. O. E. order wear an elk's tooth for a charm, and throw out the impression that this is the emblem of the order. Such writers would like to make outsiders believe that every time a new member is inducted into the order, some tooth-hunter goes off into the mountains, kills a bull elk, knocks out two upper teeth, leaves the flesh, horns, hide and hoofs to rot, solely that the aforesaid initiate might have an elk's tooth to wear as an emblem; consequently the order is to be blamed for the death and extermination of all the bull elks, in the near future. Probably, if these writers were members of the order they would know that the tooth in question is not their official emblem; yet some do wear them. Where did they get them? Anybody who knows anything about the matter, or is not too much prejudiced against the truth, knows that the Indians of the Far West have had vast numbers of elk teeth decorating their buckskin clothing, taken from animals killed years ago when as plentiful as buffalo. Members of the order who have been among the Indians and with whom I have conversed, say they have seen garments with three hundred elk teeth on them. These are highly prized by the Indians, and are only now parted with for a good price. In the earlier days of the order these were bought up by speculators, who sold them to jewelers, to be mounted as charms. Five years ago I bought them in Idaho for 50 cents, whereas now a pair of fine teeth cannot be had for $5. So the members have quit buying them, and are wearing instead the official emblem, an elk head in gold. Of course, those who have teeth now are not going to throw them away simply because of the tooth-hunting odium now attached; especially, since owing to their scarcity and consequently high price, imitation teeth made of celluloid are being offered. The Indians are just as sharp as anybody on a trade, and seeing the white men want their personal ornaments, they put up the price.

The lodges in Colorado and other Western States where the few remaining herds of elk are located, have taken strong action against their slaughter for this or any other illegal purpose. No truer friends of this noble game can be found anywhere than members of the order in those States, who would quickly inform on and cause the arrest of mere tooth-hunters. I have never yet heard of any of these gentry being arrested by game wardens, except three about a year ago, in the Black Hills; these were caught in the act, but I have not yet read of their having been punished.

As long as there are any teeth in possession of the western Indians, I suppose white men and members of the order, too, will buy them, and so will speculators; but I am sure no member of the Benevolent and Protective Order of Elks would buy or wear a tooth if he knew or thought it was procured by ruthless slaughter, and I know that the wearing of the tooth as an emblem is being discouraged by high officials of the order, on account of the blame attached to the supposed method of procuring, which is largely the imagination of alarmists. Head-hunters and meat-hunters are doing more to exterminate the animals than tooth-hunters. Bring on your facts, instead of unsubstantiated charges.

CERVUS ALCES.

DES MOINES, Ia., Sept 1.

"A Chance to Break the Chain."

Editor Forest and Stream:

That little letter from B. A. Eastman in last week's FOREST AND STREAM is a jolly good one in several ways. It certainly settles that little controversy about true sportsmanship that has been going on in the paper, or at least shows what a man is when he is a genuine sportsman. Every sentence in the letter shows that he is an all-round, practical and experienced field sportsman, and I have seldom read a letter that set so many vivid and pleasant memories awake. It made me remember all of the thirteen dogs that I have owned, and of course thought the best dogs that ever were. Why, I could write whole chapters about each one of those dogs—the things they did and how they did them, and the hard work they did for love of me. It sounds a little hard on my fellow men, but truly speaking it would be hard to pick out the same number of human friends who could be found so disinterestedly faithful as those dogs were.

Mr. Eastman's invitation to his brother sportsmen made me remember another man like him. I once met a man on the cars. A lot of quail flew from the roadside and we talked quail. At the end of our talk, he said: "I reckon there is no finer bird country in the world than where I live. The Sequatchie Valley is full of them, and I want you to stay at my house during the Christmas holidays, and we will be happy." I went, and there are long chapters of happy memories about that week. It was a long time ago, but, like the first fish I caught, it will be one of the last things to be forgotten. It is too long a story to tell here, but possibly I may tell it some other time if FOREST AND STREAM cares to hear it.

I think Mr. Eastman would find my record in regard to shooting my friends and being shot by them, a satisfactory one, as I have never shot a friend, a dog, nor any kind of domestic animal accidentally, and I think he will not envy my being "shot up" more than he has. A country boy "down on Panther Creek" in Kentucky put something more than fifty No. 8 in my right leg, at a distance of twenty-five yards, and they are all there yet. Way up in northern Wisconsin I got a good dose of No. 7's from a Parker gun loaded with 3¼ drams of Dupont smokeless at fifty yards' distance. I still carry twenty-four in the right arm and shoulder, two in the neck and one somewhere back of my eyeball. Down in Indian Territory a man shot at a snipe flying toward me, and two pellets set my face to bleeding. As there was nothing to obscure the view, there was no excuse for such reckless shooting, so I lost my temper and "cussed" him. "Bein' shot up" so much has made me a bit choice about shooting companions, but as Mr. Eastman has been duly "initiated," I would not be shy about going with him. It's my guess that he is all right every way, and that the man who accepts his liberal invitation will be in luck. His allusion to ruffed grouse stirs lots of happy memories. Why, I don't doubt that I've tramped anywhere from 500 to 1,000 miles after them; killed a lot of them and let a few (hundreds) get away. In spirit, I most heartily accept Mr. Eastman's invitation, but that is all that is possible. The "chain" is too strong to be broken. I don't anticipate much field sport this season. My friend Jim and I have been planning to shoot quail, but Jim's dog died recently and I have none.

O. H. HAMPTON.

Rail Shooting.

ESSEX, Conn., Sept. 5.—*Editor Forest and Stream:* Nearly a week has now elapsed since the law went off from rail, and the reports that have come to me thus far from the hunters and from the shovers as well are quite encouraging. On Monday, the opening day, the largest number killed by any one person was thirty-five, and the next largest something over twenty—I have forgotten the exact number. On Wednesday a local sportsman killed forty-seven, this being within three of the lawful number.

I saw an albino, or rather partial albino, blackbird while out on the marshes a few days ago. He was with a large flock of others and as he flew along the white feathers on his wings and body showed quite conspicuously. This is the first freak blackbird I have ever seen, although I am told that it is no rare occurrence to see a bird of this kind in a large flock.

G. W. C.

MILFORD, Conn., Sept. 6.—*Editor Forest and Stream:* A few rail have been shot on the river near here during the past week, but no bags of importance have been made. The largest count of which I have heard was twenty-three rail and a black duck, and from this they tailed down through 20, 19, 8 and 7.

Since last week I have learned that one reason for the scarcity of birds just before the season opened was the fact that the meadows had not been mowed. Until the crop of hay is cut on the wet meadows, the rail are scattered all over them, but after the grass has been cut they retreat to the cover of the weeds along the little leads, and to the tall corn grass and the cattails, which grow in the water and are never mowed.

With the cooler weather which may soon be expected, migrating birds will no doubt come on and some shooting may be had.

F. P.

As Sept. 1 approached, my friend and I concluded that we would open the shooting season of 1902 by a day with the rail and duck of Grass Lake. Accordingly the rising sun of Sept. 1 caught us with our pushers in the middle of the lake, anxiously scanning the skyline for duck. The birds proved to be very scarce indeed, and we accordingly turned our attention to the festive sora and found them very abundant. We bagged four specimens of the Florida gallinule or rice hen, one bluewing teal, several summer yellowlegs and snipe, and the balance of our bag of eighty-four birds were sora.

My partner, who had shot over the famous marshes of Essex, Conn., advised that he had never had a better bag. Grass Lake is one of the Fox Lake chain, and is fifty-five miles north of Chicago. Sora shooting will be good until about Sept. 20, and last year the bluewing teal flight was very heavy Sept. 15 to 20.

IVANHOE.

CHICAGO AND THE WEST.

A Lawyer and the Game Laws.

CHICAGO, Ill., Sept. 6.—"Look here, Fullerton," said I to the Executive Agent of the Minnesota Fish and Game Commission, "here's a mighty funny-looking prairie chicken, it seems to me."

Agent Fullerton stepped up to a bunch of chickens which was hanging in the smoking room of a Northern Pacific Railroad car bound for St. Paul on Wednesday morning, Sept. 3. He turned over the bunch of chickens and found another bird similar to the one which I had by accident discovered.

"I should think these were a little funny," said he, with indignation in his voice. "They are ruffed grouse. I wonder who owns these birds." So saying, he left the smoking room and started on a search among the passengers of the sleeping car.

In this bunch of birds which some careless shooter had left hanging in the sleeping car there were several pinnated grouse, some sharp-tailed grouse and two ruffed grouse. Of the latter, one had evidently been shot sitting, with a shotgun. The whole back was blown away. Now as all good sportsmen know, or ought to know, the season on ruffed grouse does not open in Minnesota until Oct. 1. Evidently, therefore, there was going to be something doing, since the product of some unknown sportsman's gun thus proved indubitably that the law had been broken.

Presently Mr. Fullerton came back and joined the rest of us. "I've found out who owns the birds," said he. "It is Stanislaus Donnelly. I never was much more surprised in my life."

Now Stanislaus Donnelly, as it transpires, is the son of the well-known writer, the late Ignatius Donnelly. Incidentally also it may be stated that he was the attorney for the Fish and Game Commission for the State of Minnesota during the term of office preceding Mr. Fullerton's. Agent Beutner was the appointee of Governor Lind, and Mr. Donnelly was chosen by Agent Beutner to counsel him in all legal matters pertaining to the game laws, the enforcement of the same, and violations thereof. Mr. Donnelly has never liked Mr. Fullerton, and, in fact, has been at some pains to openly proclaim that Mr. Fullerton is about the poorest game warden ever known within the memory of man. There are a great many of us who do not agree with Mr. Donnelly in this regard. Also there are a great many of us entitled to be glad that we were not in Mr. Donnelly's shoes on the morning of Wednesday, Sept. 3. It all came about through the careless curiosity of a newspaper man fond of looking at game birds. Therefore Mr. Donnelly may primarily blame the writer of these lines, as he is very welcome to do.

Mr. Fullerton said to me, "I would rather pull almost anybody else than this man, for he has been unfriendly to me, and I would not like it said that I have done this for reasons of personal animosity, for such is really not the case." I pointed out to him that inasmuch as he had not made the discovery himself, and inasmuch as his attention had been directly called to the matter, he could not, under his own oath of office, fail to make this prosecution.

As to Mr. Donnelly, he put up the defense of ignorance, believing that under the circumstances he might better prove his lack of standing as a lawyer than his lack of standing as a sportsman. It was a very hard set of circumstances for Mr. Donnelly, and indeed just a little humorous, if you are minded to look at it in that way. He was very meek. Mr. Fullerton asked him with the utmost politeness when it would best suit him to come around and be fined, and Mr. Donnelly replied with equal urbanity that he was quite at Mr. Fullerton's disposition in such matters. Mr. Fullerton politely refrained from seizing the whole bunch of birds, as he might have done, but stated to Mr. Donnelly that he would be obliged to take off the foot of each bird from its hold in the string. He carried the two birds openly in his hands out into the depot. I state this so that there may be no doubt as to the identity of the birds; for after leaving Mr. Fullerton, Mr. Donnelly fell into the hands of a newspaper man and said that he intended to fight the case to the Supreme Court, that he had not killed any ruffed grouse, and that he knew a ruffed grouse as well as anybody.

Opening Day in Minnesota.

Obviously the place for any one concerned in field sport was at St. Paul Union Depot on the evening preceding opening day. Reports from all over the Northwest stated that the chicken crop was unusually abundant, whereas in States like Illinois, Indiana, etc., the crop was reported poor. Hence the exodus of sportsmen to the Northwest was this year an unusually large one. I reached St. Paul Union Depot on the morning of Saturday, Aug. 30, and even at that time the entire platform surface, baggage rooms, waiting rooms, etc., were a perfect mass of sportsmen's paraphernalia. There were crates and crates of dogs of every known description, and pack bags, telescopes, trunks, gun cases and the like made up a great proportion of the outgoing and incoming baggage. The men in the baggage room stated that there were hundreds of shooters going out on every train to the north and west. I never in my life had a stronger evidence of the great natural love of the average American for the sports of the field, and deep enough is the regret one must feel that so limited a territory remains for this army of shooters, all of whom are eager for sport.

As for our own party, it was as stated, made up of Mr. Sam F. Fullerton, State Game Warden; Col. Condè Hamlin, general manager of the Pioneer Press Co.; Major W. C. Handy, managing editor of the Pioneer Press, and myself. We left St. Paul on the Northern Pacific on the evening of Saturday, Aug. 30, and arrived at Fergus Falls, our destination, early the next morning. Here we met Deputy Stephens, of Detroit, who had come in to Fergus Falls for this hunt, and also Deputy Warden Jimmie Jones, who now lives at Fergus Falls. Both these hustlers told us that there were plenty of chickens. Jimmie took us all up to his house for breakfast and here we spent most of the morning before starting out for our ultimate destination, the old Jones farm, about eighteen miles out from Fergus Falls. It was at this farm, which Jimmie sold later, that he and I had our hunt some years ago. There was no one living on the place this summer, but the house and barn were there and there was a stove in the house. We packed up bedding, food, etc., and concluded to make this vacant farmhouse our camping place during our stay. This necessitated three vehicles, one for our freight and two for ourselves, one vehicle being driven by Mr. Chappell, of the State Dairy and Food Commission, whose home is in the beautiful little city of Fergus Falls.

The weather was good, bright and yet cool, and the drive across the beautiful Minnesota prairies and wheat fields was one of continual delight. We reached our farm late in the afternoon and in possession of evidence that Jimmie Jones had held down the violators in his part of the world. We put up two or three bunches of chickens along the road, one of them apparently two coveys joined in one. I presume there were forty birds in this covey, and had it been a day later, we should surely have done some business with these birds, for they flew but a few yards and lit in a bunch of woods, where they went up one or two at a time in such shape as was most exciting to the line of gunless sportsmen who walked them up. Again we started six or eight birds along the edge of a cornfield, and yet again, but a few hundred yards away from the Jones homestead, the dogs pointed a half-dozen old birds which were out on a stubble field.

Good Meat Dog.

Of our dogs, we had five, two Irish setters brought out by Mr. Fullerton, a setter owned by Mr. Stephens and known as Teddy, an old and somewhat portly black pointer owned by Jimmie Jones and named Range, and last, if not least, a large, Gothic, ham-footed pointer of unknown name, which had been bought for $17 by Mr. Stephens, to be conveyed to Mr. Fullerton upon his arrival. This nameless pointer was a stray and a pick-up, but possessed of a vague reputation as a bird dog. He was brought along as a possibility, nothing more. He turned out to be a meat dog of the most strictest sort, able to hunt all day, of splendid nose and a lot of bird sense. In short, he was about my idea of what a dog ought to be. Just to show there was no coldness, he took a fall out of Teddy early in the morning, seizing that amiable canine by the back of his neck and pretty near killing him before his jaws could be pried apart, in which latter operation Mr. Stephen's fingers were badly lacerated. Later on, Jack, one of the Irish setters, took another slice out of the other side of Teddy's neck. At this Teddy quietly pulled his freight, thinking things were getting a

little warm for him, and it was only after an anxious search that we at last found him near the depot, looking for the ticket agent and evidently wanting to get home on the first train out of that inhospitable country. We hunted up a doctor, put cocaine on Teddy's wounds and sewed him up with several stitches in several places.

As for the meat dog, he bluffed both the Irish setters out of the game, and gave old Range, the black pointer, clearly to understand that he wanted no foolishness. He had a head about as big as a kettle. His eyes were yellow and fish-like, exactly similar to those of a muscallunge. He would weigh about as much as a yearling steer, had No. 12 feet, and a tail which curved upward in a way no pointer's tail ought to curve. Nobody liked this dog, and there was criticism openly expressed for Mr. Stephens' judgment.

The Opening Day.

We slept that first night in the hay mow, after a very excellent supper cooked by Mr. Fullerton, with Jimmie Jones as assistant. At 5 o'clock next morning we were up and breakfast was under way, and by the time the sun was coming across the stubble fields, we were out for the first sport of opening day. Jimmie Jones, Major Handy and myself went together with a driver in one of the rigs; Mr. Fullerton, Col. Hamlin, Mr. Stephens and Mr. Chappell taking the other rig.

As for our party, we did not begin to do much business for the first hour or so. Then the dogs stopped just too late to prevent the flushing of a bunch of old birds which were feeding at the end of a strip of stubble. As had the birds on the preceding day, these flew as though demons were after them. I never saw prairie chickens go so far on the 1st of September. None the less we marked them down nearly a half-mile from their starting place, and spread out over a quarter of a mile of grass land. Here the dogs began to do business, and we picked up three birds in short order. Jimmie Jones I knew to be a good steady shot, and I was pleased to see that Major Handy, with his new little 16-gauge, was also a self-possessed and accurate chicken shot. It was almost as much fun for me to see him shoot as it was to shoot on my own part, for he is an old newspaper man and for six or eight years has not had a gun on his shoulder. I presume he enjoyed the trip more than any one of us who have had a more frequent taste of the outdoor air during late years.

We did not find any good coveys of birds that morning, but picked up some more chickens here and there, one or two at a time, until we had eight birds, if my memory is correct. All the time our estimation of the white meat dog was enhancing very rapidly. In short, we knew that in him we had a very good chicken dog. His fault was that of self-hunting. His range was anything from 100 yards to half a mile, as he saw fit, and he never looked for us; but when he pointed he stood staunch, no matter how long we were in coming up. Mr. Fullerton thought our comment regarding the dog was made from politeness, and expressed no desire to hunt over him, although his own party had only picked up four chickens in the morning.

In the afternoon we went out in the same order. The day was clear and a bit warm, so that we did not expect to do anything until evening. Yet the old white dog kept on moving, setting a pace entirely too hot for old Range, although the latter kept on going and never failed to back his running mate's points, or to point a single bird now and again when occasion came his way. We heard guns once or twice, from our other party as we supposed. Indeed, we counted nearly a dozen during the day. This would seem to break up the hunting considerable, but it must be remembered that the country was very flat and one could see for a mile or two. There were not enough hunters to interfere with each other.

We did not get very far away before the old white dog began to make game along the edge of the stubble, and presently came to a stand. We followed him up and he began to road along, with head high in the air, after true chicken dog fashion, working out his scent promptly and decisively, not puttering and yet not hurrying too much. Presently he stood firm and would go no further, and in an instant we were in the middle of our first good covey rise. Then methinks the guns did indeed speak merrily, and the chickens began to fall like autumn leaves. We picked up six out of this little round up, not a very ordinary thing when three guns are shooting at one covey rise. We followed on across the hills and flats and now and then knocked down another single. Once more we caught a good covey point over the old white dog, and this time I believe we picked up five, with a single found a little later. Still again, as evening came on, the meat dog trailed a little way and pointed staunchly on the stubble. This covey we nearly wiped off the face of the earth, only two birds going on after the fusilade was over, and one of these we picked up later over the white dog's point. Starting for home once more, the old fellow pointed stiff, and I killed a single cock in very disgusting fashion, since it went directly toward Major Handy's side of the line. A little further on the black dog made a good point at the corner of a stubble, and again I got an old chicken. A few minutes later the black dog pointed in the grass, and Jimmie Jones made a long, clean kill with his new 7½-pound Smith gun, which he was shooting for the first time that day.

By this time we were all getting down to it in pretty good shape. In a covey rise we could not always tell as to our shooting, for in spite of all, shooters will occasionally double on the same bird, but on the whole we were satisfied with our execution. I was conscious of missing clean only two birds during the day. I do not think that Jimmie Jones ever missed a clean shot within range, nor did Major Handy. The work of the latter was ideal. He did not snap his birds, but simply waited for them to steady, and the way he cut them down with the little 16 was very much of a delight to us. I think we brought home twenty-one chickens in our wagon that evening, and I remember that the total score for the day of both wagons was forty-four birds, the other party getting eleven birds in the afternoon. Nothing very big for so many guns, and nothing very satisfactory to those of the other vehicle, but plenty of birds for those of our own more fortunate party. The others reported that their dogs did not do so well as they ought to have done, that Teddy had gone foot sore, that one of the Irish beauties lacked judgment, and the other lacked nose. Still our friends were plucky and declared they were having a good time. I know we all had a good supper and a good sleep in the hay mow.

The Second Day.

On the following morning we had to start home, and all of us being a little less keen, we made a later beginning with the business of the day. Our wagon had not gone far before the white dog pointed at the edge of a grass patch and four birds went out. One came directly toward the wagon and Major Handy killed it from the seat where he sat. We marked down the others and picked up a couple of them. Then we went on across the continuous expanse of stubble and grass lands, happy enough to be simply alive and out of doors. It was the old black pointer's turn this time, and presently he made a beautiful point on a high stubble knoll. The meat dog was off at one side, but backed nicely. Then old Range gave his younger rival a taste of what he could do in working out a covey scent. Promptly and with head high in air, he led us up to the birds. There was a confused whirring of wings, a rattling of shots and a little addition of four more birds to our stock in trade. We had bad luck with the singles out of this rise and so drove on.

Presently old Range pointed once more in a grass-covered hollow, which I am satisfied was once a buffalo wallow. A good bunch got out here and we picked up five birds. We had the singles marked well, and added three more to our bag, two falling to Major Handy's deadly sixteen, and the third to Jimmie's long-range artillery.

It may be seen that the floor of our vehicle was pretty well covered with birds when we met the others at the appointed luncheon place on the banks of the Red River of the North. Our friends had bad luck, the hot weather pretty nearly knocking out their dogs, and they had only a couple of birds to show as the product of the morning's work.

After lunch we made some changes, Major Handy going into the other rig and Mr. Fullerton and Col. Hamlin coming into ours, where the two pointers were to continue their work. This time the luck remained with the pointers. Major Handy and his friends did nothing during the afternoon, not seeing a single bird. Upon the other hand, we had hardly parted company when we put up a bunch of chickens on a high stubble field. The wind was increasing very fast, and the birds were wild, and we got no work out of them, only stopping two out of the rise, both probably to Mr. Fullerton's gun. Later on the white pointer made a beautiful crouching point, which showed that there was a covey at hand. Once more the birds rose wild and we did not get a shot, nor did we get up any of the scattered birds. The grouse continued to fly to unexpected distances, after a fashion I think never seen equaled at that time of the year, and which leads me to suppose that the habits of these birds must be changed, and that the birds themselves are becoming far more wary and suspicious.

Still again we put up a bunch of birds wild, the dogs pointing fully thirty yards back of them, and we failed to get a shot within range. This time, however, we marked some of them down, and the old black dog pointed staunchly at the edge of a thicket which grew along a ditch. Along this we moved, and presently I heard two shots to the left, which it proved meant a bird each for Col. Hamlin and Mr. Fullerton. On my side of the thicket there came out a big chicken, flying like a skyrocket, and I had all I could do to stop him inside of fifty yards. Yet another bird we marked down and put up wild, wasting two shots each on him. Later this bird, after flying a long way, apparently dropped dead over in a pasture. He was not dead by a large majority. Col. Hamlin walked him up and fired at him fully fifty or sixty yards away. The bird kept on flying for twenty or thirty yards further, and as it was then only about sixty yards from me, I put up my gun intending to try a long shot. Following along about a dozen feet ahead of the bird, I was surprised, before I had time to fire, to see it drop with a broken wing and apparently dead. Col. Hamlin wanted to know if I had shot at it, and I fooled him for quite a while. The truth is it was his own gun that killed the bird, the wing bone apparently breaking after it had flown some ways.

A little further on we got into another covey, and Mr. Fullerton stopped one bird from his seat in the wagon, putting in a cartridge after they began to rise. He killed another in the thicket we had just left. The wild weather was now apparently making the birds stir around, and we got some running and roading on the part of the dogs, though without much more success on the part of the birds. The weather, which had been very warm earlier, now began to change and a very cold wind came up. Presently we concluded to drop the hunting and ride on into Fergus Falls.

Rather Not Have Missed It.

In the afternoon most of the glory belonged to Mr. Fullerton. In the first bevy rise we had, it is quite likely he killed both birds, for I know I missed with my second barrel. A little later on happened one of the funniest things of the entire trip. One or two birds sprang from the stubble as we rode along, and thinking that there might be others, I jumped from the wagon and slipped a couple of shells into my gun. Just as I did so, a fine fat chicken sprang up a few yards ahead of me and circled off to the left, offering about the prettiest and easiest shot any one ever did see in all his life. It never occurred to me that I would miss this bird, but after I had done so a couple of times, I realized that I had no more barrels to my gun. I would have given $50 then for one more shot. The way Mr. Fullerton and Col. Hamlin did roast me after that was something to render me unhappy for many moons.

"They have been telling me," said Mr. Fullerton, "all about your shooting chickens, but I see now how it was. You are a good shot in a crowd, but when you get a chicken out with no one to shoot at it but yourself, you don't seem to do business."

This was one of the shots one would rather not have missed. Really the prairie chicken is not a hard bird to kill, unless he is the prairie chicken of the solitary six-year-old sort, that starts at fifty yards and flies a mile.

I presume we should be said to have had pretty good luck in handling our birds, for we met quite a proportion of old and scattered birds. When we got into a young covey, we nearly always accounted for ourselves handsomely. Mr. Fullerton was much disappointed that we did not have better shooting, but when we came to take the birds out of the wagons at Fergus Falls on the evening of the second day, we found we had seventy-four in all. I hardly know where they all came from. We picked them up here, there and everywhere, and our bag was perhaps as many as we ought to have cared for. Had we run into a great many coveys, it would not have taken us long to kill the limit for each gun. Allowing that we had five guns to our party, we might then have brought in 250 chickens instead of seventy-four. For my own part, I was well content. I broiled a half-dozen chickens on coals in my own fireplace on Lake Minnetonka, had some Minnesota wild rice to go therewith, and was happy as a lord. Moreover, was I not out with good gentlemen and good shots?

Sequel of the Meat Dog.

Moreover, did I not see one more chicken dog, a meat dog of the olden time? I do not know why it is, but I am very lucky on all my chicken hunts, for there is sure to be somewhere around at least one simple-minded, direct, matter-of-fact, old-fashioned meat dog such as I used to know years ago. I rather envy Sam Fullerton. He has a chicken dog with as good a nose as any he will ever find. Moreover, he has without doubt the homeliest dog in the whole Northwest. Hitherto Sam Fullerton has been having great trouble with people who steal his dogs. He need give himself no further concern. This dog is so homely that no one will ever think of stealing him.

"I wouldn't take a thousand dollars for him," said Mr. Fullerton to me. "That one half-day in which I saw him work showed me that he is a bird dog all right. Besides, a neighbor of mine has two mean dogs which have been in the habit of whipping every dog I take out to my house. I don't suppose I'll do a thing to those dogs now, will I? Why, when this old fellow of mine runs against those treasures of my neighbor's, he'll just eat 'em up! I'm anxious to get him home, so's to see the fun begin."

The last I saw of Mr. Fullerton, he was in a cab, holding one of his Irish setters down on one side and just reaching for the collar of the white dog, which I was handing in on the other side. I don't know whether Mr. Fullerton ever got home alive or not, but hardly think he did, for it is not likely that the old white pointer would ever let an opportunity like that go by. There was probably a beautiful dog fight on before the cab had gone two blocks. I never did see a dog more able to take care of himself than this meat dog. As I led him up to the cab door on the chain, I happened to step on one of his feet. In an instant he had me by the leg, just to show me that it was not well to take any liberties with his feet, even if they were large. He'll do for the battles of this life. He is one of the sort which can whip every dog on the place, eat all the grub you can throw to him, and then go out and hunt chickens by the week, footsore or not footsore, and not care a cent whether he is ever near the wagon or not.

The Chicken Crop in the Northwest.

As to the chicken crop in the Northwest this year, it is safe to say that for once in a way it is up to the announcements and prophecies regarding it. There are chickens all over the State of Minnesota north of St. Paul. This is in spite of a very wet spring, which probably drowned out a good many birds over flat regions such as that in which our party did their hunting. Elbow Lake, Windom, Ulen, Twin Valley, Crookston, Thief River Falls—these and dozens of other points had birds, as I learned from sportsmen whom I met on the trains. Going out of St. Paul I counted thirty-eight dogs in one baggage car, and nearly as many guns in one sleeper. These people began to come in about the middle of the week, and I saw the bags of many of them, 30, 40, 50, or more birds in each party. Up at Fargo, N. D., the sport was said to be very fine, and a man just back from Fargo said that nearly every one up there had plenty of birds, one man bringing in over 100. Pembina, N. D., was a point much patronized this year, and apparently profitably so. The country from Crookston to Winnipeg Junction was much shot over and was prolific. The Breckenridge division of the Northern Pacific had birds nearly all along the line. In South Dakota, where the Marvin Hughitt party, with Theodore Roosevelt, Jr., hunted, there were plenty of birds. Dispatches say that this party killed 153 chickens in one day, more than 100 another day, etc. Of this party, besides the younger members, were Messrs. Cantillon, Sanborn, Johnson and Gardner, of the C. & N. W. Ry. Co. These gentlemen met good weather and good sport, although they got into a country which was much posted. They worked from Arlington to Hetland and other points along the railroad.

It is almost certain that respect for the game laws and appreciation of the game birds are on the increase in the Northwest. The Minnesota wardens enforced the non-resident license act and they took in a great deal of money from non-resident shooters. The better class of these non-residents do not object to paying the license. Indeed they ought not to do so; neither ought they object to the limit of twenty-five birds a day, difficult as it is to attain in these times. There are birds, plenty of birds, more birds now in Minnesota and the Dakotas than there were ten years ago, but there are not birds enough to last forever. The chicken is too easy and defenseless, and if you turn the whole public loose on him without reservation, it is not going to endure, and you can bet on it.

Minnesota Shooters.

Mayor Smith, of St. Paul, was the guest of D. C. Shepard, the latter taking out his private car. They went to North Dakota, and not, it may be stated in passing, to Twin Valley.

Messrs. Paul Gotzian, Geo. McIntyre, James Myron, A. C. Deverell and F. R. Yerxa, were among those who shot at Herman, on the Great Northern. Donnelly, on the same road, attracted A. C. Shotwell and Harry Roberts. A party headed by Rudolph Schiffman, Jr., went

to Ulen, on the Northern Pacific. Mr. F. E. Ford headed a party for Wahpeton, N. D., and Mr. J. E. Stryker went with friends to Iroquois, S. D. Mr. J. J. Early was the host of a considerable party who went in at Larimore, N. D. It may be seen that the St. Paul sporting contingent scatters over a wide strip of country. It is safe to state that the average bag this week was better than it has been on opening day in the last dozen years.

Chickens in Wisconsin.

The State of Wisconsin is another one which requires a gun license. More than 1,100 licenses, largely local, were issued at Milwaukee before Aug. 29. As to the chickens, it is hardly thought that Wisconsin will turn out so many birds as the more favored States further to the West. From the neighborhood of Fox Lake, Wis., the report comes that the chickens did not materialize abundantly and that the crop of ducks was below the demands of local shooters, to say nothing of the non-resident element. Necedah, Babcock and other northern points no doubt furnish a good many birds, as there was a good breeding head left in there last fall.

The enforcement of the game laws in Wisconsin is improving. For instance, Mr. Henry B. Sanderson, of Milwaukee, had some prairie chickens sent to him from Dakota by some party unknown or unnamed. Mr. Sanderson did not get his hands upon his chickens, although they came to him in a box labeled "Clothing." The wardens got them at the depot. Mr. Sanderson says he "hopes this matter will be speedily dropped."

Chickens in Illinois.

The Illinois chicken crop seems to have been pretty slim this year. As an example of game and game laws, this State is pretty much all that it ought not to be. Most of our shooters did not pretend to make a chicken hunt in this State this fall, but moved on out to Minnesota or the Dakotas. A few went out near Chicago, and of these yet fewer got some birds. Mr. Friend, of Chicago, hunted not far from Chicago, and was lucky enough to bring in twenty birds. This is the best Chicago-Illinois bag of which I have heard thus far, although perhaps some of the country towns could turn in better reports than this.

Will Hunt Lions Again.

A press dispatch from Denver, Colo., dated Sept. 5, states that President Roosevelt will go on another mountain lion hunt in Coloroda the latter part of this month with John Goff, the same guide who was with him in his successful hunt in Colorado a year or so ago.

Milwaukee Sportsmen's Show.

Milwaukee opens a sportsmen's show and pure food exhibit at the exposition building to-night, the address of welcome to be given by Mayor Rose. The exhibit of firearms and other sporting gear is reported to be a good one, as well as that in boats, canoes, motor engines, etc. The arrangement of the aquaria, duck ponds, aviaries, etc., is a happy one, and the entire interior will appeal to the lover of the outdoor air.

Why He Didn't Go Chicken Hunting.

I was saying something the other week in the way of wonder why Neal Brown, of Wausau, Wis., didn't ask me to go chicken hunting with him this fall. The reason is because why, in the convention of last week, Neal Brown was one of the candidates for Governor of the State. Mayor Rose, of Milwaukee, the same who is to open the sportsmen's show to-night, got the nomination of his party, Mr. Brown giving him a good close race. I don't mind gonig on record to the effect that Neal Brown will be Governor of Wisconsin one of these days, and a mighty good Governor at that. Any man who can shoot chickens the way he does is not to be overlooked. I am sorry, however, that these conventions should come along about at the opening of the chicken season. If I had to choose between opening day and the Governorship, I would not hesitate a minute. E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Tent Pole Friction Joints.

ONE of the useful things a camper should be familiar with is a knowledge of how to make a serviceable friction joint, as this often enables one to do away with long and heavy tent poles, awning poles and the like, yet at the same time the full strength is retained. Ready-made friction joints are sold by the trade, but as these are highly polished and nickel plated, their cost is greater than it need be. The advantage in buying these is that the exact size and length one requires may be had, for they run from a half-inch up to two or three inches in diameter, and in length up to ten or twelve inches.

The more economical plan is to visit a brass foundry, if one is near at hand, or a hardware shop if not. Drawn brass tubing of a thickness of 1-32 or 1-16 inch is made in all sizes suitable for joints, and one has only to select two tubes that will fit together snugly yet not tightly enough to bind. Have the inner tubes three to four inches in length, and the outer ones twice as long. The dealer will saw these, and one pays for them at so much per pound, say about one-tenth or one-fifth the cost of the nickel-plated affairs. Four brass screws with flat heads will also be needed. Half-inch ones will be efficient.

If it is a tent pole one wishes to reduce to sections, and its diameter is two inches, the usual size, the lower joint should be two inches in outside diameter and the second joint about 1⅝. In cutting the pole, care should be taken to allow for the joints, for if the pole is sawed in three equal lengths, after the outer joints are put on the actual length of two of the three sections will be increased, whereas the pole will remain as it was. In cutting, half the length of each of the joints should be estimated in the measurement, and when the pole is sawed and the joints put on, the three sections should be of equal length. This requires exact measurements.

A sharp knife and a rasp are needed. Take the two inner tubes, measure their full length on their proper sections and mark the section. Then circle it with the knife and shave the end down that far, leaving the pole beyond untouched. After the end is almost small enough to fit into the tube, rasp it off evenly until the tube fits snugly, then force it into the tube by driving with a bit of soft wood. When the tube is home, holes should be bored on either side and countersunk for the screws. When these are down the tube will not come off at the wrong time. The outer half of the joint should be seated on another joint half its length and fastened with two screws. When the other friction joint is finished, the three sections should be either planed or sandpapered down until pole and joints are the same diameter, when varnish should be added in two or three coats, as a preservative. If the top of the pole has no ferrule, it is well to fit one on it, to prevent checking. Often the iron spikes sometimees found there are removed and a section of brass tubing ⅜ or ½ inch in diameter substituted, and into such a tube a tiny staff for a flag or club burgee is placed while the tent is being set, in camp.

As poles for conical, palmetto and all forms of peaked tents are usually eight to nine feet in length, it is often difficult to obtain a straight piece of wood for the purpose which is light in weight. By making three sections one can use bits of pine or spruce worthless for other purposes, while the finished pole will be very strong, and at the same time much more convenient to stow in a boat or ship to one's destination. Awning poles are usually made in two sections, and the friction joints need be no larger than ⅞-inch by 6 inches. A bit of brass rod is inserted in the tip of each, extending an inch beyond the end, to hold the tent-fly or awning.

Wall tents and wedge tents have long, bulky poles that are difficult to stow in a boat or wagon. Very often owners of these cut the ridge pole in two pieces and cover the joint with a large strap hinge a foot in length. This must tbe fastened securely with screws or rivets and should lie under the ridge pole when the tent is set. This scheme dectracts but little from the strength of the pole, but renders it less awkward to carry. The two upright poles are also cut and fitted with friction joints, and any wedge or wall tent so treated becomes a possibility with canoeists and small boaters who require larger tents than the conical or palmetto varieties. No doubt the ridge pole of one of these tents could also be made round and fitted with friction joints as well as the uprights. This would make it still shorter for packing.

Oars are often fitted with friction joints, and doubtless paddles are always so made. If one will devote some care and time to the work, an oar or a paddle is not difficult to make and fit with joints, and the saving is considerable. And when one is in camp and looks about at the many little wrinkles he has added to his outfit now and then, the pleasure he derives in knowing he can be independent in some things is worth the effort, and at the same time he feels that his outfit has not cost him a fortune. PERRY D. FRAZER.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

A Hard Luck Story.

IT IS very often irksome to listen to a hard luck story, especially if a man is suffering from a slight touch of hard luck himself, so only those who have been enjoying a long period of exceptionally good luck need read this brief history of a few of the unfortunate occurrences which took place on a recent fishing trip 'way up in the delightful Wisconsin country.

Our party had been settled for about five days on a beautiful little island where the ship laden with worldy cares never touched and where the days sped so fast that one tired of cutting notches in a log to keep track of them and finally forgot and was satisfied. We had fished the lake surrounding our camp with indifferent success, and had tried other outlying lakes with the same result, when our guide in command notified us that he had discovered a lake at some little distance from the camp, where the canoe of the angler had seldom been, and where, to his best knowledge and belief, there were many large bass that would consider it a favor to be allowed to swallow a minnow with a hook attached. The party was all attention at once, with the result that a pilgrimage was started in that direction the next day.

We fished the lake in relays, one man going each day with a guide. Putting the result of three days of such work together, three rods took from the lake about one hundred and twenty-five bass, five of which the party ate and five of which were presented to a neighboring camp.

It was the best fishing that it has ever been the writer's good fortune to enjoy, and the result of it all was very natural and about as sure to follow as the sunrise or the fulfillment of the decrees of Fate. Other parties in that piece of woods heard about the good fishing and wanted to take a hand at it, and right here is where the hard luck begins to appear.

The first party to arrange for a trip to the new bass lake had secured the services of a guide whose reputation named him as one of the best in the country and who was himself a fine fellow. When we left the lake on which we had been camping we marked the entrance to the trail to the new lake for the other party and thought there would be no further trouble. They had five miles to travel before arriving at the entrance to the trail which led to the Lake of the Many Bass. At the entrance of this trail their guide shouldered a birch bark and the party wended their way for a mile and a half through the forest full of delightful anticipation and the joy of living. They reached a point within a short quarter of a mile from the goal and from which the water could all but be seen, when, for some unknown reason, the lake was given up for lost and the weary homeward journey was started midst a feeling of sadness and depression which comes with defeat.

In the meantime our party, looking for new fields to conquer, had settled down comfortably on another island in another lake. It so happened that there was a lake famous as the home of that fresh water shark, the maskinonge, and situated about two miles from our new camp. Of course we wanted to get a big one if we could, and the trusty pilot of our picnic made a trip to this lake to see if the boat, which was known to be there, was anywhere to be found. He told us that he did not find it at the opening of the trail, and had started on a trip around the lake in search of it. This trip through the brushwood and alders on the shore was anything but easy. However, he was fortunate, in that after he had traveled about half a mile up the shore, he saw the boat in the reeds on the other side of the lake. He, thereupon, bound together some cedars and started in hot pursuit, with the result that he reached camp just at dark, and we went fishing the day following.

We found out a little later that "The Unfortunates," who had traveled so far to find the bass lake and had been doomed to failure, had suffered another piece of hard luck. It seems that they had arranged to fish this water where the maskinonge abides, but the boat was so effectually hidden when their guide made search that the fun had to be given up.

These two misfortunes were enough to dampen the ardor of many fishermen, but they seemed to have little effect upon "The Unfortunates," whom we truly admire and for whom we have the deepest sympathy. They merely turned their attention elsewhere and went after maskinonge in another lake, and here comes the biggest piece of hard luck of all.

After working industriously for a long time, an unusually large fish was hooked, as was evident from the commotion in the neighborhood. He was successfully played and finally tamed sufficiently so that he could be brought up to the boat. At this stage of the maneuvers the guide is supposed to rap the fish, gracefully and yet soundly, on the back of the head with the "persuader," a stout stick about a foot and a half long. This operation was successfully accomplished, and the fish lifted into the boat, where everybody was surprised and tickled at his beauty and size. Comments were indulged in and opinions passed, and the sum and substance of the whole thing was that the fish must have weighed in the neighborhood of forty pounds—a veritable monster, and undoubtedly the largest fish caught in those waters this season.

After the wee bit of excitement that must of necessity accompany such a capture had faded away and things had assumed their normal condition again, everything was made ready for more fishing. The guide started the boat once more and the spoons were dropped into the water.

Just at this moment, however, when everybody was busy, the big fish rose up in his might and flopped himself out of the boat.

Ye gods; that men should suffer so!

That ended the trip for "The Unfortunates." The fish had only been stunned when he came in contact with the "persuader," and his jump for life was more than the spirit of man could bear.

The writer did not have the pleasure of meeting these people who were pursued by such an evil fate, but his sympathy goes out to them and to their guide, for such a series of misfortunes is not only unusual, it is most unnatural.

If any of "The Unfortunates" are readers of the FOREST AND STREAM and happen upon this tale, the undersigned will consider a line from him as a favor, because it will permit of a few expressions of condolence in connection with one of the biggest pieces of hard luck that ever happened to a fisherman and one of the most unfortunate chapters to be found in the fishing history of northern Wisconsin.

EDWARD MORTON HOLLAND.

Coronation Day on Vancouver Island

LONG before old Sol showed himself in Comox Bay Dick and I were satisfying the inner man preparatory to trying the lower reaches of the Courtenay River for trout. You see we had two miles to walk ere we reached Dick's favorite pool, and well we knew that there were others equally in love with this particular haunt. It being Coronation day and a public holiday, others would be astir early, so it was a case of first come first served.

On the way to the river Dick related stories of the fine fish that lurked in the depths of this particular pool, of a catch he had made there last year, and summed up by saying that he believed it was the best hole in the river. So, naturally, I came to the conclusion that we were going to have a good day, and confess I should have been greatly disappointed if Richard's stories had not been verified in a more material way. On reaching the river we discussed the all important question of what fly to try first, but it did not take us long to decide that. As the sun was not yet shining on the pool, the Cowichan-coachman, or, as it is called for short, the "klootchman," would possibly suit the occasion, so on it went. The Cowichan-coachman is a fly that I have never seen used anywhere except in this neighborhood; it is supposed that it was first made and used by someone fishing in Cowichan Lake (in this district), hence the name. It consists of a dark claret body, encircling which is a spiral of gold tinsel, claret and white wing, with claret hackle underneath, it is an excellent killer in the early morning, but is of no service far from salt water.

Richard made first cast, and to his sweet surprise hooked a one-pounder, which he played for a few minutes, and then calling for the net I landed it for him. "Pretty good start, Frank."

"Yes; that's a very good begininng and they seem to fight well this morning."
